SEC. 701. (a) The United States Government, in connection with its voice and vote in the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Inter-American Development Bank, the African Development Fund, and the Asian Development Bank, shall promote the development and utilization of light capital technologies, otherwise known as intermediate, appropriate, or village technologies, by these international institutions as major facets of their development strategies, with major emphasis on the production and conservation of energy through light capital technologies.

(b) The Secretary of the Treasury shall report to the Congress no later than six months after the date of enactment of this section and annually thereafter on the progress toward achieving the goals of this title. Each report shall include a separate and comprehensive discussion, with examples of specific projects and policies, of each institution's activity in light capital technologies and of United States efforts to carry out subsection (a) with respect to each institution.

Mr. GONZALEZ (during the reading).
Mr. Chairman, I ask unanimous consent that the committee amendment be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. ASHBROOK. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.
The Clerk concluded the reading of the committee amendment.

The CHAIRMAN. The question is on the committee amendment.

The committee amendment was agreed to

AMENDMENT OFFERED BY MR. MATHIS

Mr. MATHIS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MATHIS: Insert the following new title immediately preceding the last title of the bill and renumber the last title.

TITLE VIII—HUMAN NUTRITION IN DEVELOPING COUNTRIES

Sec. 801(a) The Congress declares it to be the policy of the United States, in connection with its voice and vote in the International Bank of Reconstruction and Development, the International Development Association, the International Finance Corporation, the Inter-American Development Bank, the African Development Fund, and the Asian Development Bank to combat hunger and malnutrition and to encourage economic development in the developing countries, with particular emphasis on assistance to those countries that are determined to improve their own agricultural production, by seeking to channel assistance for agriculturally related development to those projects that would aid primarily in fulfilling domestic food and nutrition needs and in alleviating hunger and malnutrition in the recipient country. The United States Government shall assistance for projects that would tend to increase exports of an agricultural commodity if the United States is a net exporter of the same, similar, or competing agricultural commodity.

(b) The Secretaries of State and Treasury shall report quarterly to the Speaker of the House and the President of the Senate progress towards achieving the goals of this title.

Mr. MATHIS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. MATHIS. Mr. Chairman, let me provide a little background for the members of the Committee as to what this amendment does. I believe that some members of the Committee will recall that 2 years ago the gentleman from Louisiana (Mr. Moore) along with a few other members of the Committee on Agriculture, discovered and pointed out to the members of the committee a problem involving the importation of palm oil into this country, and we discovered, after a considerable amount of research. that not only was palm oil coming into America, but that American dollars through the various lending agencies in this bill were being used to promulgate the cultivation of these palm oil products. Therefore an amendment was offered last year, and almost adopted by the House, to prohibit any fund's dollars being used to cultivate palm oil production in various countries, particularly in Indonesia.

Subsequently we also discovered that other agricultural products were being affected by the use of U.S. dollars through these lending agencies involved in this legislation, such as orange juice, citrus and sugar products, and any number of other agricultural commodities.

What my amendment does here today is simply to prohibit the use of our dollars for the cultivation of any crop that could be brought back into this country in direct competition with American agricultural products. I would like to say, Mr. Chairman, at this point that I have offered this all-embracing language as a substitute for the amendment that would have been offered—it was printed in the RECORD—by the gentleman from Louisiana (Mr. MOORE) and the gentleman from Florida (Mr. KELLY) who had an amendment offered in the committee that would relieve the sugar, palm oil, and citrus crops. My language is more

all-inclusive and takes into consideration all agricultural aspects.

Mr. JOHNSON of Colorado, Mr. Chairman, will the gentleman yield?

Mr. MATHIS. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado, I thank

the gentleman for yielding.

As I read the amendment, the gentleman says that the "Government shall oppose assistance for projects that would tend to increase exports of an agricultural commodity if the United States is a net exporter of the same, similar, or competing agricultural commodity.

It seems to me offhand it would apply to wheat, corn, cotton, and soybeans.

Mr. MATHIS. The gentleman is eminently correct. What we are saying or attempting to say in this amendment to the people of the lending agencies is, We do not want you to loan U.S. dollars to anyone for commodities for export that are going to compete with the commodities in this country. We are not concerned with the production of food in countries that will be assisted by these loans. What we are concerned about is people who are taking the dollars that we are sending abroad and developing agricultural technologies in competition with us.

Palm oil is one of the most glaring examples, and one of which the gentleman from Colorado is well aware.

Mr. JOHNSON of Colorado. If the gentleman will yield further, the gentleman will recall that I sat on the committee at that time, and I thought the palm oil situation was particularly atrocious, because of other domestic policies. We had curtailed the export of sovbeans-and we had encouraged the production of soybeans elsewhere in the world. Then we were encouraging the production of palm oil to compete with our own producers, whom we were preventing from competing on the foreign market, because of the embargo. That combination of circumstances led me to feel that the palm oil situation deserved our attention. But when the gentleman expands it to wheat, corn, cotton, orange juice, and all of the other commodities exporting situations that we are involved in, I do not know whether the gentleman may have gone too far.

Mr. MATHIS. I would say to the gentleman from Colorado in response to his concern that I know of no instance where we have these kinds of problems that have arisen from wheat or corn or from any of the feed grains the gentleman mentions. I do think we have problems in citrus, pointed out very ably by the gentleman from Florida (Mr. KELLY). We know, for example, that last year some \$59 million went to Brazil in lowinterest loans that ended up subsidizing the exportation of frozen concentrated orange juice in direct competition with citrus growers in Florida, who were having problems at that point in getting assistance from their very own govern-

I understand the gentleman's concern, but I think his concern is totally unwarranted in this instance.

Mr. SYMMS. Mr. Chairman, will the gentleman vield?

Mr. MATHIS. I yield to the gentleman from Idaho.

Mr. SYMMS. I thank the gentleman for yielding.

The language reads:

If the United States is a net exporter of the same, similar, or competing agricultural commodity.

The commodity that comes to my mind is a net importer of sugar. As the gentleman knows, the sugar producers in this country are in great financial straits. Would this amendment cover sugar?

Mr. MATHIS. I would assure the gentleman that he has raised a point that I do not know whether I am prepared to answer. I think, looking at the language, we probably would not cover sugar, but I will say that the gentleman from Louisiana (Mr. Moore) has an amendment that will correct the problem the gentleman from Idaho is concerned with.

Mr. SYMMS. I thank the gentleman

very much.

Mr. MATHIS. Mr. Chairman, I urge the adoption of my amendment. As I said, the gentleman from Louisiana (Mr. Moore) has some clarifying language that he will offer at the proper time, but I will accept it. As I understand, it will direct our representatives to these various lending agencies not only to oppose but to vote against any future projects of this type

We have been assured that these kinds of things were not going to continue. The gentleman from Texas, the distinguished chairman of the subcommittee, Mr. Gonzalez, held hearings last year. at which time we were assured no more loans to growers of palm oil would be made, and yet we find in the last 2 weeks an additional loan of \$20 million was made to the Ivory Coast for the production of palm oil. So with the adoption of the Moore amendment. I urge adoption of my amendment.

Mr. REUSS. Mr. Chairman, I rise in opposition to the Mathis amendment and I do so with regret, because there never was a tiger more zealous for the interest of American agriculture than the gentleman from Georgia, Mr. Daw-SON MATHIS. Here in his amendment. which he calls an all-embracing amendment, he achieves a real understate-This is the most embracing amendment I have ever seen.

What it does, as I read it, and the critical sentence is this:

The United States Government shall oppose assistance for projects that would tend to increase exports of an agricultural commodity if the United States is a net exporter of the same, similar, or competing agricultural commodity.

It need not even be shown that the increased exports infiltrate into the Inited States. If, for example, we wished through the international lending agency to help the pitiful plight of Costa Rican farmers in growing a little better corn, and some of that corn is exported under the terms of their trade to nearby Honduras, then that is a loan the United States must inevitably vote against.

It seems to me this defeats the very purpose of these international institutions. If Sri Lanka wants to do a little export business with Togo, I do not see why that is going to hurt the great State of Wisconsin and I do not see why that is going to hurt the great State of Georgia, or any one of our great agricultural States.

In fact, the National Advisory Council has been quite zealous of the legitimate interests-and believe me, they are legitimate-of American agriculture.

But why we should want to frown upon the little intramural exports between some of these pitifully poor countries I do not know, and I must oppose the amendment as too embracing.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Minnesota.

Mr. FRASER. Mr. Chairman, I would only like to make an observation that the United States is heavily committed worldwide efforts to increase the ability of the countries to feed themselves. It is estimated that by 1985 we are going to be many millions of food tons short in the world.

This amendment could apply to many of the poor rice growers in Asia and also to many other items. I think it is an astonishing proposition that the United States should withdraw from any effort to help the countries of the world if they should seek to gain foreign exchange earnings my improving agricultural production, a part of which they might seek to export.

Mr. REUSS. I hope the gentleman will allow us city Members, and I am one, and I have always supported American agriculture in its efforts to produce foods and fiber, not to do this to the people in those poor countries of the world.

Mr. MATHIS. Mr. Chairman, will the gentleman yield for an observation?

Mr. REUSS. I yield to the gentleman from Georgia.

Mr. MATHIS. We have, Mr. Chairman, as I said in the well, no objection whatsoever to technology being shared to allow the poor nations to attempt to feed themselves, but I think we do have objection to what amounts to American dollars being used to subsidize exports coming in and knocking American commodities out of the box. We cannot agree with American dollars being used to subsidize the export of palm oil which infiltrates our market.

Mr. REUSS. I agree, but the amendment is directed at the intramural exports of countries thousands of miles from us, so I hope the Mathis amendment will be voted down.

Mr. TSONGAS. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Massachusetts.

Mr. TSONGAS. Mr. Chairman, there is another point to this amendment, and that is introducing into the development banks these constraints would open the door to every other country interested in its own particular interests to do the same thing, and we would end up scuttling the International Development Bank efforts in toto.

Mr. REUSS. It is a road we do not want to go down and I would hope we would yote the amendment down.

Mr. DENT. Mr. Chairman, I move to strike the requisite number of words. I rise in support of the amendment.

Mr. Chairman, we are right back where we started some 25 years ago. Many of the same arguments being made now for freer trade were made 25 years ago, while these arguments may have made sense after World War II, they make no sense today. Over the part decade I have watched my State become almost barren in its job opportunities, because of this crazy policy called free trade.

What the gentleman is saying, in plain words, is "don't loan mony to a nation-that is borrowing on the basis that they need certain agricultural commodities, so as to compete with American producers and farmers." That is all the gentleman is saying. That is what we have done in every industrial nation on the face of the Earth, loan them American tax dollars, so that they can compete with us. That is plain economic non-

sense.

Right now today, 55 percent of all the shoes worn in America come from foreign countries. I remember the argument when we had the shoe legislation before us. It was to help other countries become independent. I heard President Jack Kennedy's first Fourth of July speech in the city of Philadelphia in Liberty Hall. He said that the purpose of foreign aid was to make dependent nations become independent. It was never the intent of making the United States dependent on these other nations. The very thing he was talking about has hit this Congress square in the face. Within 12 months there might not be 1 pound of sugar produced in the United States. I am not kidding about it, because we have helped other nations become sugar-producers so that today there is more sugar on hand than at any time in the world's history. There is not consumption enough to use it all, so we are going out of the sugar business just like we are going out of the shoe business, the glass business, the textile and clothing business, the specialty steel business, the rubber business, the electronics business, and yes even the automobile business.

Far too many of these workers have been laid off, permanently laid off. I defy anybody to say they are not permanently laid off. We have a little auto plant in my district from a foreign country. They decided they had to come to the United States, because they felt that the American Congress would awaken one day and stop imports into the United States, so they are staking a claim on the American market. They had to make an agreement with their government that they would manufacture cars in the United States for the U.S. market, but would not ship one of those cars back to Germany.

Do we realize that we owe more money in this country than all the other countries put together? They are asking me today to vote more funds to destroy more American industry. This administration has started off on a footing that has me disturbed; disturbed because they have already vetoed two of the four trade relief proposals—the only two in 10 years that have been sent down with any meaning. What were these proposals? They were that we change the import duty on mushrooms and to increase the tariffs on shoes.

My State was the largest producing State in the Union, and the largest single cash crop in Pennsylvania was mushrooms. Let me just tell the Members what we have done.

My mushroom growers were sent over to Taiwan.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired

(By unanimous consent Mr. Dent was allowed to proceed for 5 additional minutes.)

Mr. DENT. We went over to Taiwan, and we helped create a beautiful mushroom industry. Then, along came Korea. Then, we had a practice in which we were interested in Korea, so we sent our technicians over there and we created a mushroom industry in Korea.

Now, at a time when our needs are in a very serious position, those Korean mushrooms are cutting into production in the United States, and over the horizon we are now importing Red Chinese mushrooms into the United States.

Do any Members have any idea of what is happening here? We have \$19 billion in permanent unemployment compensation. We passed a bill in which they handed a sop to labor under the Kennedy administration, the first so-called reciprocal trade agreement, in which we gave the President power, when there was an impact that cost any jobs in the United States—any meaningful jobs in production—where the President could either set a quota, add a tariff, give unemployment compensation relief, or place an embargo; or all four remedies.

We have never used them. What have we done? I will tell the Members what we have done. We have cost the State of Pennsylvania \$80 million in the last 2 years because in 1974 a sneak punch was pulled in this Congress in the 1974 Trade Act. We shifted the burden for paying the cost of unemployed workers who lost their jobs because of imports, to the States rather than where it belongs, on the Federal Government.

I am telling the Members right in this Congress today—and I will stake my life on this—that there are between 10 and 12 million workers unemployed in the United States of America today. My figures are backed up and proved, and I will offer them to any Member of this Congress.

I study a lot and when I study, I get mad at myself, mad at this Congress, and mad at the people of these United States who believe that we can get along with an economy of distribution and consumption.

We cannot survive unless we have the three ingredients of an economy: Production, distribution and consumption. Oh, we have distribution; we have consumption; but we are losing our produc-

We have indeed become dependent. We will be paying \$5 a pound for sugar. Next year we will be paying \$5 a pound for coffee. We will be paying \$12 a barrel of oil because we have to deal with the Arab nations. Diplomacy has taken over the American economy in international trade matters.

Every President I have served under came in as an American and left as a foreigner.

I am not throwing any kind of brickbats at Democrats or Republicans. Once they become President, they become internationalists.

I was told that 25 cents an hour or 30 cents an hour was inflationary, as a minimum wage increase.

The CHAIRMAN. The time of the gentleman from Pennsylvania (Mr. Dent) has expired.

(By unanimous consent, Mr. Dent was allowed to proceed for 2 additional minutes.)

Mr. DENT. We have more money in this package here than the whole total cost of the minimum wage increase to 3 million low paid workers in America. They are earning \$1,200 a year less, than this poverty level set by our own Government. We are making it more attractive for unemployed persons to go on the relief rolls, shameful relief. I would vote for welfare until we find a job for the American worker. If we cannot give them a job, we have to be prepared to pay taxes and see that they have a house and that they have bread for their children.

I am ashamed of those in this Congress who do not understand the economics of survival. I am bitterly hurt that I have to stand in the well of the House and say that I am ashamed.

Mr. Chairman, I am not going to take much more time. Time is running out on us. I will go from here knowing that I did everything I could to make the bread-and-butter principle a real principle to the American people who work for a living. I want to save their jobs for them.

AMENDMENTS OFFERED BY MR. MOORE TO THE AMENDMENT OFFERED BY MR. MATHIS

Mr. MOORE. Mr. Chairman, I offer amendments to the amendment.

The Clerk read as follows:

Amendments offered by Mr. Moore to the amendment offered by Mr. Mathis: In Section 801(a) of the new Title VIII, immediately after the words "African Development Fund," add "the Asian Development Fund," and strike out the last sentence of Section 801(a) of the new Title VIII, and insert in lieu thereof the following: "the United States representatives to the above named institutions and associations shall oppose and vote against any loans or other financial assistance for establishing or expanding production of palm oil, sugar, or citrus crops if the United States is a producer of the same, similar, or competing agricultural commodity."

Mr. MOORE. Mr. Chairman, I ask unanimous consent that the two amendments I have offered be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. MOORE, Mr. Chairman, I have joined with the gentleman from Georgia (Mr. Mathis) in the introduction of his amendment, as does the gentleman from Florida (Mr. Kelly).

I am now offering an amendment to that amendment to correct two items that have been brought out on the floor concerning the amendment offered by the gentleman from Georgia (Mr. MATHIS).

The first is that one institution was left out of his amendment, the Asian Development Fund, which I have included in the list of institutions subject to the amendment offered by the gentleman

from Georgia (Mr. Mathis).

The second is that the last sentence of subsection (a) of the amendment is being amended by my amendment to clarify what we want done. We want our representatives in those institutions to oppose and to vote against any further loans for the establishing or the expanding of production of sugar, palm oil, or citrus crops as long as we are a producer of these same crops or similar crops.

In a few moments the gentleman from Florida (Mr. Kelly) will address himself to citrus crops and sugar. I would like to continue to address the subject of

palm oil.

Mr. KELLY. Mr. Chairman, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Florida.

Mr. KELLY. Mr. Chairman, I thank

the gentleman for yielding.

Does the language in the gentleman's amendment which reads, "production of sugar, palm oil, or citrus crops" include both the raw and processed version of the commodity?

Mr. MOORE. Mr. Chairman, the an-

swer to that question is "Yes."

Mr. KELLY. Mr. Chairman, I thank

the gentleman.

Mr. MOORE. Mr. Chairman, if I may continue now, I would point out that last year, on June 29, 1976, I offered es-sentially this same amendment, but it was geared only to palm oil production. That amendment was offered to the foreign assistance appropriation bill. At that time we had a recorded vote, and my amendment failed by only 12 votes. The vote was 198 to 210.

Following that vote a number of the Members of the House from both sides said, "If we had only known more about what your amendment was doing, we

would have supported you."

I believe that we do have more knowledge now on the subject, and I would

appreciate that support.

Since that amendment was offered, the Subcommittee on Oilseeds and Rice of the Committee on Agriculture, which the gentleman from Georgia (Mr. MATHIS) now chairs and I am a member, held hearings. Those hearings showed indisputably that something must be done. The subcommittee chaired by the gentleman from Texas (Mr. GONZALEZ), who is handling this bill today, had hearings in the last Congress, and evidence was presented showing that something had to be done.

I think we have studied this issue to death. It is now time to take some action.

Basically, our soybean crop, next to feed grains, represents the biggest item the U.S. exports. If we do damage to that crop, we are doing irreparable damage to our balance of trade and our economy. We have seen this happen with other items that are important to our economy, as previous speakers have attested

Mr. Chairman, we are the only major importing nation today that does not have any import or tariff quotas on palm oil. We have no such protection.

Mr. MATHIS. Mr. Chairman, will the

gentleman yield?

Mr. MOORE. I yield to the gentleman from Georgia.

Mr. MATHIS. Mr. Chairman, I thank the gentleman for yielding.

The distinguished chairman of the full committee expressed reservations about my amendment because he said it was too all-embracing, and I admit it was all-

The amendment offered by the gentleman from Louisiana (Mr. Moore) to the amendment offered by the gentleman from Georgia would limit these restrictions to citrus crops, to sugar, and to palm oil; am I correct in that interpretation?

Mr. MOORE. Mr. Chairman, the gentleman is entirely correct. We limit it now to simply three crops, on which the evidence is abundant to the effect that these loans are causing unfair competition to the producers of these crops and putting our people out of business.

Mr. MATHIS, Mr. Chairman, if the gentleman will yield further, the purpose of doing this, then, was to ease the reservations held by the distinguished committee chairman, the gentleman from Wisconsin (Mr. REUSS)?

Mr. MOORE. Most assuredly.

Mr. MATHIS. Mr. Chairman, I thank the gentleman.

Mr. MOORE, Mr. Chairman, I wish to continue.

The palm oil crop is something that is being supported extensively by loans from these international lending institutions that are being partially funded by taxpayers as in this bill. Palm oil coming into this country is being bought by American consumers thinking that it is a healthful vegetable oil. They are misled. The facts gathered by the U.S. Department of Agriculture show that palm oil is actually higher in saturated fats than any domestic vegetable oil and even animal fat. The highest saturated oil produced in this country in the category of vegetable oil is cottonseed oil, and that contains about 25 percent saturated fat. The average margarine found in grocery stores is about 26 percent and animal fat is 38 percent.

Palm oil is 45 percent, so I must submit to the Members that the American consumer does not realize that this is not a vegetable oil like one produced in this country but one that is produced elsewhere and is quite unhealthy.

More than one-fourth of all the world's palm oil production today is directly attributable to these loans. With the loans that are in the pipeline now, we can expect to increase that so onehalf of the total world's production of palm oil will be due to these loans. Twothirds of all of that palm oil is being exported, much of it to the United States

Production of our domestic oilseed crops, safflower, cottonseed, peanut, soybean, corn, and sunflower, are being displaced by this increased production of palm oil.

The U.S. Department of Agriculture has estimated that if it continues to increase, in 10 years, 15 million bushels of soybeans, or over one-half million acres of soybean production, will be displaced and put out of business.

After I offered this amendment last year we received assurances from the Treasury Department and the U.S. Department of Agriculture that they were going to do what they could to exert pressure on these banks to no longer make any further loans for palm oil.

As a matter of fact, Mr. Chairman, one Member even assured us that no further loans were going to be made in the year 1976. This week a \$20 million World Bank loan was just announced and approved, going to the Ivory Coast to increase palm oil production.

This proves that we can no longer depend on anything in the nature of assurances and that we have to have some sort of legislation to handle this situation. This amendment appears to be the best vehicle to get at this situation.

Mr. MAHON. Mr. Chairman, will the

gentleman yield?

Mr. MOORE. I am happy to yield to the gentleman from Texas. Mr. MAHON. Mr. Chairman, I thank

the gentleman for yielding.

I believe the gentleman from Louisiana (Mr. Moore) is making a genuine contribution through the remarks he has made. I remember supporting the gentleman last year in regard to this matter. I think the matter justifies the attention of the Members of the House. I hope the amendment will be agreed to.

Mr. MOORE. Mr. Chairman, I thank the gentleman from Texas for his remarks.

Mr. Chairman, I will conclude by saying that we all believe in free trade, but it is not free trade when we take American tax dollars, send them overseas at almost no interest, a rate of three-quarters of 1 percent, for over 50 years, and permit the people overseas to compete with our own people. Our people cannot get loans for anything like that. That is unfair government subsidized competition to our great detriment.

Mr. Chairman, I urge the adoption of my amendment to the Mathis amendment and then I hope the Mathis amendment as amended will be agreed

JOHNSON of Colorado. Mr. Chairman, will the gentleman yield? Mr. MOORE. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. Mr. Chairman, I thank the gentleman from Louisiana for yielding.

I believe the amendment offered by the gentleman from Louisiana is a sounder approach than what the Maris

amendment was.

I offer the gentleman my support, as a member of the subcommittee that heard all of the testimony with regard to palm oil. I do not have any soybeans in my area but I think this is a problem that we ought to deal with. With regard to our sugar industry the circumstances are such that our domestic producers are in dire straits, and this alone would justify our support of the amendment. I urge that the amendment be adopted.

Mr. KELLY. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, the bill presently before the committee increases contributions to international development banks and institutions. The United States provides nearly 25 percent of the financial support for these agencies. Our workers and producers are the direct source of this money.

The field of agriculture offers a clear

example of the problem.

Agriculture is our strong hand in world trade and exports. Exports in agriculture amounted to \$22 billion last year. That was 20 percent of this Nation's total exports. Yet the agencies that are supported in this bill are heavily involved with the development of agriculture in nations that produce mostly, or only, for export and specialize in crops that are in direct and indirect competition with the U.S. farmers. Sugar, palm oil, and citrus are examples. Each of these commodities is primarily an export commodity of the producing nation, they are not commodities that are primarily produced for local consumption in the producing nation.

Brazil in 1976 received \$59 million in loans with no interest from these same agencies.

Brazil currently is the world's largest exporter of frozen concentrated orange juice. Brazil in 1975 exported orange concentrate equal to 121.3 million gallons of single strength juice, much of it to the United States.

Mr. TSONGAS. Mr. Chairman, will the

gentleman yield?

Mr. KELLY. I yield to the gentleman from Massachusetts.

Mr. TSONGAS. I thank the gentleman for yielding.

Is the gentleman saying that all of this \$59 million was for citrus development?

Mr. KELLY. I am saying that it is my understanding that a portion of the \$59 million was used for the purpose of producing and processing citrus prod-

Mr. TSONGAS. Can the gentleman give us a figure?

Mr. KELLY. As to the portion of the \$59 million?

Mr. TSONGAS. If any.

Mr. KELLY. I cannot. I will be glad to furnish that to the gentleman at a later time if he is interested.

Mr. TSONGAS. Hopefully before the vote takes place.

Mr. KELLY. Perhaps I will be able to do that.

There was \$7½ million furnished to Mauritius in no-interest loans. This country produced 750,000 tons of sugar. Fiji received \$12 million for sugar production and exported 260,000 tons. While the U.S. sugar industry is under heavy pressure from imports and deflated world

U.S. producers of vegetable oil products face losses due to the importation of palm oil from such countries as Malaysia and Indonesia.

And so it goes with the well-inten-

We set out to help the world and wind up hurting our own workers, our own producers, both directly and indirectly. We hear the results as pleas for extended unemployment benefits, training programs, increased price supports for the farmers, import quotas, and higher tariffs.

For the reasons that I have stated, I support the amendment which, if adopted, will require that the U.S. representatives to the institutions covered by this act shall oppose all loans or other financial assistance for projects dealing with the production of agricultural products for export which have an adverse effect on U.S. producers of those prod-

Clearly, it is time now for the Congress of the United States to look to the interests of its workers, of its farmers, of its producers, as well as to the world good. Imposing tariffs and trade barriers has great limitation, and this is certainly true in the thinking of many who believe in free world trade.

The CHAIRMAN. The time of the gen-

tleman has expired.

(By unanimous consent, Mr. Kelly was allowed to proceed for 1 additional minute.)

Mr. KELLY. But financing our competition in this context should make no sense to any Member of Congress.

Mr. TSONGAS. Mr. Chairman, will the gentleman yield?

Mr. KELLY. I will be glad to yield to the gentleman from Massachusetts.

Mr. TSONGAS. I thank the gentleman for yielding.

I believe I have the information the gentleman was referring to. There were two loans to Brazil last year. Neither of them was an IDA loan. They were World Bank loans, so they were not at low-interest rates; they were at normal market rates. One loan was \$40 million.

Mr. KELLY. I thank the gentleman for that information. Can the gentleman assure the Members of this Congress that the money given to Brazil will not be used to further citrus growth and processing? If he cannot, then I think what he has just given us makes no difference.

I thank the gentleman, and I yield back the remainder of my time.

Mr. TSONGAS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I will not take all of the time. I would just like the courtesy of putting into the RECORD the two loans. The first was for \$40 million in various agricultural products, none of which are involved with citrus. The second was for \$12 million, which refers to a rural

development project co-op, again not related to citrus.

Mr. KELLY. Mr. Chairman, will the gentleman yield?

Mr. TSONGAS. I yield to the gentleman from Florida.

Mr. KELLY, I thank the gentleman for yielding, but clearly the gentleman can give no assurance to the people of the United States who pay the bill for all this that the money such countries as Brazil will get by this bill will not go to production of citrus, soybeans, and other products that will be in competition with the American producers of those products and our farmers.

Mr. TSONGAS. I simply wanted to correct the record on the Brazilian figures. The gentleman knows 26 percent of the world production of sugar goes

to the United States.

Mr. VANIK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I want to take this time to set the record straight on some of the issues that have been discussed in this debate. I am placing in the REC-ORD today a statement that I invite my colleagues to examine relating to our country's trade posture. America had a positive trade balance of \$26.5 billion this year except for oil payments of over \$30 billion for imported oil. So if we exclude oil, which is a separate problem. the balance of trade is \$26.5 billion in our favor, and I think that is something we have to recognize.

I urge my colleagues to look at these

and test their accuracy.

There is just one other fact on the sugar problem. The sugar industry itself provides a substantial portion of the reason that sugar sales are down and the market is depressed. A few years ago the industry said we are going to have to get accustomed to high prices for sugar. The price went to 64 cents a pound, and the consumers of every community in America paid incredible sums for what many believed to be a manipulated market.

What did they do? The American people changed their dietary habits, reduced their sugar consumption and discovered that they could live better with less sugar and enjoy better health. This change in American dietary demand stimulated by high prices have lost 22 percent of market demand forever. Unacceptable high prices for sugar forced commercial producers to turn to alternative sources of supply, and 69 percent of the market in sugar has been converted to the use of corn sweeteners which are made in the United States.

Sugar is a situation in which an industry permitted a price to go wildly out of line and they have permanently lost a market because of this costly abuse of the American consumer.

There are other reasons that are involved in some of the problems of sugar and I think we ought to fully debate them. For the present I wanted to set the record straight on statements which were made in the course of this afternoon's debate.

Mr. KELLY. Mr. Chairman, will the gentleman yield?

Mr. VANIK. I yield to the gentleman from Florida.

Mr. KELLY. Mr. Chairman, the gentleman certainly is not suggesting that because the price of sugar on the world market increased we should now punish the sugar producers of the United States?

Mr. VANIK. I think we ought to examine into the reasons why sugar prices went out of line. We ought to explore why the market was so beautifully controlled. When the prices were going up through the sky, the farmers said: "Give us a free market," and the price rose to 64 cents a pound. Now, with the price depressed they want a controlled market and they want to restore a market they destroyed a few years ago. The sugar producers simply cannot have it both ways-a free market when prices are rising and a controlled market when prices fall. I have not forgotten the extraordinary abuse of the American consumer and I am not going to allow it to be forgotten.

Mr. KELLY. Mr. Chairman, if the gentleman will yield further, I join the gentleman in suggesting we should look into the whole question of sugar, but I think there is no reason to finance the competition of the American sugar industry. The sugar industry may very well be coming in here to have price supports and we should not further exacerbate the situation by financing their competition in the production of sugar.

Mr. VANIK. I do not know that we should provide price supports. We cannot allow them to abuse the American consumer with high prices and then demand supports. They cannot have it both

The CHAIRMAN. The question is on the amendments offered by the gentleman from Louisiana (Mr. Moore) to the amendment offered by the gentleman from Georgia (Mr. Mathis).

The amendments to the amendment were agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia (Mr. Mathis), as amended by the amendments offered by the gentleman from Louisiana (Mr. MOORE).

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. MATHIS. Mr. Chairman, on that ask for a recorded vote and pending that, Mr. Chairman, I make the point of order a quorum is not present.

The CHAIRMAN. The Chair will count.

RECORDED VOTE

Mr. MATHIS. Mr. Chairman, I ask unanimous consent to withdraw the point of order of no quorum, and I demand a recorded vote.

The CHAIRMAN. The gentleman from Georgia (Mr. Mathis) asks unanimous consent to withdraw his point of order of no quorum.

Is there objection to the request of the gentleman from Georgia?

There was no objection.

The CHAIRMAN. The gentleman from Georgia has demanded a recorded vote. A recorded vote was ordered

The vote was taken by electronic device, and there were-ayes 218, noes 145, not voting 70, as follows:

AMENDMENT OFFERED BY MR. MILLER OF OHIO

Mr. MILLER of Ohio, Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MILLER of Ohio: Page 7, immediately after line 22, insert the following new title:

TITLE IX-RESTRICTION ON FINANCIAL ASSISTANCE

SEC. 901. Whenever, on or after the date of enactment of this Act, the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Inter-American Development Bank, African Development Fund, or the Asian Development Bank provides, directly or indirectly, any financial assistance to Cambodia, Cuba, Laos, or Vietnam, any United States monies appropriated to such institution on or after such date of enactment shall revert back to the United States.

Redesignate the succeeding section accordingly.

Mr. REUSS. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Ohio. Is the gentleman from Wisconsin requesting me to yield for the purpose of asking to limit debate?

Mr. REUSS. Yes, Mr. Chairman. What

I would like to do, if the gentleman will yield, is to propose that we limit debate to 10 minutes on each of the amendments now pending, including that of the gentleman from Ohio and I believe the other one will be offered by the gentleman from Michigan (Mr. Brown)

The CHAIRMAN. Does the gentleman

from Ohio yield?

Mr. MILLER of Ohio. I yield for that purpose, Mr. Chairman.

Mr. REUSS. I thank the gentleman from Ohio for yielding to me.

I would ask the gentleman from Michigan (Mr. Brown) if I am correct that his is the other outstanding amendment?

Mr. BROWN of Michigan. Mr. Chairman, if the gentleman from Ohio will yield, it is my understanding that the gentleman from Ohio (Mr. MILLER) and I would have 5 minutes to present our amendments and then 5 minutes on each of the amendments for the opposition?

Mr. REUSS. The opposition to each of these amendments would also be permitted 5 minutes, to be divided by the

Chair.

Mr. BROWN of Michigan. I have no objection.

Mr. MILLER of Ohio. Mr. Chairman, I have no objection.

Mr. REUSS. Mr. Chairman, I ask unanimous consent that that request be adopted, that all debate be limited to 10 minutes on each of the remaining amendments

The CHAIRMAN. Is there objection to the request of the gentleman from Wis-

consin?

There was no objection.

Mr. MILLER of Ohio. Mr. Chairman and colleagues, what my amendment does is to indicate very plainly, that none of the funds in the multilateral development assistance institutions shall be used in order to aid Communist Cambodia. Communist Cuba. Communist Laos, or Communist Vietnam.

I believe that we have the right to this because, as an example, the United States is now contributing about

25 percent to the World Bank.

I think it is vitally important that we consider the fact that we have 128 member countries in the World Bank, and we, the United States of America, contribute 25 percent of the total funds of that Bank. If we are going to contribute, we in turn should have a great deal of input in the decisionmaking process.

We have one country as an example, Vietnam, whom we have requested to account for our MIA's. Oh, yes, we had a group who went to Vietnam not long ago, but they certainly did not receive a full acounting of our MIA's. Instead of accounting for our MIA's according to humane standards of decency, Vietnam demands that America pay millions of dollars of tribute to her while dangling clouded hopes before our long-suffering MIA families. This is tragic.

I do not believe that the American taxpayers want their tax dollars used to aid countries that are truly suppressing the human rights of the individuals within their countries.

Neither do the American people have any great desire to financially support countries that export violence and disruption outside of their borders. Cuba

is such an example. At the present time Communist Cuba has troops in Angola. I have heard rumblings from the other side of the Capitol, from the other body, and the White House that we should normalize our relationship with Cuba. The Members know what that normally means: We will loan them money.

I ask for the Members' support for the amendment because, in my judgment, the vast majority of American citizens strongly oppose the utilization of U.S. funds for the purpose of perpetuating such notoriously repressive regimes in control of Cuba, Laos, Vietnam, and Cambodia. Yes, Mr. Chairman, the U.S. taxpayer objects to this. I object to it and I urge my colleagues to stand up for oppressed peoples, the U.S. taxpayers, principles of justice and decency, and the honor of the MIA's and their families by voting against aid to regimes which flagrantly flout and disregard minimum standards of human rights and compassion for their own people and peoples of other nations. This is an important vote. Make no mistake about it. Our national honor is at stake.

Mr. REUSS. Mr. Chairman, I rise in opposition to the amendment.

I shall be brief. I rise in opposition for several reasons. For one thing, Cuba is not even a member of any of these agen-

Second, the Southeast Asian countries, notably Vietnam, are members of the Asian Development Bank. However, it is simply contrary to the charter of those institutions that U.S. money revert to the United States from those institutions simply because we oppose a particular vote

But most important of all. I am genuinely fearful that some of the excellent work being done on our prisoners of war and missing in action is likely to be undone by action of this nature at this

Mr. Chairman, at this time I should like to yield to the distinguished gentleman from Mississippi (Mr. Montgomery) who has done so much for our missing

Mr. MONTGOMERY. Mr. Chairman, I also rise in opposition to the amendment. As the chairman said, this amendment is not workable anyway. The international banks are not going to be able to return the funds once the funds are given to them by the United States

The timing of the amendment could hurt the work of the Presidential Commission on the MIA's, and we have just returned from Hanoi. Mr. Chairman, having served on this Presidential Commission-and I felt it a great honor to have the privilege to represent the House of Representatives and the Congress-I really believe we have a chance to get additional information from Vietnam and some information from the Laotian Government on the missing

In my opinion, the Vietnamese and the Laotians do not have a lot of information, but they do have some information and we are entitled to it.

While we were in Hanoi, we worked

out technical agreements with the Vietnamese and with the Laotian Government that would speed up the process of finding these remains.

I think that this amendment will slow down the work we did in Hanoi, and I am told that the Paris talks, pertaining to the missing and other matters, will start within the next 3 weeks.

The amendment is not workable. It could hurt our efforts we had in Vietnam on the MIAs.

I would like to say the gentleman from Ohio (Mr. MILLER) certainly has no intention of trying to slow down the work on those missing and getting this information on the missing. He has been one of our leaders in working for the MIAs, but it is a bad amendment. The timing is wrong, and it is not going to help our situation as far as our finding out what happened to these Ameri-

Mr. REUSS. Mr. Chairman, I hope the amendment will be voted down.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. MILLER).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. MILLER of Ohio. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were-ayes 165, noes 189. answered "present" 1, not voting 78, as follows:

So the amendment was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. BROWN OF MICHIGAN

Mr. BROWN of Michigan. Mr. Chairman. I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Brown of Michigan: Add a new title immediately pre-BROWN of ceding the last title, to read as follows:

TITLE IX-PRESIDENTIAL CERTIFICATION

Notwithstanding any other provisions of this law or other laws pertaining to the participation by the United States in the financial institutions named in this law, the United States representative on the board of control of each of these institutions, or his delegate, shall not vote for or support granting of any loan or extension of assistance to any country, or for a project in any country, unless the President of the United States certifies that such country is in conformance with his views concerning the extension and protection of human rights with respect to its citizens, others residing there, or visitors to such country and, in addition, certifies that such country does not engage in, or permit any of its citizens, personal, corporate, or otherwise, to engage in any conduct in support of any discriminatory boycott against any other nation or persons on the basis of race, creed, color, religion, or religious beliefs.

Mr. BROWN of Michigan. Mr. Chairman, in the course of the debate this afternoon on this legislation many Members have spoken out, including the gentleman from New York and the gentlewoman from New Jersey, with respect to the importance of letting the President conduct foreign policy, especially as it relates to the financial institutions named in this legislation.

I quite concur with them, and I think that probably the necessity for many of the amendments in the same or similar areas that have been adopted this afternoon would be nullified if my amendment were adopted.

In short, the adoption of my amendment would provide the President with a tool, a means for putting into effect the policy and beliefs which he has respectively proposed and which he holds and concerning which he has been most outspoken in his public statements and dealings with other nations and dissi-

It is clear that nations seeking assistance from these institutions would be familiar with the President's beliefs and positions on these issues and knowing his certification of conformance might be essential to the receipt of such assistance, they would attempt to come into conformity with his beliefs, therby accomplishing the ends the President has been seeking.

Mr. Chairman, I think that those Members who spoke earlier this afternoon in opposition to some of the rather restrictive and constrictive amendments that were specifically offered, some of

which were adopted, can support my amendment in complete confidence that the President will have the authority to determine what countries should receive assistance under this legislation as being really in conformance with the President's beliefs both with respect to human rights and with respect to prohibiting boycotts. I think that this is a position that all of us can support.

But beyond that, let me just conclude by saying that whereas in the past I have supported our participation in these multilateral financial institutions-and I had intended to today-I feel, however, the extending of what amounts to a substantially blank check for participation in the African Development Bank, when such participation has not been requested by either the members of the African Bank or the administration, as far as that goes, prompts me to withhold my support on this occasion.

Mr. Chairman, I support these institutions. I think the President is the one who should exercise the discretion and have the opportunity to say yes or no on the assistance provided in these bills. So, therefore, I urge a "yes" vote on my amendment.

Mr. TSONGAS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the committee previously adopted a section in this legislation increasing protection for human rights. To accept this amendment would damage greatly the commitment that we have made to human rights in this

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. TSONGAS. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, I believe that if there is anything that would turn around the progress that has been made on human rights, nothing could do more than this single amendment.

Adoption of this amendment would also turn around the progress that Congress has made in trying to assert its role in the formulation of foreign policy.

This amendment says that this has to be in compliance with the President's views. That is the thing we are trying to get away from, the imperial Presidency that dictates all of our foreign policy.

So, Mr. Chairman, I just wish to urge the Members to defeat this amendment.

I repeat that I cannot think of anvthing that would do more to damage the progress we have made in the field of human rights than this amendment.

Mr. FRASER. Mr. Chairman, I further wish to express my serious concern about this amendment in that it does not restrict the problem of the violation of rights, about torturing people and imposing inhuman indignities upon a per-

Further, the amendment makes no provision for making loans to needy people notwithstanding that their government may be engaged in bad practices. It is a mischievous amendment and would do great harm to the progress we have made in human rights.

I urge defeat of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. Brown).

The amendment was rejected.

Mr. ROUSSELOT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in opposition to H.R. 5262, the International Financial Institutions Act.

There are three questions which need to be addressed to the proponents of this legislation and have not been properly answered for the whole House.

First, we are about to authorize over \$5.2 billion in contributions to various international institutions, approximately \$2 billion of which represents "callable" capital. This appears to be the first installment in a series of contributions to various international funds to prove balance-of-payments assistance, commodity price supports, "safety nets," and more. Can the Chairman or any other advocate enumerate the various proposals that are likely to be made and give us a total dollar figure, to the nearest \$10 billion, so that we may see the whole shopping list before we decide to buy the first item? Probably not, because even the Chairman is not totally aware of the full long-range costs.

Second, an article in the April 4, 1977, edition of Newsweek, entitled "Commodities: A Better Idea?" stated:

The LDC's prefer a common pool of funds, totalling at least \$3 billion and underwritten mainly by rich countries, to finance buffer stocks for eighteen different commodities. U.S. officials believe a common fund would require many times that amount to be effective.

The same article said that two commodities; namely, tea and jute, were in such chronic oversupply that they could not be stabilized. Let me quote from major and important portions of the April 4 article in Newsweek magazine:

COMMODITIES: A BETTER IDEA?

Buried deep in Jimmy Carter's speech to the United Nations, the proposal sounded like another vague bit of diplomatic jargon—and it slid past with hardly any notice in the U.S. press. But when he said he was "willing to consider" agreements to stabilize world commodity prices, he was signaling a major break with past U.S. policy and an offer that, if it comes to anything, could affect the world's economy for decades.

For the less-developed countries (LDC's) that produce most of the world's commodities, the benefits of stabilized prices would be obvious. The dizzying fluctuations of world markets (charts) have crippled the LDC economies and hampered their domestic

development. Until recently, the rich nations that buy commodities haven't wanted to tamper with the markets. But as their loans to DLC's pile up, they stand to lose, too: the price gyrations jeopardize the loans, threaten a financial crisis among major Western banks and thus endanger the whole fabric of global trade.

The first concrete evidence of the shift in U.S. policy may come as early as next week. American trade officials are scheduled to confer with their opposite numbers from Europe and Japan to draw up proposals for a new international sugar agreement between rich nations and the sugar-exporting LDC's. When the U.S. plan is presented next month at a meeting of the United Nations Conference on Trade and Development. Newsweek learned, it will include a recommendation that sugar prices be set within a specific range—probably 12 to 20 cents a pound. But in the initial stage, the U.S. is prepared to go only so far. The Administration argues that the range must be firmly agreed upon before there is any talk of a sugar "buffer stock" to enforce the stabilized price-and that seems certain to sit badly with many LDC's. "We don't expect the militants among the LDC's to see our position as forthcoming," says a top U.S. trade expert, "but when they see that this is all they're

going to get, we hope they'll negotiate."

Buffer: The LDC's prefer a common pool of funds, totaling at least \$3 billion and underwritten mainly by rich countries, to finance buffer stocks for eighteen different commodities. U.S. officials believe a common fund would require many times that amount to be effective—and in any event, they are prepared to discuss agreements only on a smaller number of commodities. But they regard the idea as basically sound. Buffer stocks could be sold off when demand pushed up prices; in periods of low prices due to excess supplies, the buffer stockpile would

buy from commodity producers.

LDC's wouldn't be the only ones that stand to gain from such an arrangement. U.S. sugar producers, who are losing money because world sugar prices have fallen to less than 11 cents a pound, would certainly benefit from a sugar agreement that would stabilize prices at 12 to 20 cents a pound. And American grain exporters will be helped by a wheat agreement now being negotiated in London. Washington maintains that the purpose of the pact is to create an international wheat reserve-financed by consuming as well as producing countries-that can be tapped to supply needy nations during periods of severe crop failure. But the agreement could also help to stabilize wheat prices, and that can only work to the advantage of American farmers.

In theory, at least, consumers stand to gain as well. Sugar prices, for example, might rise slightly as a result of a stabilization agreement. But the extra expense may turn out to be worth it—if the agreement keeps producers from going out of business in times of glut, leading to another shortage

when the price soars to nearly 60 cents a pound, as it did in late 1974.

But would such agreements really keep prices at reasonable levels over the long run? A number of experts aren't so sure. In practice, says William Jiler, president of the Commodity Research Bureau, commoditystabilization plans "have provided only price floors, never price ceilings." The reason is that "any time prices reach the supposed ceilings, the producers simply say. 'To hell with it,' and go for the higher free-market price." Thus, Jiler says, the agreements are basically inflationary. For that reason, the U.S. will insist on tight controls on all stabilization pacts. "You [have to] provide penalties for any producer who fails to sell from buffer stocks when the formula dictates," insists a top Treasury expert.

Bananas: But even with such controls, stabilization agreements probably are unsuited to certain commodities. For one thing, notes a U.S. official, "you can't begin to think of buffer-stock arrangements for perishables like bananas. And there can't be stabilization for products in chronic oversupply like tea or jute. All a buffer stock would be able to do is buy: You'd have to stage a giant Boston Tea Party to get rid of your stocks." Thus, the U.S. is willing to discuss stabilization agreements only for a handful of commodities—among them sugar, natural rubber, tin, cocoa, bauxite and copper.

More important, says Treasury Secretary Michael Blumenthal, "there is no agreement that is going to prevent the price of a commodity from going through the roof when you are faced with a prolonged shortage." Consumers, he says, will always be at the mercy of developments such as the Brazilian frost, which has sent coffee prices soaring.

Despite these pitfalls, there's little doubt that commodity-stabilization agreements would produce real benefits for the troubled LDC economies. Until now, the question has been whether rich nations could ever be persuaded that it would be to their benefit, too—and as the IDC's see it, the Carter Administration's subtle shift in policy is a solid step in the right direction. It might even signal an idea whose time has come.

-ALLAN J. MAYER with RICH THOMAS in Washington

I note from materials provided by the African Development Bank, the smaller parent of the African Development Fund, that the Bank has provided six loans to Uganda and that the most recent of which was approved on October 28, 1976, in the amount of 5 million units of account—approximately \$4.5 million—for "erection and installation of tea factories." Let me review African Development Bank records on that subject:

FROM: AFRICAN DEVELOPMENT BANK RECORDS

My question is, Why is the Bank financing tea factories when there is a glut of tea and why is it doing all this

activity in Uganda?

Finally, I note that the African Development Bank has also provided a loan for 2.5 million units of account—approximately \$2.25 million—for "telecommunications links between Brazzaville and Impfundo," including "a direct visibility shortwave relay link * * to serve a support for the transmission of television programmes."

Is the Bank unable to find better uses than this for its funds? Maybe they want to watch "Captain Kangaroo."

H.R. 5262 provides for authorizations of \$5.225 billion for increased contributions to various international development institutions.

It is our belief that this legislation needs to be considered in light of the amount of economic assistance which the United States has already provided since World War II, and the diminished ability of the United States since the 1973 OPEC oil embargo to continue to pro-

vide such assistance.

During the years 1946–75, the United States provided a net total of more than \$12 billion in economic assistance to Latin America and another \$4.75 billion to Africa. Projections provided in the President's budget for fiscal year 1978 called for new obligational authority of \$10.293 billion and for additional outlays of \$7.847 billion. The Committee on the Budget has approved \$9.543 billion in additional obligational authority and \$7.397 billion in new outlays for fiscal year 1978. We note also that there are existing unobligated balances in this category in excess of \$11 billion.

This level of foreign economic assistance will have to be reduced to some extent if a significant reduction in the budget of the Federal Government is to be made during the next 3 years to achieve the President's announced goal of a balanced budget at the end of that

period.

The following additional comments are addressed specifically to the proposed \$150 million contribution to the African

Development Fund:
First. The \$150 million for the African
Development Fund added to H.R. 5262
during subcommittee markup was not
requested by the administration when it
testified on the bill, no hearings were
held on this proposal, and the amount
requested bore no relationship to past
U.S. contributions or negotiated replen-

ishment agreements.

Second. Not all of the member countries of the African Development Bank itself have fully paid their own subscriptions to provide paid-in capital for the Bank. This point was established as a result of an answer provided by Hon. Charles A. Cooper, Assistant Secretary of the Treasury for International Affairs, in response to a question submitted by Subcommittee Chairman Henry B. Gonzalez during the last hearings on the African Development Fund, which were held in 1975.

Question. Are all of the subscriptions of the African countries of the Bank up to date?

Answer. The AfDB has had a problem with arrearages on paid-in capital but has negotiated settlements with the delinquent members and the amount of arrears has been reduced from 40 percent of paid-in capital in 1969 to 13 percent of paid-in capital in 1974. In April 1975, the total arrears were \$20 million compared to \$24 million the previous year.

One country, Egypt, which accounted for 70 percent of all arrearages, has formally agreed to a 3-year settlement schedule. Settlements have also been negotiated with Ethiopia and Senegal. Chad and the Central African Republic have yet to sign settlement agreements.

Third. The United States is being asked to contribute capital to the African Development Fund under conditions which sharply restrict this country's ability to influence decisions regarding assistance to be provided by the Fund. Unlike other multilateral international financial assistance institutions in which the United States participates, the AfDF provides that one-half of the voting power is to be exercised by the African Development Bank. This arrangement leaves only the remaining half of the voting power to be exercised in proportion to the amount of capital contributed to the Fund itself. In other words, the United States has the opportunity to make a contribution of money to the AfDF, but the weight of its influence will be confined to one-half of the proportional amount of its contribution.

It is high time for Congress to demonstrate that it is acutely aware of the terms and conditions, as well as the amounts, of U.S. contributions to international economic assistance institu-

tions.

It is my hope that the House will vote down this overbloated authorization.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

Page 7, line 23-

TITLE IX—EFFECTIVE DATE

SEC. 901. This Act shall take effect on the date of its enactment, except that no funds authorized to be appropriated by any amendment contained in title I, II, III, or IV may be available for use or obligation prior to October 1, 1977.

COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

Committee amendment: Page 8, line 1, strike out "IV" and insert "IV, or V".

Mr. WRIGHT. Mr. Chairman, I move to strike the last word, and I rise in support of the committee amendment.

Mr. Chairman, I rise in support of this legislation. At this particular moment in human history it is vitally important that the United States give a convincing example of its continuing support for the development of the world's underdeveloped national economies.

Shortly following World War II when we launched the Marshall Plan, it was credited by Winston Churchill as "the most unsordid act in human history."

Since that time the emphasis has changed away from helping to rejuvenate and rebuild the war-damaged portions of Europe into trying to help build a basic economic infrastructure in those finan-

cially malnourished areas of the world damaged by a cruel history.

The emphasis has changed further from outright gifts to repayable loans, and from unilateral help given only by the United States to multilateral loans to which many of the more fortunate nations jointly contribute.

In that specific connection it is interesting to note that our share of the contributions loaned through these multilateral development institutions has steadily declined. Whereas previously about 35 percent of the total funds were put up by the United States directly, today for the World Bank it is only 19 percent and for the Asian Development Bank it is only 16 percent. This is because other nations, following our initial example, have contributed in growing numbers and in growing dollar volumes for the assistance of those less fortunate than themselves. We are all wrapped up in this together, and the world increasingly recognizes it.

There are in the world today a little over 1 billion people between the ages of 5 and 20. That is the next generation. If we were to take a representative cross section of 100 of those people, 56 of the 100 would be from Asia—56 from Asia—15 would be from Western Europe, 9 would be from Latin America, 8 would be from Africa, 6 from the Soviet Union, and only 4 from the United States. Our future is so inseparably interlinked with that of the developing world that it cannot be considered apart.

This, I think, is what President Carter was talking about when he wrote his letter to the Congress in connection with this very bill. He congratulated the committee upon the provisions of this legislation and said:

This legislation is an integral part of my administration's foreign policy program . . . This bill, is related to our national interest . . The future of the United States will be affected by the ability of the developing nations to overcome poverty and achieve steady economic and social development . . . The International Development Banks are intimately involved in this effort.

I know there has been some apprehension over the President's recent emphasis upon human rights throughout the world. Let me see if I can put in perspective what it is that the President is attempting to do in his role as spokesman to the world community for this Nation. He is trying to recapture an initiative which, unfortunately, has been lost to nations which do not deserve it.

In the last century when a popular people's movement wanted to replace a despotic government, we were the model. The emerging leaders looked to America; men like Bolivar, O'Higgins, and San Martin looked to the United States and modeled their infant republics after ours. As late as the 1920's Sun Yat-sen in his revolution in China looked to the United States not only for political example but for moral inspiration.

So this is what we are trying to recapture. Surely at this very time in history when other nations have followed our example and are in increasing numbers and in increasing amounts supporting the worldwide effort to help the less fortunate peoples to achieve some stability that will contribute to the stability of the world, it would be most untimely for the United States to draw back from that which we ourselves set in motion

Rather it is a time for us to recognize that maybe it is not our role to be the envy of the world.

How much better-how much betterthat instead we can be an inspiration to the world.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(On request of Mr. STANTON, and by unanimous consent, Mr. WRIGHT was allowed to proceed for 1 additional minute.)

Mr. STANTON. Mr. Chairman, will the gentleman yield?

Mr. WRIGHT. I yield to the gentle-

man from Ohio.

Mr. STANTON. Mr. Chairman, I just wish to associate myself with the majority leader and to point out to the Members here in the Committee that the bill we are about to vote on and the figures that have been affirmed really are not solely the product of the Carter administration but involve also months and years of preparation on the part of the previous administration as well as this one. I think it is a bad thing whenever we get down to a thing in recent years that we must support a bill when one party is in the White House and we do not support it when the other party is in. It is clearly the most responsible vote when we vote to help the very poorest of the poor people in the world.

Mr. WRIGHT. Perhaps instead of describing it narrowly as an administration initiative, by our votes today we can put it in the broader context of an American initiative. That, I am sure, is what the President earnestly wants it to be.

The CHAIRMAN. The question is on

the committee amendment. committee amendment The was

agreed to. The CHAIRMAN. There being no further amendments, under the rule, the

Committee rises. Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. Duncan of Oregon, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5262) to provide for increased participation by the United States in the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Asian Development Bank and the Asian Development Fund, and for other purposes, pursuant to House Resolution 473, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment?

Mr. ASHBROOK. Definitely, Mr. Speaker. I demand a separate vote on

the committee amendment as amended by the Badillo amendment.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put them en gros.

The amendments were agreed to. The SPEAKER. The Clerk will report the amendment on which a separate vote has been demanded.

The Clerk read as follows:

Committee amendment as amended: Title VI, subsection (e), in lieu of the matter proposed to be inserted by the Committee Amendment, insert the following:

(e) In addition, the United States Government, in connection with its voice and vote in the institutions listed in subsection (a) is, authorized and directed to vote against any loan, any extension of financial assistance or any technical assistance to any country which engages in a consistent pattern of gross violations of internationally recognized human rights, including torture or cruel, inhumane or degrading treatment or punishment, prolonged detention without charges, or other flagrant denial of the right to life, liberty, and the security of person. and including providing refuge to individuals committing acts of international terrorism such as hijacking of an aircraft unless such assistance is directed specifically to pro-grams which serve the basic human needs of the citizens of such country.

Mr. ASHBROOK (during the reading). Mr. Speaker, I ask unanimous consent that the amendment be considered as read.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

Mr. CARNEY. Mr. Speaker, I object. The SPEAKER. Objection is heard. The Clerk will read the amendment.

The Clerk completed the reading of the amendment. The SPEAKER. The question is on the

amendment.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused. So amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. REUSS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken by electronic device, and there were-yeas 194, nays 156, not voting 83, as follows:

Mr. McCormack with Mr. Perkins. Mr. Patterson of California with Mr. Charles H. Wilson of California.

Mr. Metcalfe with Mr. Staggers. Mr. Hillis with Mr. Roybal. Mr. Yatron with Mr. Weaver.

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the able.

GENERAL LEAVE

Mr. GONZALEZ. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed, and on the Badillo amendment to that bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING CLERK TO MAKE CORRECTIONS IN ENGROSSMENT OF H.R. 5262

Mr. GONZALEZ. Mr. Speaker, I ask unanimous consent that the Clerk may be authorized to make corrections in punctuation, section numbers, and crossreferences in the engrossment of the bill, H.R. 5262.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

CORRECTING ENROLLMENT OF H.R. 3365

Mr. ANNUNZIO. Mr. Speaker, I ask unanimous consent for the immediate consideration of the concurrent resolution (H. Con. Res. 191) to correct the enrollment of H.R. 3365.

The Clerk read the title of the concurrent resolution.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 191

Resolved by the House of Representatives (the Senate concurring), That the action of the Speaker of the House of Representatives and of the Acting President of the Senate pro tempore, in signing the enrolled bill (H.R. 3365) to extend the authority for the flexible regulation of interest rates on deposits and accounts in depository institu-tions, and for other purposes", be, and the same is hereby, rescinded, and the Clerk of the House of Representatives shall make the following corrections:

(1) In proposed section 107(5)(E) of the Federal Credit Union Act (as contained in section 302(a) of the bill) strike out the semicolon and insert in lieu thereof the following: ": Provided, That a credit union which originates a loan for which participation arrangements are made in accordance with this subsection shall retain an interest of at least 10 per centum of the face amount of the loan."

(2) Strike out section 303(b) of the bill and insert in lieu thereof the following:

(b) Paragraph (8) of such section is redesignated as paragraph (7) and amended

by adding the following paragraph:

"(I) in the shares, stocks, or obligations of any other organization, providing services which are associated with the routine operations of credit unions, up to 1 per centum of the total paid in and unimpaired capital and surplus of the credit union with the approval of the Administrator: Pro-vided, however, that such authority does not include the power to acquire control

directly or indirectly, of another financial institution, nor invest in shares, stocks or obligations of an insurance company, trade association, liquidity facility or any other similar organization, corporation, or association, except as otherwise expressly provided by this Act;".

(3) In the amendment made by section 304(2) of the bill after "unless", insert "it

(4) In section 310 of the bill after the colon, insert the center heading "DIVIDENDS".

(5) In the amendment made by section 310 of the bill, strike out "DIVIDENDS.—", and insert "SEC. 117.".

Mr. ANNUNZIO (during the reading). Mr. Speaker, I ask unanimous consent that the concurrent resolution be considered as read and printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object-and I do not think I will object-can my distinguished colleague, the gentleman from Illinois (Mr. Annunzio), assure us that these minor corrections that need to be made because of a confusion in the enrollment process have now been made. and that it is correct?

Mr. ANNUNZIO. Mr. Speaker, if the gentleman will yield, I assure my distinguished colleague, the gentleman from California (Mr. Rousselot), that it is

now correct.

Mr. ROUSSELOT. Mr. Speaker, I appreciate the gentleman's response. To the best of the gentleman's knowledge, we will not have to come back here some time in the future and correct it again?

Mr. ANNUNZIO. That is absolutely correct.

Mr. ROUSSELOT. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The concurrent resolution was agreed

A motion to reconsider was laid on the table.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 5717. An act to provide for relief and rehabilitation assistance to the victims of the recent earthquakes in Romania.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 1828. An act relating to the effective date for the changes made by the Tax Re-form Act of 1976 to the exclusion for sick

The message also announced that the Senate agrees to the amendment of the House with an amendment to a hill of the Senate of the following title:

S. 489. An act to amend the Foreign Assistance Act of 1961.

The message also announced that the Senate disagrees to the amendments of the House to the amendments of the Senate to the bill (H.R. 11) entitled "An act to increase the authorization for the Local Public Works Capital Development and Investment Act of 1976," agrees to a conference requested by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. RANDOLPH, Mr. MUSKIE, Mr. BURDICK, Mr. BENTSEN, Mr. Anderson, Mr. Moynihan, Mr. Staf-FORD, Mr. McClure, Mr. Domenici, and Mr. CHAFEE to be the conferees on the part of the Senate.

The message also announced that the Senate had passed a bill and a Joint Resolution of the following titles, in which the concurrence of the House is requested:

- S. 36. An act to authorize appropriations to the Energy Research and Development Administration in accordance with section 261 of the Atomic Energy Act of 1954, as amended, section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and for other purposes; and
- S. J. Res. 44. Joint resolution to authorize the printing and binding of an edition of Senate Procedure and providing the same shall be subject to copyright by the author.

SUPPLEMENTAL HOUSING AUTHOR-IZATION ACT OF 1977

Mr. ANNUNZIO. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 3843) to authorize additional funds for housing assistance for lower income Americans in fiscal year 1977, to extend the Federal riot reinsurance and crime insurance programs, and for other purposes, with Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The Clerk read the title of the bill. The Clerk read the Senate amendment, as follows:

Strike out all after the enacting clause and insert:

That this Act may be cited as the "Supplemental Housing Authorization Act of 1977".

TITLE I—SUPPLEMENTAL AUTHORIZA-TIONS AND EXTENSIONS OF HUD PRO-GRAMS

AMENDMENTS TO THE UNITED STATES HOUSING ACT OF 1937

SEC. 101. (a) The first sentence of section 5(c) of the United States Housing Act of 1937 is amended by striking out "and by \$850,000,-000 on October 1, 1976" and inserting in lieu thereof "and by \$1,228,050,000 on October 1, 1976".

(b) Section 9(c) of such Act is amended by striking out "and not to exceed \$576,000,-000 on or after October 1, 1976" and inserting in lieu thereof "and not to exceed \$595,600,-000 on or after October 1, 1976".

Section 8(e)(1) of such Act is

amended-

(1) by striking out "two hundred and forty months" in the first sentence and inserting in lieu thereof "three hundred and

sixty months, except that such term may not exceed two hundred and forty months in the case of a project financed with assistance of a loan made by, or insured, guaranteed or intended for purchase by, the Federal Government, other than pursuant to section 244 of the National Housing Act"; and

(2) by striking out "In the case of" in the second sentence and inserting "Notwithstanding the preceding sentence, in the case

GENERAL INSURANCE FUND

SEC. 102. Section 519(f) of the National Housing Act is amended by striking out "\$500,000,000" and inserting in lieu thereof "\$1,000,000,000".

URBAN HOMESTEADING DEMONSTRATION

SEC. 103. Section 810(g) of the Housing and Community Development Act of 1974 is amended by striking out "not to exceed \$5,000,000 for fiscal year 1977" and inserting in lieu thereof "not to exceed \$15,000,000 for fiscal year 1977".

FEDERAL RIOT REINSURANCE AND CRIME INSURANCE PROGRAMS

SEC. 104. Section 1201(b) of the National

Housing Act is amended—
(1) by striking out "April 30, 1978" in paragraph (1) and inserting in lieu thereof "April 30, 1978"; and

(2) by striking out "April 30, 1978" in paragraph (1)(A) and inserting in lieu thereof "April 30, 1981".

MISCELLANEOUS PROVISIONS RELATING TO MORT-GAGE INSURANCE PROGRAMS

SEC. 105. (a) Section 101(c) of title I of the Housing Act of 1949 is amended by deleting the following words in the first sentence "and no mortgage shall be insured, and no commitment to insure a mortgage shall be issued, under section 220 of the National Housing Act, as amended," and by deleting the first proviso of that section.

(b) The National Housing Act is amended by deleting from section 220(d)(1)(A)(ii) the words "in a community respecting which the Secretary of Housing and Urban Development has made the determination provided for by section 101(c) of the Housing Act of 1949, as amended."

CONSTRUCTION OF MODERATE INCOME HOUSING

SEC. 106. Section 221(d)(4) of the National Housing Act is amended by deleting the words "other than a mortgagor referred to in subsection (d)(3) of this section," from the first sentence of the section.

TITLE II—NATIONAL COMMISSION ON NEIGHBORHOODS

SHORT TITLE

SEC. 201. This title may be cited as the "National Neighborhood Policy Act".

FINDINGS AND PURPOSE

SEC. 202. (a) The Congress finds and declares that existing city neighborhoods are a national resource to be conserved and revitalized wherever possible, and that public policy should promote that objective.

(b) The Congress further finds that the tendency of public policy incentives to ignore the need to preserve the built environment can no longer be defended, either economically or socially, and must be replaced with explicit policy incentives encouraging conservation of existing neighborhoods. That objective will require a comprehensive review of existing laws, policies, and programs which affect neighborhoods, to assess their impact on neighborhoods, and to recommend modifications where necessary.

ESTABLISHMENT OF COMMISSION

SEC. 203. (a) There is hereby established a commission to be known as the National Commission on Neighborhoods (hereinafter referred to as the "Commission").

- (b) The Commission shall be composed of twenty members, to be appointed as follows:
- (1) two Members of the Senate appointed by the President of the Senate;

(2) two Members of the House of Representatives appointed by the Speaker of the House of Representatives; and

(3) sixteen public members appointed by the President of the United States from among persons specially qualified by experience and training to perform the duties of the Commission, at least five of whom shall be elected officers of recognized neighborhood organizations engaged in development and revitalization programs, and at least five of whom shall be elected or appointed officials of local governments involved in preservation programs. The remaining members shall be drawn from outstanding individuals with demonstrated experience in neighborhood revitalization activities, from such fields as finance, business, philanthropic, civic, and educational organizations.

The individuals appointed by the President of the United States shall be elected so as to provide representation to a broad cross section of racial, ethnic, and geographic groups. The two members appointed pursuant to clause (1) may not be members of the same political party, nor may the two members appointed pursuant to clause (2) be members of the same political party. Not more than eight of the members appointed pursuant to clause (3) may be members of the same political party.

(c) The Chairman shall be appointed by the President, by and with the advice and consent of the Senate, from among the public members.

(d) The executive director shall be ap-pointed by the President, by and with the advice and consent of the Senate, from among individuals recommended by Commission.

DUTIES

SEC. 204. (a) The Commission shall undertake a comprehensive study and investigation of the factors contributing to the decline of city neighborhoods and of the factors necessary to neighborhood survival and revitalization. Such study and investigation shall include, but not be limited to—

- (1) an analysis of the impact of existing Federal, State, and local policies, programs, and laws on neighborhood survival and revitalization:
- (2) an identification of the administrative, legal, and fiscal obstacles to the well-being of neighborhoods;
- (3) an analysis of the patterns and trends public and private investment in urban areas and the impact of such patterns and trends on the decline or revitalization of neighborhoods:
- (4) an assessment of the existing mechanisms of neighborhood governance and of the influence exercised by neighborhoods on local government:
- (5) an analysis of the impact of poverty and racial conflict on neighborhoods;
- (6) an assessment of local and regional development plans and their impact on neighborhoods:
- (7) an evaluation of existing citizeninitiated neighborhood revitalization efforts and a determination of how public policy can best support such efforts: and
- (8) a quantification, where feasible, of the costs and benefits to society from present programs, and a quantification, where fea-sible, of the costs and benefits to society of programs which are recommended as required by subsection (b).
- (b) The Commission shall make recom-mendations for modifications in Federal, State, and local laws, policies, and programs necessary to facilitate neighborhood preservation, and revitalization. Such recommendations shall include, but not be limited to—

(1) new mechanisms to promote reinvestment in existing city neighborhoods;

(2) more effective means of community

participation in local governance;
(3) policies to encourage the survival of economically and socially diverse neighbor-

policies to prevent such destructive practices as blockbusting, redlining, resegregation, speculation in reviving neighborhoods, and to promote homeownership in urban communities;

(5) policies to encourage better maintenance and rehabilitation of existing structures at least as attractive from a tax viewpoint as demolition and development of new structures:

(7) modification in local zoning and tax policies to facilitate preservation and re-vitalization of existing neighborhoods; and

(8) reorientation of existing housing and community development programs and other tax and subsidy policies that affect neigh-borhoods to better support neighborhood preservation efforts.

(c) Not later than one year after the date on which funds first become available to carry out this title, the Commission shall submit to the Congress and the President a comprehensive report on its study and investigation under this subsection which shall include its findings, conclusions, and recommendations and such proposals for legislation and administrative action as may be necessary to carry out its recommendations.

COMPENSATION OF MEMBERS

SEC. 205. (a) Members of the Commission who are Members of Congress or full-time officers or employees of the United States shall serve without additional compensation, but shall be reimbursed for travel, subsistence, and other necessary expenses incurred in the performance of the duties vested in the Commission.

Members of the Commission, other those referred to in subsection (a), (b) shall receive compensation at the rate of \$100 per day for each day they are engaged in the actual performance of the duties vested in the Commission and shall be en-titled to reimbursement for travel, subsistence, and other necessary expenses incurred in the performance of such duties.

ADMINISTRATIVE PROVISIONS

SEC. 206. (a) The Commission shall have the power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates, but at rates not in excess of a maximum rate for GS-18 of the General Schedule under section 5332 of such title

(b) The Commission may procure, in accordance with the provisions of section 3109 of title 5, United States Code, the temporary or intermittent services of experts or consultants. Persons so employed shall receive compensation at a rate to be fixed by the Commission but not in excess of \$100 per day, including traveltime. While away from his or her home or regular place of business in the performance of services for the Commission, any such person may be allowed travel ex-penses, including per diem in lieu of subsistence, as authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently.

(c) Each department, agency, and instrumentality of the United States is authorized and directed to furnish to the Commission, upon request made by the Chairman or Vice Chairman, on a reimbursable basis or otherwise, such statistical data, reports, and other information as the Commission deems necessary to carry out its functions under this title. The Chairman is further authorized to call upon the departments, agencies, and

other offices of the several States to furnish, on a reimbursable basis or otherwise, such statistical data, reports, and other information as the Commission deems necessary to carry out its functions under this title.

(d) The Commission may award contracts and grants for the purposes of evaluating existing neighborhood revitalization programs and the impact of existing laws on neighborhoods. Awards under this subsection may be made to-

(1) representatives of legally chartered

neighborhood organizations;

(2) public interest organizations which have a demonstrated capability in the area of concern; and

(3) universities and other not-for-profit

educational organizations.

(e) The Commission or, on the authorization of the Commission, any subcommittee or member thereof, may, for the purpose of carrying out the provisions of this title, hold hearings, take testimony, and administer oaths or affirmations to witnesses appearing before the Commission or any subcommittee or member thereof. Hearings by the Commission will be held in neighborhoods with testimony received from citizen leaders and public officials who are engaged in neighborhood revitalization programs.

AUTHORIZATIONS OF APPROPRIATIONS

SEC. 207. There are authorized to be appropriated not to exceed \$1,000,000 to carry out this title.

EXPIRATION OF THE COMMISSION

SEC. 208. The Commission shall cease to exist thirty days after the submission of its report under section 204.

EMERGENCY HOMEOWNERS' RELIEF ACT AMENDMENTS

SEC. 209. That (a) section 102 of the Emergency Homeowners' Relief Act is amended— (1) by redesignating subsection (b) as

subsection (c); and

(2) by inserting after subsection (a) the

following:

"(b) The Congress also finds that severe localized economic distress caused by the legal claims of the Mashpee Tribe in Mashpee, Massachusetts, may require the furnishing of assistance under this Act to avoid mortgage foreclosures and distress sales resulting from the temporary loss of employment and income."

(b) Section 103(4) of such Act is amended inserting "national or local" before

'economic conditions".

The SPEAKER. Is there objection to the request of the gentleman from

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, will my colleague the gentleman from Illinois explain to me what this is all about?

Mr. ANNUNZIO. Mr. Speaker, if the gentleman from California will yield, this is to extend the Federal riot reinsurance, and crime insurance programs, and for other purposes, with the Senate amendment, disagree to the Senate amendment and request a conference with the Senate.

Mr. ROUSSELOT. The gentleman is only requesting to go to conference?
Mr. ANNUNZIO. That is all.

Mr. ROUSSELOT. I thank the gentle-

Mr. Speaker. I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from II-The Chair hears none, and aplinois? points the following conferees: Messrs. REUSS, ASHLEY, MOORHEAD of Pennsylvania. ST GERMAIN. MITCHELL of Maryland, Patterson of California, AuCoin, BLANCHARD, BROWN of Michigan, STANTON and Rousselot.

EFFECTIVE DATE OF CHANGES IN SICK PAY EXCLUSION

Mr. ULLMAN. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 1828) to provide that the changes made by the Tax Reform Act of 1976 to the exclusion for sick pay shall only apply to taxable years beginning after December 31, 1976, with the Senate amendments thereto. and agree to the Senate amendments.

The SPEAKER. Is there objection to the request of the gentleman from

Oregon?

Mr. STARK, Mr. Speaker, I object. The SPEAKER. Objection is heard. The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 4, after line 4, insert:

Sec. 3. Effective Date for Changes in Treatment of Income Earned Abroad By United States Citizens LIVING OR RESIDING ABROAD.

Subsection (d) of section 1011 of the Tax Reform Act of 1976 is amended by striking out "December 31, 1975" and inserting in lieu thereof "December 31, 1976".

Page 4, after line 4, insert:

SEC. 4. WITHHOLDING TAX ON CERTAIN GAMBLING WINNINGS.

(a) In GENERAL.—Subparagraph (C) of section 3402(q)(3) of the Internal Revenue Code of 1954 (relating to sweepstakes, wagering pools, and other lotteries) is amended to read as follows:

"(C) SWEEPSTAKES, WAGERING POOLS, CER-TAIN PARIMUTUEL POOLS, JAI ALAI, AND LOT-TERIES .- Proceeds of more than \$1,000 from-

"(i) a wager placed in a sweeptakes. wagering pool, or lottery (other than a wager described in subparagraph (B)), or

(ii) a wagering transaction in a parimutuel pool with respect to horse races, dog races, or jai alai if the amount of such proceeds is at least 300 times as large as the amount wagered.".

(b) EFFECTIVE DATE.—The amendments made by this section apply to payments made after April 30, 1977.

Page 4, after line 4, insert:

SEC. 5. STATE LEGISLATORS' TRAVEL EXPENSES AWAY FROM HOME.

Subsections (a) and (d) of section 604 of the Tax Reform Act of 1976 are each amended by striking out "January 1, 1976," and inserting in lieu thereof "January 1, 1977,". Subsection (c) of such section is amended by inserting "beginning before January 1, 1976," after "any taxable year".

Page 4, after line 4, insert:

SEC. 6. UNDERPAYMENTS OF ESTIMATED TAX.

No addition to the tax shall be made under section 6654 or 6655 of the Internal Revenue Code of 1954 (relating to failure to pay estimated income tax) for any period before April 16, 1977 (March 16, 1977, in the case of a taxpayer subject to section 6655), with respect to any underpayment, to the extent that such underpayment was created or increased by any provision of the Tax Reform Act of 1976.

SEC. 7. UNDERWITHHOLDING.

No person shall be liable in respect of any failure to deduct and withhold under section 3402 of the Internal Revenue Code of 1954 (relating to income tax collected at source) on remuneration paid before January 1, 1977, to the extent that the duty

to deduct and withhold was created or increased by any provision of the Tax Reform Act of 1976.

SEC. 8. INTEREST ON UNDERPAYMENTS OF TAX.

No interest shall be payable for any period before April 16, 1977 (March 16, 1977, in the case of a corporation), on any underpayment of a tax imposed by the Internal Revenue Code of 1954, to the extent that such underpayment was created or increased by any provision of the Tax Reform Act of 1976.

Amend the title so as to read: "An Act relating to the effective date for changes made by the Tax Reform Act of 1976 to the exclusion for sick pay and for other purposes."

Mr. ULLMAN (during the reading). Mr. Speaker, I ask unanimous consent that the Senate amendments be considered as read and printed in the Rec-

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

Mr. CONABLE. Mr. Speaker, I reserve the right to object.

Mr. STARK. Mr. Speaker, I reserve the

right to object.

The SPEAKER. The Chair recognizes the gentleman from New York (Mr. CONABLE).

Mr. CONABLE. Mr. Speaker, I reserved the right to object in order to receive an explanation of these amendments so that my colleagues will understand what is being proposed here.

Mr. ULLMAN. Mr. Speaker, H.R. 1828 generally postpones for 1 year the effective date of the sick pay revisions made by the Tax Reform Act of 1976. The House passed the bill on Monday and the Senate has agreed to the bill as we sent it over but has added to it four amendments which also relate to retroactive effective dates in the Tax Reform Act of 1976.

The first amendment postpones for 1 year the revisions of the exclusion of income earned abroad for individuals. Prior to the 1976 Tax Reform Act, U.S. citizens could exclude up to \$20,000, and in some cases, \$25,000, of income earned abroad during a period in which they were overseas for 17 out of 18 months or during a period they were bonafide residents of a foreign country. The 1976 act generally reduced this exclusion to \$15,000 per year and made several modifications in the computation of the exclusion. This provision was made effective for 1976. The Senate amendment postpones the application of this provision until 1977. Although we have not as yet reviewed this retroactive provision, many members of the committee have been made aware of the considerable hardship that has arisen for many individuals who are working abroad and did not know that this change was made for 1976 which resulted in substantially higher taxes for them for that year. The revenue involved for this 1-year postponement is approximately \$38 million and in view of the special circumstances involved, I think this Senate amendment should be accepted, although in my request we are disagreeing to this amendment because objection was heard to my first unanimous consent request.

The second amendment added by the committee modifies the rules established by the Tax Reform Act in regard to the

withholding on income tax on winnings from wagers place in parimutuel pools with respect to horse races, dog races, or jai alai. The problem with regard to this matter occurred during the conference on the 1976 Act where many people, including the Commissioner of Internal Revenue, as well as several conferees and their staffs, understood that the withholding provision would apply to winnings of over \$1,000 only if the odds were at least 300 to 1. However, since the provision was the same in both the House and Senate versions of the bill, no change could be made in conference. Subsequent to the passage of the act, the Internal Revenue Service requested a revision in this provision in order to provide better administration which could not be done under the literal language of the 1976 Act. The Senate amendment provides that withholding will be required on winnings of more than \$1,000 but only if the amount of the winnings is at least 300 times the amount of the bet. This amendment merely makes the law into what thought it would be when we passed the 1976 act. Until this amendment is passed. the Internal Revenue Service is not withholding on winnings and, therefore, the amendment should be agreed to.

The third amendment deals with the tax treatment of State legislators. The Tax Reform Act of 1976 provided an election for the tax treatment for State legislators for taxable years beginning before 1976 for the determination of their tax home and the amount of expenses which could be deducted for their living expenses while away from home. The Tax Reform Act provision did not cover years after 1975 in order to allow Congress to develop a permanent workable rule for the future. The Senate extended the provision in the Tax Reform Act for 1 year through 1976. The Ways and Means Committee has reported a temporary 2year rule for State legislators which should be coming to the House after the recess. Since there is an April 15 filing date, I think it is important to extend this provision in order to allow State legislators to know their tax status for 1976. The Ways and Means has reported out a bill dealing with 1977 which will be before the House after the recess.

The final amendment added by the Senate provides relief from interest and penalties attributable to the application to 1976 of provisions of the Tax Reform Act. This amendment is identical to the bill, H.R. 1680, that the House passed on Monday.

Mr. Speaker, I would hope that the House will agree to these last three amendments since they all deal with retroactive effective date problems under the Tax Reform Act.

Mr. CONABLE. Mr. Speaker, further reserving the right to object, if I may recapitulate, the basic vehicle here which has been sent to us by the Senate involves the sick pay exclusion. The retroactivity feature is eliminated as it was in their provision in the Tax Stimulus bill, which still languishes in the Senate. To this has been attached the so-called Keys amendment which would eliminate penalties for underestimation of tax where

that underestimation is a result of retroactivity in the 1976 Tax Reform Act.

I understand there also is a compromise on the provision reported by the Committee on Ways and Means relating to withholding on gambling earnings, which in fact incorporates what was originally thought to be the proposal in the 1976 act. One thousand dollars is subject to withholding only if it is the result of 300-to-1 odds and 20 percent withholding will be taken from anything that meets these criteria.

Mr. ULLMAN. The gentleman is correct.

Mr. CONABLE. It is my understanding further that the State legislators situs-of-work provision has been changed in some way from what we originally passed with the Committee on Ways and Means; is that correct?

Mr. ULLMAN. If the gentleman will yield further, the provision in the tax bill last year dealing with the problem retroactively is the provision incorporated here, only it is extended on through 1976. Last year we provided the treatment through 1975. All this does is provide that same treatment up through 1976.

Mr. CONABLE. Further reserving the right to object, Mr. Speaker, if I understand correctly, then, the objection of the gentleman from California (Mr. Stark) eliminates the retroactivity provision, relative to taxation of income earned by Americans living abroad, and that would have to be dealt with separately. We will send back to the Senate the sick pay exclusion provision amended with these other three amendments, and the Senate, meeting tomorrow, then will be able to enact the entire package before April 15. Is that correct?

Mr. ULLMAN. If the gentleman will yield, that is correct, the entire package with the exception of amendment No. 1 having to do with 911. There is no great urgency in that matter because U.S. citizens working abroad do not have to file their tax returns until June 15, so we will have time to deal with that problem in an orderly way before that time.

Mr. CONABLE. From that comment on the part of the chairman, I would judge the objection is primarily procedural in that this measure has not been taken up in the Committee on Ways and Means.

Mr. Speaker, I would like to thank the gentleman for his explanation and say that I urge passage of this provision. Even though it is necessary by unanimous consent. It seems to me that there considerable value in passing the elimination of retroactivity in the sick pay exclusion. Also, the other amendments are comparatively modest ones that have been reported by our committee.

For that reason, Mr. Speaker, I with-draw my reservation of objection.

Mr. ULLMAN. I thank the gentleman. The SPEAKER. Is there objection to the request of the gentleman from Oregon?

Mr. FRENZEL. Mr. Speaker, reserving the right to object, will the distinguished chairman review the Senate provision about the tax treatment for the travel of State legislators? Are we accepting what was in the Senate bill when it came out of Senate committee in H.R. 3477, which allows a legislator to declare his home within his legislative district and to collect per diem for each day that the legislature was in session?

Mr. ULLMAN. Mr. Speaker, if the gentleman will yield, that is basically the same provision we provided in the tax bill for preceding years.

Mr. FRENZEL. And that applies only

to calendar year 1976?

Mr. ULLMAN. This provides only for the calendar year 1976, covering the tax returns that have to be filled out at this time.

Mr. FRENZEL. I thank the gentleman.

Is the gambling provision endorsed by the administration the compromise which is now before us?

Mr. ULLMAN. The Internal Revenue Service fully approves of this compromise and the administration approves of it.

Mr. FRENZEL. I thank the chairman.

Mr. Speaker, I withdraw my reservation and I urge the passage of the bill.

Mr. STARK. Mr. Speaker, I withdraw my reservation of objection and urge passage of the bill.

Mr. BAUMAN. Mr. Speaker, reserving the right to object I just want to ask the gentleman if the provision for dealing with State legislators contained any language dealing with the increased deduction for Members of Congress in the District of Columbia?

Mr. ULLMAN. There is absolutely no provision dealing with Members of Congress. This is limited solely to State legislators.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman from Oregon.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON INTERIOR AND INSULAR AFFAIRS TO HAVE UNTIL MIDNIGHT, APRIL 7 TO FILE REPORTS ON H.R. 1403 AND H.R. 2527

Mr. KAZEN. Mr. Speaker, I ask unanimous consent that the Committee on Interior and Insular Affairs have until midnight, Thursday, April 7, 1977, to file reports on the following bills:

H.R. 1403. To authorize the Secretary of the Interior to convey the interest of the United States in certain lands in Adams County, Miss., notwithstanding a limitation in the Color-of-Title Act (45 Stat. 1069), as amended (43 U.S.C. 1068); and

H.R. 2527. To authorize the Secretary of Agriculture to convey certain lands in the Sierra National Forest, Calif., to the Madera Sierra National Forest, Calif., to the Cemetery District.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

PROPRIETY OF TRAVEL AND ARRANGEMENTS TO PEOPLE'S REPUBLIC OF CHINA

(Mr. BRADEMAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I understand that reservations have been expressed concerning the propriety of travel and other arrangements pertinent to a trip to the People's Republic of China which at the request of the President, I, along with several other Members of the House are to make.

I understand further, Mr. Speaker, that these reservations arise from the provisions of article I of the Constitution, the provisions of the Foreign Gifts and Decorations Act and the prohibition against acceptance of foreign gifts recently added to the rules of the House by the so-called Obey resoulution.

Mr. Speaker, it is my own judgment that these expressions of concern are illfounded and perhaps even a little silly.

The trip involved is being made, as I have said, at the request of the President and is in furtherance of the exchange program announced several years ago in the Shanghai communique.

In other words, what is involved here is not only official business but business essentially diplomatic in nature.

The Comptroller General, presented with an identical question 2 years ago, ruled that the law was not violated by reciprocal expense arrangements, and I am told that the Select Committee on Ethics just this afternoon approved an advisory opinion stating that the rules of the House would not be offended by such an arrangement.

But, Mr. Speaker, all of this is merely academic for the fact of the matter is that the host government—in this instance the People's Republic of China—is not, repeat not, absorbing the official expenses of the Members who are taking poet in this visit

part in this visit.

On the contrary, all of our expenses will be paid for with counterpart funds owned by the United States.

I am sorry to disappoint any of our friends who might have hoped the facts would be otherwise, but I am afraid there is simply no issue here involving either the Constitution, the law or the rules of the House.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, the gentleman has called the concern of some Members expressed silly. I think that is an unfortunate expression. Has the gentleman read the Advisory Opinion No. 3 of the House Committee on Standards of Official Conduct issued on June 26, 1974? Mr. BRADEMAS. Not recently.

Mr. BAUMAN. If the gentleman would refresh his memory on that opinion I am certain he will find that the official body that has been charged with governing our ethical conduct in this House has ruled such trips if they are paid for by a foreign government as unconstitutional and that is a finding which certainly governs everyone of the Members of this

House. The gentleman may consider the Constitution and its interpretation by our Ethics Committee silly, but I think if we are going to have ethical standards we must abide by them.

Mr. BRADEMAS. I would simply have to reiterate that the gentleman's observations reassure me that my original criticism of some of the unfounded charges with respect to the expenditures for carrying out this particular trip are silly and I would reiterate that the funds that are being used to pay for this trip are counterpart funds owned by the Government of the United States.

I would also say to my friend, the gentleman from Maryland, that there was a subsequent ruling by the Ethics Committee contrary to the opinion just alluded to by the gentleman from Maryland.

Mr. RHODES. Mr. Speaker, will the gentleman yield?

Mr. BRADEMAS. I yield to the dis-

tinguished minority leader.

Mr. RHODES. Mr. Speaker, I think the distinguished gentleman from Indiana will recall, however, that when I was fortunate enough to be picked by the People's Republic of China to go to that land with the former Speaker, the Honorable Carl Albert, that we did feel constrained because of the ruling of the Committee on Ethics to have a resolution adopted allowing us to take that trip at the expense of the People's Republic of China. I am satisfied that the gentleman who called this matter to the attention of the House does so with the knowledge of the Constitution and also the previous action taken

Mr. Speaker, I agree with the gentleman from Maryland. I think that the characterization of the gentleman bringing it to the House as "silly" is unfortunate, because it is a serious matter. As I mentioned to the gentleman from Indiana awhile ago. I think that matters like this should not come up. I feel that it would be within the best interest of the House for us to pass some sort of permanent legislation, which perhaps would allow the Speaker in instances like this when the Speaker feels that such types of travel are for the best interests of the Nation to make an appropriate waiver so this constitutional question will not arise.

Mr. BRADEMAS. Mr. Speaker, I understand, and I am not unsympathetic to the point the gentleman made, but the reason the gentleman from Indiana used the word "silly" in the characterization of some of the statements made earlier in this House was that, at least it was reported, a censure was being threatened in respect to the expenditures to be made for the purpose of carrying out this particular trip.

I would say that this seems to me to be silly. Beyond that, I would reiterate what I said earlier, that no reciprocal expense arrangement is involved in respect to this particular matter.

The SPEAKER. The time of the gentleman from Indiana has expired.

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the body of the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, would the gentleman tell us the subject of the gentleman's revision and remarks in the extension?

Mr. BRADEMAS. Yes. I would be very glad to. It is an essay by the Reverend Theodore Hesburgh, President of Notre Dame, and James Grant, Executive Director of the Overseas Development Council.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

Mr. KETCHUM. Mr. Speaker, further reserving the right to object.

Mr. BRADEMAS. Mr. Speaker, I withdraw my unanimous consent request.

APPOINTMENT AS MEMBERS OF THE SELECT COMMITTEE ON CON-GRESSIONAL OPERATIONS

The SPEAKER. Pursuant to the provisions of House Resolution 420, 95th Congress, the Chair appoints as Members of the Select Committee on Congressional Operations the following Members of the House: the gentleman from Texas (Mr. Brooks), chairman; the gentleman from Connecticut (Mr. Giatmo); the gentleman from Minnesota (Mr. Oberstar); the gentleman from California (Mr. John L. Burton); the gentleman from Indiana (Mr. Benjamin); the gentleman from New Hampshire (Mr. Cleveland); and the gentleman from Ohio (Mr. Ashbrook).

APPOINTMENT AS MEMBERS OF THE U.S. DELEGATION OF THE MEXICO-UNITED STATES INTER-PARLIAMENTARY GROUP

The SPEAKER. Pursuant to provisions of section 1, Public Law 86-420, the Chair appoints as members of the U.S. delegation of the Mexico-United States Interparliamentary Group the following Members on the part of the House: gentleman from Texas (Mr. the WRIGHT), Chairman; the gentleman from Pennsylvania (Mr. Nix), Vice Chairman: the gentleman from Arizona (Mr. UDALL); the gentleman from Texas (Mr. DE LA GARZA); the gentleman from Texas (Mr. WHITE); the gentleman from Texas (Mr. KAZEN); the gentleman from Arkansas (Mr. ALEXANDER); the gentleman from Pennsylvania (Mr. YATRON); the gentleman from California (Mr. Rousselot); the gentleman from New York (Mr. GILMAN); the gentleman from California (Mr. LAGOMAR-SINO); and the gentleman from Arizona (Mr. Rupp).

PERSONAL EXPLANATION

Mr. KRUEGER. Mr. Speaker, on roll-call No. 106, taken on March 29, a motion to adopt in the Committee of the Whole the Walker substitute to H.R. 5045, the Presidential Reorganizational Authority Act, I am listed as voting "aye," when I had intended to vote "no." I ask that the Record reflect my "no"

vote on rollcall No. 106, and that this statement appear in the permanent RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

LEGISLATIVE PROGRAM

(Mr. RHODES asked and was given permission to address the House for 1 minute.)

Mr. RHODES. Mr. Speaker, I have asked for this time to inquire of the distinguished majority leader as to the program for the balance of the week and, presumably, the program for the week following the Easter work period.

Mr. WRIGHT. Mr. Speaker, will the distinguished minority leader yield?

Mr. RHODES. I am happy to yield to the distinguished majority leader.

Mr. WRIGHT. Mr. Speaker, I believe the business for this week has been completed. When the House adjourns today, it will adjourn by prior agreement, to meet on Monday, April 18, at noon.

On that Monday following the home district work period the House will consider one suspension, H.R. 3340, business use of residences for day care service.

On Tuesday, the House will meet at noon. There are no bills scheduled on the Private Calendar. There are three bills scheduled for consideration under suspension, and the votes on these will be postponed until the end of all suspensions. Those three bills are as follows:

H.R. 5864, Amendments to Federal Rules of Criminal Procedure;

H.R. 4836, Commission on New Technological Uses of Copyrighted Material; H.R. 5638, Canadian Fishing Agree-

Following that, the House will consider H.R. 5101, the R. & D. authorization for the Environmental Protection Agency, under an open rule with 1 hour of debate.

On Wednesday, the House will meet at 3 p.m. The bills scheduled for that day would be H.R. 5840, Amendments to Export Administration Act, subject to a rule being granted.

Later on Wednesday, the House and Senate would meet in a joint session to receive the President's energy message.

For Thursday and the balance of the week, the House will meet at 11 a.m. It is planned that we would take up H.R. 5970, the Department of Defense Authorization for Fiscal Year 1978, subject to a rule being granted.

The House will adjourn by 3 p.m. on Fridays, and by 5:30 p.m. on all other days except Wednesdays, as is the rule until May 15.

Of course, conference reports may be brought up at any time, and any further program will be announced later.

Mr. RHODES. Can the gentleman be more precise as to the time that the President's energy message might be received. Will it be in the daytime or evening?

Mr. WRIGHT. If the gentleman will yield further, the majority leader is not possessed of that certain knowledge. It

is possible that the President may choose to come in the afternoon or in the evening. I think, traditionally, we have been willing and anxious to receive the President of the United States whenever he asks to be heard.

Mr. RHODES. I thank the gentleman. Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, if I am not mistaken, the conference report on the bill H.R. 4877, the supplemental appropriation, will be brought up after the work period is concluded. I wonder whether the gentleman from Texas could tell us when that might be brought up.

Mr. WRIGHT. If the gentleman will yield, I will say that it is planned at present that this conference report will come to us on Wednesday, April 20.

Mr. BAUMAN. I thank the gentleman.
Mr. WRIGHT. If the gentleman from
Arizona will yield further, I should like
to wish to all of my colleagues of the
minority party, on behalf of all of us of
the majority party, a pleasant, happy
Easter, and a very pleasant, fruitful, and
productive work period.

Mr. RHODES. I thank the gentleman. I wish to the members of the majority, the distinguished Speaker, the distinguished majority leader and all Members, a very happy Easter and, as the gentleman says, a very happy international work period.

AUTHORIZING SPEAKER TO ACCEPT RESIGNATIONS, TO APPOINT COMMISSIONS, BOARDS AND COMMITTEES NOTWITHSTANDING ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that, notwithstanding any adjournment of the House until Monday, April 18, 1977, the Speaker be authorized to accept resignations, and to appoint commissions, boards, and committees authorized by law or by the House.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING CLERK TO RECEIVE MESSAGES FROM SENATE AND AUTHORIZING SPEAKER TO SIGN ENROLLED BILLS AND JOINT RES-OLUTIONS DURING ADJOURN-MENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that, notwithstanding any adjournment of the House until Monday, April 18, 1977, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY, APRIL 20, 1977

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule on Wednesday, April 20, 1977, be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

CREATION OF AGENCY FOR CONSUMER ADVOCACY—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–119)

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Government Operations, the Committee on Interstate and Foreign Commerce, and the Committee on the Judiciary, and ordered to be printed:

To the Congress of the United States:

The task of helping consumers understand and shape the powers of their government has become more difficult, and more important, through the years. As the Federal Government has grown, individual citizens have found it harder to learn how and where and when to go to influence the many government decisions which make a difference in their lives. As the technology of our society has become more complex. Congress and the President have delegated more responsibility to regulatory technicians, whose activities affect consumers profoundly but are difficult for average citizens to study, influence, and understand.

For several years there has been a movement in Congress and among the people to create a strong voice in government to speak up for the consumer. Today I am recommending measures which will expand and accelerate that

movement.

The first of these measures is the creation of an Agency for Consumer Advocacy, which will bring to fruition eight years of bipartisan effort in the Congress.

This Agency will be a small, effective group; its purpose will be to plead the consumer's case within the government. It will not require major additions to the government's size or operations; in significant part, it can be established by drawing together resources now scattered throughout the government. It will not be another regulatory agency. Its purpose is to improve the way rules, regulations, and decisions are made and carried out, rather than issuing new rules itself. It will help the Congress and help me search out programs which are inefficient or have outlived their purpose, and will help us correct inequities in programs and procedures which are supposed to protect consumers.

The Agency will aid in the fight against inflation by monitoring governmental actions that unnecessarily raise costs for consumers. Many government activities affect prices: The government establishes

rates, standards and incentives for private businesses to follow, and it is itself a major purchaser of goods and services. In all these areas, the Agency will use its pall these of intervention and of information collection, analysis and dissemination to keep costs down.

By establishing the Agency, the Congress can give new meaning to the phrase "in the interest of consumers" found throughout the United States Code and the Code of Federal Regulations.

The basic format of the Agency for Consumer Advocacy has been refined and perfected in eight years of debate by Congress. I support that framework. In particular, I believe that the following principles should be reflected in a bill

creating the Agency:

First, most government consumer functions should be consolidated in the Agency. The Office of Management and Budget has begun a comprehensive review to help me identify those units that should be transferred to the Agency. This review will also determine how remaining functions in the individual agencies can be strengthened. Of course, I still expect that all Federal agencies will be responsive to the consumer's concerns.

Second, the Administrator of the Agency, like the heads of other executive agencies, should be appointed by the President and serve at his pleasure. The Agency should be subject to the normal executive budget and legislative clearance procedures. Accountability within the executive branch is necessary to ensure that the Agency will be as vigorous and effective as the people expect. It will not undermine the independence of the Agency's representational role.

Third, the Agency should be empowered to intervene or otherwise participate in proceedings before federal agencies, when necessary to assure adequate representation or consumer interests, and in judicial proceedings involving Agency action. The Agency, at its discretion, should be represented by its own lawyers. I will instruct the Administrator to establish responsible priorities for con-

sumer advocacy.

Fourth, the Agency should have its own information-gathering authority, including, under appropriate safeguards, access to information held by other government agencies and private concerns. However, small businesses should be exempt from the Agency's direct information-gathering authority. Additional safeguards should be included to assure that needless burdens are not imposed on businesses or other government agencies.

The Agency for Consumer Advocacy is mainly designed for participation in very large administrative proceedings; it is only one of a number of steps which will better protect the consumer. Members of my Administration, in the months ahead, will comment to the Congress on a variety of these steps. There are three of them I would like to mention now; they are measures which the Congress has been considering, and which I believe would complement the ACA.

The first is legislation to help consumer groups represent themselves in agency and judicial proceedings. I support Congressional efforts to assist citizen groups to participate in the proceedings of Federal agencies, where their participation may lead to a more balanced decision. I also recommend that Congress enact legislation that would give the federal courts more discretion to reimburse litigation costs for plaintiffs who win cases of public importance involving the government.

Second, I support legislation which will give citizens broader standing to initiate suits against the government, in appropriate cases. The government has too often routinely invoked the "standing" defense when it is challenged in court. The Department of Justice will work with my Special Assistant for Consumer Affairs, Esther Peterson, and with the Congress toward legislation to reform this practice.

Third, I support the effort to enable consumers to sue as a class to enforce their rights. Recent court decisions have greatly restricted their ability to do so. I want to expend the opportunities for responsible class actions, starting with violations of consumers' rights. The Department of Justice and Mrs. Peterson will work with the Congress to develop

suitable legislation.

These measures—and the others which members of my Administration will discuss in the months ahead—will enhance the consumer's influence within the government without creating another unwieldy bureaucracy. I believe they will increase confidence in government by demonstrating that government is considering the people's needs in a sensitive and responsive way.

JIMMY CARTER.
THE WHITE HOUSE, April 6, 1977.

COMMUNICATION FROM THE CLERK OF THE HOUSE—SUBPENA TO TESTIFY BEFORE GRAND JURY

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

Washington, D.C., April 6, 1977.

Hon. Thomas P. O'Neill, Jr.,
Speaker, House of Representatives, Washington, D.C.

ton, D.C.

DEAR MR. SPEAKER: On January 6, 1977 I was served with the attached subpoena commanding me to appear before the United States District Court for the Western District of Pennsylvania on January 18, 1977 and to bring with me the documents de-

scribed in the subpoena. By the attached letter dated January 10, 1977 I informed the United States Attorney for the Western District of Pennsylvania that pursuant to the provisions of Resolution 10 no evidence of a documentary character in the possession and under the control of the House of Representatives may be taken from its possession or control except by its permission and, further, that no Member, officer or employee of the House is authorized to produce such evidence except where a proper court has determined upon the materiality and relevancy of specific papers or documents called for in the subpoena. Accordingly, on January 18, 1977, the United States Attorney informed me that the sub-

poena would be postponed.

On March 9, 1977, upon consideration of in camera representations by the United

States Attorney, the Court found the materials subpoenaed under the previously served subpoena to be material and relevant to a pending grand jury investigation of possible violations of Sections 1623, 1001, 2001 of Title 18 of the United States Code.

Pursuant to the provisions of House Resolution 10, I am hereby transmitting the above described documents and the matter is presented for your consideration.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr., Clerk, House of Representatives.

The SPEAKER. Pursuant to the provisions of House Resolution 10, the subpena and order will be printed in the RECORD at this point.

The subpena and order follow: [In the U.S. District Court for the

Western District of Pennsylvania SUBPENA TO TESTIFY BEFORE GRAND JURY, DISTRICT OF COLUMBIA

To: Clerk of House, Records and Registration, Room 1036 Longworth Building, Washington, D.C.

You are hereby commanded to appear in the United States District Court for the Western District of Pennsylvania at 708 U.S. Post Office and Courthouse in the city of Pittsburgh on the 18th day of January 1977 at 9:30 o'clock A.M. to testify before Grand Jury and bring with you all "Reports of Receipts and Expenditures for A Candidate" for Frank M. Clark for the period January 1, 1971 through January 31, 1976.

This subpena is issued on application of the United States of America.

JACK L. WAGNER

Clerk.

Alexander H. Lindsay, Jr., Assistant U.S. Attorney, 633 U.S. Post Office and Courthouse, Pittsburgh, Pa. 15219.

OFFICE OF THE SERGEANT AT ARMS, HOUSE OF REPRESENTATIVES, Washington, D.C., January 10, 1977.

Mr. ALEXANDER H. LINDSAY, Jr., Assistant U.S. Attorney, Office of the U.S. Attorney, U.S. Post Office and Courthouse, Pittsburgh, Pa.

DEAR MR. LINDSAY: This is in respectful answer to the Subpoena To Testify Before Grand Jury issued to the Sergeant-at-Arms of the United States House of Representatives directing him to appear as a witness before the Grand Jury of the Court on January 18, 1977 at 10:00 a.m. and to bring with him the records named therein. Pursuant to the provisions of House Resolution 10. adopted on January 4, 1977, no evidence in the possession and control of the House of Representatives may be taken from such control or possession except by its permission. Furthermore, that resolution provides that no Member, officer, or employee is authorized to produce such evidence except where a proper court has determined upon the materiality and relevancy of specific papers or documents called for in the subpoena. Therefore. I have the honor to transmit herewith a certified engrossed copy of House Resolu-tion 10, in reference to this matter, as a respectful answer to the subpoena duces tecum referred to above.

With kind regards, I am Sincerely,

KENNETH R. HARDING, Sergeant-at-Arms U.S. House of Representatives.

U.S. ATTORNEY. Pittsburgh, Pa., January 18, 1977. EDMUND L. HENSHAW, Jr., Clerk, U.S. House of Representatives, Washington, D.C.

DEAR MR. HENSHAW: We have received your

letter of January 10, 1977, indicating that pursuant to the provision of House Resolution 10 adopted on January 4, 1977, you are unable to comply with a federal grand jury subpoena issued in this district to produce certain documents before the grand jury on January 18, 1977, at 10:00 A.M.

This letter is to inform you that until a decision is made in this office as to what steps will be taken to comply with House Resolution 10 or to enforce the grand jury subpoena, your appearance or the appearance of your representative will be postponed. We will notify you should we decide to enforce the subpoena or comply with House Resolution 10.

Thank you for your cooperation in this matter

Very truly yours,

BLAIR A. GRIFFITH.

U.S. Attorney. By: ALEXANDER H. LINDSAY, Jr., Assistant U.S. Attorney.

U.S. ATTORNEY,
Pittsburgh, Pa., March 15, 1977.
EDMUND L. HENSHAW, Jr.,
Clerk, U.S. House of Representatives, Wash-

ington, D.C.

DEAR MR. HENSHAW: Enclosed herewith please find a certified copy of the Findings of the Court entered by District Judge William Knox on March 9, 1977, in connection with the grand jury subpoena served on you regarding the records of Frank M. Clark.

The grand jury investigation concerns alleged violations of Sections 2001, 1001 and 1623 of Title 18 United States Code, and violations of the various criminal statutes of the tax code.

If I may be of further assistance to you, please feel free to contact me.

Very truly yours

BLAIR A. GRIFFITH, U.S. Attorney. By: ALEXANDER H. LINDSAY, Jr.,

Assistant U.S. Attorney.

[In the U.S. Court for the Western District of Pennsylvania] In re GRAND JURY SUBPOENAS

FINDINGS OF COURT Upon consideration of in camera disclosures made by representatives of the Office of the United States Attorney for the West-ern District of Pennsylvania, it is this 9th day of March, 1977,

Found, that the papers, documentary evidence and materials subpoenaed under subpoenas duces tecum dated December 22, 1976. and addressed to the Clerk of House. Records and Registration, and the Sergeant at Arms, House of Representatives, facsimiles of which are attached hereto are necessary, material and relevant to a pending grand jury investigation in this judicial district and in this

Court for the promotion of justice.
Wherefore, this Court desires that the documentary evidence or certified copies thereof which are the subject of the subpoenas duces tecum be supplied to the federal grand jury, impaneled in this judicial district, or its authorized representative and agent, pursuant to said subpoenas.
WILLIAM W. KNOX.

U.S. District Judge.

HOUSE ETHICS STANDARDS COMPROMISED ALREADY

(Mr. CHARLES H. WILSON of California asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. CHARLES H. WILSON of California. Mr. Speaker, it is with some distress and consternation that I read of actions

taken by the Senate Ethics Committee vesterday to waive a provision of that body's recently adopted code of conduct. It is my understanding that the House Ethics Committee will be issuing a counterpart waiver so that several Members may embark on a visit to the People's Republic of China at the invitation and expense of the Chinese People's Institute of Foreign Affairs.

As we all have been made amply aware, such a trip violates the rule prohibiting Senators and Representatives from accepting gifts of over \$100 from any foreign national acting on behalf of a foreign organization or government. In fact, this Chinese expedition is contrary to the dictates of article I of the Constitution regarding the acceptance of any present or emolument without the consent of Congress, by a person holding any office of profit or trust. The Library of Congress Congressional Research Service has examined the propriety of accepting travel paid by foreign governments under Public Law 89-673 and concluded that

. . would not seem to have been consented the Congress, inasmuch as it is difficult to imagine a foreign trip with a value of than \$50, and trips cannot posited . . . for use and disposal as the property of the United States."

It seems quite ironic to me that one of the initial steps voted by our embryonic Ethics Committees is to compromise the standards we have so diligently and laboriously set for ourselves. The situation is further compounded when one recalls the criticism leveled by media and Members of travel sponsored by private organizations within the Republics of Korea and China.

These foundations, which have never been determined to be government related, invited Members of the House and Senate to their countries for cultural exchanges and for free and unimpeded observation of their domestic programs and policies. Such trips were loudly condemned as a form of direct influence buying by two of our oldest and staunchest allies

And so I must ask myself if this excursion to Red China-financed, choreographed, and dictated by the public-relations-minded Communist Party-does not bear a similar smudge. Evidently exceptions can and will be made for those nations who have worked against democracy and against America's democratic ideals. A technical indulgence will be granted so that the Chinese People's Institute of Foreign Affairs can "show" our delegation the successful striving of workers under post-Maoist socialism. Yet no such consideration could ever be extended to our friends of long standing-whose governments operate under the constant peril of attack by the People's Republic of China.

The citizens of the United States now have a first indication of the way in which Congress will administer its highly touted Code of Ethics: By exception rather than rule; with deference to hypocrisy and prevailing political whim.

I am sure there are others who must share my unhappy sentiments on this less-than-auspicious occasion.

CONGRESSIONAL REFORM JEOP-ARDIZED BY WAIVER OF RULES

(Mr. KETCHUM asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KETCHUM. Mr. Speaker, I rise this afternoon to call my colleagues' attention to one of the most underhanded and unethical tactics I have ever wit-

nessed in this Congress.

I am referring to an article in the Washington Post this morning which reported that the Senate Ethics Committee waived a provision in its new ethics code. At its initial meeting, the very first, mind you, committee members waived the rule prohibiting Members from accepting gifts of over \$100 in the aggregate per year so that Senators may visit Communist China as guests of the Government-sponsored Chinese People's Institute of Foreign Affairs.

This sleight-of-hand maneuver was accomplished in order to relieve the fear of our esteemed colleagues who would knowingly violate their rules because the Chinese insist on paying for all arrangements when an official delegation visits their country. In other words, either find a way around the rules or stay at home.

Let me hasten to add that I am not against foreign travel for Members of Congress when on official business and I personally have done so from time to time. But it irks the devil of me to watch an end run around a set of rules that are still wet from the printers' ink.

Further, I am surprised the Senate Judiciary Committee did not grant a waiver to the Constitution which explicitly prohibits the acceptance of gifts from a foreign state. And I do not think there is any doubt as to who is footing

the bill.

The American people should be incensed with this mockery. For months they have ben showered with verbage on how Congress will implement a strong code of ethics. But when the rules become an impediment Congress can waive them. How many ordinary citizens can ignore, let alone think of waiving, the regulations imposed upon them by OSHA, EPA, and the hundreds of other bureaucratic dictators. But hell hath no fury like a legislator if he cannot take a trip abroad.

To our distinguished chairman of the House Ethics Committee, I say, poppycock to writing an advisory opinion exempting such trips or waiving the rules.

We talked about ethics and morality for months and beat the drum for reform. The time has come to practice what we preach and act like ordinary citizens and abide by the law.

INTRODUCTION OF UNIFORM FED-ERAL RESEARCH AND DEVELOP-MENT UTILIZATION ACT OF 1977

(Mr. THORNTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. THORNTON. Mr. Speaker, the bill I am introducing today is primarily to establish a uniform Federal system for management, protection, and utilization of the results of federally sponsored scientific and technological research and development.

The issue of a balanced, equitable, and uniform Federal patent policy, and the resultant procurement and licensing practices and their economic impacts have been of continued importance to the Federal Government since the framing of our Constitution.

Article I, section 8, states that it is the responsibility of the Government, "to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive rights to their respective writings and discoveries." Notwithstanding that mandate, over the years, patent policy has developed primarily on an agency-byagency basis, resulting in many varied and often confusing executive directives, legislative mandates and regulations.

Determining patent rights when an invention is the result of federally funded research has become increasingly complex. The allocation of rights, however, has been under careful scrutiny by several commissions and study groups for at least 30 years. It is a result of their efforts and conclusions that this legislative initiative has been undertaken. In addition to establishing a uniform patent policy for the allocation of rights, a primary emphasis of this legislation is to permit the early development and commercial utilization of resulting inventions. These goals and consistent with public interests, enhancing the probability that useful inventions will reach the marketplace to benefit the public as well as the individual inventor.

"March-in" rights have been incorporated in the legislation to allow the Federal Government to order licensing of a patent where useful inventions are not being actively pursued to commercialization, or to meet other public interest considerations. In addition, in the absence of a declaration of contractor interest, the Federal Government acquires

title for use by the public.

It is of serious concern to me that the legislative branch has failed to act to establish a mechanism whereby the fruits of federally sponsored research and development can move forward with the researcher confident that his rights are protected under a uniform policy. Agency-by-agency determinations have both deterred inventive undertakings by individuals and cost the American public the price of needed scientific and technological advances.

This is a problem with both substantive and procedural issues. The former require careful consideration by the scientific and technological community, the latter are best considered by patent experts dealing with the judicial system.

Thirty years of study have provided the necessary data to write meaningful and judicious legislation. It is time for the Congress to exercise its constitutional responsibility to protect the Natioh's scientists and inventors and the public which ultimately is the beneficiary of technological innovations.

This legislation evolved from careful consideration of the results of years of study and reflects the unselfish and time consuming assistance of many individuals in both the public and private sectors. Members of the Committee on Government Patent Policy, formerly under the Federal Coordinating Council for Science and Technology and currently under the Federal Coordinating Council for Science, Engineering, and Technology's Committee on Intellectual Property and Information were especially helpful in consultation on their findings and potentials for legislative action.

LOWELL NATIONAL CULTURAL PARK BILL

(Mr. TSONGAS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. TSONGAS. Mr. Speaker, in Lowell,

Mass., an old idea promises a new future. The idea is over 150 years old. The idea was to plan and build a new city centered around the manufacture of textiles. They were not talking of one factory. They were not talking about standard methods which took days or weeks to produce a finished article. They did not wonder about how these factories would be financed or powered. They had determined the answers to these questions and were determined to build a different kind of American city. And America would be different because of a city that later became known as Lowell.

The men who stood above the 30foot falls in the Merrimack River, 30 miles north of Boston, saw far beyond the farmlands. They too were different. There is no doubt that they were free enterprise capitalists. There is also no doubt that they practiced corporate benevolence and had a renaissance type vision. They saw, in that 30-foot drop, enough power to run 60 mills and produce more cotton textiles than any other city in the United States. They saw the world's most sophisticated hydropower canal system. They saw a city which bore no resermblance to the industrial horrors of England and France. They saw and eventually built the great brick mills, the 5 miles of canals, a business district, boardinghouses, schools, churches, trolleys, railroads, and parks. They built a city that thousands of people came to see. A city of mills which even Britain's harshest social critic, Charles Dickens, called "clean and comfortable." nowned French civil engineer Michael Chevalier described Lowell as "new and fresh, like a setting at an opera." Scientists, educators, and tourists traveled to see this planned city, this birthplace of the American Industrial Revolution. President Jackson chose to visit Lowell to mark the Nation's 50th anniversary.

At first, Yankee mill girls from New England farms worked in the textile mills. The conditions were good, the pay and the hours were reasonable. The girls went to school and even published their

own newspaper.

In the latter part of the 1800's the immigrants began to come to Lowell. They worked longer hours and for lower wages than would the mill girls. Some immigrants walked as much as 30 miles a day to work in the city. Most settled in Lowell. They settled and sent for their

families. They built their own neighborhoods reflecting both Old World customs and New World lifestyles. Over 20 different ethnic groups were represented in Lowell. At the peak of immigration, in the early 1900's, only 10 percent of Lowell's residents were native-born Lowell's residents

Eventually, mill conditions began to deteriorate. Labor unions began to form. Women led protests over long working hours, low wages and dangerous factory conditions. The original owners and corporate benevolence were gone. There were strikes and there was violence.

The conflicts and tension continued periodically until the great depression. The depression closed Lowell's mills. A one industry city, Lowell's mills were empty, its workers unemployed, and its tradesmen without buyers.

Eventually, perseverence and diversification helped to bring Lowell back, though the city still struggles economically. Ironically, the only memories of the past were the economic scars. Children knew nothing of the significance of their hometown. There was little to be proud of in Lowell.

Yet, the famous past continued to physically engulf the city. The mills remained forming Lowell's skyline. The streets ran along and criss-crossed the canals. The 19th century commercial district remained with original buildings hidden by plastic and paint. The ethnic neighborhoods, restaurants, holidays, and institutions were merely confusing. In fact, the city was confusing. It seemed to have no reason for being or for having been built.

Twelve years ago, a man named Patrick J. Morgan helped to rediscover Lowell's 150-year-old idea. His own parents had come to America from Ireland. Mogan, an educator, became involved with the local model cities program. He argued against tearing down the physical links to the past. He saw those links as important and exciting. He saw the mills, canals, and the people. He was not ashamed of Lowell. Pat Morgan spoke of the reasons behind the findings of Lowell. Of the farmland, the founders. their system, the mill girls, the immigrants, the way of life. These roots made people see themselves and their city differently. Suddenly, Lowell made sense. The city had rediscovered its identity from its history and culture. The significant role it had played in America's modern day development became important, Lowell had rediscovered an old idea

Many persons played a role in this process, in Lowell and outside of the city. My predecessors F. Bradford Morse and Paul W. Cronin; Senators Kennedy and Brooke. Many Members of Congress kept the Lowell story alive, former Congressman Roy Taylor, Congressmen SIDNEY YATES, MORRIS UDALL, and KEITH SEBELIUS. House Speaker Thomas P. O'NEILL, JR., provided two important contributions: guidance and Thomas P. O'Neill, III, the Lieutenant Governor of Massachusetts and Chairman of the Lowell Historic Canal District Commission. This Federal, State, local commission, created by Public Law 93-645, has

provided a plan for the preservation of Lowell and the Lowell story. I have today officially presented this report to the Congress on behalf of the Commission. Massachusetts Governor Dukakis has lent his strong support and committed \$9 million to Lowell's restoration. Scores of city officials also deserve credit. And the people of Lowell cannot again be forgotten. A city searching for and finding its past is a magnificent experience. Even those who cannot trace their roots to Lowell have become involved in this process. This has produced remarkable unanimity in the city.

Lowell's idea is the old Lowell. So it is this idea that I speak of today. Too many of us have ignored these kind of ideas and this American story. Consequently, we are left with questions that we have trouble answering: What does America mean? How did we get here? Who are we? We are left with personal questions about our families and their heritage of working and living in America. Lowell provides an extraordinary opportunity for all of us to find answers to these questions.

A LOWELL NATIONAL CULTURAL PARK

Today I am introducing legislation to establish a Lowell National Cultural Park. I consider this among the greatest honors that I have had as a Member of the Congress.

The Lowell National Cultural Park plan is based upon the recommendations of the Lowell Historic Canal District Commission, charged by the Congress to prepare a "plan for the preservation, interpretation, development, and use of the historic, cultural, and architectural resources * * * of Lowell, Mass."

The national park that would be established by this legislation tells the story of working and living in America as it entered the industrial revolution and the modern era. And Lowell tells the story of free enterprise, science and technology, and of immigration. Lowell tells the story of an often forgotten American Revolution which significantly affected the way we live.

This bill calls attention to a story not told in books alone, but in the mills, on the canals, in the boarding houses, the court yards, the markets, and in the neighborhoods by the people themselves. It is a living story. But it is a story in danger of being lost, physically lost, for all time. The physical structures and artifacts that symbolize the American industrial revolution cannot be preserved without a commitment from the Congress and Federal Government, Despite State and local contributions, Federal recognition, resources, and knowhow are essential.

The goal of this bill is cooperative preservation and interpretation of Lowell and America's story.

So I speak for 12 years of planning. I speak for hundreds of people who kept this vision alive. I speak for one-half million people in the Fifth District of Massachusetts. And I believe I speak for a majority of more than 200 million people represented in this House Chamber who believe that the past is important.

This story, this past, this national heritage must be saved. The Lowell Na-

tional Cultural Park bill can accomplish this objective in a creative and fiscally responsible manner.

I seek your support for an old idea. I seek your support for the past.

For only the knowledge and the value of the past can give meaning to the fu-

FOREIGN PAYMENT FOR TRIP TO CHINA BY MEMBERS OF THE HOUSE FORBIDDEN

(Mr. BAUMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BAUMAN. Mr. Speaker, as a member of the House Commission on Administrative Review, who helped to draft the ethics proposals which were adopted by the House, I can say that it is this one Member's opinion that the code of ethics now in effect forbids the acceptance by Members of this House of the gift of travel expenses from foreign governments such as those being offered by Red China for Members of this Congress. Article I of the Constitution also forbids the acceptance of such foreign

If indeed these Members accept the gifts they may well be in violation of our rules and the law and subject to censure by the House of Representatives. Complaints could be filed against them with the Committee on Standards of Official Conduct.

I do not understand that any committee of the House has any power to waive these rules or the Constitution and in this instance they cannot be waived. I would suspect that any Member who plans to take these trips under these circumstances ought to reconsider.

At this point I include in my remarks an advisory opinion issued by the House Committee on Standards of Official Conduct:

ADVISORY OPINION No. 3

Issued June 26, 1974 on the subject of foreign travel by Members and employees of the House of Representatives at the expense of foreign governments.

REASON FOR ISSUANCE

The Committee has received a number of requests from Members and employees of the House for guidance and advice regarding acceptance of trips to foreign countries, expenses of which are borne by the host country or some agent or instrumentality of it.

The Committee is advised that similar inquiries recently have been put to the Department of State with respect to other Federal employees.

In order to provide widest possible dissemination to views expressed in response to the requests, and to coordinate with statements likely to be forthcoming from other areas of the Federal government in this regard, this general advisory opinion is respectfully offered.

BACKGROUND

The United States Constitution, at Article

I, Section 9, Clause 8, holds that:
"No Title of Nobility shall be granted by
the United States: And no Person holding any Office of Profit or Trust under them, shall without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State."

This provision, described as stemming from a "just jealousy of foreign influence of every sort," extremely broad as to whom it covers, as well as to the "presents" or "emoluments" it prohibits—speaking of the latter as of any kind whatever. (emphasis provided)

It is narrow only in the sense that the framers, aware that social or diplomatic protocols could compel some less than absolute observance of a prohibition on the receipt or exchange of gifts, provided for specific exceptions with "the consent of the Con-

gress."

Congress dealt from time to time with these exceptions through public and private bills addressed to specific situations, and dealt generally, commencing in 1881, with the overall question of management of foreign gifts.

In 1966 Congress passed the latest and the existing Public Law 89-673, "an Act to grant the consent of Congress to the acceptance of certain gifts and decorations from foreign governments." That law is presently codified at title 5, United States Code, section 7342, a copy of which is attached.

The law is quite explicit in virtually all particulars, save whether the expense of a trip paid for by a foreign government is a "... present or thing, other than a decoration, tendered by or received from a foreign government; ..."

It is on this point that this Opinion lies.

BASIS OF AUTHORITY FOR OPINION

Since this matter impinges equally on all Federal employees, the Committee sought advice from the Comptroller General as legal adviser to the Congress, and from the Secretary of State as the implementing authority over 5 U.S.C. 7342.

Copies of their official responses are attached to this Opinion.

SUMMARY OPINION

It is the opinion of this Committee, on its own initiative and with the advice of the Comptroller General and the Assistant Secretary of State, that acceptance of travel or living expenses in specie or in kind by a Member or employee of the House of Representatives from any foreign government, official agent or representative thereof is not consented to in 5 U.S.C. 7342, and is, therefore, prohibited. This prohibition applies also to the family and household of Members and employees of the House of Representatives.

SSI BENEFITS TO ALIENS

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, a very genuine concern has been expressed by many of my constituents regarding the eligibility of aliens for supplemental security income, SSI, benefits after having been in the United States for only 30 days.

It is my understanding that in order to be eligible for SSI, an individual must be aged—65 years of age or older—blind, or disabled. In addition that person must be a resident of the United States and be either a citizen or an "alien lawfully admitted for permanent residence in the United States." In addition, the individual must reside in the United States for a period of 30 days.

Consequently, elderly and disabled immigrants have been able to obtain SSI benefits almost instantly and subsequently have been able to qualify for free medical care under their State welfare programs.

The concern being expressed by my constituents centers around both the cost of providing these immigrants with benefits as well as the fairness to the individual who has been a citizen and taxpayer of the United States all of his or her life.

The precise cost is not yet known but estimates are that \$300 to \$400 million dollars is being paid out in benefits to aliens. By channeling this money to this purpose, we deny ourselves the opportunity to use it to benefit needy citizens of the United States.

A number of my constituents have quite properly raised this point calling it a "ripoff" of the hard-working tax-payers of the United States. In all candor, they resent it very much At the same time everyone agrees that our own U.S. citizens who are eligible should be adequately taken care of.

Therefore, I urge the House Ways and Means Committee to give this matter prompt attention and the kind of investigation that would develop a factual base for change. This investigation will focus attention on the problem so that the best legislative and administrative talents can be drawn on to find the most equitable and reasonable solution to the problem.

LEGISLATION PROVIDING EARLY RETIREMENT TO EMPLOYEES OF BIA AND IHS

The SPEAKER. Under a previous order of the House, the gentleman from Alaska (Mr. Young) is recognized for 10 minutes.

Mr. YOUNG of Alaska. Mr. Speaker, I am today introducing in the House of Representatives legislation to provide for outplacement and an early retirement option to employees of the BIA and IHS who have been adversely affected by the application of Federal laws requiring employment preference to Indians.

The IRA of 1934 established the Indian preference policy for both recruitment and subsequent personnel action, but the BIA and IHS did not enforce the policy beyond initial hiring action until 1972. In that year, the BIA extended the application of Indian preference-section 12 of the IRA of 1934—to promotion. lateral transfers and reassignments, as well as to initial hiring. The validity of this policy and its application to all personnel actions has been upheld in two court decisions: a U.S. district court decision in 1972-Freeman against Morton-and an 8-0 decision of the Supreme Court in 1974-Morton against Mancari-which upheld the constitutionality of Indian preference statutes on grounds that they are valid employment criteria intended by Congress to assist Indians in gaining greater control over the agencies that dominate their lives.

The upshot of the court decisions is that non-Indian employees find themselves in a unique situation: They accepted employment with the understanding that they would have full competitive status within the Indian agencies, but now they are virtually frozen at present job levels with little or no opportunity for career advancement. The frustration and discouragement felt by these loud and clear in the many constituent letters I have received about the situation. Although some employees have found suitable employment outside BIA or IHS and continue their careers with a minimum of interruption, many have not.

Some BIA and IHS positions have no counterpart in other Federal agencies, especially positions at higher grade levels and those requiring unique specialties. Individuals in such positions are demoralized at the prospect of facing the rest of their professional lives with little or no promotion potential. Meanwhile, ambitious, highly motivated and qualified Indians must wait for non-Indians to vacate key positions. For both groups, it is a very frustrating situation, counterproductive to the goals of Indian self-determination and greater Indian participation in and control over the BIA and IHS.

My bill would provide a measure of equity for the non-Indian employee by allowing him to retire earlier than normally. At the same time, it would provide job openings that qualified Indians are eager to fill. The bill authorizes increased retirement annuities to non-Indian employees of the BIA and IHS who will have completed 20 years of service as of December 31, 1984, and who are not currently otherwise eligible for full retirement benefits under civil service regulations. It will thus assist those long-term employees whose careers are at a standstill as a result of Indian preference. On the other hand, it will further the cause of Indian self-determination by encouraging non-Indians to retire earlier.

Last year the House and Senate passed different versions of an early retirement bill. The House bill included an outplacement program; the Senate bill did not. The House bill would have increased the unfunded liability of the civil service retirement fund by an estimated \$25 million; the Senate bill would have increased it by an estimated \$136 million. Unfortunately, the conference report on the final bill was a product of a conference that never met. That report adopted the Senate-passed bill in its entirety. President Ford subsequently vetoed this less acceptable and more costly version.

The bill I am introducing is identical to the bill passed by the House last year, H.R. 5465. I believe this legislation is still the best available remedy to the acute personnel problems caused by strict application of the Indian preference laws. Hopefully, the new administration and the Senate will agree. I therefore urge the appropriate House committee to give this legislation speedy and favorable consideration.

A PERMANENT REDUCTION IN TAX RATES IS THE BEST WAY TO REVITALIZE THE NORTHEAST

The SPEAKER pro tempore. Under a previous order of the House, the gentle-

man from New York (Mr. KEMP) is recognized for 15 minutes.

Mr. KEMP. Mr. Speaker, in recent months there has been a considerable amount of discussion about economic problems in the older industrialized States of the Northeast United States. As a Representative from New York, which is one of the most seriously depressed States in the Northeast, I am vitally interested in Federal Government policies which can help reverse this situation.

I am convinced that the best thing which the Congress can do to help New York and the other States of the Northeast without punishing other States is to permanently reduce personal income tax rates. Therefore, I am introducing legislation today which will exactly du-plicate President Kennedy's tax cut of the early 1960's. It reduces all individual income rates by approximately 28 percent, reduces the corporate tax rate by 2 points, and for small business increases the corporate surtax exemption to \$200,-

I believe that this will not only stimulate production in the U.S. economy, but does so in a sound, noninflationary manner. This will be especially helpful to the Northeast, in contrast to President Carter's \$50 rebate plan, which only subsidizes the Sunbelt at the expense of the

There are several reasons why the administration's plan will be harmful to the Northeast. These reasons have recently been brought to public attention by Mr. Warren Brookes of the Boston Herald American. He has calculated that since President Carter's rebate will go to every man, woman, and child in families with incomes below \$30,000, this means that States where poverty and family size are high, and the number of taxpayers per family are low, will automatically get more money for their tax dollar than States where family size is low, where there are more wage earners and taxpayers per family, and more high wage earners

Therefore, since families in the sunbelt tend to have larger families, a higher percentage of nontaxpaying dependents per 1,000, and a lower percentage of families over the \$30,000 bracket than States in the Northeast, this means that more of the rebates will be going to people in the sunbelt. Mr. Brookes estimates that this will result in a net loss of over \$700 million for the Northeast.

Furthermore, because money for the rebate will have to be borrowed from the Nation's capital markets, due to the fact that the Federal Government is running deficit, this will largely affect the Northeast, because this is where most of the Nation's capital is located. And because the cost of living is considerably lower in the sunbelt, the rebate itself will be worth substantially more there than in the Northeast.

By contrast, a program of general tax rate reduction would be especially beneficial to the Northeast because it is the most heavily taxed area of the country. New York is a case in point. In 1974 the per capita tax burden was \$952 for all State and local taxes. By contrast, the average State and local tax burden for

the United States was only \$618. And of the 10 lowest-taxed States in the country, virtually all are located in the South. For example, the per capita State and local tax burden in Alabama was \$383, Arkansas \$384, South Carolina \$422, Tennessee \$424, Mississippi \$425, Oklahoma \$428, Kentucky \$441, West Virginia \$450, North Carolina \$461, and Texas \$467. It is no coincidence that these are the most rapidly expanding States in the country in terms of jobs.

An example of how bad things can really get is New York City. There the local tax burden was \$566 in 1974. When you add to this the per capita State tax of \$952 you come up with the staggering sum of \$1,329 in total State and local taxes. Consequently, it is not surprising that the city has lost 468,000 jobs since 1970. And manufacturing employment is dropping at the rate of 48,000 jobs per year-a total of 527,800 since 1969. The following chart summarizes the job situation:

Composition of New York City employment changes 1969-73 by industry and sector

	Employment change	Percent
Private sector wage	The Paris	
and salary em-		
ployment	-310,589	-9.1
Manufacturing	-169,590	-20.5
Trade	-60,548	-7.9

estate	-35,438	-7.3
Transportation, communica-		
tion, etc	-30, 869	-9.3
Services	-13,177	-1.4
Others	-967	9
Proprietors	19, 265	9.1
Government	26, 544	4.9
Federal	-16, 735	-14.7
State and local	43, 279	10.1

Source: Regional Economics Information System, Bureau of Economic Analysis, Department of Commerce.

The decline in manufacturing jobs is particularly significant. Between 1950 and 1975 over one-half of all the city's manufacturing jobs were lost. This, in turn, has resulted in a considerable loss in city revenues, as the following table demonstrates:

Estimated New York City revenues per manufacturing employee: 1976

Estir	nated
re	venue
	per
Type of revenue: emp	oloyee
City income tax	\$115
City sales tax1	135
Miscellaneous city taxes	15
Bus and subway tolls based on an as-	
sumed average of 400 rides per year 2	200
Residential property taxes assuming	0.00
an average assessment of \$3,300 per	
employee's family	300
Total city personal taxes per	1

Total city taxes per employee __ 1,395 With adjustment for difference from state sales tax, i.e., parking tax, entertainment tax, tax on services, etc.

City business taxes per employee s ___

employee

While bus and subway fares are not tech-

630

nically taxes, the City's subsidization of the transit system gives them that effect.

Included with these taxes are the fees and charges, especially water charges, levied on manufacturers in New York City.

Source: Temporary Commission on City Finances.

This loss in revenues then exacerbates the very thing which led to the loss of jobs in the first place: high tax rates. The following list shows that the history of taxes on manufacturing in New York City is one continuous upward trend:

1946 Gross receipts tax doubled to 1/10 of 1 percent.

1946 City sales tax doubled to 2 percent. 1948 Gross receipts tax doubled again to

1/5 of 1 percent. 1951 City sales tax increased to 3 percent. 1955 Gross receipts tax increased to ¼ of 1 percent.

1959 Gross receipts tax increased to 2/5 of 1 percent.

1960 Commercial motor vehicle tax imposed

1963 City sales tax increased to 4 percent. 1963 City commercial rent occupancy tax

imposed at 5 percent. 1965 City sales tax decreased to 3 percent.

1965 State sales tax imposed at 2 percent, exempting machinery, equipment, fuel and

1966 Gross receipts tax replaced with the general corporation (business income) tax at 5.5 percent.

1970 City commercial rent occupancy tax increased to 7.5 percent.
1971 General corporation (business in-

come) tax increased to 6.7 percent.

1974 City sales tax increased to 4 percent. General corporation (business income) tax increased to 10.05 percent.

Thus the city is continually attempting to increase its revenues by raising taxes on a smaller economic base to the point where it has clearly become counterproductive. The General Accounting Office recently estimated that any attempt by the city to raise taxes in order to balance its budget will actually reduce future revenues:

Changes in the City's revenues and expenditures affect its economic base and vice versa. The tax revenues depend upon the City's choice of tax base and tax rate, which are applied to the income or wealth of individuals and businesses. Increases in economic activity generate increases in income and wealth, which in turn generate increased revenues from several sources: personal income tax, corporate income tax, sales tax, and, with a lag, property tax. Increases in economic activity also tend to generate decreases in unemployment compensation and other categories of public assistance.

This interrelatedness between the budget and the economy is critical to any policy decision. Budgetary decisions have both direct and indirect effects on the economy. A City action to raise taxes to balance its budget in a given year may or may not ac-complish its stated goal for that year; but it may also affect the tax base in later years. This indirect effect may actually lead to smaller future revenues—a result counter to the purpose of the short-run action.

Conversely, the mayor's temporary commission on city finances recently concluded that a reduction in taxes would actually increase tax revenues. It said that if the following modest program of tax reduction on manufacturing industries were implemented, it would pay for itself within 3 years:

1. The general corporation (business income) tax as it applies to manufacturers should be reduced from 10.05 percent to percent.

2. The 4 percent sales tax on the purchase of machinery, equipment, fuel and utilities should be eliminated.

3. A 5 percent investment credit against general corporation (business income) tax should be instituted for the purchase of new manufacturing machinery, equipment and structures.

4. The commercial rent occupancy tax should be reduced from its present effective rate of almost 7.5 percent to a flat 2.5 percent on all rentals in excess of \$1,000 per

5. The exemptions from the property tax for newly constructed manufacturing facilities provided under the recently enacted Padovan-Steingut legislation should be increased to 95 percent of the assessed value added to the property, declining by 5 percent annually over 19 years from the present 50 percent exemption which declines by 5 percent annually over 10 years.

On the other hand, if this program is not enacted, manufacturing can be expected to continue its outward exodus to lower-taxed areas of the sunbelt and lead to a loss in revenues of more than \$90 million per year within 3 years.

Now it is possible to see how a tax reduction on the Federal level can have particularly beneficial effects for New York City and New York State. As I noted earlier, New York City residents have a combined State and local tax burden of \$1,329 per capita and New York State residents a burden of \$962 per capita. In order to get the full picture, however, one must add to this the per capita Federal tax burden, which is \$874. This means that New York State residents are paying approximately \$1,826 per capita in total taxes and New York City residents are paying \$2,203 per capita. By comparison, the average for the United States is \$1,492 per capita.

Consequently, a substantial reduction in Federal tax rates would go a long way toward eliminating the disincentives to investment, production, and job creation which presently exist in the overtaxed Northeast. By immediately increasing the aftertax reward for work and investment, there will be an immediate incentive for businesses to expand plant capacity and employment. Workers will immediately increase their takehome pay. And billions of dollars of capital will be released for investment.

Since the Northeast is still the most heavily industrialized area of the country, any expansion of production generally will have to have significant impact here. It cannot be broken down geographically, but my tax reduction proposal is estimated by the Congressional Budget Office to add \$74 billion to the Nation's GNP by the end of 1978 and \$121 billion by the end of 1979. This translates into 1,460,000 jobs by the end of 1978 and 2,340,000 by the end of 1979, according to the CBO.

I hope that my colleagues in the Northeast will pay especially close attention to my remarks today and join me in cosponsoring this legislation. It is the best thing they can hope to do on the Federal level to help their own districts.

At this point I would like to include with my remarks the article by Warren Brookes referred to earlier from the Boston Herald American of March 20, 1977, which relates to another tax reduction proposal of mine, and an editorial from the Wall Street Journal of December 12, 1976, entitled, "Sunbelts and Snowbelts":

SUNBELTS AND SNOWBELTS

Our award for the most overblown political issue of 1976 goes to the Sunbelt-Snowbelt Theory, an idea that gripped the minds and hearts of Northeast politicians soon after it was advanced in the June 26 issue of The National Journal. The magazine conducted a study that concluded that "there is a massive flow of wealth from the Northeast and Midwest to the faster-growing West and South."

What got the adrenalin pumping among snowbelt mayors and governors was the further conclusion that the "massive flow" being directed by the federal government, which seemed to be siphoning tax dollars out of the North and sending them South and West. By the NJ's calculations, the five Great Lakes states are hurt the worst, last year sending \$62.2 billion to Washington and getting only \$43.6 billion back. New York, New Jersey and Pennsylvania had a net loss of \$10 billion. The Southern states gained \$11.5 billion and the Western states gained

It all sounds terribly unfair and if you don't think about it very hard, which is standard procedure among politicians, it may even be the cause of the decline of the North and rise of the Sunbelt. The numbers though, are trivial, given the size of the U.S. economy. Gross National Product these days is \$1.8 trillion, which is \$1.8 thousand billion. In context, \$10 billion is hardly massive.

But even accepting the idea that \$10 billion is not to be sneezed at, there is no evidence that the \$10 billion or so that is sent South is spent there.

Here is Grandma and Grandpa Jones who vorked all their lives in Pottsville, Pa., drawing Social Security checks in St. Petersburg, Fla. Their children are working in Pottsville, Detroit and Trenton, N.J., each sending their Social Security taxes to Washington. By these accounts, there is a flow of funds from Pennsylvania, Michigan and New Jersey to Florida.

But when Grandma and Grandpa Jones get their check, what do they do with it? They make a payment on their Chevrolet, made in Detroit, and a payment on their mobile home, made in Pine Grove, Pa., and a month's worth of pharmaceuticals made in New Jersey. By these accounts, there is a massive flow of funds from the Sunbelt to the Snowbelt.

The point being that any study on the incidence of taxation or the incidence of spending is of little value, for what is important to public policy is the burden of taxing and spending. Does the profits tax that General Motors sends to Washington come out of Michigan? Or is it collected by GM in the price of autos as they are sold throughout the nation, selling faster these days in the more rapidly growing South and West? And does the paycheck sent to the San Diego sailor stay in San Diego, or does it bounce back to Kansas wheat and Kentucky bourbon?

We're almost sorry to have to point up the economic foolishness of the Sunbelt-Snowbelt Theory. If it were valid, after all, we could point to it as further evidence that federal taxes and spending must be reduced. Isn't it clear that if Ronald Reagan's famous to cut federal taxes and spending by \$100 billion were enacted, the Snowbelt states would benefit most, because the Snowbelt pays more of the taxes and the Sunbelt gets more of the spending? Why didn't the Northern mayors and governors embrace the Reagan plan?

As it is, here are these same Snowbelt politicians-New York City Mayor Beame in the forefront-beating on Jimmy Carter to boost spending instead of cutting taxes to stimulate the economy. If Mayor Beame believes the theory, he's acting irrationally, for if spending remains the same and taxes are cut, the Snowbelt benefits relative to the Sunbelt. Right?

Somebody should tell Mayor Beame a little secret. The federal policy that would maximize benefits to New York City relative to the rest of the nation would be an across-theboard reduction in federal tax rates on personal incomes. It costs more to live in New York City than anywhere else, doesn't it? Wages and salaries have to be considerably higher in New York to yield the same aftertax purchasing power as in Birmingham, say, or Dallas. Which means the New York carpenter, salesman, dentist is in a higher tax bracket than his counterpart in the Sunbelt, and a percentage cut in rates for all federal taxpayers gives a bigger break to New Yorkers than to any others, with the possible exceptions of Hawaiians and Alaskans.

But this makes too much sense. The Sunbelt-Snowbelt Theory and its single-entry bookkeeping flaws is so much better suited to the redistributional instincts of the politicians of the Northeast. It was all the rage this year and no doubt it will be back bigger than ever in 1977.

CARTER'S TAX PLAN IS A RIPOFF FOR THE NORTHEAST

(By Warren T. Brookes)

With all due respect to Congressman Michael Harrington, who is a very likeable and hard working fellow, his "Northeast Economic Coalition" is turning out to be something of a joke.

Why?

Because with every passing vote, the Massachusetts Congressional delegation is doing more new economic damage to this region than the coalition can ever correct.

How so?

Let us take (for just one prime example) the recent vote in the House on Jimmy Carter's so-called "economic stimulus package."

Our intrepid delegation had their choice between the Carter "Quick Fix" Tax Rebate program and a permanent tax cut proposal made by Congressman Jack Kemp of New York.

All but four of these high paid folks of ours chose the Carter package, providing that either they have an economic death wish, or they can't add and subtract.

Only two of the ten democrats, Burke and Early, had the good judgment to see that the Carter Tax Rebate plan was a terrible "rip for the Northeast.

Indeed, the whole Carter proposal should be labeled the "Sunbelt Stimulation Act of

Why?

FIGURE IT OUT FOR YOURSELF

The Carter proposal calls for a \$50 cash rebate to every man, woman and child in families with incomes below \$25,000 and nothing for families over \$30,000.

This means that states were poverty and family size are high, and the number of taxpayers per family are low, will automatically more money for their tax dollar than states where family size is low and where there are more wage earners and taxpayers per family, and more high wage earners.

Now it just so happens that the Sunbelt states have a much higher family size than we do (3.5 versus 3.1 for Massachusetts) and a much lower number of taxpayers per family than we do (1.5 Sunbelt versus 1.8 in Massachusetts).

This means that the Sunbelt states have on average about 12-16 percent more nontaxpaying dependents per 1000 population than we do. These states also have more than twice as many non-taxpaying poverty fam-

ilies as we do (15.6 percent below the poverty line in the Southeast compared with 6.7 percent in Massachusetts)

Conversely, the Sunbelt states in the Southeast have a much lower percentage of families over the \$30,000 bracket than we do (2.9 percent for the Southeast versus 3.8 percent for Massachusetts)

What does all this really mean?

Very simply, there will be about 16 percent more non-taxpaying rebate receivers in the Southeast than here in Massachusetts, and about 40 percent more people will receive no tax rebate at all in Massachusetts than in the average Sunbelt state.

In sum, the Tax Rebate plan is a huge "rip off" for Massachusetts and a nice stimulus

for the Sunbelt.

Our own estimate is that in terms of "tax share," the outflow of funds on this program alone will be over \$700 million from the Northeast and for Massachusetts a loss of between \$80-110 million.

NICE WORK, FELLOWS

What makes this whole mess more ludicrous is the fact that the tax rebate will be financed largely out of the Northeast's own job starved capital markets, Boston, New York, Philadelphia, etc.

This is partly because that's where most of the nation's capital is, and partly because in the slower moving, older economies of the Northeast, 5 percent risk-free U.S. Treasury bonds are much more attractive than

private investments. But this isn't all.

The cost of living in Massachusetts is 18 percent above the U.S. median, while the cost of living in the Sunbelt is about nine percent below. The result is that the \$50 rebate will be worth about 27 percent more to the Sunbelt receiver than to the Massachusetts resident, and that much more valuable to that economy than to ours.

THERE'S STILL MORE

The Carter package also includes a special "tax incentive" to businesses that hire new workers, but the hitch is that the incentive only applies to jobs added above and beyond

a "normal three percent increase."

Now ask yourself "Where is the job growth rate already well above three percent a year?"
You guessed it, the Sunbelt. Now where is the average job growth rate the lowest in the country (under 1 percent)? Massachusetts and New York.

Who is going to get the most tax credits for job creation? The answer is obvious—the Sunbelt. Who is going to get almost nothing from this \$2 billion part of the program? Massachusetts and New York.

The fact that eight of our ten democrats (including Mr. Harrington) voted for this incredibly bad program shows they have not

been doing their homework

They do not understand that one of the biggest problems facing our region is the lack of capital investment, and the main reason for this is that we have the highest taxes on income and investment of any region, and the poorest return compared with the Sunbelt.

Every time the federal government spends more and inflates more, this differential gets even worse, because inflation drives up our tax rates, while driving down our investment

Thus, like elderly people living on relatively fixed incomes, the older industrialized regions pay most fiercely for all federal government spending, taxation and inflation.

The Sunbelt states, on the other hand, are less hurt by federal spending, inflation and taxation, because their lower-taxed economies are growing even faster, and their plants and equipment are newer, requiring less in-flated replacement.

Obviously, the only possible way to reduce this terrible and growing disparity between

the Sunbelt and the Northeast is to cut federal taxation permanently for all levels of income.

This is why a very savvy, young congress-man named Jack Kemp, a Republican from a very depressed industrial area of New York, borrowed a leaf from the late President John F. Kennedy.

Sixteen years ago, when this nation was struggling with 6.6 percent unemployment and sluggish growth, President Kennedy got some sound advice from Germany: Cut all your tax rates permanently and turn loose your private sector.

He did—and it worked spectacularly well. From 1962 to 1967, this nation enjoyed its best five years of economic growth in history and its lowest inflation and unemployment

During that period we had the highest level of capital investment in modern history and the fastest growth in real personal income.

It worked, because everyone at all levels of the income was encouraged to save more, invest more, and work harder. And, incidentally, despite much lower rates, tax revenues rose and deficits disappeared.

Now Congressman Kemp wants to do more of the same thing. He points out that because of inflation our federal taxes have been rising. even though rates have been the same.

This year 34 percent will pay at the 30 percent marginal tax rate, compared with only three percent just 15 years ago.

Furthermore, if Congress doesn't act, there will be a 25-30 percent increase in tax rates for all Americans by 1981, just because in-flation is pushing us all into higher brackets.

Kemp understands that the impact of this taxflation" will fall most heavily on his region, the Northeast, and particularly on the capital-starved economy of Massachusetts. So, he proposed an across-the-board per-

manent tax cut for individuals and businesses, as opposed to a quickie transfer-type cash rebate

It was the perfect economic approach to our region's problems, but only two wise Mass. Democrats (Early and Burke) could bring themselves to join the two Republicans (Conte, Heckler) to support it. All the rest vent along with the same old tired approach that has drained the Northeast into the Sun-

belt for years. That's why Congressman Harrington should stop kidding us with his Northeast Regional Coalition. As long as he and our congressional delegation vote the way they do, it's nothing but public relations cosmetics.

AUTOMOTIVE TRANSPORT SEARCH AND DEVELOPMENT ACT OF 1977

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. Brown) is recognized for 10 minutes

Mr. BROWN of California. Mr. Speaker, I take this time to make some brief remarks on the Automotive Transport Research and Development Act of 1977, which very nearly became law last year, and is pending before this body now. This legislation, originally introduced as H.R. 784, was sent to President Ford late last year, where it was vetoed in the last days of the session. The House promptly overrode the veto of that bill, but the Senate failed to muster the twothirds majority needed for passage. H.R. 784 is currently before the Committee on Science and Technology, where it is expected to receive prompt attention.

The importance of this legislation grows every day as the problems with imported oil become more apparent, the

need to develop more efficient motor vehicles becomes more obvious, and the need to maintain air quality and automotive safety requirements remains a major national goal. The Automotive Transport Research and Development Act would not eliminate the need for fuel economy or auto emission standards, nor would it relieve the automobile companies of the responsibility to make major investments in new technologies. What it would do is guarantee that the technology needed to meet these various requirements would be available when needed. Every day that passes without action postpones the day when that technology, which is feasible but not yet developed, would be available.

Mr. Speaker, I have spoken many, many times in the past about the need for a vigorous and comprehensive energy conservation program, and I have sponsored or cosponsored dozens of bills which would contribute to this goal. H.R. 784, the Automotive Transport Research and Development Act of 1977 is one of the most important pieces of energy conservation from the last Congress that has not yet become law. I would be happy to document the need for this bill to anyone who asks, and I would certainly recommend the committee reports on this bill to any possible skeptics. As the prime author of this legislation, in its various forms, for the past 4 years, I have no doubts that the merits of the proposal are now understood by those most concerned.

At this time, I wish to list the cosponsors of this bill and the identical versions of it which have been introduced this year. I would like to especially note the constant support and help this proposal has received from the chairman of the Science and Technology Committee, OLIN E. TEAGUE, and the chairman of the subcommittee involved, MIKE McCor-MACK.

The cosponsors follow:

LIST OF COSPONSORS FOR AUTOMOTIVE TRANS-PORT RESEARCH AND DEVELOPMENT ACT OF

George E. Brown, Jr. of California. Mike McCormack of Washington. Olin E. Teague of Texas. Don Fuqua of Florida. Dale Milford of Texas. Ray Thornton of Arkansas. Marilyn Lloyd of Tennessee. H.R. 3199 SEEN AS WORKABLE, PRAC-TICAL, AND EXPEDITIOUS

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. Wolff) is recognized for 5 minutes.

Mr. WOLFF. Mr. Speaker, the 1972 Water Pollution Control Act was a monumental attempt to improve the quality of our Nation's waters. However, the implementation of the original act had been bogged down by massive redtape, overlapping, and duplicative review procedures which hinder our efforts to restore the original purity of our streams, rivers, and waterways. Escalating costs, the loss of employment, as well as the loss of other economic benefits accruing from the construction of public works such as water treatment plants are due to delays in awarding construction funds to the States, delays exacerbated by the lack of integration and coordination between the Federal, State, and local governments

By approving H.R. 3199, the House has made this important Federal law one that is workable, practical, and expeditious. We have eliminated the needless and repetitive review procedures by providing for the State certification of grant applications, and clarifying the intent of certain provisions within the 1972 stat-

One provision I would like to highlight is one that I introduced in the House of Representatives as H.R. 2752. which was incorporated into H.R. 3199 as section 7(e). This provision, by recognizing the impediments and delays of the funding obligation process caused by massive redtape in the original act, will extend the deadline for the construction grants applications deadline by 1 year from September 30, 1977, to September 30, 1978. This necessary extension will preserve the availability of funds allotted to New York, Pennsylvania, Michigan, Maryland, Delaware, Connecticut, and the District of Columbia, for water pollution control.

The potential loss to these eight regions could have ranged as high as \$700 million. New York alone would have lost up to \$300 million had this extension not been approved. I am proud to have been an instrumental force in preserving these funds; funds which were desperately needed to comply with Federal law, to protect the health and safety of our citizens, as well as providing a welcome economic stimulus through the creation of thousands of construction jobs. These benefits would have been irrevocably lost, if the House of Representatives had not so judiciously approved this extension.

I would like to take this time to thank my colleagues in the House who so strongly supported my efforts:

COSPONSORS OF H.R. 2752 (ALSO: H.R. 2937, H.R. 2938, H.R. 3390, H.R. 4060)

Solarz, Ms. Spellman. Mr. Steers, Mr. Stratton, Mr. Studds, Mr. Vander Jagt, Mr. Weiss, Mr. Wydler, Mr. Zeferetti.

"KEEP CHICAGO CLEAN" ESSAY CONTEST

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. Annunzio) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, yesterday I announced the winners in the essay contest sponsored by Mayor Bilandic's Citizens Committee for a Cleaner Chicago, myself, and Illinois State Representative William J. Laurino.

I wish to include in the RECORD copies of the essays by the runners-up, all of which were written by pupils in schools located in the 39th Ward area of the 11th Congressional District of Illinois, which I am proud to represent.

The essays follow:

KEEP CHICAGO CLEAN FLORENCE ERICKSON

I believe that the only way to keep this community clean is to cooperate. I try to cooperate by not littering, which is the main problem in all communities. We must put things where they belong and not on the ground, in the water, or out a window.

Another problem is the exhaust from cars, trucks, and buses. People should band together and make everything pass the clean air exam, and if they can't, they should have to make adjustments. All the tons of soot and exhaust being poured into the air is not only making the air and water dirty but also, killing the birds and fish. If the birds and fish are killed, then soon it may be people

I try my best to keep things nice, but it's hard sometimes. It's hard for everyone, but if everyone tries their best, this community will once again be clean and beautiful. This should be everyone's number one goal.

RONALD BUGAR

We should understand the fact for keeping our city clean. It involves mostly the cooperation of the people in our city. One of the most important projects is going on all over America and our city, its called recycling. Recycling means being used over and over again. It can be very profitable for many people. Recycling is being used for many items such as newspapers, bottles, cans, wires, and most of all aluminum cans.

I myself had recycled over two tons of aluminum during the bicentennial year, earning a very profitable amount of money.

By recycling items you help to control litter and solid waste.

Recycling pays, don't throw money away, earn cash, fight litter!!

SHEILA LEARN

To keep my community clean and beautiful, I would pick up all papers and litter, use refuse cans for garbage and tell others to use them too. I would try to keep our parks and forest preserves from being torn down for industry. I would try to help people clean out rivers and lakes, and make sure people don't use them for junk yards. I would want the workers to either fix up or tear down the abandon buildings. I would try to help arrest or fine people defacing public property,

such as buildings, fences, and walls in schools. I would help in planting beautiful flowers and trees around the city for conservation.

That is how I would and will keep my community clean and beautiful.

MARY SHULTZ

Some of the ways that I can keep our community clean and beautiful are by not throwing gum wrappers, old paper, candy wrappers, etc. into streets and alleys.

I can also help by teaching my younger brothers, sisters and younger children on my

block not to throw garbage around.

I can teach them to put it in the proper place.

When they throw waste in the garbage can they should make sure they put the lid back on.

This will prevent the wind from blowing it around. And will also keep rodents away.

When I see some garbage blowing around, I

can pick it up.

I can also start a clean up campaign. Some of my friends and I can go around my neighborhood and pick up old bottles etc.

These are some of the ways that I can (Pitch in to Keep Our Community Clean and Beautiful)

ROBERT KAZEL

Since we all live in our community, we all profit from it's strengths and enjoy it's surroundings. It is natural, then, for us to want others to enjoy our neighborhood with us. We can accomplish this by taking our fundamental responsibility of keeping the community clean and help making it beautiful.

There are many ways that I, along with other Chicagoans, can help our neighbor-hood's appearance. It is important to remember that our city streets, sidewalks, and parks are owned by no one, but shared by everyone. If we stop littering these places, our community and the people who live in it will benefit. "Pitch in," "Give a hoot . . ," "Put litter in it's place," are slogans that we've heard daily for several years. They all mean the same thing-our great city is too beautiful and important to so many to let littering ruin it.

Our natural resources are increasingly vital, because they are irreplaceable. Chicago is lucky to have so many wonderful natural resources, including Lake Michigan and the city's wildlife. In an age of immeasurable progress, protection of our surrounding animal and plant life should always be strong. We must save these things not only for our community, but for future generations to come.

Chicago, for it's size, is a truly clean and a very beautiful city. Along with me, I hope Chicagoans will have the persistence and good judgment that our city's public has had for decades, when keeping our communities clean and beautiful.

JOANN RITRO

I have always felt that it is important to keep our surrounding environment as clean and beautiful as possible, and so I will do anything in my power to help our city, Chicago, to stay looking beautiful. I will not litter, but put the garbage into my pocket, and wait until I see a trash can. some young teen-agers can get together and make posters reminding people not to litter or break pop bottles. To help our air, people can make car-pools and take turns using different cars. Again, young people can clean up our public parks and plant flowers and trees. Adults can also help by cleaning up writing on their buildings or homes, by keeping tops on their garbage cans to prevent spilling into the alleys. Yes, I think that we all can work together, and make our neighborhood, and city, litter free, and have something to be proud of.

ANNABELLE SINENSE

My neighborhood is important since it reflects me and the other people around it. Therefore, we should keep it clean and everybody should do their part. I can do mine by showing an example. I can start by not littering, and by respecting other people's property, by not writing on the walls and stepping on the grass, etc. I know I cannot always keep my neighborhood as clean without everybody's help, so why not all pitch in. A clean environment is healthier and better to live in.

Keeping our area beautiful would be a hard job. A good way to start would be to get some friends and tell them the importance of a clean Chicago. Then we could go around picking up garbage. If we keep the bottles, cans and papers, we could recycle them. After this we could use the recycling money to buy trees and plants to plant in vacant places. With the money left over we could buy garbage cans. On the cans a sign would say depends on it." "Pitch in, Chicago's future

After that we might get our parents to sign a petition to make all factories put

filters in their chimneys

We could get City Hall to destroy vacant, condemned buildings and build homes for the homeless in their place. They could make sure landlords treat their tenants fairly and make sure Gaylords and other groups of kids who ruin others property are justly punished. Some of the harder things I can't do but with the help of Mayor Bilandic and other government officials they would be done. This way Chicago's land, buildings and people are clean.

Don't worry, Mayor Bilandic, we will help make Chicago beautiful. Our Fifth Grade

Class are with you all the way.

BARBARA ANN JENKINSON

Pollution, litter, garbage, junk, smoke, industries, cars, people, machines, and smoking all contribute to the dirty environment that we have all created. Everyone can help keep our community clean and beautiful. I can't do it alone and you can't do it alone. Everyone must do their share and work together as a community.

If I was the only one picking up garbage, I couldn't get anywhere, because others would be putting down garbage 100 times faster than I could pick it up. I am only one person but at least I can set a good example. Maybe if I was lucky, they would see me and do the same. When I get older, I could teach my children to pick up garbage and they in turn would teach their children. I could teach my children not to smoke and that smoking is not only bad for the community but that it is also bad for your health. I would need cooperation and everyone's help.

Our world is in deep trouble. It is very sick. One hundred years from now it will probably die if we don't do something about it. What can we do? Let's all do our part. Pitch in and clean up your community today. Don't put it off until tomorrow. Act

A cleaner community means a cleaner city. cleaner city means a cleaner state. A cleaner state means a cleaner and more beautiful country.

Help your community to be clean and beautiful.

ROSEANN BLAIR

There are many things I think could be done to keep Chicago a cleaner and brighter place to live.

One of the things that I could do is to clean up after myself and others as well. Many people litter without even thinking. If they stop to think about it at all, most people make an excuse of "Everybody does and leave it at that. Many of the few remaining people who don't litter refuse to help clean up after those who do litter be-cause, as they say, "I didn't do it so why should I clean up?" I believe that if I try hard enough, I could convince people that Chicago is a city, a group of people bound together, and that each one of us must be

responsible for the preservation of the beauty of our environment.

Another way I think I could keep Chicago clean is if I could explain to people that Chicago is their home and to litter our streets and public places is like tossing gum wrappers and other litter on the floor of their own homes.

I think that if I could bring these two suggestions to the public eyes, I would be helping to keep Chicago clean.

CHARGES AND QUESTIONS CON-CERNING RICHARD SPRAGUE

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. Gonzalez) is recognized for 5 minutes

Mr. GONZALEZ. Mr. Speaker, in the RECORD for April 5, 1977, there appears remarks in defense of Richard Sprague. the former Chief Counsel and Staff Director of the House Select Committee on Assassinations, in respect to some of the charges and questions I have raised in respect to him and his role as an employee of the House.

I am not about to make this a donnybrook, by going argument by argument and refuting what all has been said in

Mr. Sprague's defense.

For example, I know that others can confirm that the entire committee was not told in executive session of the Cuban situation as it arose and before any contacts with any foreign officials were made. On the contrary, the negotiations were very much underway when Mr. Sprague mentioned the fact to us at the tail end of an executive session-which a number of members had already left.

Further, in the defense of Mr. Sprague it is said that the necessary forms for disclosure of finances by staff members can only be obtained after the chairman of the committee in question has submitted to the Committee on Standards of Official Conduct a list of personnel to whom the forms should be sent. I sent such a list to the Committee on Standards of Official Conduct.

Has Mr. Sprague, as well as others, now gotten away without having to meet the April 30 deadline-as well as the February 15 deadline which I asked them to meet when I was the chairman of the committee?

I still say that such information is important and should be made public knowledge. Also, to clear up any confusion about the finances of the House Select Committee on Assassinations during the 94th Congress and the first 3 months of this Congress, I believe a full report should be made to the House of the expenditures for these periods.

Mr. Speaker, I believe that the re-marks in defense of Mr. Sprague are simply an attempt to obfuscate the facts which I related in my statement of Tuesday, March 29, which begin on page

9372 and conclude on 9378.

While it is true that Mr. Sprague did submit a check for \$114.48 for his 73 phone calls in November to Philadelphia, he did not do so until after I resubmitted to him vouchers for November and December I had been asked to sign in February for a previous Congress for a committee which had been under another chairman. His check to the C. & P

Telephone Co. was dated February 15, 1977.

Unfortunately, my colleague who submitted the defense of Mr. Sprague, as well as other colleagues on the select committee have chosen to ignore some very serious charges in respect to the former chief counsel and staff director.

I have—throughout my public life—had the reputation for speaking forth-rightly and honestly in respect to all matters of public concern.

My experience with Mr. Sprague has shown me that he is not honest, and I challenge any colleague to prove other-

wise.

THE REVITALIZATION OF HOBOKEN

The SPEAKER. Under a previous order of the House, the gentleman from New Jersey (Mr. Le Fante) is recognized for 5 minutes.

Mr. LE FANTE. Mr. Speaker, at a time when most of our urban centers are declining in stature and experiencing the decay of their inner cities, the community of Hoboken, N.J., in my district is enjoying a renaissance of unparalleled proportion.

Hoboken has reversed the unfortunate trend from which our major urban areas suffer through the implementation of an imaginative and highly successful pro-

gram of revitalization.

In 1972, the municipality of Hoboken embarked upon a policy of neighborhood preservation. Prior to that time, this city of 45,396 was afflicted with a declining tax base, a diminishing population, and a severe housing problem aggravated by a large percentage of deteriorating, substandard, and overcrowded dwellings.

Today, under the direction of the Hoboken Community Development Agency which is administrating the neighborhood preservation program, the city is undergoing a rejuvenation unmatched by any other urban center in our Nation. Within the last 5 years, over 800 new housing units have been constructed, over 1,000 units rehabilitated, and over 700 dwelling units renovated.

Property values are rising steadily, and the exodus of citizens in recent years has been reversed. In fact, the revitalization of the city has created a renewed interest in Hoboken on the part of many residents of the New York-New Jersey met-

ropolitan area.

The most significant success of neighborhood preservation, however, has been the impact which it has had on the long time residents of the community. They have not only recommitted themselves to their city, but have reinvested their finances and their futures, as well as their spirit, to the community they love so well.

Their devotion has not been misplaced. To insure the viability of neighborhood preservation, Hoboken offers its citizens a number of different low-interest loan programs to aid them in the rehabilitation of their homes, as well as free professional architectural assistance to insure that the renovations are both economic and efficient. And, to complete the rebirth of Hoboken, the municipal government of Mayor Steve Cappiello plans

the construction of two new parks, in addition to the improvement of existing parks and the planting of shade trees on every street in the area.

The revitalization of Hoboken was founded upon the principle that private investment is the key to municipal prosperity. The renovated brownstones, the rehabilitated tenement buildings, and the now famous factory that has been converted into a housing complex, are glowing examples of what can be accomplished through an alliance of government and the private sector.

Mr. Speaker, the Hoboken renaissance is truly a model for other cities to emulate. The inner-city decay which has ravaged our urban centers in recent years need not be a way of life, for in fact, as Hoboken has shown, the deterioration can be halted and indeed reversed. Our cities need not die. They can survive; they can prosper.

GEOTHERMAL ENERGY DEVELOP-MENT TAX INCENTIVE

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. McFall) is recognized for 10 minutes.

Mr. McFALL. Mr. Speaker, I am today introducing legislation designed to provide an incentive for the development of our Nation's geothermal energy resources. The President has announced that he will present to the Congress later this month his energy plan for the Nation. I do not know what provisions the President will include in his plan, but I hope that he will address the need for geothermal energy development.

The legislation I am introducing provides a 25-percent tax deduction from the gross income generated by a geothermal property and allows the deduction of intangible drilling costs as expenses. These provisions provide a handsome incentive for geothermal energy development, but I do wish to point out that the application of this incentive is restricted by my bill.

This legislation is designed to provide this incentive to exclusively geothermal energy firms. Specifically, the bill precludes from qualifying for the incentive individuals who are retailers of oil or natural gas, refiners of crude oil producing over 500,000 barrels a day, and anyone owning 5 percent or larger interest in such oil or gas operations.

Additionally, the incentive applies only to domestic geothermal resources, and this incentive will automatically expire from the Tax Code 10 years after its enactment.

This 10-year expiration clause adds further pressure for immediate development since the 25-percent deduction cannot be taken until income from the sale of the geothermal energy is realized.

I know that some Members of Congress have reservations about providing tax incentives to private industry, but I believe the provisions contained in this legislation are sufficiently restrictive to assure that the tax benefits realized will go to those private firms primarily concerned with geothermal energy development.

I am including for insertion in the

RECORD after these remarks a copy of a section-by-section analysis of this bill by Mr. Howard Zaritsky of the Congressional Research Service, as well as a copy of the bill itself:

[From the Library of Congress, Congressional Research Service, Washington, D.C.]

SECTION-BY-SECTION ANALYSIS OF A DRAFT BILL ON GEOTHERMAL ENERGY INCOME TAX INCENTIVES

This report analyzes the provisions of a draft bill designed to encourage the production of geothermal energy through income tax incentives. Each section of the bill will be examined and analyzed independently.

SECTION 1

(a) Section 1(a) of the new bill would add a section 189 to the Internal Revenue Code of 1954, as amended to date (Code), providing for a deduction of twenty-five percent of the gross income derived from a geothermal energy source, excluding rents and royalties. The deduction is also limited to one-half of the taxable income from the property, determined without regard for depletion or depreciation recapture. Int. Rev. Code, secs. 611, 1245. The deduction established by this new provision would always at least be permitted to equal the depletion deduction otherwise available.

deduction otherwise available.
"Geothermal property" is defined as domestic property producing geothermal steam, hot water and hot brines, or steam, hot water and hot brines resulting from the introduc-

tion of water into formations.

Certain individuals are precluded from qualifying for the aforementioned tax deduction, including retailers of oil or natural gas, refiners of crude oil producing over 50,000 barrels on any day of the taxable year, and related taxpayers. A related person is defined as someone holding a significant ownership interest in the taxpayer or in whom the taxpayer holds a significant ownership interest. An interest is significant if it is at least a 5 percent interest in stock of a corporation, profits or capital of a partnership, or beneficial interests in a trust or estate.

If a taxpayer takes the new deduction for geothermal energy property, no depletion deduction may be taken under section 611.

If property is held by two or more persons other than jointly, special rules govern who is entitled to the deduction. If the property is held by a lessee and lessor, the deduction is to be "equitably apportioned" pursuant to regulations of the Secretary of the Treasury. If the property is held by a life tenant with a remainderperson, the deduction is entirely that of the life tenant. If the property is held in trust, the trust instrument determines the apportionment or allocation of the section 189 deduction or, if the instrument is silent, the deduction will be apportioned in the same manner as income of the trust. Finally, if the property is held by an estate the deduction is apportioned among the heirs, legatees and devisees, and the estate itself, in relation to the income of the estate which is allocated to each of them.

The deduction for geothermal energy is patterned after the depletion deduction. Int. Rev. Code, sec. 611. The depletion deduction is applicable to geothermal energy properties, treating them as "gas properties" for purposes of percentage depletion. Such properties are given substantial benefit under the phase-out of percentage depletion, with a continuation of a 22 percent depletion rate through 1980, and a scaled down depletion rate reaching 15 percent for 1984 and thereafter. Int. Rev. Code, sec. 613A(b); See also Reich v. Commissioner and Rowan v. Commissioner, 454 F. 2d 1157 (9th Cir. 1972). Cost depletion, of course, remains unchanged, permitting deduction over the useful life of the property of the adjusted basis of the taxpayer in such property.

The difference between the depletion deduction and the deduction for geothermal energy properties is primarily the size of the deduction. The geothermal energy property deduction is 25 percent of the gross income from the properties while the depletion deduction is 22 percent or less. Consequently, in almost all conceivable cases the proposed deduction would be more favorable than depletion, except for certain cost depletion situations respecting properties with unusually short useful lives (less than 4 years), or if there were a very low income yield from the property and cost depletion were elected.

(b) This subsection of the bill makes necessary amendments to other provisions of the Code to comply and correspond with the new deduction for geothermal energy property income. References to the deduction for depletion are expanded to also refer to the new deduction for geothermal energy property income. Eleven such changes are

made.

(c) Subsection (c) makes a change in the table of contents for the Internal Revenue Code, to reflect the new provision.

Section 263 of the Internal Revenue Code permits the current deduction as an expense of certain research and experimental expenditures by the taxpayer, particularly intangible drilling costs. Absent this provision, these costs would have to be added to the taxpay-

er's basis and written off by depletion.
"Intangible drilling costs" are such developmental costs as: "clearing the site of the well, digging a sludge pit, hauling, erecting derricks, laying lines for water if it is not available at the site, and then pay the wages, fuel, repair, etc., necessary to drill the hole." Mertens, Law of Federal Income Taxation, vol. 4, p. 263 (1973, supp. 1976).

The amendments in section 2 of the pro-posal would permit the expensing of intangible drilling costs attributable to geothermal

energy properties.

SECTION 3

The amendments added by this proposal would apply to taxable years beginning during the 10-year period beginning after the date of enactment of the law. Consequently, the law is self-eliminating after ten years.

H.R. 6147

A bill to amend the Internal Revenue Code of 1954 with respect to the taxation of income from the production and sale of geothermal steam and associated resources

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part VI of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to itemized deductions for individuals and corporations) is amended by adding at the end thereof the following new section:

"SEC. 189. GEOTHERMAL STEAM AND OTHER GEOTHERMAL RESOURCES.

- "(a) IN GENERAL,-In the case of a geothermal property there shall be allowed as a deduction, under regulations prescribed by the Secretary or his delegate, an amount equal to 25 percent of the gross income for the taxable year from the property, excluding from such gross income an amount equal to any rents or royalties paid or incurred by the taxpayer in respect of the property. In no case shall the amount allowable as a deduction under this section with respect to a geothermal property be less than the amount which would (but for subsection (f)) be allowable under section 611 with respect to such property. For purposes of applying such section 611 with respect to this section, a geo-thermal property shall be considered a gas
- "(b) LIMITATION.-The deduction allowed under subsection (a) shall not exceed 50 per-cent of the taxpayer's taxable income for the taxable year from the property, computed without regard to the deduction allowed by

this section and section 611. For purposes of the preceding sentence, the allowable deductions taken into account in computing the taxable income from the property shall be decreased by an amount equal to so much of any gain which (1) is treated under section 1245 (relating to gain from the disposition of certain depreciable property) as gain which is ordinary income, and (2) is properly allocable to the property.

(c) SPECIAL RULES.

"(1) LEASES.—In the case of a lease, the deduction allowed under subsection (a) shall be equitably apportioned between the lessor and lessee.

"(2) LIFE TENANT AND REMAINDERMAN .the case of property held by one person for life with remainder to another person, the deduction under this section shall be computed as if the life tenant were the absolute owner of the property and shall be al-

lowed to the life tenant.

"(3) PROPERTY HELD IN TRUST.—In the case of property held in trust, the deduction allowed under subsection (a) shall be apportioned between the income beneficiaries and the trustee in accordance with the pertinent provisions of the instrument creating the trust, or, in the absence of such provisions, on the basis of the trust income allocable to

"(4) PROPERTY HELD BY ESTATE.—In the case of an estate, the deduction under this section shall be apportioned between the estate and the heirs, legatees, and devisees on the basis of the income of the estate allocable to each.

"(d) DEFINITIONS.—For purposes of this section-

- "(1) GEOTHERMAL PROPERTY.-The term geothermal property' means property within the United States or a possession of the United States from which the taxpayer obtains-
- '(A) indigenous geothermal steam, hot water, and hot brines, or

"(B) steam, hot water, and hot brines, resulting from the introduction of water into geothermal formations.

(2) PROPERTY AND GROSS INCOME FROM THE PROPERTY.—The terms 'gross income from the property' and 'property' have the same meanings as when used in part I of subchapter I

of chapter I with respect to gas wells. (e) EXCLUSIONS.

"(1) OIL OR NATURAL GAS RETAILERS .- Subection (a) shall not apply in the case of any taxpayer who directly, or through a related person, sells oil or natural gas, or any product derived from oil or natural gas—
"(A) through any retail outlet operated

by the taxpayer or a related person, or

(B) to any person-

"(i) obligated under an agreement or contract with the taxpayer or a related person to use a trademark, trade name, or service mark or name owned by such taxpayer or related persons, in marketing or distributing oil or natural gas or any product derived from oil or natural gas, or

'(ii) given authority, pursuant to an agreement or contract with the taxpayer or a related person, to occupy any retail outlet owned, leased, or in any way controlled by

the taxpayer or a related person.

"(2) CERTAIN REFINERS .- If the taxpayer or a related person engages in the refining of crude oil, subsection (a) shall not apply to such taxpayer if on any day during the taxable year the refinery runs of the taxpayer and such person exceed 50,000 barrels.

"(3) RELATED PERSON DEFINED .- For purposes of this subsection, a person is a re-lated person with respect to the taxpayer if a significant ownership interest in either taxpayer or such person is held by the other, or if a third person has a significant ownership interest in both the taxpayer and such person. For purposes of the preceding sentence, the term 'significant ownership interest' means"(A) with respect to any corporation, 5 percent or more in value of the outstanding stock of such corporation,

"(B) with respect to a partnership, 5 per cent or more interest in the profits or capital

of such partnership, and

"(C) with respect to an estate or trust, 5 percent or more of the beneficial interests in such estate or trust.

"(4) MEANING OF OTHER TERMS.—For purposes of this subsection, the terms 'crude oil', 'natural gas', and 'barrel' have the meanings given them in section 613A(e).

"(f) APPLICATION WITH SUBCHAPTER I.—No

deduction shall be allowed under section 611 for the taxable year with respect to geothermal property if a deduction is allowable to the taxpayer under this section with respect to such property for such year."

(b) (1) Section 57(a) (8) of such Code is amended by inserting after "section 611" the

following:

"or the deduction allowable under section

- (2) Section 62(6) of such Code is amended by striking out "and the deduction allowed by section 611." and inserting in lieu thereof a comma and "the deduction allowed by section 189, and the deduction allowed by section 611."
- (3) Section 163(d)(3)(C) of such Code is amended by adding at the end thereof the following new sentence: "For purposes of this subparagraph, section 611 shall be applied without regard to section 189(f)."
 (4) Sections 174(b)(1)(C) of such Code

is amended by inserting after "depletion)

the following:

"or the deduction allowed under section 189 (relating to geothermal steam and other geothermal resources).

(5) Section 611(c) of such Code is amended to read as follows:

"(c) CROSS REFERENCES.

"(1) For other rules applicable to deprecia-

tion of improvements, see section 167.

"(2) For allowance of deduction with respect to geothermal steam and other geothermal resources, see section 189."

- (6) Section 613A(b)(1)(C) of such Code is amended by striking out the comma at the end thereof and inserting in lieu thereof the following: "and with respect to which section 189 does not apply,"
- (7) Section 642(e) of such Code is amended by striking out "and 611(b)" and inserting in lieu thereof ", 189(c), and 611(b)".
- (8) Section 691(b) of such Code is amended by striking out "164," and inserting in lieu thereof "164, 189,".
- (9) Section 691(b)(2) of such Code is amended by striking out "in section 611" and inserting in lieu thereof "in section 189 or section 611"
- (10) Sections 804(c) (4), 822(c) (9), and 832(c) (8) of such Code are each amended by striking out "section 611" and inserting in lieu thereof "section 189 (relating to geothermal steam and other geothermal resources) and by section 611".

(11) Section 4940(c)(3)(B)(ii) of such Code is amended by striking out "section and inserting in lieu thereof "section 613" 189 (relating to geothermal steam and other geothermal resources) and section 613"

(c) The table of parts for such part VI is amended by adding at the end thereof the following new item:

"Sec. 189. Geothermal steam and other geothermal resources."

SEC. 2. Subsection (c) of section 263 of the Internal Revenue Code of 1954 (relating to intangible drilling and development costs in the case of oil and gas wells) is amended-

- (1) in the subsection heading, by inserting ter "Gas Wells" the following: "and Geothermal Property", and
- (2) by striking out "Congress." and inserting in lieu thereof "Congress; and such reg-

ulations shall be extended so as to apply with respect to intangible drilling and development costs in the case of geothermal property, as defined in section 189(d)."

SEC. 3. The amendments made by this Act shall apply to taxable years beginning during the 10-year period which commences on the date of the enactment of this Act.

LEGISLATION TO TERMINATE AU-THORIZATION OF FURTHER STUD-IES OF CANALIZATION OF WA-BASH RIVER

The SPEAKER. Under a previous order of the House, the gentleman from Indiana (Mr. Sharp) is recognized for 5 minutes.

Mr. SHARP. Mr. Speaker, today I am introducing a bill with six of my colleagues to terminate authorization for any further studies of canalization of the beautiful Wabash River.

Since navigation studies were originally authorized in 1967, several surveys have been made. Not one has justified the construction of a canal, and the more evidence is collected, the more convincing becomes the case against it. A Wabash Canal of any length is unjustified on the grounds of economy, environmental protection, and transportation. I do not believe that we should leave open the possibility of the expenditure of one more tax dollar on additional studies of this ill-conceived project.

The various definitions of this project have called for studies of canals or navigable waterways of various lengths: From the Ohio River to Lake Michigan or Lake Erie, 320 to 440 river miles; from the Ohio River to Terre Haute, 214 river miles; and from the Ohio River to Mount Carmel, 95 river miles.

ECONOMY

According to the Army Corps of Engineers—

A reconnaissance report completed in 1972 found the economic feasibility of providing navigation improvements from the Ohio River to the Great Lakes, by various alternate routes, to be infeasible by a wide margin (0.2 or 0.3 to 1.0 based on 1970 datum and 51/2 % interest rate.)

The Louisville District of the corps then issued an information brochure entitled "Navigation Improvements, Cross Wabash Valley Waterway," which under the heading of "Recommendations" included the following statement:

Based on the reconnaissance level studies described in this brochure, the District Engineer recommends that at this time no additional studies be made of a waterway traversing the entire distance from the Ohio River to the Great Lakes via the Wabash River and adjacent basin streams. The District Engineer further recommends that survey scope investigations of that portion of the Cross Wabash Valley Waterway from the Ohio River to Mt. Carmel, Illinois continue.

Since 1972 funds have been appropriated and additional studies carried out on the Ohio River to Mount Carmel segment of the river, as well as a less detailed review of the Mount Carmel to Terre Haute segment. In a draft feasibility report released by the Louisville district of the corps in December 1976, these segments were also found to be

economically infeasible. The Ohio River to Mount Carmel segment was found to have a cost of \$387.5 million and a benefit to cost ratio of 0.88 to 1.0. If redevelopment benefits are included, the benefit to cost ratio is still unfavorable: 0.97 to 1.0. The corps also stated that "the benefit of the doubt has been given to the waterway" in this analysis.

The December draft report by the corps also indicated that—

Extension of a considered canal to Terre Haute would not appear to be economically feasible and does not warrant further study at this time.

Although a precise benefit to cost ratio was not established, the corps indicated that in order to achieve benefits equal to the projected cost, an overwhelming volume of traffic would have to be generated on the waterway, and this might necessitate even greater costs for additional locks and a widening of the canal.

The economic case against a Wabash canal of any length therefore appears conclusive, without any additional studies.

ENVIRONMENT

The environmental case against the canal is even stronger. The U.S. Fish and Wildlife Service, in a July 3, 1975, letter from Charles A. Hughlet, acting regional director, to Col. James N. Ellis, district engineer of the corps, stated:

The effects of the proposed canal construction and operation would irreparably damage the environmental resources of the lower Wabash River.

Following a very detailed and specific report, Mr. Hughlet concluded:

We know of no form of compensation which could offset the expected environmental damages attributable to this project.

Those who find the already negative benefit to cost ratio unpersuasive should note that these serious environmental costs were not included in the calculations because they were unquantifiable.

TRANSPORTATION

The pro-canal bias of Wabash Canal studies to date is further indicated by the lack of any cost estimates for the loss of rail shipments, revenue, and jobs. Almost the entire justification for the canal is based on anticipated shipments of grain and coal from the area, but these shipments can be handled adequately by rail. An official of the Louisville and Nashville Railroad, which serves the area, has stated:

Shippers and receivers located in the counties adjacent to the proposed waterway in the States of Illinois, Indiana and Kentucky currently have adequate transportation serv ices available. New shippers such as operators of newly developed coal mines, or others, would have no difficulty in obtaining rail service. The Louisville and Nashville Railroad and other rail carriers serving the area are ready, willing and able to provide adequate transportation service from and to present as well as any new coal mine, industry, or warehouses to be developed in the area at just and reasonable rates and charges. naviagtion projects such as the Cross Wabash Valley Waterway, there is usually no increase in the nation's total output of transportation service since nearly all of the projected waterway traffic would move even in absence of the project. Inland waterway facilities primarily replace or serve as a substitute for existing transportation facilities. This is particularly significant since the railroad industry transportation facilities are already considerably underutilized."

Moreover, there is no evidence that there is any demand for the canal by shippers, even if this Government-subsidized mode of transportation should result in reduced rates. A report on a Wabash River navigation conference held by the corps on September 25, 1975, stated:

No coal producer or consumer has expressed a need for or a desire to use an improved Wabash River navigation system.

Even in the absence of the economic and environmental reasons for opposing any Wabash Canal, I believe that it would be unwise to contribute further to the decline of our Nation's private railroads by building additional Government financed, maintained, and operated canals.

LACK OF STATE SUPPORT

The State of Indiana has recognized the compelling nature of the arguments against construction of a Wabash Canal. On March 18, 1976, the Indiana Natural Resources Commission voted unanimously to disapprove in principle the proposed canal. Additionally, on January 11, 1977, Gov. Otis Bowen, in his state of the State message to the Indiana General Assembly, stated:

With a conclusion by the Army Corps of Engineers that the project's costs exceed its benefits, it is my belief that State government should offer no future encouragement toward the canal proposal.

DEAUTHORIZATION

Given the overwhelming case against the canal, it may appear unnecessary to terminate authorization for any additional appropriations. Unfortunately, however, there are believers in the dream of a Wabash Canal who will not accept the evidence and who will continue to urge the expenditure of additional funds for additional studies in the hope that eventually, through some altered definition of the project or some new way of looking at the data, a positive benefit-tocost ratio can be generated. The corps has, perhaps unwittingly, contributed to this possibility by including the phrase "at this time" in each of its recommendations against additional studies.

I believe it is time to call a halt. We have spent approximately \$1 million on studies of this project. I would like to assure the taxpayers that no additional money will be wasted on studying a project that has been demonstrated conclusively to be unfeasible. The way to do this is to terminate the authorization for the study, and the bill we are introducing today will accomplish that.

THE FIGHT AGAINST NAZI WAR CRIMINALS IN THE UNITED STATES: WHERE WE STAND TODAY

The SPEAKER. Under a previous order of the House, the gentlewoman from New York (Ms. Holtzman) is recognized for 20 minutes.

Ms. HOLTZMAN. Mr. Speaker, 3½ years ago I learned that the U.S. Immigration and Naturalization Service had failed to act on more than 50 cases of

alleged Nazi war criminals living in the United States who had entered this country illegally. Since that time I have made every effort to end INS inaction and indifference, and to see that Nazi war criminals are denied sanctuary in this country. As a result, INS has begun a number of deportation and denaturalization actions, and started seriously to investigate Nazi cases. I would like to report on the present status of this matter.

CURRENT STATUS OF THE INVESTIGATION

At the present time the Immigration Service is investigating more than 90 individuals against whom serious charges of war crime activities have been made. Since last October, the Service has begun actions to deport four alleged Nazi war criminals. In addition, the Justice Department, acting on information supplied by INS, is proceeding with five denaturalization cases. If alleged war criminals have become citizens, denaturalization is the first step in the deportation process. Before a person can be deported, his citizenship must be taken away.

These actions, together with the likelihood of additional deportation and denaturalization cases beginning in the next few months, represent substantial progress from the situation in April 1974, when I first publicly exposed INS's failure to pursue cases involving Nazi war crimes. At that time virtually nothing had been done on these cases.

WHO ARE THE ALLEGED WAR CRIMINALS

The question is occasionally asked: These crimes took place so long ago; why not just forget them? I think the simplest answer can be found by looking at the charges in some of the cases brought by INS and the Justice Department. These charges do not involve ideology or politics; they involve mass murder and atrocities.

Frank Walus, German born naturalized U.S. citizen, residing in Chicago, Ill.; denaturalization case. Walus is charged with being a member of the Gestapo who "ordered a woman, with two girls, to disrobe and, following her refusal, he drew his pistol and shot the woman in the neck, after which the two girls were killed." The Justice Department attributes other murderous actions to Walus including the following:

During 1942, while in civilian clothes and accompanied by a company of SS troops, he took part in separating children from their parents, after which the children were shot.

Valerian Trifa, Romanian born naturalized U.S. citizen, residing in Detroit, Mich.; denaturalization case. Trifa is charged with being a leader of the fascist Iron Guard in Romania, who "rode through the Jewish sector of Bucharest * * * (and) ordered, participated, and observed his Iron Guards set fire to houses, stores and a synagogue * * * (and) used his pistol, shooting with the others, and ordered his men to kill and to torture Jews."

Serge Kowalchuk, Polish born natural-

ized U.S. citizen, residing in Philadelphia, Pa.; denaturalization case. The Immigration Service affidavit charges Kowalchuk with having been a member of the Ukrainian police in Poland in 1941 and 1942, and with committing 11 separate acts of murder or brutality against Jews.

Boleslavs Maikovskis, Latvian national, residing in Mineola, N.Y.; deportation action. Maikovskis is charged with "participation in the selection of a group of Jewish children * * * for execution." INS also cites six other incidents in which Maikovskis allegedly participated in murders or assaults.

Vilis A. Hazners, Latvian national, residing in Whitehall, N.Y.; deportation action. According to INS, Hazners participated "in collecting a group of Jews in Riga, Latvia, and detaining them at the Big Synagogue (Choral Synagogue) on Gogol Street, Riga, Latvia, after which the said synagogue was set afire and the detained Jews burned to death therein." The INS order attributes four additional acts of murder and brutality to Hazners.

Bronius Kaminskas, Lithuanian national, residing in Hartford, Conn.; deportation action. According to the Order to Show Cause filed by INS, Kaminskas is charged with participation "in the shooting of approximately 200 Jews" and "the commission of an assault upon an infant child."

Equally appalling charges are leveled against the other alleged Nazi war criminals who are the subjects of INS and Justice Department actions. If the people who committed these kinds of crimes were allowed to find a haven in the United States, it would be an affront to human decency and make a mockery of the sacrifice of those millions of Americans who fought against the Nazis in World War II.

GETTING THE INVESTIGATION MOVING

In May 1974, I reviewed the Immigration Service's status report on its Nazi war criminal cases, and found that for 25 years it had made no serious effort to pursue these investigations. Specifically, I found that INS had failed to interview available witnesses, refused to pursue leads brought to its attention, made no effort to seek witnesses or other evidence from foreign countries-including Israel-and generally conducted its "investigations" in a disorganized, incompetent and indifferent manner. Against this background, it is not surprising that since the war not one person had been deported from the United States for Nazi war crime activities. The one exception to INS's total inaction was the case of Hermine Braunsteiner Ryan, a former concentration camp guard living in Queens, who was extradited by West Germany to stand trial for war crimes.

On the basis of this review of INS files, I called for a complete overhaul of the effort against Nazi war criminals and made detailed recommendations as to how the investigations should proceed. These recommendations included:

Systematic contacting of all foreign and domestic sources, governmental and otherwise, for information about alleged Nazi war criminals. Assignment of a full-time lawyer to direct the investigation and the hiring of experienced investigators for a centralized, high priority war crimes effort.

Reinstatement of investigations that had been canceled unjustifiably.

Establishment of investigation priorities and timetables.

Review of the Trifa and Maikovskis cases to determine if early action could be taken.

As a result of increasing public attention to the congressional charges of inaction, the Immigration Service finally took the steps I recommended and now appears to be making a serious effort to investigate and deport alleged Nazi war criminals. Experienced attorneys and investigators were put in charge. New leads were pursued on cases already in the files and new cases were opened as additional charges surfaced. The Trifa case began in March 1975 and the Maikovskis deportation proceeding started in October 1976.

One of the most important aspects of the recent INS investigations has been the seeking of evidence from foreign sources. After my criticisms, INS officially contacted Israel authorities. These contacts proved so fruitful that eyewitnesses and other evidence located on one trip to Israel led to the eight deportation and denaturalization cases begun since October.

I had also insisted that the Immigration Service seek information on Nazi cases from the Soviet Union and other Eastern European countries, from which most of the alleged war criminals had come. In a meeting with members of the House Immigration Subcommittee in May 1975, a high Soviet official said that his government would respond favorably if asked by the State Department for such information. Nonetheless, the Department failed to act on the Immigration Service's request that the Soviet Government be contacted until I protested publicly.

Finally, starting in January 1976, the State Department forwarded 20 cases to the Soviets, and evidence has already been received from them on 11 of these cases. It is not yet clear how useful and reliable that evidence is, nor do we know whether the Soviets would be willing to send witnesses to this country to testify, but the fact that the evidence is being sought represents a major step forward.

Special mention ought to be made of the case of Andrija Artukovic. Artukovic was the Interior Minister of the Nazi puppet state of Croatia. As Interior Minister he was responsible for the State's domestic policies, which included the sending of thousands of Jews, Serbs, and gypsies to death camps. Artukovic has been under a deportation order for more than 20 years, but his deportation has been postponed indefinitely because of an INS ruling that he would be subject to political persecution if returned to Yugoslavia. In 1974, I called on the State Department and INS to review the question of political persecution and determine whether Artukovic could be deported. When these agencies still failed to act, Congressman Waxman and I, joined by nine other Members of Con-

¹ All quotes are from INS or Justice Department documents in these cases. They represent charges which Justice and INS intend to prove and for which, presumably, they have eyewitness or other evidence.

gress, repeated this request. The Artukovic case is now under review.

WHAT REMAINS TO BE DONE

Measured against 25 years of prior INS inaction, there has been considerable progress to date. Nonetheless, no Nazi war criminal has yet been deported. The Immigration Service has only moved on these cases because of sustained pressure. It is clear, then, that Congress must keep up the pressure in order to see that Nazi war criminals are finally removed from the United States.

Congressional action is particularly important in the following areas:

First. Oversight of the current Immigration Service investigation. INS must be subject to continual oversight by the House Immigration Subcommittee to insure that its investigation is proceeding effectively and expeditiously. Investigations remain to be completed in more than 90 cases; the present deportation actions have to be concluded successfully; the Service must provide the Department of Justice with the evidence it to prosecute denaturalization cases. INS and the Justice Department must be particularly alert to avoid unnecessary prosecutorial delays. In this connection, it is significant to note that the Trifia case began 2 years ago and the trial has still not started.

It is, thus, the responsibility of Congress to see that INS does not repeat the laxity and indifference which characterized its earlier work. The nine cases now in progress should not be token efforts.

Second. Legislation to provide a direct basis for deporting Nazi war criminals. I have introduced legislation (H.R. 412) to deport from the United States persons who, under the Nazis, engaged in the persecution of others because of religion, race, or national origin.

Under existing immigration law, a person who committed war crimes under the Nazis can be deported only for concealing these actions from immigration officials. This provision, however, applies for the most part only to persons who entered the country before 1953 under the Displaced Persons Act.

Nazi war criminals who did not enter the country under the Displaced Persons Act are not deportable. As a result, a number of persons against whom the Im-

of war crimes allegedly committed under

the Nazis cannot be deported.

My bill would correct this failing in our immigration laws by giving INS direct authority to act against Nazi war criminals. It would also place Congress squarely on record as demanding that Nazi war criminals be denied sanctuary

migration Service has received evidence

in this country.

Commissioner Chapman of the Immigration Service has pointed out the need for this legislation, and expressed his support for it. The bill already has 52 cosponsors in the House. I am hopeful that it will receive speedy and favorable

consideration by the Congress.

Third. Investigation of past INS inaction. In recent months increasing numbers of people have asked why INS failed to act on Nazi cases for more than 25 years. How were these people allowed to enter the United States? Why were they allowed to remain undisturbed

until public and congressional outcry brought action? How were some allowed to become citizens even though INS had received information about their Nazi pasts?

I believe the American people and the Congress are entitled to have these questions answered. I have called for an investigation by the House Immigration Subcommittee of INS inaction and delay. Congressman Cohen joined me in this request. This investigation should begin without further delay.²

One particular focus of the investigation should be on whether political officials and executive agencies brought pressure on INS, or sought to intervene in Nazi cases. A number of alleged Nazi war criminals now under investigation have been employed by or otherwise involved with executive agencies, particularly the CIA. Others seem to have highly placed political connections. These include: Edgars Laipenieks who worked for the CIA; Vilis Hazners who was employed by Radio Liberty which was funded by the CIA; Andrija Artukovic on whose behalf at least three Members of Congress introduced private bills; and Valerian Trifa who in 1955 gave an opening prayer in the Senate. In letters written in October 1976 and February 1977, I twice asked Commissioner Chapman for complete information on executive agency involvement in Nazi cases.3 but he has to date, failed to respond satisfactorily.

Mr. Speaker, the cases of Nazi war criminals in the United States constitute the unfinished business of World War II. I urge my colleagues to join in the efforts I have outlined to see that Nazi war criminals, the mass murderers who have tried to find a haven in this country, are finally removed from our shores.

THE BOUNDARY WATERS WILDER-NESS ACT—THE PROBLEM OF AC-CESS FOR SENIOR CITIZENS AND HANDICAPPED PERSONS

The SPEAKER. Under a previous order of the House, the gentleman from Minnesota (Mr. Fraser) is recognized for 15 minutes

Mr. FRASER. Mr. Speaker, one of the most sensitive issues that has been raised in conjunction with my bill to declare the Boundary Waters Canoe Area a fully-protected wilderness is whether the bill would unfairly block senior citizens and handicapped persons from enjoying the beauty of this area. Some have argued that to declare the BWCA a wilderness would be to effectively exclude all but the young and able-bodied and that we should therefore allow mechanized travel in a significant portion of the area. Although well intentioned, this argument overlooks three considerations:

First. Handicapped and elderly persons can and do use the part of the BWCA that is now wilderness;

Second. Both the National Park Service and the Minnesota State Park system have taken major steps toward making parks more accessible; and

Third. Mechanized travel is incompatible with a meaningful concept of wilderness. These points deserve to be examined in detail.

It is simply not true that only the young and those in perfect health can now enjoy a wilderness experience in the BWCA. Sigurd Olson, the environmentalist and author who has become something of a folk legend in Minnesota, continued to paddle the BWCA until he was into his seventies. William Magie, a lifelong champion of wilderness preservation who has canoed the Boundary Waters country for half a century, is still offering guide services at age 76.

Similarly, while persons with disabilities must take greater care in the planning and execution of their trips, they too can enjoy extended and intensive wilderness experiences. A fascinating program operated by the Minnesota Outward Bound School was begun in 1976 in which able-bodied and physically handicapped persons participated in a rigorous BWCA program. A project description outlined the following goals:

This unique program will be offered in 1977 for the physically disabled and ablebodied to live and work together, to grow as individuals, and to explore the nature of physical disabilities and the effect they have on human relationships.

Persons with a wide range of abilities and personal interests are encouraged to participate. People with such disabilities as walking, cerebral palsy, hearing impairments, paraplegia, limb deformities, and Guillan-Barre Syndrome have successfully participated in the program.

The standard course begins with a skills training phase. Activities include: canoeing skills, expedition planning, physical conditioning, ropes course, wilderness emergency care, search and rescue training, rock climbing, and ecology.

The project also seeks to develop the capacity of the Outward Bound School to assist organizations, facilities, and agencies serving the physically handicapped to establish outdoor adventure programs for their clients; the school plans to disseminate a model of its project to interested professional agencies, facilities, individuals, and the general public. Therefore, even though the project now involves only a small number of individuals, it holds the potential of reaching large numbers of disabled persons who are interested in learning how to best undertake a trip into the BWCA or other wilderness areas.

I would like to insert at this point an article that appeared in the Minneapolis Tribune Picture magazine on October 31, 1976, describing this wilderness training program and some descriptive materials published by the school:

[From the Minneapolis Tribune Picture magazine, Oct. 31, 1976] (By Bruce Bisping)

It was 5:30 a.m., and it was cold.

The rising sun began to cast a warm light on the mist over the Kawishiwi River in the wilderness near Ely, Minn., and gradually the

² In my judgment, the Subcommittee should not await the outcome of the present GAO study before beginning its own inquiry. GAO is likely to take at least a year to complete its work and may not get access to essential INS, FBI, CIA and other agency records.

³ Chairman Eilberg of the Immigration Subcommittee joined me in these requests.

warm light reached Homeplace, the base for the Minnesota Outward Bound School. The students started to crawl out of their sleeping bags to be greeted by a rush of cold, moist air.

It was opening day for a wilderness course at the Minnesota Outward Bound School. The 11 students had arrived the day before and had only begun to get acquainted. They had been divided into two brigades that would live, eat, work and play together for the next ten days.

At the Bahwetig brigade tent, the day was starting like any other opening day at the wilderness school. Mumbling and flashlight beams broke the dark silence of the new day as the students tried to find some clothes to put on. What made this day different was that some of students also had to grope for wheelchairs, crutches or artificial legs.

Bodies started moving. There was a mild oath or two as warm feet touched the cold wooden floor of the tent. But some students couldn't feel the cold floor because they had no feeling in their feet-or had no feet.

The Bahwetig brigade consisted of three disabled students, two able-bodied students and two Outward Bound instructors. They were disorganized now, but within a week the brigade would become a closely knit group.

Larry Orr of St. Paul was injured five years ago in an automobile accident that broke his spinal column. The lower half of his body is paralyzed, he uses a wheelchair.

Sandy Nelson of Minneapolis was born without legs. She uses fiberglass artificial

Kevin Peterson of Mora, Minn., broke his spinal column in a motorcycle accident a year ago. He has some control over the lower half of his body and gets around on crutches.

Del Dorn, social service worker at the Rehab-4 unit at the University of Minnesota, was supposed to be one of the able-bodied students, but he broke his arm six weeks before the class began and it was still in a cast.

Weinbaum, physical therapist from Plainfield, Vt., was the other able-bodied student.

Betty Halverson and Dennis Kearney were the instructors.

These were the members of the Bahwetig brigade, which made up half of the class in first wilderness course for the capped offered by Outward Bound in the United States. There had been a 10-day trial design course in May, and now, in September, the first official course was beginning.

In the past, recreation and rehabilitation programs for the handicapped had been confined to the city or a near-the-city camp designed especially for disabled people. Sel-dom had the handicapped person been offered a chance to experience the wilderness as an able-bodied person could.

In this course the six handicapped people performed on an equal basis with the five able-bodied students in learning those skills typically taught in an Outward Bound course: rock climbing, backpacking, a diffi-cult rope course that included a zip wire located 60 feet in the air, portages canoes, and camping in the wilderness. with

There was a requirement of at least one wheelchair student per brigade, and there had to be at least as many able-bodied people as disabled people in each brigade.

The day begins at 5:30 a.m. at all Outward Bound schools, leaving time for housekeeping and physical activity before the 8 a.m. breakfast. There might be a run of several miles followed by a cold dip in the river, an exercise in climbing a 14-foot wall or a class in lifesaving. One of the early-morning activities at this school was instruction in portaging canoes.

After breakfast that first morning, members of the Bahwetig brigade returned to the river clad in swimsuits for a swimming test and a canoe-swamping exercise. The

water was cold. Orr simply wheeled up to the water's edge and fell out of his wheelchair and into the water. After finishing the test, he climbed back into the chair and made a straight line for the sauna, where he was joined by the others after they completed their tests.

After lunch there was a bit of chaos as the group learned that the five-day wilderness trek had been advanced because of the possibility of the wilderness being closed during the fire emergency. They were to leave later in the day, as soon as they could get ready.

Outward Bound has 32 schools in wilderness areas throughout the world including seven in the United States-in Minnesota, Maine, North Carolina, Colorado, New Mexico and Oregon. Each year more than 6,000 people aged 16 to 60 take part in Outward Bound schools. Until now, all students had to be able-bodied.

The course for the handicapped was helped by funds from the General Mills and Archer Daniels foundations.

We hoped the able-bodied and disabled people on the MOBS handicapped course would have an emotional experience that would lead to a better understanding of each other's problems," said Rolf Evenson, project director for the course. "In the process, I think we all discovered how much we have in common.

When climbing a rock face, it doesn't matter if you're a housewife, a bank president or a disabled person. Everybody gets as scared as the next guy. You have to over-come that fear, It's worthwhile to know inner limitations are universal and can be done away with, by both the handicapped and the able-bodied. That's one of the main reasons for our course.'

News of the course was spread mainly by word of mouth by John Schatzlein, community resources director for the University of Minnesota Medical School. Schatzlein one of the handicapped students on the pilot course in May

The handicapped students on this course are the adventurous type," Schatzlein said.
"When someone says, 'You can't do that because you're disabled,' they don't listen. These people go out and find their own limits."

"I didn't know what I was getting myself into when I signed up for the MOBS course," said Sandy Nelson. "I didn't expect tennis courts, but I surely didn't expect anything this intense. The course was the best thing that ever happened in my life. It gave me so much confidence and strength that even my friends can notice the difference in my attitude toward life. I really feel better about my life now."

MINNESOTA OUTWARD BOUND SCHOOL PROJECT WITH THE PHYSICALLY DISABLED PROJECT

A. HISTORY OF OUTWARD BOUND

Since its founding in 1941, Outward Bound has spread to encompass an international network of 12 schools from which more than 200,000 people have graduated. In the United States, the first Outward Bound School was founded in Colorado in 1962. There are now seven U.S. Outward Bound Schools offering year-round programs for an increasingly diverse population, including young men and women, adults, businessmen, educators, delinquents, and diplomats

Outward Bound maintains a leadership position in outdoor experiential education. Its courses are acceptable for academic credit in high schools, colleges, and graduate schools. It serves as a model and a con-sultant for educators and social service workers who, to date, have established more than 300 adaptive programs for state and city institutions, and for individuals who employ Outward Bound methodology in

their professional setting.

By using the stress and challenge of wilderness living and travel as a vehicle for personal change, Outward Bound is able to effect measurable results. (Research reports are available on request.) Clarified values, increased self-confidence, and more positive goal orientation which develop during the experience result in greater personal effectiveness after students return home.

B. THE NEED

Physically disabled persons are confronted with many barriers to meaningful and pro-ductive participation in the normal affairs of daily living. Physical access to public facilities is frequently difficult, if not impossible, and exposure to the wide variety experiences necessary for social and intellectual stimulation and growth can thereby be diminished.

The problem is compounded by the expectations held by the able-bodied of those who are physically disabled. Because of the appearance of the disabled person ignorance, false assumptions, or misplaced solicitude on the part of able-bodied people, the physically disabled are often patronized and/or ignored. Such treatment prevents the establishment of rich and rewarding interpersonal relations with others necessary to the growth of any individual.

Given these physical and social barriers to active daily living and the limitations imposed by the disability itself, many physically disabled persons lack self-confidence and personal esteem and question their ability to contribute productively to society. Thus psychological barriers to meaningful participation in societal affairs are also raised and the physically disabled person often finds himself overly dependent on others and cut off from activities enjoyed by the able-bodied.

Attempts to resolve the issue must address two distinct, but related, needs. In order to productively contribute to society, the disabled person must develop confidence in his skills and talents by successfully using them and achieving more than he previously thought was possible. Equally important is the need for able-bodied persons to understand the true nature of disabilities meaningful interaction with the physically disabled

In 1976 with the help, advice, and endorsement of disabled persons and rehabilitation professionals in Minnesota, this dual approach was employed in a pilot project sponsored by the Minnesota Outward Bound School. (A report on this pilot project is available upon request.) People with such disabilities as cerebral palsy, hearing-impairments, paraplegia, and congenital deformities participated together with able-bodied persons in a wilderness adventure program in the canoe country of Northern Minnesota.

The results of this project showed that Outward Bound was effective in addressing the need of physically disabled persons to develop self-confidence, perseverance and awareness of personal limitations and capabilities. Further, the project was significant for able-bodied persons in understanding the nature of disabilities, the influence disabilities have on relationships, and understanding the human commonalities the able-bodied share with the physically disabled.

Despite the demonstrated value of a program of this type few are available and do not generally offer the level of intensity, adventure, and challenge found in the Outward Bound model. Accordingly, it is the intention of the Minnesota Outward Bound School to offer the knowledge and skills gained by its staff through this project to interested agencies, institutions, and facilities wanting to establish their own adventure programs. By thus sharing the concept, skills, and techniques of outdoor adventure programming for the physically disabled with others, opportunities can be more widely available and the effects multiplied.

C. PROGRAM IMPLEMENTATION

The program was designed on the assumption that the disabled could do essentially what an average able-bodied brigade could do but in a longer time. Consequently, the program day was divided into 4 hour blocks rather than the usual 1½ hour periods.

What follows is a day by day summary of activities. (See Appendix D for course schedule and Appendix E for technical safety and

health procedures used):

Day 1: Tour of the MOBS base (Homeplace) near Ely, Minnesota on the edge of the Boundary Waters Canoe Area (BWCA) and dinner followed by a discussion of expectations and review of the course plan. The review of the course was used as a tool to help focus on specific disabilities and begin the process of group decisionmaking.

Day 2: Pre-breakfast: The wall (A 14-foot high structure over which the brigade must place all members). The time for the at-

tempt was about 45 minutes.

Morning: Swamp crossing. The brigade was dropped at one side of a swamp 50 yards from their canoes. The task was to transport the brigade across the swamp to the canoes, using whatever means they could devise with the four lengths of rope provided. This crossing was designed to be a group problem-solving task and served as an introduction to the world of mud and water.

Afternoon: Swimming, Ely High School pool. The pool was used because the lake water temperature was less than 50°. Agenda included drownproofing (survival floating) and basic water confidence testing.

Day 3: Pre-breakfast: Paddle and portage exercise to help work out the logistics of transferring people and chairs from canoes to rocky landings and vice versa.

Morning: Ropes course (A series of obstacles constructed of rope, logs, and construction cable varying in height from ground level to 60 feet). The participants were encouraged to do what they were able, and with some special rigging, everyone had a chance to experience the zip wire, an extended cable down which participants ride on a pully.

Afternoon: Rock climbing: A large boulder at Homeplace was used and provided interesting yet moderate climbs that most could complete. Those in wheelchairs belayed (securing the climber by rope) most effectively from the bottom by being anchored, chair and all, to a cedar tree. Canoe rescue: This provided an opportunity to observe students' reactions to cold water as they dumped canoes and paddled to shore.

Day 4-8: Expedition: A variety of activities were conducted during the expedition in addition to traveling by canoe through the BWCA. Campcrafts, map and compass, basic flora and fauna, trail cooking, conservation and ecology, and campsite selection and care are examples. Special health and safety precautions and methods required by the disabled in the conduct of these activities were also explored in preparation for the pilot course in September. Awareness of fatigue levels and recovery time required were also noted. Communication with brigade members with hearing impairments was sometimes difficult, particularly when it was dark, people were tired, or time was short.

The climax of the expedition was a 16 hour "solo" (A period of isolation from other members of the brigade for the purpose of providing contrast and time for reflection).

Day 9: The Marathon consisted of a canoeorienteering course in a 12-man North canoe.

Half of Day 9 was spent evaluating each element of the course, making recommenda-

tions for the September course and doing the post-course testing. The traditional last night banquet was followed by a two hour session conducted by the brigade for the entire MOBS staff. They did mini-skits describing their course, talked about their disabilities and how they solved the various problems of the course.

Day 10: The students left after breakfast, some wishing for another 8 days, other feeling 10 were adequate.

There is no question that the difficulties presented by this kind of planning. training, and execution will discourage some—it is not meant for everybody. For those who prefer a different, but equally rewarding, recreational experience, there are a large number of State and national parks that have been moving toward removing both the physical/architectural and attitudinal barriers to handicapped persons' involvement. The Minnesota Department of Natural Resources and the State park system have chosen eight parks as pilot projects in which to move toward improved access of facilities and trails, expanded outdoor educational programing, and fuller integration, rather than segregation, of handicapped and nonhandicapped recreational opportunities. It is interesting to note that the State has tried to incorporate much of the Outward Bound School's programing into the State pilot projects.

Additionally, the National Park Service has published a "National Park Guide for the Handicapped" that describes the conveniences and barriers handicapped persons will find in the hundreds of units of the National Park system. The following materials are taken from the guide published in 1971—I understand that an updated guide will soon be issued:

NATIONAL PARK GUIDE FOR THE HANDICAPPED FOREWORD

Parks are for the people. All the people. The beauty of a mountain wilderness, the sense of identity and continuity to be found at historic shrines, or the freedom from the constraints of urbanization that exists at the seashore or prairie—these things are the birthright of us all.

Those whose activities are restricted by physical handicaps may not be able to take part in many activities at our national parks, monuments, and recreation areas. There is, however, no limitation upon their ability to enjoy in other ways the miracles of life and living that make man realize he is part of nature.

I think that the handicapped will be pleasantly surprised at the scope of activities and facilities now available to them in the National Park System. This booklet will help them plan their visits by telling them in advance of both the conveniences and the obstacles they may find there.

and the obstacles they may find there.

I hope this booklet will encourage handicapped people to visit the parks. The wonderful experiences found in a park visit can be enjoyed by everyone.

ROGERS C. B. MORTON, Secretary of the Interior.

Too often in the past, public facilities were planned without regard for the needs of the handicapped. The National Park Service is now working on a double-edged program of building new facilities that easily accommodate the handicapped and of use of all facilities.

removing existing obstructions to the full
This booklet tells what the handicapped may expect in the way of facilities and limitations in the National Park Systém. I want every handicapped person to know that the men and women of the parks are

anxious to help make your visit as enjoyable and trouble-free as possible. There is much we in the Park Service can do on our own and much more we can do if the handicapped persons will ask. The rangers and interpreters are there to help. Please call on them.

The national parks and historic places embrace both the wondrous diversity of our natural inheritance and much that is significant from our national past. Every American should know these lands. In this booklet we issue a specific invitation to the handicapped. We hope you will accept it.

GEORGE B. HARTZOG, JR.,

Director, National Park Service.

INTRODUCTION

Handicapped persons are welcome in the national parks and every effort is made to afford them comfort and convenience. Park personnel-rangers and interpreters trained in first aid and emergency treatment, and, what is important, they are alert to the needs of those, who, for some reason, are restricted in their movement about the parks. Most facilities constructed in recent years have been designed with the handicapped in mind: ramps and graduated paths permit access to buildings and high elevations; automatic doors and wide passageways facilitate the movement of wheelchairs; hospitals and on-the-spot equipment are available for heart patients; and special audio programs and contour exhibits assist the blind. The national parks are particularly concerned with the deaf, the blind, those confined to wheelchairs, and heart and special medical patients, but visitors should not hesitate to seek advice or assistance for any purpose.

DEAF VISITORS

Among the handicapped, the deaf visitor to the parks is probably the least disadvantaged. All museum and wayside exhibits and trails are appropriately signed and marked with interpretive messages. Transcripts of audio programs and lectures have been made in some areas. Inquiries should be made at information desks.

BLIND VISITORS

Few areas are restricted to seeing-eye dogs and the blind are welcome in every park. Where there are no special programs and facilities, park personnel are available for assistance. Special efforts have been made in many areas to accommodate the blind, such as the Meade Station Trail at Petersburg National Battlefield which is posted with Braille markers. A number of the mountain and canyon parks have especially constructed maps, which may be touched by blind visitors, and many park concessioners have small plastic contour maps for sale. Also, in those cases where "don't touch" restrictions prevail, such as the log cabin at Lincoln Birthplace, regulations are suspended for the blind.

WHEELCHAIR VISITORS

The most common problems for wheelchair visitors are steps and door widths. With few obstructions have been these eliminated or modified so that visitors are free to move almost any place: nature trails and walkways are packed and smooth and some are paved; ramps are provided at curbs, steps, and building entrances; handrails have been installed in restroom facilities; scenic overlooks are equipped with quardrails; and special assistance is provided for conducted tours. With the exception of traveling on rugged terrain or unusually steep inclines. wheelchair visitors can enjoy the national parks as easily as anyone else. Concessioners throughout the Park System provide accommodations for handicapped persons.

HEART AND SPECIAL MEDICAL VISITORS

Park elevations and warnings on strenuous climbs are listed throughout this publication. Since so many of the natural areas have such features, visitors with respiratory allments should pay particular attention. All areas cited are at elevations of less than 5.000 feet unless otherwise indicated.

GRAND PORTAGE NATIONAL MONUMENT

(P.O. Box 666, Grand Marais, MN 55604)

A 9-mile portage on a principal route of Indians, explorers, missionaries, and fur traders into the Northwest. Includes a reconstructed Grand Portage trading post of the North West Company. A "Living History" area.

Wheelchair users and visitors with heart conditions may safely enjoy the inside of the stockade, flag exhibit, dock, lake views, picnic area, and guided tours. The Grand Portage Trail and the Mount Rose Trail are impassable to wheelchairs.

PIPESTONE NATIONAL MONUMENT

(P.O. Box 727, Pipestone, MN 56164)

Quarry where Indians obtained materials for making peace pipes used in ceremonies. A "Living History" area.

Visitor center is accessible to wheelchairs, with all facilities on one floor. Restroom outside doors are 31 inches wide; booth doors, 23 inches. Some panel exhibits in the visitor center have three-dimensional objects that are meaningful to the blind. The Circle Trail and old quarry are accessible to wheelchairs, with assistance.

The third and final consideration involves the integrity of a wilderness. By excluding motorboats and snowmobiles from the BWCA, our bill seeks to extend to the area the protection that is implicit in the vision of wilderness set forth in the 1964 Wilderness Act:

A wilderness is an area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain . . . retaining its primitive character . . . managed to preserve its natural conditions . . . where the imprint of man's work is substantially unnoticeable.

The intrusion of motors is inconsistent with this vision. This is true whether those using motors are physically handicapped or able bodied; no special dispensation is made under the Wilderness Act for those with handicaps. For those who desire motor travel, this demands sacrifice. But alternatives do exist for these people. Motorboaters have available dozens of large and beautiful lakes just outside the BWCA and thousands of lakes throughout the State. Snowmobilers can legally operate on National and State forest lands, on State lakes, in many other State parks, and on thousands of miles of private and State trails. Both motorboaters and snowmobilers are encouraged to use neighboring Voyageurs National Park. In contrast, those who desire a wilderness lakeland canoe trip have no alternative—the Boundary Waters Canoe Area is the only place in the United States where this kind of primitive experience is possible.

I encourage those who feel our bill is unfair to take these considerations into account. I think they will realize that the preservation of a unique and irreplaceable national resource is at stake.

IN ANTICIPATION OF THE BOARD OF TRUSTEES' ANNUAL REPORT

The SPEAKER. Under a previous order of the House, the gentleman from Massa-

chusetts (Mr. Burke) is recognized for 10 minutes.

Mr. BURKE of Massachusetts. Mr. Speaker, by law, the trustees of the oldage and survivors insurance and disability insurance trust funds are required to submit an annual report on the status of the trust funds to the Congress by April 1 of each year.

Unfortunately, this statutory deadline was once again not met. I had hoped that the new administration would break the pattern of late report filings that was set by the previous administration. Prior to 1971 every trustees' report was filed on or before the date specified in the law. Since 1971 they have all been late.

In anticipation of this report, however, I believe it is appropriate to comment on the short- and long-term financing issues in the social security program. Undoubtedly, the report will serve as a sounding board for the amplification of alarmist signals forecasting the "bankruptcy" of the system and the inability of the system to pay future benefits. While such gloomy predictions oversimplify the issues and overstate the case, there certainly is much cause for concern over the continuing excess of disbursements over income in the trust funds. In all likelihood, the trustees' report will hold no surprises for the Congress The message., however, cannot fail to reach us—there is an exigent need for timely legislative action that will assure a sound fiscal basis for the trust funds. As time passes, the luxury of having adequate opportunity to exercise prudent judgment diminishes and the risk of turning to an inadequate or inappropriate remedy increases.

The Subcommittee on Social Security of the Committee on Ways and Means is painfully aware of the inadequacy of current payroll tax receipts to fully finance present benefit levels-and the decline in the balance in the trust funds. The subcommittee has transmitted its concerns to the administration, and in no uncertain terms has urged that the Executive's recommendations to deal with the financing problems be finalized and referred to the Congress without delay. The committee has informed the administration, and continues to assure the understandably concerned public, that it stands waiting to immediately take action on this legislation as soon as it is received.

I do not believe that our desire in the Congress to act in harmony with the executive branch can be fairly characterized as it has by some as foot-dragging. Action must be taken, however, in the very near future. It is incumbent upon the administration to formulate its legislative package in at timely and comprehensive manner. "The latest assurances I have had are that both the trustees' report and the administration's financing recommendations will be transmitted by the middle of this month.

A related matter that I have requested the administration to consider in connection with the social security financing proposals arises out of the recent Supreme Court decisions which have struck down as discriminatory certain provisions of the act that treated male and female wage earners differently. Inasmuch as cost projections estimate that compliance with these rulings will require additional outlays of over half a billion dollars a year, and recognizing that these outlays will in most instances result in windfall payments to spouses entitled to annuities as retired Federal employees or employees of a State or local government, it is incumbent on the executive and legislative branches to consider the need for corrective legislation.

One does not have any difficulty in perceiving the need for additional revenues just to pay present benefit levels, and halt the deficits that have been diminishing the trust funds. Where, however, will there be found sources of revenue to meet the costs of these additional benefit disbursements-including estimated \$888 million in cost-of-living adjustments not forecast in the fiscal year 1978 budget? It is equally difficult to consider increasing the burdensome payroll tax both from the standpoint of its regressive impact on the low- and middle-class family and its consequences in relation to the President's economic stimulus program. It is my hope now that serious light will be shed on the merits of some form of general revenue participation, a concept that I have long advocated and whose timeliness I believe will never be more appropriate.

There is a paramount need for action—action that is quick and comprehensive, fiscally sound, and equitable. The Committee on Ways and Means is determined to act this Congress on the financial problems of the social security program. It is important, however, that the new administration be given adequate time to work in cooperation with the Congress in arriving at sound solutions to these problems. Time to do this is fast running

out.

NATIONAL COMMITMENT TO RURAL WATER AND WASTE DISPOSAL SYSTEMS

The SPEAKER. Under a previous order of the House, the gentleman from Arkansas (Mr. Alexander) is recognized for 60 minutes.

Mr. ALEXANDER. Mr. Speaker, key to the economic development of every rural community in this Nation is an adequate water and sewer system.

I think we would all agree that every American deserves the protection and services provided by facilities to supply basic community needs, such as clean water and sanitary waste disposal. Now is the time, I believe, to reaffirm the need of all Americans to these vital services, regardless of region, State, or size of the community in which they reside.

A piecemeal and incomplete effort to provide for such needs has been a part of the programs Congress has adopted during the 1970's. These programs were designed to improve the quality of life in nonmetropolitan America by making available to citizens in these areas the assistance they needed to preserve and upgrade the areas in which they lived. However, despite these piecemeal efforts, the needs are far from being met and

the problems will grow larger as the population pressures on rural America increase.

We need a national commitment to the enhancement of rural life, similar to our commitment to rural electrification, which would insure that the benefits of clean water and sanitary waste disposal would be available to all Americans.

I am today introducing a resolution which calls for such a national commitment to providing the resources necessary to help rural communities secure adequate water and waste dis-

posal systems.

I would like to share with my colleagues some statistics compiled by the National Demonstration Water Project, a national organization that works in the field toward this goal. I believe these statistics are glaring proof of the inadequacies of our current efforts to provide clean water and sanitary waste disposal systems in nonmetropolitan America.

One out of every ten rural residents lives in housing without running water, or a total of between 5.5 and 5.7 million people. Between 9 and 10 million people live in housing with incomplete plumbing, about 16 percent of the total rural

population.

Approximately 18 million people in communities of 10,000 and under use individual wells that have high rates of contamination and over 6.5 million people served by community water systems use water that did not meet Federal drinking water standards in 1970.

In 1975, there were approximately 36 million people—nearly all rural—who obtained their water from self-supplied systems. This is slightly less than half of all Americans who live in communities

of 10,000 and under.

While comprising only 27 percent of the total U.S. population, communities of 2,500 and under have 92 percent of all housing without running water, and 64 percent of all housing with incomplete plumbing. The 16 percent of all rural residents lack complete plumbing, but only 3.4 percent of all urban residents lack this service; 10.5 percent of all rural residents lack running water, but only 0.3 percent of all urban residents are without running water in their homes.

Mr. Speaker, these figures clearly indicate the job we are not doing in providir: for clean water and sanitary waste disposal for the millions of Americans who have chosen to live in the

countryside.

I plan to pursue this legislative goal with President Carter as I believe it is a must for the economic well-being and the economic development of small towns across the country.

The text of my resolution follows:

H. CON. RES. 192

Whereas the general welfare and security of the Nation and the health and living standards of its people require that the people of rural America be provided with adequate, environmentally sound and economic water supplies and waste disposal facilities: Now therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress that all agencies with responsibilities in these areas coordinate their activities to provide maximum assistance in the research, planning, financing and construction necessary to achieve this national goal;

That it is the sense of Congress that all agencies involved shall coordinate their efforts to achieve maximum goals at minimum cost, including area coverage of central facilities where the cost does not exceed the cost of adequate individual or neighborhood facilities:

That it is the sense of Congress that subsidies and credit should be made available to individual or neighborhood facilities where isolation precludes central system service:

That it is the sense of Congress that preference for subsidies, loans and technical assistance shall be given to public, nonprofit

and cooperative agencies; and

That it is the sense of the Congress that planning and other assistance shall give high priority to extending adequate and affordable service for low-income people and the highest priority to facilities that are certified by state health officials as essential to health.

A NEW COMMUNITY DEVELOPMENT PROGRAM FOR RURAL AMERICA

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. Lundine) is recognized for 15 minutes.

Mr. LUNDINE. Mr. Speaker, I am extremely pleased today to join my distinguished colleague from Oregon (Mr. AuCoin), in introducing this very important legislation designed to improve housing in rural America.

It is clear that if we are to meet the challenge of achieving the goal of a decent home for every American, new initiatives are in order. Many of these needed initiatives are contained in the bills we are introducing today: the Rural Housing Act and the Consolidated Farm and Rural Development Act Amendments of 1977. The major provisions of this rural development package are: First, the establishment of an escrow system for Farmers Home Administration-FmHA-borrowers: second. increased funds and subsidies for water and sewer facilities; and third, development of new homeownership programs to assist low-income rural families.

Central to the legislation we are proposing is the strengthening of the FmHA and the ability of that agency to serve its program participants. Our rural development package would not only continue the authority of the FmHA to conduct ongoing programs—an authority which would otherwise lapse at the end of this fiscal year—but it would increase funding ceilings of some programs and would mandate implementation of other programs which are currently in the law but are as yet inoperative.

We have agreed as a nation for some time now that the availability of a decent home in a suitable environment was the right of every American. We have also agreed that the private sector alone cannot meet the housing needs of low- and moderate-income people. These problems are particularly acute in the rural areas of our country where higher levels of poverty prevail, where the population tends to be older and more dispersed, and where hardships are less obvious to most except those who suffer from them. It

continues to surprise people that rural America contains almost two-thirds of the Nation's substandard housing while constituting only a little more than 30 percent of its population This is a statistic in which we can take little comfort. Nor do these harsh statistics adequately tell of the suffering endured by those forced to live under substandard conditions.

Much of the responsibility for the special housing needs of rural areas has been given to the Farmers Home Administration-FmHA-of the Department of Agriculture. This agency had its origins in the depression of the 1930's when the Farm Security Administration was established as a lender of last resort for poor farmers and other rural people for housing and related purposes. The FmHA is unique among Federal agencies in that it provides services directly from over 1,750 locally based county offices directly to rural residents. In addition, the FmHA can, through many of its programs, provide direct loans for housing and community development. The FmHA in fact is currently a major provider of credit in rural areas. In fiscal year 1976, plus the transition quarter, more than \$7 billion in loans and grants were channeled through FmHA programs to almost 200,000 individuals and associations. This has been a significant contribution to the rural economy, but still falls far short of what is needed.

Over the years FmHA has been given additional program responsibilities without corresponding budget support. In fact while the agency's responsibilities were being expanded, its staff was being cut back. Today the FmHA has responsibility for 33 separate programs involving housing, farming, and rural development. In the past few years, increasing costs of fuel, rising taxes, mounting construction costs, and inflation in general have adversely affected the ability of the FmHA to serve those people and communities most in need of assistance-low- and moderate-income people and the smaller rural communities which are unable to provide basic services to their citizens.

In addition, population is rising in some rural areas. While this is a welcome trend, it puts undue pressure on already strained housing resources.

According to the National Association of Home Builders, the average cost of a newly constructed house in this country is about \$45,000, a price which effectively excludes almost 85 percent of the country's population from the home-buying market. Even the modest homes for which the FmHA provided financing in fiscal year 1976 had an average cost of more than \$23,000. For low- and moderate-income people in rural areas, the dream of owning a home has all but evaporated.

The legislation we are introducing today would enable the Farmers Home Administration to do a more effective job in meeting the housing and community development needs of rural America.

While over the years, Congress has provided authority to the FmHA for a variety of purposes, much of this author-

ity has never been used. To correct this and make FmHA more responsive to rural American housing needs, our bill would mandate use of many currently unused provisions. For example, the rural rental assistance program which was authorized in 1974 is now needed more than ever because of the increased number of persons renting in rural areas. Another program not implemented to date, but mandated under our legislation, would require FmHA to establish an in-house research capacity. Such capacity is essential if FmHA is to address critical rural housing and community development needs in a sound way. Although HUD has researched some rural problems. HUD's focus has been primarily on urban needs and problems, with the result that solutions which were feasible in the country, but not in the city, have frequently been overlooked.

Another previously unused provision which would be mandated under our bill is the establishment of escrow accounts to enable borrowers to budget for the payment of taxes, insurance, and other expenses. Without forcing any borrower to use this service, an escrow service would be offered to avoid large bills at the end of the year. It is anticipated that such a program will increase FmHA's efficiency and reduce delinquencies. A foreclosure notification requirement coupled with the use in certain situations, of a moratorium on payments for a borrower threatened with foreclosure should also assist the low-income borrower.

Our rural housing bill would also create new programs to meet the current needs of rural areas. Purchasers would have recourse to remedies for defects in new homes which FmHA's inspector should have recognized and prevented. In such instances, FmHA would be responsible for remedying the defects in question. This seems only equitable in view of the clear mandate of FmHA to see that purchasers obtain housing which meets FmHA standards. Moreover, HUD has had a similar program for several years.

Our proposal would also extend benefits already available to the elderly to handicapped rural persons. New congregate housing facilities with common dining rooms would become part of the construction program for the elderly and handicapped.

Improved sites for housing construction have always been a serious problem. Our proposal would address that problem by extending the existing program to include private builders on a guaranteed basis, with the provision that at least 50 percent of the developed sites be made available to low-income borrowers.

The absence of decent water and sewer facilities is near the top of any list of the most urgent needs in rural America. The increases in authorizations and improvements in existing programs provided for in our rural development package would help correct these deficiencies in basic services while maximizing scarce resources to serve as

many rural communities at as low a cost as possible.

Among other critical programs which would be strengthened under our proposal are the very low income housing repair loan and grant programs. By raising the funding ceiling, our bill would offer many elderly homeowners their only opportunity to remove dangerous health and safety hazards, to weatherize drafty homes, and to make repairs necessary to prevent complete home deterioration.

A new problem—the need for greater awareness on the part of FmHA of energy conservation is recognized in our bill by requiring the inclusion of energy saving devices and techniques in housing financed by FmHA. Our bill would encourage flexibility in the use of plentiful energy sources as alternatives to the present high cost fuels.

In recent years homeownership possibilities for rural low- and moderate-income people have been greatly reduced because of skyrocketing costs. The level of income which can be served by the FmHA 502 homeownership program has been moving steadily upward with no alternative available.

In answer, we propose to establish a homeownership program for those who cannot be served by the regular 502 program. Our bill would provide the same type of subsidy for homeownership that is currently used by the HUD section 8 rental program. The section 8 program assists private owners to develop equity in rental properties. Similarly our provision would do the same for low-income rural people whose rental options are limited and who have no other opportunity for homeownership. At the same time provision would be made to prevent windfall profits on any resale by giving FmHA authority for recapture.

Mr. Speaker, if we are to deal effectively with the rural housing problems of our country, it will be necessary to move aggressively and imaginatively with solutions. We hope you will join us in supporting our rural development package, a major initiative which can provide the answers rural America badly needs to its housing and community development problems.

I include the text of the Consolidated Farm and Rural Development Act and a summary of the bill:

H.R. 6236

A bill to amend the Consolidated Farm and Rural Development Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 306(a)(2) of the Consolidated Farm and Rural Development Act is amended to read as follows:

"(2) The Secretary is authorized to make grants aggregating not to exceed \$500,000,000 in the fiscal year beginning October 1, 1976, \$750,000,000 in the fiscal year beginning October 1, 1977, and \$1,000,000,000 in any fiscal year thereafter to such associations to finance specific projects for works for the development, storage, treatment, purification, or distribution of water or the collection, treatment, or disposal of waste in rural areas. The amount of each grant made under the authority of this paragraph shall be 75 percent of the development cost of the proj-

ect to serve the area which the association determines can be served by the facility and to adequately serve the reasonably foresee-able growth of the area. If an association receives a 25 percent grant from other sources, a project's economic feasibility shall be based exclusively on the association's ability to meet normal operation and maintenance costs of the proposed system."

(b) Section 306(a) (4) (B) of the Consolidated Farm and Rural Development Act is amended by inserting the following before the period at the end thereof: ", except that such facilities must be economically con-

structed".

SEC. 2. (a) Section 310C(a) (2) of the Consolidated Farm and Rural Development Act is amended by inserting "(which the Secretary has determined to be without adequate credit resources)" after the word "areas".

(b) Section 310C(a)(3) of such Act is amended by striking out all that follows "shall" and inserting in lieu thereof the following: "be processed only by the State offices of the Farmers Home Administration or such other regional offices as may be designated.".

SEC. 3. (a) In addition to the Assistant Secretaries of Agriculture now provided for by law, there shall be an additional Assistant Secretary of Agriculture for Equal Opportunity who shall be appointed by the President, by and with the advice and consent of the Senate.

(b) Section 5315(11) of title 5, United States Code, is amended to read as follows: "(11) Assistant Secretaries of Agriculture (6).".

SUMMARY OF THE AMENDMENTS TO THE CON-SOLIDATED FARM AND RURAL DEVELOPMENT ACT

SECTION 1-WATER AND SEWER

The absence of decent water and sewer resources is very near the top of any list of the most urgent needs in rural America. Over 30,000 rural communities are without adequate water systems, and 44,000 rural communities are without adequate sewage systems. This is an untenable situation which not only causes serious health problems for rural people, but also prevents communities from experiencing economic and population growth. Although it was estimated several rears ago that it would take \$12 billion dollars to correct these deficiencies in basic services to rural communities, the present grant level of authorized spending is set at only \$300 million. Even that level of spendhas never been reached, not because rural communities are not interested, but because of administrative actions of the agency. Impoundments, rescissions, deferrals have been all too common.

Moreover, even those communities which have been eligible for the maximum grant amount (50%) have been denied that assistance through FmHA's arbitrary and inconsistent use of restrictive formulas which generally reduce the grant to 20% to 30% of development costs. In many cases, the application of these rules has denied legitimate assistance to low-income communities with the worst water and waste problems.

In order to eliminate the confusion over grant amounts and to bring the FmHA program in line with the EPA formula, this amendment would mandate grants to cover a flat 75% of development costs. It also would prevent FmHA from denying assistance to a community, which received a 75% FmHA grant and a 25% grant from another source (e.g., the State), on the arbitrary basis that it was too poor to maintain the system.

Finally, the amendment would attempt to prevent abuses in design of both water and sewer systems but primarily sewage systems. It has often been the case that sewage sys-

tems have been proposed for rural communities which are over-designed. This adds to the initial cost and, more importantly, requires high on-going operating and maintenance costs. The amendment is an attempt to make scarce resources serve as many communities as possible and to keep ongoing costs as low as possible.

SECTION 2-CREDIT EXTENSION

This provision allows the Secretary to extend FmHA credit in rural areas which do not already have adequate credit resources available.

SECTION 19—ASSISTANT SECRETARY FOR EQUAL OPPORTUNITY

The Department of Agriculture should be provided an additional Assistant Secretary for Equal Opportunity.

The Assistant Secretary should assist the Secretary—1) in administering provisions in the Civil Rights Act of 1964 (PL 82–352, Stat. 241. 42 U.S.C. 2000a) and related Executive Orders applicable to the Department of Agriculture and its activities; 2) in the development of policy and procedure for the enforcement of civil rights legislation and executive orders within the Department of Agriculture and in the implementation of its programs; and 3) in the administration of programs and activities relating to housing and rural development in a manner to affirmatively further the purposes of the Civil Rights Act of 1964.

The Farmers Home Administration's record on civil rights is disappointing, at best. Minorities are receiving a disproportionate smaller share of the benefits provided by the FmHA's housing program when evaluated in terms of the proportion of minority families living in substandard housing and, also, when measured by the number who are income eligible. Furthermore, the percentage of loans to minorities decreased between 1971 and 1975, while there was a large increase in total loans. The equal opportunity regulations of FmHA lack effective procedures for uncovering discriminatory practices and policies, correcting such practices and policy if found, providing remedies for the victims of bias, and insuring that the FmHA programs are administered in a manner to affirmatively promote the national housing policies.

The establishment of an Assistant Secre-

The establishment of an Assistant Secretary would elevate equal opportunity and civil rights within the Department of Agriculture from its present lower level spot under an Assistant Secretary for Administration. The new Assistant Secretary would work directly with the Secretary and reinforce a stronger commitment by the Department of Agriculture to civil rights issues.

REVITALIZING FARMERS' HOME ADMINISTRATION HOUSING PRO-

The SPEAKER. Under a previous order of the House, the gentleman from Oregon (Mr. AuCoin) is recognized for 15 minutes.

Mr. Aucoin. Mr. Speaker, I am today introducing, along with my distinguished colleague from New York, a rural housing bill designed to make the Farmers' Home Administration rural housing programs work more effectively and efficiently both for low-income rural residents, and for the general taxpayer. It is a major bill simply because it addresses a major problem—the housing plight of low-income rural Americans; but, it does not involve vast additional sums of money, nor will it solve the problems of all those who need housing in our small cities and towns.

It does however, attempt to insure an equitable distribution of the resources available to those who most need them.

Mr. Speaker, we urgently need more, and better rural housing programs. While this Nation has, for the past decade, concentrated on the problems of the inner city and urban communities, the rural community has lost ground. This legislation reflects the needs of smaller communities and rural areas where the needs are scattered, but nonetheless similar to the urban centers.

Most of the changes in this bill are individually minor amendments designed to more explicitly State congressional intent and I do not suppose there will be any particular objection either by my colleagues or by the Administration.

Other provisions, however, may engender some comment and it will be worthwhile, before discussing them, to put the rural housing problem in focus.

The 1974 annual housing survey disclosed that rural areas—towns of under 2,500 and open country—had 27 percent of all occupied housing units, but 63 percent of all units lacked plumbing; 58 percent of all units lacked kitchens. What is more, 34 percent of all overcrowded units are in rural areas. Forty-two percent of this same rural housing stock lacked any roof or attic insulation, yet rural incomes are significantly lower than urban incomes and fuel costs often higher.

Stated in human terms, there are 1.9 million families in rural areas living in housing which lacks plumbing facilities; 1.4 million families without kitchens; 1.3 million families are overcrowded, with more than 1 person per room; 3.9 million families without attic or roof insulation; and 7.8 million families without storm windows or other protective window covering. Some 5 million rural families live in houses with some structural deficiencies as leaky roofs, holes in the floor or walls, or other major problems.

This, Mr. Speaker, is the rural housing problem. It is largely a hidden problem. It is easy to overlook a town of 3,000 people when the media and the Government focus on the problems of the New York cities of this Nation. But the housing needs of rural Americans are acute, and the ability of significant numbers of rural citizens to improve their housing without assistance is very limited.

Title V of the Housing Act of 1949 was enacted to provide that assistance, and the Farmers' Home Administration in USDA was charged with its administration. While there have been a great many amendments since 1949, by no means all of them have been implemented, and the record since 1969 is tragic. It shows up best, I think, in the numbers of housing loans made to low- and moderate-income families.

In fiscal year 1969, 50.2 percent of the rural housing loans made by FmHA went to families with gross incomes of less than \$6,000, and 1.9 percent went to families with incomes of \$10,000 and over. In fiscal year 1976, 10.3 percent of the rural housing loans went to families with less than \$6,000 income, and 35.9 percent went to those with incomes over \$10,000.

Based again on the 1974 Annual Housing Survey, 38 percent of all rural families with incomes below \$6,000 need special help in obtaining new housing. This bill addresses that need in several ways.

It makes clear that elderly and handicapped persons in rural areas are fully eligible for services offered by FmHA—sections 2 and 9—removing any ambiguity that may in the past have made the agency reluctant to extend all necessary services to this group of potential beneficiaries.

Four sections of the bill—10-11-12-13—are administrative changes which will tend to insure that services go to low-income families, when and where needed. Four other technical—7-16-17-18—changes will tend to make land for building more readily available for low-income housing.

Four provisions—2-4-5-19—deal with the problem of delinquencies and fore-closures and their timely prevention.

Other sections direct this \$7 billion agency to conduct its own research program into rural problems; and authorizes the continuation of all its programs—which would otherwise expire on June 30 of this year.

Three final provisions I should like to deal with in more detail. Section 3 of the bill would require the Secretary to establish an escrow system which would permit—but not require—borrowers to pay their property taxes and insurance on a monthly basis, just as you and I do.

I find it incredible that FmHA, which made 123,000 loans to homeowners last year, does not have an escrow procedure for its borrowers.

It is the largest home mortgage lender in the country without such a system.

Yet while the Congress in 1974 specifically authorized the establishment of such accounts, FmHA has done nothing. Is it any wonder that a family struggling to make ends meet on an income of \$6,500 a year may become delinquent at years end when faced with a combined tax and insurance bill of \$400 and \$500 or even more? Such payments are not unusual in this period of rising property taxes, but they are disastrous to low-income families.

Congress also in 1974 authorized the Secretary to institute in rural rental housing the same rent supplement provisions available to urban renters. Briefly stated, it would insure that certain low income tenants in FmHA financed rental projects need pay no more than 25 percent of their adjusted annual income for rent. The then Secretary chose not to implement the program. This bill would, as in the case of the escrow provision, direct the Secretary to institute the rent supplement program.

Finally section 14 of the Rural Housing Act of 1977 would establish a new type of homeownership subsidy program.

Homeownership has become a realistic alternative for fewer and fewer rural households over the last several years. The average initial FmHA Section 502 loan in fiscal year 1969 was \$10,083 and at 1-percent interest required an annual mortgage payment of \$360. By 1976 the average initial 502 loan had risen to

\$21,470 with an annual payment at 1 percent interest of \$765. Taxes and utility costs have increased at an even higher rate in most areas of the country. By fiscal year 1975, the average gross annual income for all 502 recipients had climbed to \$8,741 and the continuing nationwide trend of increasing land and construction costs, promises to send this figure further upward.

In short, section 502 interest credit loans no longer can effectively serve low income rural families. In those few instances where they do it is because of unusual circumstances, such as very low tax and utility costs. Or it is because of some other cost saving scheme, such as mutual self-help housing or subsidized manpower programs. The impact of these devices is almost negligible in comparison with the overall need.

This amendment would authorize FmHA to subsidize the difference between 15 percent of annual gross income of a very low income household and the costs of principal and interest, property taxes, insurance, utilities and maintenance. This minimum payment by the low income household is the same amount as required under the HUD section 8 program for rental units.

To insure that these subsidy costs are restricted to shelter costs of the family and that the family does not gain a windfall at the expense of the government by selling the house at a substantial profit, this section would allow FmHA to recapture subsidy costs. If the low income family were to sell the house at a profit, a portion of the profit would be provided to the seller to help in relocation. The remainder, up to 100 percent of the subsidy dollars provided by FmHA over the life of the mortgage, would be repaid to FmHA.

I believe such a program will work, and furthermore will be less expensive than similar programs which provide rental units, or attempt to in some rural areas. Homeownership is the normal circumstance in small towns and rural areas, in part because of historical development, but also because it is not economically attractive to build rental complexes in low density population areas. Developers do not achieve the economics of scale in either construction or management that accrue to them in metropolitan areas.

The Rural Housing Act of 1977 is timely; it is necessary; indeed I suggest that it is essential if the Congress is going to continue, as it has in the past, to commit itself to decent housing for all Americans.

Mr. Speaker, I include a summary of this bill in the RECORD following my remarks:

SUMMARY OF THE RURAL HOUSING ACT OF 1977
SECTION 1—TITLE

May be cited as the "Rural Housing Act of

SECTION 2—HOUSING FOR THE ELDERLY AND HANDICAPPED

Unlike legislation on HUD's housing programs, which mentions "handicapped" as being eligible for certain programs, FmHA programs do not specifically include the handicapped. This amendment would ensure

that the handicapped will have full and equal access to the housing programs in Title V of the Housing Act of 1949. Additional incentive for this amendment stems from Section 504 for the Rehabilitation Act, which is intended to ensure nondiscrimination on the basis of handicap.

This section also expands the definition of elderly and handicapped persons to include single individuals living together or one or more persons living with someone essential to their well-being.

SECTION 3—ESCROW ACCOUNTS FOR PERIODIC PAYMENTS OF TAXES, INSURANCE AND OTHER EXPENSES

FmHA is the only major home mortgage lender in the United States which does not provide an escrow service for borrowers.

This amendment would require the Secretary to establish a system of escrow accounts to enable borrowers to better budget for the payment of taxes, insurance, and other expenses. The present authority is discretionary, and FmHA has so far failed to implement it. The amendment would help stabilize home repayment ability and reduce delinquency, foreclosure, and loss of homes. It is counseling tool consistent with FmHA's own recommendations for more counseling in its "Review of Rural Housing Programs—June 15, 1973".

Continuing inflationary pressures, including those which have resulted in sharp tax increases, have exacerbated the need for an escrow arrangement.

SECTION 4-RURAL HOUSING RESEARCH

This amendment would create an in-house research capacity at FmHA, and would direct it to focus on several views which have been largely ignored in the past. These include the needs of special groups, such as the elderly, the handicapped, farmworkers, and Indians; rural growth patterns; and rural community facilities and services. It also would make clear that FmHA's research mandate is for rural housing generally and not just farm housing.

The amendment would also require the

The amendment would also require the Secretary to study the housing problems of migrant farm laborers, whose housing problems have received scant attention at the federal, state, and local level. The study would be intended to see if existing programs can be made flexible enough to deal with short-term occupancies or if new approaches are necessary. The Secretary would have to report back to Congress within one year.

SECTION 5—COMPENSATION FOR CONSTRUCTION DEFECTS

Would make FmHA responsible for remedying construction defects determined to be necessary within eighteen months after purchase of any new structure.

Repairs would be made as soon as determined to be needed. If subsequently found not to be the fault of the builder or any FmHA inspector, the cost would be added to the loan. Similar authority already exists for HUD.

SECTION 6-FORECLOSURE PREVENTION

Would require notice to all borrowers of the moratorium provisions of Section 505 of the original Housing Act of 1949.

That section, never effectively implemented, permits the Secretary "to grant a moratorium upon the payment of interest and principal . . . upon a showing by the borrower that due to circumstances beyond his control, he is unable to continue making payments . . . without unduly impairing his standard of living . . ."

This provision simply makes certain borrowers suffering misfortune receive an opportunity to make the showing required to receive relief.

SECTION 7—LIMITATION ON ADMINISTRATIVE AUTHORITY

This limitation on the Secretary's rule-making authority is intended to eliminate a proposed new policy or any future policy for site development which would preclude FmHA financing of new subdivisions which are not contiguous to an existing community with water, sewer, and other services already in place. While this proposed policy makes sense in a majority of situations, the rule's inflexibility would prevent FmHA from providing assistance in the other situations where FmHA should be permitted to operate. Some examples are:

 where there are no available sites which can be purchased at a price FmHA-eligible families can afford or which will be appraised by FmHA at an acceptable level;

 where zoning or housing size requirements within the municipal limits preclude FmHA activity;

where the community does not have central sewage facilities, and available sites within that community do not meet FmHA, state, or local health standards for individual septic systems;

4. where minority people have historically been prevented from buying homes inside the town and the minority population is located in areas outside the town:

5. where the area's only "growth center" is too large to be eligible to be included in the FmHA service area, but there are no other established communities nearby;

6. where building the subdivision on the edge of an established community might

lead to "rural sprawl"; and

7. where rehabilitation assistance is needed in an existing subdivision which is in open country and failure to provide FmHA assistance would doom the subdivision by preventing any improvement.

SECTION 8-ASSISTANCE AUTHORIZATIONS

Would extend all expiring authorizations, and in most cases, provide some increase. Specifically the section would:

1. Section 504 Home Repair Loans and Grants; provide \$100 million for three years. 2. Section 516 Farm Labor Housing Grants; provide \$100 million for three years.

Section 506 Rural Housing Research;
 provide \$1 million each year for three years.
 Section 514 Farm Labor Housing Loans;

authorize \$50 million in loans each year.
5. Section 515 Rural Rental Housing; continue the present unlimited authorization through 1980.

- Section 523 Self-Help Technical Assistance Grants; authorize \$20 million in grants each year.
- 7. Section 523 Self-Help Site Loans; authorize \$5 million in loans each year.
- Section 525 Technical Assistance Grants and Seed Money Loans; provide \$10 million annually for each of these two programs.

SECTION 9—CONGREGATE HOUSING FOR ELDERLY
AND HANDICAPPED FAMILIES

This amendment would make clear that congregate housing with common dining areas for the elderly and handicapped may be built with FmHA 515 funds. Since this had not been expressly provided for in the past, FmHA has refused to allow such housing, often essential to the needs of the elderly and handicapped.

SECTION 10—FINANCIAL ASSISTANCE TO PRO-VIDE LOW-RENT HOUSING FOR DOMESTIC FARM LABOR

The farm labor housing grant program (Section 516) was instituted by Congress to provide low-rent housing for domestic farm labor. Congress recognized that to make this program available to farmworkers, a variety of groups and organizations would have to be eligible to apply for farm labor housing funds including, "... any State or political

subdivision thereof or any broad-based public or private nonprofit organization incorporated within the State, or any nonprofit organization of farmworkers incorporated within the State. . . . "

The intent to allow private and farmworker nonprofit organizations to apply for this assistance has been subverted by FmHA Instruction 444.6, which gives priority of grant funds to public bodies. There are many areas with a need for farm labor housing without a housing authority. There are also housing authorities which refuse to sponsor farm labor housing. Farmworkers who live in areas without a housing authority or with one that refuses to sponsor farm labor housing should not be penalized. The priority for funding applications should be based primarily upon need. Therefore, private and nonprofit organizations should be considered on an equal basis with public bodies in applying for farm labor housing funds. This amendment would accomplish that purpose.

SECTION 11—PROVIDING THAT 60 PERCENT OF INSURED RURAL HOUSING LOANS GO TO LOW-INCOME FAMILIES

This amendment would require that no less than 60 percent of all insured Section 502 single family and Section 515 rural rental loans go to low-income families, as defined by the Secretary. Up to this point, the yearly FmHA appropriations bill has contained language to do this. Placing this provision in the authorizing legislation strengthens the intent of Congress that these programs serve those most in need of decent housing.

SECTION 12—AVAILABILITY OF RURAL HOUSING FUNDS

This section would require the Secretary to allocate funds to assure maximum availability and use during peak construction periods.

During Fiscal Year 1976 the use of monthly allocations was implemented in both the Section 502 and Section 515 programs. It proved totally unworkable in the 515 program and was dropped, while continuing in Section 502. The result was chaos. Applicants on long waiting lists were forced to wait longer for processing. Many builders, constructing dwellings under the FmHA conditional commitment program, found themselves with completed units and no way to gain timely processing for potential buyers unable to rapidly advance through a waiting list that has been dramatically affected by monthly quotas.

SECTION 13—CHANGES IN GUARANTEED HOUSING LOAN PROGRAM

Would limit this guarantee to applicants with above moderate incomes, seperate guarantee authority from loan authority, and provide for processing by state or regional offices.

SECTION 14—HOMEOWNERS SUBSIDY FOR LOW AND MODERATE INCOME PERSONS

This amendment would authorize FmHA to subsidize the difference between 15% of annual gross income and the costs of principal and interest, property taxes, insurance, utilities and maintenance. This minimum payment by the low income household is the same amount as required for very low income households under the HUD Section 8 rental program.

To insure that these subsidy costs are restricted to shelter costs of the family and that the family does not gain a windfall at the expense of the government by selling the house at a substantial profit, this section would allow FmHA to recapture some of the subsidy costs. If the low income family were to sell the house gaining a windfall profit, up to 100% of the subsidy dollars provided by FmHA over the life of the mortgage, and a portion of the profit could be recaptured by FmHA. The seller would be allowed to retain his equity and a portion of the profit

to relocate in comparable housing or facilities which the seller and his family finds suitable to their needs

SECTION 15-RURAL RENTAL ASSISTANCE

This amendment would require that the rent supplement program enacted in 1974 be implemented. It inserts "shall" for "may". The amendment would make clear that occupants in congregate and cooperative housing would qualify under the program. It would make sure that the tenant pays 25% of adjusted annual income, as determined for the major homeownership and rental programs. The amendment would clarify that any farm labor housing, financed with a loan or a grant/loan combination, could receive rent supplement assistance in 100% of the units.

supplement assistance in 100% of the units. Finally, it would increase the percentage of family units which could be assisted, to 40% in any project.

SECTION 16—MUTUAL AND SELF-HELP HOUSING Would authorize site loans to Section 523 self-help grantees for the purchase of sites as well as options.

SECTION 17-SITE LOAN CHANGES

This amendment is to provide for profit and limited profit developers in rural areas access to capital in order to provide desperately needed improved building sites. This is done by extending the guarantee authority to the site development program. Private lenders will be encouraged to provide capital for this purpose because of the incentive of guarantees. The amendment specifies that servicing for such loans will be made from the state FmHA office to be sure that the main attention of the country offices is focused on the direct loan programs, which serve the lower income families

SECTION 18—TITLE INSURANCE FOR REMOTE CLAIMS OR ENCUMBRANCES

This amendment would authorize the Secretary to make loans on land where private insurance companies will not provide title insurance solely because of remote outstanding claims or encumbrances on title.

SECTION 19-ENERGY CONSERVATION

Would mandate use of energy conserving construction techniques, materials and standards in all new housing financed by FmHA; and, would require the Secretary to encourage the use of locally available, alternative space heating systems for new or rehabilitated housing.

SECTION 20-ATTORNEY'S FEES

Would permit reasonable attorney's fees for persons and organizations seeking to enforce rights under FmHA rural housing programs. It is limited to payment for work normally done by attorney's, and not that of developers, packagers, etc.

LEGISLATION REQUIRING BILLS AND RESOLUTIONS TO CONTAIN TITLES ACCURATELY REFLECT-ING CONTENTS

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. Weiss) is recognized for 5 minutes.

Mr. WEISS. Mr. Speaker, I am introducing today a resolution (H. Res. 487) to require that all bills and resolutions introduced for consideration by the House contain titles which accurately reflect the contents including the specific amounts of authorizations and appropirations contained therein.

In recent months several legislative matters have come before us for consideration and vote which have contained major provisions which were not reflected in the bill titles or, in some instances, even in the body of the legislation. This situation has been extremely misleading to the public and to Members of Congress, and has denied interested persons the opportunity to participate in the legislative decisionmaking process by expressing their opinions to their elected representatives.

For example, on February 7, I discovered that House Joint Resolution 227, which was titled as an "urgent supplemental appropriation for the Southwestern Power Administration," contained a major funding provision for ERDA which included over \$5.5 billion tied to nuclear research and development. The only mention of the provision contained in the bill's title was the phrase "and for other purposes" and the only amount mentioned in either the title or the body was the sum \$6,400,000. The actual amount being appropriated was closer to \$7,006,400,000.

Recently, on March 17, the House considered H.R. 4088, the fiscal year 1978 authorization for the National Aeronautics and Space Administration. While preparing for the debate on this bill, I discovered an authorization for a supersonic transport which was referred to solely in the committee report, but entirely omitted from the text of the bill being considered in the House.

Mr. Speaker, I believe it to be most inappropriate to have presented to us legislation so obfuscated that it is impossible upon a reading of the bill to tell precisely what it is that a Member is voting on. I am hopeful that this resolution will correct this problem by requiring the title of each legislative matter to contain sufficient information to advise us of its contents.

DODD SUPPORTS HANDICAPPED DEMONSTRATION FOR ANTIDIS-CRIMINATION REGULATIONS

The SPEAKER. Under a previous order of the House, the gentleman from Connecticut (Mr. Dobb) is recognized for 5 minutes.

Mr. DODD. Mr. Speaker, I rise to bring to the attention of my colleagues the dramatic confrontation now taking place between several hundred handicapped persons who are sitting-in at the HEW building across the street from the Capitol and Secretary Califano who has refused to approve Federal regulations prohibiting discrimination against the handicapped.

I support the brave efforts of these handicapped persons who are doing nothing more than asking HEW to make good on the promise of protection against discrimination which the Federal Government made over 3 years ago when it passed the Rehabilitation Act of 1973.

Mr. Speaker, 3 years is enough. The 35 million handicapped citizens of our Nation must not be forced to wait any longer before they are allowed to enjoy the same rights to a job, good education and adequate health care that the rest of our citizens have. It is a disgrace that the world's richest Nation continues to uphold barriers which prevent the handi-

capped from obtaining their fair share of the benefits of our society.

In an investigation which I initiated in May of 1975, GAO discovered that "in essence section 504"—this is the section of the Rehabilitation Act which prohibits discrimination against the handicapped in programs or activities receiving Federal financial assistance—"had not yet been implemented as of June 1975" and that two executive departments were completely unaware of the requirements of section 504. Citing the conclusions of that report, I wrote then President Ford in October of 1975 asking that he immediately initiate an Executive order giving HEW responsibility for enforcement of section 504. I was very encouraged when President Ford acted on my request and issued Executive Order 11914.

Almost a year has now passed since the President issued his Executive order requiring HEW to develop regulations implementing section 504. Despite this Presidential action, extensive public comment and support and indepth study, former HEW Secretary David Mathews failed to sign the regulations before leav-

ing office.

When Secretary Califano took office he expressed basic support for the regulations but then established a task force to review the more controversial elements of them. Although he gave the task force a deadline of March 17, by which they were to report back to him, the task force only very recently completed its work.

In addition, Secretary Califano is reported to be considering major changes which would permit him, in certain cases, to waive the requirement that recipients of Federal assistance make the facilities in which they provide their services ac-

cessible to the handicapped.

Mr. Speaker, these regulations must not be weakened. Instead, I believe that the Federal Government should help recipients with the cost of making their facilities accessible to the handicapped. I believe the Federal Government would be more than reimbursed for its expense by the increased tax revenues and reduced welfare costs that would result from having handicapped citizens become active, productive contributors to our economy.

Mr. Speaker, I urge my colleagues to communicate their support for these regulations and the handicapped protest to the White House and to Secretary Califano. No further delays in the implementation of this important legislation, now 3 years old, should be tolerated. All handicapped Americans are watching our action; we must not let them down.

REMARKS AT A TESTIMONIAL DINNER HONORING CLEMENT J.

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. Rostenkowski) is recognized for 10 minutes.

Mr. ROSTENKOWSKI. Mr. Speaker, last Tuesday, March 29, I had the honor to act as master of ceremonies at a tes-

timonial dinner honoring my good friend and distinguished colleague, the Honorable CLEMENT J. ZABLOCKI, chairman of the House International Relations Committee. The dinner was sponsored by the Washington Metropolitan Division of the Polish American Congress. The dinner was attended by well over 300 persons, including many Members of Congress and other honored guests, including my good friend, Ed Piszek, the president of the Copernicus Society of America. The main speaker of the evening was the distinguished author, James Michener.

There is a great deal of similarity between James Michener and Clem Zablocki. They both have several interests in common. One of them is the world. James Michener is fascinated by it and by the people who inhabit it. Clem Zablocki, every day of his life, carefully watches it and analyzes its growth in peace and in freedom. Both of them share the same compassion for the underprivileged and the oppressed.

Almost one year ago, Speaker "Trp" O'NEILL and I had the honor to be given a special tour of the Children's Hospital in Krakow. I am sure that many of you have also visited this truly magnificent institution, perhaps the most visible expression of goodwill between the American people and the people of Poland. No one man has done more, has been more responsible for the creation and the continuation of this hospital than our good friend, CLEM ZABLOCKI. That day last April proved to be a very moving experience for me. Everywhere that Speaker O'NEILL and I went, in the wards, in the operating rooms, we were continually asked the same question: "Did we know Congressman Zablocki?" The doctors, the nurses, and especially the children all said, "Please say hello to Congressman Zablocki." CLEM Za-BLOCKI did not know it, but he received hundreds of testimonials that day. Most of them came from very small, very sick Polish children. And knowing CLEM the way I do, I can assure you that each of those kind words meant more to him than the generous tributes he received last Tuesday evening.

Mr. Speaker, I would like at this time to insert into the Record Clem Zablocki's remarks of last Tuesday. It is an excellent speech which clearly indicates Clem's strong views on the role of the Congress in international relations. I would also like to place into the Record the remarks of my good friend, the Honorable Aloysius A. Mazewski, president of the Polish American Congress and the Polish National Alliance. Al, my Chicago neighbor, a former member of the U.S. delegation to the United Nations, continues to be an outstanding champion of

human rights.

As I mentioned earlier, the keynote address was given by the distinguished author, James Michener. It was one of the most thoughtful addresses that I have ever heard. I would strongly recommend it to my colleagues, not only because of the nice things he says about CLEM ZABLOCKI, but also for what he says about the present state of world affairs.

The remarks follow:

CONGRESSMAN CLEMENT J. ZABLOCKI'S SPEECH

Thank you very much my big town friend from the suburb of Chicago Dan Rostenkowski. Very reverend Reverend Clergy, my congressional colleagues, distinguished friends in the State Department, military and executive branch, and other departments of our Government, the national local representatives of the PAC, President of Washington Metropolitan Division—Jan Kanty Miska, Aloysius Mazewski, my good friend Ed Piszek, President of the Polish American Congress, Mr. Michener, Msgr. Malanowski, Rev. Smyczyk, and all of you my dear friends.

Let me say it is indeed a great personal privilege to be here and to hear such fine things. Dan, of course you've heard, it's better to be a big fish in a small pond than a small fish in a big pond and as I outgrew my size in Milwaukee and they wanted to get rid of me, they sent me to Washington and although I did not grow physically and I must say I don't believe everything that was said this evening, I still did like to hear it.

My friends, your kind and generous words, your very presence impresses me deeply. I am overwhelmed and almost speechless, but did you ever see a politician that was ever speechless? I would be remiss, however, if I did not express my special thanks to the Washington Metropolitan Division of the Polish American Congress, to the working committee headed by its President Mr. Jan Kanty Miska, and all the individuals and organizations who cooperated and assisted

in making this event possible.

I know there are too many to single out. I wouldn't even attempt to dare to try, but I know many of you come from far and distant places. This moves me. I am heartwarmed. I sincerely appreciate this display of confidence in me—it will serve as a further incentive—as I take on additional and important responsibilities now. The memory of this evening will be a constant reminder of your support and faith in me. I assure you that your faith will not be betrayed. These festivities and your expressions of best wishes and congratulations are indeed heart-

warming. And as I sat there listening to them, I saw those flowers, I met so many of the clergy, I saw the candles and as my pipe began to smell more like incense, I began to worry. I worried since I knew I've had it. You only hear such nice things when people can't hear them, and I was wondering as I was already dreaming . . . I am human enough to enjoy hearing them. But it is my understanding and perception that the honors bestowed are on the office I hold-and the chairmanship of the important International Relations Committee. Yes Mr. Michener-I undertake some very serious obligations and responsibilities. But let me say after an 18 year apprenticeship as ranking member of that Committee, over the years that Dr. Tom Morgan was chairman-let me assure you that I am well prepared and will conduct myself and administer my duties in a manner which will continue to earn your respect and support.

I am proud to be an American of Polish descent—proud that the blood of Kościuszko and Pulaski flows in my veins—proud that the land of my ancestors contributed so much to science, art, culture, music, literature—and yes—Christianity. To name a few: Madame Skłodowska-Curie, Kopernik, Chopin, Paderewski, Sienkiewicz.

My goals in the past have always been based on the motto—"God, country, honor"—so I pledge to you this evening—it is my resolve to continue in that spirit—God, country, honor, especially since my responsibilities in the Congress are even more challenging and important, toward that end, in all humility, I solicit your encouragement,

CXXIII-681-Part 9

your counsel and most especially your prayers.

Let me say that many asked and so many referred to my humble accomplishments over the years. In the past agreements were made that Congress never even knew of and at times the State Department was not aware of. That is changed by the Case-Zablocki Act. It's law. Future presidents, this President, can not make executive agreements without advising Congress. Yes, I'm proud of the War Powers Act which restored to Congress the responsibility that the Constitution gave Congress, that only Congress wage war, that presidents could not get us involved in conflicts without the approval of Congress.

Yes, there will be other decisions that we will have to make. And today many ask since this President-President Carter is a Democrat and I am a Democrat whether my policies will change. Yes, President Carter is my President and thus far he and his administration have demonstrated the intent to consult and seek the advice of Congress. And to add, to that end as long as they will I am sure there will be the full cooperation of Congress. But Democrat or no Democrat let me assure you that I will as chairman, as I had in the past, guard very thoroughly the responsibilities, the obligations, the attitude that Congress will have, the input that Congress will have in the International Affairs.

This is as it should be. We will not relinquish that oversight, we will cooperate but we will always be watchful. After all we are the people's representatives and we want to assist the President, we want to be in a partnership with an executive branch. In that way we can assure that the progress for our country and for peace in the world will indeed become a reality. Yes, Mr. Michener, and others with you who have spoken, I deeply appreciate your very, very kind words, but the job is a big one and I shall look for your counsel, solicit your advice and most especially your prayers. Again my sincere and heartfelt thanks to the Polish American Congress and all of you in an old Polish saying: "Bog zaplac"—May God reward you.

REMARKS BY HON. ALOYSIUS A. MAZEWSKI,
PRESIDENT OF THE POLISH AMERICAN
CONGRESS

Mr. Chairman, distinguished guests, Mr. and Mrs. Zablocki, our honorees, Reverend Fathers, and ladies and gentlemen.

I deem it a great privilege to be here today. My speech will be very short. But I have a few things to say and in five minutes I really have to be as affluent and as fluent and as able and capable as all these Congressmen I hear. I also want to take this opportunity since I see so many Congressmen to thank them for voting for that Polish Veterans Bill. It finally became a reality.

The Washington Metropolitan Division of Polish-American Congress deserves accolade for arranging this testimonial dinner in honor of Congressman Clement Zablocki who in 28 years of dedicated and highly visible service in the House of Representatives has earned the position of leader-ship as the chairman of the highly impor-International Relations Committee This position is indeed important both to the Congress and to the nation and Congressman Zablocki has proved his qualities of leadership and his grasp of international problems and challenges facing our nation today. The instances of his effective, bold and far-reaching initiatives and actions in the area of our foreign relations are too numerous to delve into in a brief address.

Therefore, I will mention only one which is of particular interest and importance to Americans of Polish origin who see a free and independent Poland as the key factor in the stability of East Central Europe where a considerable measure of our national security is involved. It was through Zablocki's initiative and dedicated efforts that Congress adopted a resolution requiring that all international executive agreements concluded by our government be transmitted to Congress for debate, evaluation and acceptance. Had this resolution been in effect in 1945 the Yalta Agreement would not have been presented to the American nation as an accomplished fact and perhaps Europe would not have been divided by the Iron Curtain.

In our view as Americans of Polish origin and heritage, or as we are frequently referred to as American Polonia, this testimonial dinner in honor of Zablocki has an added significance. To us this dinner is a focal point which brings to us as it should bring to our compatriots of other origin the awarenes of the contributions Americans of Polish origin made to the development and stability of our political system. Our tradition in this area goes back to the year 1619 when Jamestown pioneers from Poland won their strugfor enfranchisement and through their action instituted the first vocational act in America. Our participation in the civic affairs of the Republic reaches the time when Peter Stadnicki helped to finance the American Revolution and earned words of thanks from Thomas Jefferson.

It also reaches the time when Albrecht Zaborowski became the first justice in what is now Bergen County, New Jersey, and his grandson John became a member of the Bergen County Committee of Correspondents. Throughout the history of the Republic Americans of Polish origin distinguished themselves in many executive positions on the state and local levels, in the judiciary, in education, and in arts and sciences. Today we have many Americans of Polish origin eminently qualified by education, experience and qualities of leadership to serve our nation effectively in positions of responsibility, trust, and challenges.

I was very pleased to read just recently, just a few days ago, that our former Ambassador Gronouski will be named as chairman of BIB. I don't see any better qualified individual that understands the problems of Radio Free Europe, Radio Liberty, and Voice of America than Ambassador Gronouski.

I feel it is our duty as American citizens to support those radios because those radios must continually beam the truth beyond the Iron Curtain. I also wish at this time to congratulate President Carter on his strong stand on human rights. The struggle for human rights and our support for those who share with us the desire for a truly democratic system in the world are absolutely vital in order to preserve peace in this world. We must also insist that Russia, Poland and other signatories of the Helsinki Agreement quit violating those human rights provisions. Our honored guest Congressman Zablocki is an example of the quality of service, dedication and commitment Americans of Polish origin and heritage can bring to the civic sector of our nation and prove to our somewhat cynical and disillusioned younger generations that politics could be, should be and in fact is an honorable profession. This to us, Americans of Polish origin and heritage, is the larger meaning of this testimonial. We are happy and honored that this larger meaning is today centered on Clement Zablocki who eminently deserves our tribute. Thank you.

KEYNOTE ADDRESS BY JAMES A. MICHENER
Distinguished Members of Congress,
members of the clergy, guests who have
come here tonight to honor an outstanding American.

ing American.

If I were sitting in this audience I would ask myself, why is this man speaking about Zablocki? The answers are very simple. I served on a national commission which was

supervised by the committee of which Mr. Zablocki is now chairman. We had to go before him for our funds, for our approval, for our continuation. I was on the committee for five years and learned from the people who gave us instructions that Zablocki was the man to watch because he had a very solid, sane approach. I therefore feel almost as if I were one of his constituents as indeed for five years I was. I came to know how his mind worked, what he was in favor of, and what he was against. And I came above all to respect him. It occurred to me in the middle of my service on this commission that Zablocki and I were very similar. He in the governmental area, I as a private citizen in that we were both concerned about the position of the United States in world affairs! And on four specific items I found myself involved with the very things that he was involved in.

In 1956 I participated at a very low but intense level in the Hungarian Revolution. I saw at first hand the complexities of the Dulles Doctrine that the United States stood ready to support any uprisings that might happen in the countries that had recently fallen under Russian domination. The United States never said that, but the idea was abroad that that was our doctrine and when the harshness of the Hungarian Revolution erupted we all saw how false that assumption was. That a dreadful affair was happening in Budapest and we were simply powerless to do anything about it. And this had a profound impression on me. I served, as you know, on the frontier bringing Hungarian refugees out and helping get them settled in this country and elsewhere. And again and again I was asked, why didn't you do what you said you were going to do? And it was heartbreaking to tell these people who had struck a tremendous blow for freedom that they had misunderstood what we had said.

And I think that in the years since 1956 it has been incumbent upon all of us to be very careful that we do not promulgate another Dulles Doctrine which we either will not or cannot support. And on no man does the problem of holding the line on this fall more heavily than on Clem Zablocki. He must be careful of what he says. And in my service under him as it were, I came to know how imperative it is that we keep all of these things in mind and in balance. In 1963-64 I was given the rare opportunity of working intimately with the leaders of Israel. And with many of the citizens of the surrounding Arab states.

It was perhaps the most vital intellectual experience I have ever had. And it left a deep and abiding impression on me. I have subsequently written about it in a score of places. I have tried to keep the values in mind. I have tried to be an honest assessor of this and I would not say that I had succeeded. I think almost no American can pick his way securely through this terrible jungle of Middle Eastern affairs. I think we're obligated to try. I think we've done a good job of being honest about it. I think we have been evenhanded in the phrase that my good friend and neighbor Bill Scranton introduced to the displeasure of many people. I see the Middle East as a cauldron.

I was one of the last people out of Beirut before the roof fell in. We all knew it was going to fall in. There was no way of escaping this. And one feels that there are many situations like this. Well, the men who worked with Zablocki in the House and in the Senate are obligated to try to pick their way carefully through this maze and bring some sense of order into it. And I am very proud of the stand taken by the United States in trying to be fair to both sides in this question and to urge both of them to the table where they can discuss without warfare the problems

that confront them. I think as I work in these fields that your Congressman is responsible for that I have a sense of great tragedy almost as I look at Lebanon, Cyprus, Northern Ireland. When I was a young man I thought the days of such internecine struggle were over. I thought we had moved onto new plateaus where this would no longer be necessary. Everything I believed hopefully then has fallen in ashes. We live in a much tougher world than I imagined when I was young. And it has been my service in these areas and meeting the people who were on the firing line which has brought this truth home to me.

Tonight I have somewhat the same hopes I had when I was a young man. I think that by the year 2000 we are going to have resolved many of these difficulties. I think the pressure of population and communication and interrelationship will dampen some of these fires. I certainly am as hopeful as I was the day I started but I am not as stupid as I was then. I realize it's much tougher than I thought. I have an enormous respect for men like your Congressman who are on the firing line in this continuing battle.

In 1964 and twice later I had the great opportunity of spending intensive periods in the Soviet Union. And while there at one extraordinary conference I had the temerity to bring up the question of the captive Baltic states—Estonia, Latvia, Lithuania—about which I have always had deep interests and sometimes deep connections. And I was like the little boy who brings a skunk to a birthday party. These were things that the Russians did not want discussed. Although they certainly are on the world agenda. They're up for discussion but not for intervention. And that is a very difficult posture for America to be in. To want to discuss something but not necessarily to intervene about it.

Well, there are a lot of problems in this world that fall within that category. And I think all of you can name them. I could rattle off some twenty that I have been in-volved in that should be discussed at every level and our attitudes should be made known, and our willingness to help both sides should always be on the table, but about which we are powerless to intervene on an operative level. Later I spent eight weeks in South Africa, the Republic of South Africa. One of the most beautiful countries on earth, absolutely heavenly spot. With a variation that would surprise you, with great beautiful areas for development, with a very fine black and white population capable of developing it. An area that reminds me of the best parts of America. One saw there again the enormous tragedy comparable to Cyprus, Beirut, and Northern Ireland—an almost insoluble confrontation with men of good intention on both sides trying vainly to find some way out of this impasse. And again this is a problem which is going to fall in your Congressman's lap for the rest of his tenure in Congress. He cannot escape it.

Finally, some years ago I had the great privilege of visiting Red China on a rather of the intimate level and meeting many leaders of that country and especially many of the fourth and fifth echelon people who were slugging it out on the firing line. I remember one evening after America had been kicked around rather savagely by some of the leaders of the Chinese delegation, I had a meeting with the head of what would be the Chinese Associated Press. And we got down to very fundamental levels that men of comparable occupation can often do. And he wanted to know exactly what we were thinking about the Russia-Chinese confrontation. And he had been rather arrogant with me in the preceding three days. Delightful man and an even more delightful wife, terribly bright people. They knew who I was, they knew what I stood for, they were heckling me pretty furiously as was the Chinese delegation heckling our leaders. And I got rather angry and I said, "It's very simple. If you want to behave this way all we have to do is leave here and fly to Moscow and an entirely different kind of balance is going to be established."

Believe me, for the next two days we had one of the profoundest conversations I have ever had. Did I really mean that? Was there a possibility of an American-Russian rapprochement? What would we do about the Far East? What would we do about the Trans-Siberian Railroad? I got an introduction to Chinese politics that was invaluable and he wanted it that way. He had found that I wasn't kidding. He was a man exactly like me, about my age, about my same background. It was an introduction into the complexities of the Russian-Chinese situation. And again I came away feeling quite ignorant and with renewed respect for those men in Washington who are responsible for picking their way through this jungle.

So, accidentally and on a low working level I have been toiling in the same garden as Clem Zablocki. And I have come to have enormous respect for the way he approaches these problems which have totally baffled me. One, how to encourage the captive republics without repeating the Dulles error of overanticipation. Parenthetically, how to restate the Sonnenfeldt Doctrine which created so much havoc in groups like yours some years ago. How to avoid the regrettable stumble that President Ford made at the height of the campaign which did him so much damage and may have affected the outcome in November.

Two, how to advance the possibility of peace in the Middle East without abandoning America's historic positions on all kinds of international relations.

Three, how to retain meaningful contact with the Soviet Union without reversing attitudes or surrendering positions which we have won through hard negotiations. I think everyone can see that that is the great problem tonight in Moscow as Vance and the leaders meet. How can we retain contact without surrendering or retreating from positions hard won by previous administrations.

And fourth, maybe most complex of all, how to build an increasingly fruitful relationship with China without becoming embroiled in her self-centered pursuit of her own interests, say vis-a-vis India, vis-a-vis Siberia, vis-a-vis Taiwan. I am not wise enough even to give advice on any of these problems. But we must have in this country men who are willing to operate upon the level of advice they do have and make the right decisions.

And it is for that reason that I come here tonight to pay my testimony to the track record of the distinguished Member of the Congress who has been trying to do that. I wish Congressman Zablocki well in his pursuit of these matters and I find great encouragement in his past performance. His restatement of the principle of war powers was long overdue and should go far to avoid some of the excesses of the last twenty years. His constant concern with arms limitation is a posture that our government should have. It should be stated clearly, it should be pursued rigorously. His insistence that international agreements be reviewed by Congress is very much to my liking. I think a previous speaker has said that had this provision been in operation the harsh conclusions of Yalta would not have been permitted. We may have stumbled into them

but we would not have gone into them secretly with the sad repercussions that followed. And finally, his desire to help underdeveloped nations progress in meaningful ways with our continued assistance, with our guidance, with our cooperation.

Congressman Zablocki, good luck. You are going to need it.

FCC SHOULD NOT ENTER INTO COMPACTS WITH FOREIGN GOV-ERNMENTS WITHOUT CONGRES-SIONAL OR PRESIDENTIAL AU-THORITY

The SPEAKER. Under a previous order of the House, the gentleman from Georgia (Mr. Levitas) is recognized for 5 minutes.

Mr. LEVITAS. Mr. Speaker, on February 2, 1977, the Federal Communications Commission issued a public notice announcing:

New procedures concerning the type acceptance and certification of Japanese manufactured citizens band equipment.

A compact was reached between the FCC's chief engineer and an official of Japan's Ministry of International Trade and Industry—MITI—in which laboratories in Japan would test Japanese manufactured CB radios for FCC type acceptance.

I find it strange and, at least unusual, if not illegal, that the compact reached between the chief engineer and MITI changes the FCC's rules regarding type acceptance and certification without compliance with the Administrative Procedure Act's requirement for a public rulemaking process. The Commission's rules permit the Commission to "require an applicant for type acceptance or certification to submit one or more sample units for measurement at the Commission's laboratory." The so-called compact would allow inspection and testing at the Japanese laboratories.

This may be another example of where the bureaucrats are making decisions and rules rather than the duly established authorities doing so. Did the Commissioners know of and appraise this action? I would like to know.

Of further interest is that it appears that some of our bureaucrats are permitting agencies controlled by foreign sovereignties to handle some of the load confronting the Commission's testing laboratories here in the United States. Assuming the Commission had the authority to delegate its equipment authorization responsibilties to nongovernmental parties, then the Commission should at least consider delegating that authority to U.S. testing laboratories to maintain U.S. employment of engineers and technicians.

Finally, I question the propriety of the staff of the FCC conducting our relations with foreign governments and entering into compacts with foreign governments without congressional or Presidential authority.

I trust the Committee on Interstate

I trust the Committee on Interstate and Foreign Commerce will look into this matter and determine which occurred and whether it is proper.

FARM PRODUCTION PROTECTION **ACT OF 1977**

The SPEAKER. Under a previous order of the House, the gentleman from Tennessee (Mr. Jones) is recognized for

Mr. JONES of Tennessee. Mr. Speaker, today I am introducing the Farm Production Protection Act of 1977. This bill is an expansion and revision of the mandate given to USDA's Federal Crop Insurance Corporation. It was developed by crop insurance experts in the FCIC and provides us excellent guidance and a basis from which to consider making crop insurance one of the most important agricultural policy tools. Secretary Bob Bergland has publicly expressed his desire to establish an "all crop, all risk" insurance system. This bill was designed to meet his desires.

Additionally the administration has asked for only a 1-year extension of the disaster payments program. Plans call for replacing it with a revised crop insurance system. I submit this bill to start our deliberations and hope we can consider it in the Agriculture Committee as soon as our schedule is cleared of the farm bill extension later this year.

The initial objectives of the proposed Farm Production Protection Act will be to provide economic stability to producers of wheat, cotton, corn, barley, grain sorghum, and rice on a national basis upon enactment of the enabling legislation

Further, it will be the objective to expand this protection to producers of other major farm products as rapidly as the Secretary of Agriculture and Board of Directors of the Farm Production Protection Corporation feel is prudent and are able to develop an appropriate actuarial structure.

This will provide a strong program to prevent loss of the producer's farm production costs in the face of unavoidable natural causes.

The primary purpose will be to assure a supply of food and fiber sufficient to meet the needs of domestic consumption and export demand and to permit a high export level for our agricultural products.

Further, it will assure a strong and substantial rural agricultural and commercial financial structure. This economic protection will virtually assure the consumer of agricultural products in the marketplace and of a long-range continuation of a plentiful supply of food and fiber

This would be a major forward step in minimizing a conflict between the agricultural producer and the consumer.

It is the intent of the legislation to provide a vehicle to forge a united disaster assistance program, at a minimal cost, which will permit responsive Federal action to alleviate farm financial problems caused by natural disasters.

Accomplishment of these objectives will be through the formation of the Farm Production Protection Corporation which will be managed by a Board of Directors appointed by the Secretary of Agriculture. The Board shall consist of the Manager of the Corporation; two other persons employed by USDA, one of which represents the consumer viewpoint; one person experienced in the insurance business, and three active farmers who are not otherwise employed by the Government.

Financing under this legislation, during ordinary or nondisaster conditions, will be by subscription of \$300 million capital stock, premiums paid by participating farmers, and appropriated funds for operating expenses.

Experience under the existing Federal Crop Insurance Act has fully demonstrated the feasibility of this financing concept since premiums paid by farmers from 1948 through 1976 have been equal to indemnities incurred for losses,

In the event of catastrophic and disaster type loss situations, such as have occurred in areas stricken by drought in 1976, the Secretary of Agriculture is empowered to expend whatever funds are necessary to meet the needs of the immediate situation in a timely manner.

These expenditures will not be permitted to increase the premium costs or reduce the protection guarantees to participating farmers. This will prevent making the program cost prohibitive to participants and assure a continuation of the economic stability and protection needed in disaster areas.

Following is a section-by-section analysis which I ask to be printed with my statement:

FARM PRODUCTION PROTECTION ACT: SECTION-BY-SECTION SUMMARY

Section 101. To promote economic stability of agriculture by protecting farm production costs against loss from natural and uncontrollable causes

CREATION OF FARM PRODUCTION PROTECTION CORPORATION

Section 102. Creates the Farm Production Protection Corporation as a corporate body. to implement and execute the declaration of purpose under general supervision of the Secretary of Agriculture.

CAPITAL STOCK

Section 103. (a) Provides for funding of the Corporation through \$300 million capital stock authorized as a working reserve.

(b) Receipts for stock to the Secretary of the Treasury as evidence of stock ownership.

MANAGEMENT OF THE CORPORATION

Section 104. (a) Management through a seven-member Board of Directors appointed by the Secretary of Agriculture. The Board shall consist of the Manager of the Corporation; two USDA employees, one of which shall represent consumers; one person experienced in insurance business, and three farmers.

- (b) Four members constitute a quorum for business transactions.
- (c) Establishes compensation and travel and subsistence allowances for members of the Board.
- (d) Appointed by the Secretary of Agriculture, the Manager shall be the chief executive officer with authority conferred by the Board of Directors.

GENERAL POWERS

Section 105. (a) Succession in its corporate name.

(b) Adopt, alter and use the corporate seal judicially noticed.

(c) May contract, purchase, lease, hold real and personal property necesary to transact its business. May dispose of such property as deemed appropriate.

(d) The Corporation may sue and be sued.

The courts of jurisdiction are designated herein.

(e) May adopt, amend and repeal by-laws, rules and regulations.

(f) Use of the U.S. mail service as other

executive agencies of the government.

(g) Provides for broad use of information, services and facilities to carry out provisions of the title.

(h) Research, survey and investigate to assemble data for establishing the actuarial basis for farm production protection.

Determine the character and necessity for expenditures.

(j) Confers powers upon the Corporation that may be necessary or appropriate.

PERSONNEL

Section 106. (a) The Secretary will appoint officers and employees pursuant to Civil Service laws and regulations, define authorities and duties, and delegate powers as he may determine. May require bonding. Provides that personnel paid by hour, day or month when actually employed and county representatives may be appointed and compensation fixed without regard to Civil Service laws

and regulations.
(b) Provides for compensation for employees suffering injuries while in the performance of their duties.

(c) Authorizes the Secretary to utilize bureaus or offices of the Department or other agencies of State and Federal government to assist in carrying out this title

(d) Grants authority to the Board to utilize producer-owned and producer-controlled cooperative associations to assist in carrying out the title.

FARM PRODUCTION PROTECTION

Section 107. (a) Commencing with the 1978 crop year, provide protection to producers agricultural products. Such protection against loss of production costs due to unavoidable natural causes. Production protection may cover up to the cost of production of the product subject to adjustment by the Board. Shall not cover losses due to neglect or malfeasance of the producer or failure of the producer to follow established good farming practices. The Board may refuse production protection in any county, area or farm not suited to the production of such prod-uct. May limit or refuse in any county where it is administratively impractical to establish a county program.

Requires the Corporation to report annually to Congress.

(b) Premiums for production protection fixed at such rates sufficient to cover claims for normal loss of production. Catastrophic or disaster losses shall not be included in the protection experience for rating risk and fixing premium rates.

(c) Catastrophic or disaster losses shall be charged to the disaster relief fund to the ex-

tent determined by the Board.

(d) To adjust and pay claims for losses under rules prescribed by the Board. Suit may be brought against the Corporation for denial of a claim if brought within one year after the date when notice of denial of the claim is mailed to and received by the claimant.

(e) To issue contracts and regulations which are binding on the contractual parties.

(f) To provide reinsurance for the Commonwealth of Puerto Rico.

(g) To offer reinsurance to private insurance companies, not to exceed 20 counties.

INDEMNITIES EXEMPT FROM LEVY

Section 108. Claims for Indemnity shall not be liable to attachment, levy or garnishment before payment to the insured, except claims of the United States or the Corporation.

DEPOSIT OF FUNDS

Section 109. Monies of the Corporation deposited with the Treasury of the United States subject to withdrawal or may be invested in obligations of the United States. The Federal Reserve is authorized and directed to act as depository custodian and fiscal agent.

TAX EXEMPTION

Section 110. The Corporation shall be exempt from all taxation.

FISCAL AGENT OF THE GOVERNMENT

Section 111. When designated by the Secretary of the Treasury, the Corporation shall be a depository of public money. May also be employed as a financial agent of the government and shall perform reasonable duties as a depository of public money as may be required

ACCOUNTING BY CORPORATION

Section 112. The Corporation shall maintain complete and accurate books of accounts, reporting annually to the Secretary of Agriculture. The Corporation shall be sub ject to the audit of the General Accounting Office annually.

CRIME AND OFFENSES

Section 113. (a) Penal statutes apply to the Corporation provided that Section 22 of Title 41 shall not apply.

(b) Chapter 645 of the Act of June 25, 1948, 62 Stat. 729 and 62 Stat. 790 amended by striking Federal Crop Insurance Corporation and inserting Farm Production Protection Corporation.

(c) The Corporation may void a contract where concealment or misrepresentation or fraud occurs.

(d) Reserves the right of the Corporation to be titled the Farm Production Protection Corporation.

ADVISORY COMMITTEE

Section 114. Provides authority for the Secretary of Agriculture to appoint an advisory committee, fixes the compensation and travel and subsistence expenses.

APPROPRIATIONS AND REGULATIONS

Section 115. (a) Provides for the appropriation of all operating and administrative costs of the Corporation.

(b) Authorizes the Secretary to expend funds for disaster relief for a loss situation declared as disaster or catastrophic by the Board of Directors.

(c) The Secretary and the Corporation are authorized to issue regulations as may be necessary to carry out provisions of the Title.

Authorizes the Corporation to use capital stock for the amount needed in excess of amount budgeted for direct cost of loss adjustment and agents commissions and will restore the amount used by appropriations.

Section 116. The sections of this title and subdivisions of sections are hereby declared to be separable, and in the event any one or more sections or parts of the same of this title be held to be unconstitutional, the same shall not affect the validity of other sections or parts of sections of this title.

DEFINITIONS

Section 117. (a) Defines "Agricultural productions."

- (b) Defines "Catastrophic and Disaster Loss.
 - (c) Defines "Cost of production."
 - (d) Defines "General farm overhead."
 - (e) Defines "Land charges."
 - (f) Defines "Machinery ownership."
 - (g) Defines "Management charges."
 (h) Defines "Normal loss."

 - (i) Defines "Normal production level."
 - (j) Defines "Production protection level."
 - (k) Defines "Variable costs."

INDEMNITIES EXEMPT FROM INTEREST

Section 118. The Corporation is not liable or obligated to pay interest on Claims for Indemnity.

TRANSFERS OF ASSETS OF FEDERAL CROP INSURANCE CORPORATION

Section 119. Assets, funds, property, records, policyholders, rights, privileges, powers, duties and liabilities of the Federal Crop Insurance Corporation transfer to the Farm Production Protection Corporation.

DISSOLUTION OF FEDERAL CROP INSURANCE CORPORATION

Section 120. The Secretary authorizes to dissolve the Federal Crop Insurance Corpora-

REPEAL OF THE FEDERAL CROP INSURANCE ACT Section 121. Title V of the Agricultural Adjustment Act of 1938 (52 Stat. 72) (known as the Federal Crop Insurance Act) is hereby repealed.

HEARINGS ON JUVENILE JUSTICE DELINQUENCY AND PREVENTION AMENDMENTS OF 1977

The SPEAKER. Under a previous order of the House, the gentleman from North Carolina (Mr. Andrews) is recognized for 5 minutes.

Mr. ANDREWS of North Carolina. Mr Speaker, I take this opportunity to announce that the Subcommittee on Economic Opportunity will conduct hearings on April 22, 1977, on H.R. 6111, a bill to amend the Juvenile Justice Delinquency and Prevention Act of

INTRODUCTION OF A RESOLUTION CONCERNING AN INTERNATIONAL TREATY ON CHEMICAL WARFARE

The SPEAKER. Under a previous order of the House, the gentleman from Wisconsin (Mr. Zablocki) is recognized for 5 minutes

Mr. ZABLOCKI. Mr. Speaker, as we reported to the Congress in our 1974 hearings on chemical warfare policy, the conference of the Committee on Disarmament's discussions on chemical warfare limitations have been stalled over the inability or unwillingness of the U.S. Government to table a specific proposal. During the 94th Congress, I introduced a concurrent resolution which I hoped would encourage the U.S. Government to develop a formal position on chemical warfare limitations and present this position to the CCD.

In testimony on Monday of this week by the Honorable Paul Warnke, Director of the U.S. Arms Control and Disarmament Agency before the Subcommittee on International Security and Scientific Affairs of the International Relations Committee, we learned that the CCD will again consider an international agreement to prohibit chemical weapons production and stockpiling. Such an agreement would complement the 1972 Biological Weapons Convention.

Both the United States and the Soviet Union have committed themselves to further limits on chemical weapons, through statements made at the CCD, and in communiques released following summit meetings in 1974. The Soviet Union has tabled a formal treaty proposal, as has Japan. The nations meeting at the CCD have been waiting for a formal U.S. proposal for almost 2 years.

Given the recent problem encountered in U.S.-Soviet Strategic Arms Limitation Talks, now is perhaps a propitious time to make a formal proposal in the CCD. A bold move in this multinational arms control forum would do much to resuscitate multilateral arms control efforts, particularly at a time when the United States is being criticized for devoting too much attention to bilateral arms control efforts. A formal proposal on chemical warfare would also make progress on this serious arms control issue possible.

It is important to remember that unlike biological warfare, some nations have had some experience with chemical weapons. Consequently they are reluctant to take the first step toward a disarmament treaty without some assurance of compliance by all nations, especially the superpowers. We are aware of similar problems associated with our slow progress toward the control of nuclear weapons. Unlike the history of nuclear weapons, however, chemical weapons are more accessible to all nations. Indeed, the real danger exists that the smaller nations may be encouraged to continue to acquire chemical weapons.

I wish to remind my distinguished colleagues that the United States and the Soviet Union have stated that the issue of chemical warfare arms control and disarmament is of sufficient importance to warrant bilateral discussions. Some discussions have, in fact, been held. In my opinion, such discussion are essential if the impasse at Geneva is to be overcome. At the same time, it is important to expand the number of participants to include those states whose interests would be significantly affected by any effort to limit chemical weapons. My resolution is being introduced in the constructive spirit of anticipating the hopeful fulfillment of the treaty and joint communique commitments to seek a meaningful treaty banning such chemical weapons. It represents a significant step toward effective control of "weapons of. mass destruction." Today, there is a possibility to prohibit such weapons. We should make that possibility a reality.

LETTING OUR HANDICAPPED VOTE

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, today I am introducing with Mr. Cohen revised legislation to help the elderly and the handicapped exercise their right to vote. Many times a handicapped or elderly person will attempt to vote, only to find that architectural barriers physically bar him or her from the polling place door. The presence of such barriers effectively abrogates the right to vote for this group of people, and they are thus

denied participation in the most fundamental exercise in a democracy, the elec-

toral process.

To reenfranchise these individuals, Mr. COHEN and I have developed the Voting Rights for the Elderly and Handicapped Act. Fifty-seven Members of Congress have agreed to cosponsor this legislation which calls for the removal of many of the physical impediments that hinder senior citizens and disabled persons in their attempts to cast a ballot.

The most conservative estimates of the number of persons who are physically disabled supports the acute need for legislation such as ours. The number of permanently disabled persons requiring mobility aids in the United States has been estimated at 20 million. When the needs of our elderly population are taken into account, the potential benefits of this legislation grow larger. Finally, our proposal would aid those who usually have no mobility restrictions but who may find themselves temporarily disabled as a result of accident or illness.

Our bill addresses these needs by requiring that polling places used in Federal elections and voter registration sites be located in facilities that provide temporary or permanent access by ramps or other means to individuals in wheelchairs. In the event that such modifications of sites are not readily available, the bill would require that adequate voting alternatives be instituted. For example, the handicapped or elderly person may be assigned to an alternative voting site that is accessible. Also, the bill allows the use of "curbside ballotting." If a physically disabled or elderly person is unable to enter a polling place without assistance, clerks or judges may present an official ballot to the voter at the polling place door.

In addition, the bill requires that paper ballots be available at all voting sites used for Federal elections for the use of those persons who are unable to operate a conventional voting machine. The revised version of this legislation has added a further provision to aid the blind in their attempts to vote. Blind individuals and others who have difficulty both in operating a voting machine and in marking a paper ballot would be allowed to designate an individual to assist them

in the voting process.

Mr. Speaker, much has been done to extend voting privileges to groups of people who have been systematically excluded from participating in the democratic process because of racial and language discrimination. President Carter's recent proposal for universal registration, if instituted, seeks to involve greater numbers of Americans in the electoral process. But I hasten to point out that for handicapped and elderly persons, polling place registration is only meaningful if polling places are free of architectural barriers, and the elderly and handicapped are not only able to register, but can also cast their ballots.

The handicapped and elderly have long faced many problems in achieving parity with respect to the rest of the population in the areas of jobs, educa-

tional opportunities, and accessibility to transportation because of architectural barriers. When these barriers interfere with basic participation in the democratic process—the exercise of one's right to vote-the need for immediate remedy is especially acute.

LEADERSHIP IN ENERGY TECHNOLOGY

(Mr. PRICE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PRICE. Mr. Speaker, an excellent article on the most advanced new energy source is contained in the March issue of Scientific American. The article, entitled, "Superphenix: A Full-Scale Breeder Reactor," describes the breeder reactor concept and summarizes French accomplishments in this critically important field of energy. As indicated in the article, the breeder concept would permit the use of our limited supply of uranium fuel in a manner which would give the world a virtually inexhaustible

source of energy.

A source of dismay brought out by the article concerns the relative position of the United States in this important field of technology. The United States led the world by far in the breeder reactor field. We led the world by nearly a decade in placing the first power breeder experiment into operation. Now the British, Soviets and French have larger machines in operation than the United States. The French built and placed an advanced breeder reactor concept, the Phenix, into operation in approximately 4 years while it takes us about 10 years to place a conventional nuclear power plant into operation. Now, as explained in the Scientific American article, the French have started the construction of a full-scale commercial breeder reactor. the Superphenix, and plans to offer it for sale on the international market.

Although we never had a monopoly in the power reactor field, we did hold a position of leadership at one time. I think we can and I believe we must again attain a dominant position in this important field. I believe that the more all of us learn about the facts in the worldwide breeder reactor field the more we will be able to assist our national efforts to advance our position in this field. For this purpose, I am including the principal portion of the text of the Scientific American article in the RECORD. I highly commend it to you and also highly recommend the full text including the usual beautiful illustrations in the March issue of Scientific American.

In closing I would like to suggest we, in carrying out our various legislative responsibilities, do everything we can to assure our efforts are adequately funded to complete our development work in the breeder reactor field.

SUPERPHÉNIX: A FULL-SCALE BREEDER REACTOR (By Georges A. Vendryes)

The need to resort to nuclear fission to help meet the anticipated world demand for energy over the next few decades is widely, if not universally, recognized. What is often not appreciated sufficiently, however, is the fact that if the construction of new nuclear power plants is limited to the same basic types of reactor generally in service today, ne respite gained will be only a brief one. Most experts agree that at current prices the world's economically recoverable uranium reserves are inadequate to ensure a lifetime supply of fuel for light-water nuclear reactors built after the year 2000. This means that unless uranium is used in a more efficient way than it is in such reactors, it will turn out to be an energy resource not very different in scale from oil.

breeder reactors—nuclear plants that produce more fuel than they consume-are capable in principle of extracting the maximum amount of fission energy contained in uranium ore, thus offering a practical long-term solution to the uranium-supply problem. Breeder reactors would make it possible to obtain some 50 times more energy from a given amount of natural uranium than can be obtained with present-day lightwater reactors. Hence the minimum uranium content of economically recoverable ore could be significantly lowered. For these two reasons (of which the second is by far the more important) the useful supply of natural uranium could be greatly enlarged. Uranium would then constitute a virtually inexhaustible fuel reserve for the world's future energy

Recognizing the importance of these considerations, a number of nations have undertaken intensive research programs aimed at developing an economically competitive breeder reactor before the uranium-supply situation becomes critical. Last fall a consortium of major European electric-utility companies, acting through a joint subsidiary, decided to start the construction of a 1.200megawatt breeder-reactor power plant at Creys-Malville in France. The new full-scale breeder reactor, named Superphenix, will be described here. First, however, it is necessary to explain just what is meant by the term breeding, which serves to characterize the operation of such plants.

Two types of heavy isotope are present in the active core of every nuclear reactor. One type, called the fissile (or fissionable) tope, undergoes most of the fission reactions and is the source both of the heat energy released by the reactor and one of the neutrons that sustain the chain reaction in the core. The only fissile isotope that exists in nature is uranium 235, which constitutes 7 percent of natural uranium; the nonfissionable isotope uranium 238 accounts for the remaining 99.3 percent. Two other fissile isotopes, plutonium 239 and uranium 233, are expected to play an increasingly important role in the future as substitutes for uranium

The second type of heavy isotope in the core of every reactor is said to be fertile: it undergoes practically no fission reactions, but by capturing a stray neutron a fertile nucleus can be transmuted into a fissile nucleus at the end of a series of radioactive disintegrations. A typical example of a fertile nucleus is uranium 238, which is transmuted by neutron capture into fissile plutonium 239. Similarly, fertile thorim 232, the only form of thorium extracted from the ground, can be transmuted into fissile uranium 233.

In every nuclear reactor, as the fissile nuclei are being consumed new fissile nuclei are being created by the transmutation of fertile nuclei. Most reactors in operation today, however, use either ordinary (light) water or deuterated (heavy) water to moderate, or slow, the neutron flux in the active core. In such a slow-neutron reactor it is impossible to produce as many fissile nuclei by neutron capture as are consumed. As a re-

sult the proportion of fissile nuclei in the fuel quickly falls below a certain minimum level, and the depleted fuel must be removed from service with most of the fertile nuclei still not transformed. A set of special conditions must be satisfied to raise the breeding ratio (the ratio of the amount of fissile material produced from fertile material to the amount of fissile material consumed during the same period) to a value greater than 1. The most favorable conditions for breeding are obtained when fissile plutonium 239 and fertile uranium 238 are used together in a fastneutron reactor, in which the neutrons from the fission reactions are not slowed down by a moderating substance such as water between the time they are emitted by one fission reaction and the time they cause the next reaction. Only under these conditions can the breeding ratio be raised to a value significantly higher than 1.

In a fast-neutron reactor the initial fuel load of plutonium is needed to start the fission chain reactions and the production of power. During this period plutonium is bred from natural uranium (or from uranium depleted in uranium 235) in the reactor core and in the surrounding "breeding blanket." When the fuel subassemblies that make up the core and the blanket have undergone prolonged neutron irradiation, they must be reprocessed chemically in order to separate and remove the fission products. In each reprocessing operation more plutonium is recovered at the start of the irradiation. The excess plutonium is set aside and is replaced in the reactor by natural or depleted uranium. Everything proceeds as though the reactor were consuming only natural or depleted uranium and simultaneously furnishing new plutonium as a by-product of the plant's operation.

The time required for a breeder reactor to produce enough plutonium to fuel a second identical reactor is called the reactor's doubling time. This time factor is inversely proportional to the reactor's breeding ratio. In the future it is expected that breeding ratios on the order of 1.4 or so will be achieved, in part by exploiting the concept of the heterogeneous core. The corresponding doubing times will then be between 10 and 20 years. Since it is unlikely that the consumption of electricity will double at shorter intervals toward the end of the century, a doubling time in this range will enable fastneutron reactors to cope with the rising demand for energy unaided, by virtue of their self-fueling feature.

The breeding ratios of the fast-neutron reactors built today are not significant, since for several years the plutonium produced by light-water reactors will constitute the major, if not the exclusive, source of the initial fuel for fast-neutron reactors. Thus a remarkable complementarity exists between these two types of nuclear reactor. Over a fairly long period a two-pronged strategy of nuclear-power generation can be established, with the light-water plants leading the way for the gradual penetration of the market by the fast breeder plants.

Although fast-neutron plants are capable of producing more plutonium than they consume, that potential can be exploited or not. At the discretion of the user plutonium production can be higher or lower than consumption. The amount of plutonium available can be matched exactly to the demand, whether the latter rises, remains stable or even declines; hence a stock of unused plutonium need never be created. In the absence of fast-neutron reactors, on the other hand, it would be impossible to completely burn the plutonium and its transplutonium derivatives produced by the slow-neutron plants. These highly radioactive elements

would constitute wastes that would have to be set aside and stored for thousands of years.

Every fast-neutron reactor that has been or is being built in the world today calls for molten sodium as the coolant. The fact that all the countries with active breeder programs (including the U.S., the U.S.S.R., France, Britain, West Germany, the Benelux nations, Italy, Japan and India) have made the same basic technological choice is a very favorable factor. It avoids the spreading of effort mounted along divergent lines and enhances overall efficiency. The approach followed has been much the same in all the countries involved. Reactors built and planned during the still prevailing development phase belong to three categories that follow in a logical succession: experimental reactors, demonstration plants and prototype power stations.

In line with this logical sequence the forerunners of Superphénix were Rapsodie and Phénix. The experimental reactor Rapsodie (the name associates the words rapide and sodium) was commissioned in 1967. Its power level is low (40 megawatts of thermal output) and it does not produce any electricity. Nevertheless, its main features are representative of the breeder regime from a technical standpoint with respect to temperature and other factors. Rapsodie has operated in a satisfactory manner for almost 10 years, with an average availability of nearly 90 percent during the operating runs. It is in continuous use as a test facility for investigating the effects of prolonged irradiation on various fuel assemblies.

One year after Rapsodie went into operation the decision was made to build the Phénix demonstration plant, named for the mythological bird that was reborn from its own ashes. The achievement of a high breeding ratio was not of particular concern in the design stage. The principal purpose of Phénix was to confirm the validity and reliability of the entire system by demonstrating the possibility of building a fast-neutron power plant within a reasonable period of time and of running it satisfactorily. Phénix was put into regular operation in July, 1974. The record of the first two years is particularly gratifying. These excellent results do not mean that the demonstration is over. The day-to-day operation of the reactor is being closely watched, and unforeseeable incidents could still occur. Small sodium leaks detected during the summer of 1976 in two intermediate heat exchangers have led to the temporary shutdown of the plant for repairs to the observed defects, which are minor and do not call the design into question. The initial results are considered encouraging enough to proceed with confidence.

Superphénix, the next step in the development sequence, will be the prototype for the commercial breeder power plants of the future. In design it is very similar to Phénix. It was thought essential for overall efficiency and success to maintain the continuity of technological choices as far as possible. In spite of this constraint continuous progress in acquired know-how led in some cases to significant changes with respect to Phénix, if only to meet increasingly stringent safety criteria. Creys-Malville, where Superphénix will be built, is in the upper Rhône valley, not far from the electric-power grids of Italy and Germany. The site selected for the plant, on the banks of the Rhône 40 miles east of Lyons, is in a sparsely populated farming region where no other major industrial projects are planned.

The Superphénix power station will be designed to adapt its operation to variations in demand on the electric-power grid. It will be operated as a baseload plant. The gross

power output of the plant has been set at 1,200 megawatts of electricity, which is similar to the power level of light-water nuclear plants scheduled for construction at the same time. In 1985, 1,200 megawatts will represent between 1.5 and 2 percent of the total installed power of the French grid. The choice of this figure for Superphénix results from a compromise. On the one hand there is a trend toward large nuclear power plants on the grounds of economics; on the other hand extrapolation from Phénix to Superphénix must remain within reasonable limits.

A fast breeder plant does not differ greatly in its general layout and operating scheme from any other nuclear power station.

from any other nuclear power station.

The different types of fast-neutron reactor are distinguished essentially by the organization of the primary sodium circuit. In the pool design the reactor core, the intermediate heat exchangers and the primary sodium pumps are all within a single large vessel. In the loop design only the reactor core is housed within the vessel and the intermediate heat exchangers and pumps are connected to it by loops. It must be stressed that the two systems rely on the same technology, that most development work on components is common to both and that the differences between the two concepts are much less than those between, say, pressurizedwater and boiling-water reactors. In most countries loop-type reactors were built first, since the separation of components facilitated construction, operation and maintenance, justifying such a choice at an early stage of development. The first pool-type breeder reactor in the world was built in the U.S. more than 10 years ago. Following the loop-type construction of Rapsodie, the pool concept was adopted for Phénix and. owing to the excellent record of that plant, it was maintained fundamentally unchanged for Superphénix.

It is clear that both the pool system and the loop system can be built and run, and that both have advantages and drawbacks only long operating experience can distinguish. Among the main reasons for the selection of the pool system for Phénix and Superphénix, following a meticulous comparison with the loop system, was a safety consideration. For a large plant, say 1,000 megawatts or more, it was thought the integrity of the primary sodium circuit could be maintained in all reasonably foreseeable circumstances more readily by enclosing it within a single vessel of simple design than by dispersing it in a highly intricate system of pipes and vessels involving many hundreds of meters piping up to one meter in diameter. Although the main pool-type vessel is larger than the loop-type reactor vessel (roughly 20 meters in diameter as against 10), the pool-type vessel is much more straightforward in design. As a result construction, inspection and maintenance are far easier. The main problem encountered in the pool design concerned the cover of the main vessel. solution implemented in Phénix could not be extrapolated to the dimensions of Superphénix. It was decided to hang the steel main vessel directly from the steel-andconcrete upper slab, and to put under the slab a layer of metallic thermal insulation that is in contact with the argon atmosphere above the sodium. The tests performed to date indicate that this arrangement is entirely satisfactory.

Experience with nuclear power plants of every type has shown that the steam generator is a crucial component. In fast-neutron reactors particular care must be taken in design and construction to prevent any violent chemical reaction between the sodium and the water, which would result from a leak in the exchanger tubes. The steam-gen-

erator model selected for Phénix, the only one with which extensive experience had been gained at the time, was subdivided into 36 low-power modules (17 megawatts each). The subdivision made it possible to subject three complete fullscale modules to thorough tests in simulated operational conditions. Although this approach was justifiable for an initial project, it could not be maintained for a large power plant because of its prohibitive cost. Research for Superphénix was therefore oriented toward units of different design, with a higher power per unit (several hundred megawatts).

The problems presented by the fabrication and the operation of these units did not appear to grow with size, but the large modules do have certain drawbacks, the main ones being the near impossibility of conducting full-scale tests prior to installation in the power plant and the increased electric-power loss in case of the unavaila-

bility of a unit.

The tests performed under normal and ac-cidental conditions on two "once through" mock-ups, one with straight ferritic steel tubes and the other with helical Incology tubes, provided complete satisfaction and showed good agreement with the design forecasts. The helical-tube model was finally selected for Superphénix, with each secondary loop including a steam generator with a thermal power of 750 megawatts. A steamreheat stage can be added with either sodium or steam. The sodium system was employed for Phénix, raising the net efficiency of the plant to 42 percent. The steam system was adopted for Superphenix, simplifying the steam generator and the associated circuits, because a cost study showed that the lowered investment cost offset the loss in efficiency.

The principles underlying the control of a fast-neutron reactor are identical with those of any other nuclear reactor. The existence of delayed neutrons gives the mechanisms acting on core reactivity the time to act smoothly, whether to raise or lower the power of the plant or to keep it stable. These whether to raise or lower the operations are performed by means of control rods containing a suitable neutron-absorbing material, which move in channels parallel to the fuel subassemblies.

The many precautions implemented in the design of Superphenix were subjected detailed scrutiny by the licensing authorities before their approval was secured. These safety measures reduce the probability of an accident to an extremely low level. The procedure followed went to the extent of considering the case in which a total shutdown of forced sodium circulation through the core at full power is not accompanied by any action of the many control systems designed to shut down the fission chain reaction and

energy production immediately.

The containment system for Superphénix therefore consists of a series of successive enclosures, which can withstand both internal reactor accidents and external aggression such as an airplane crashing into the power plant. Finally, special arrangements have been made to prevent potential sodium fires and to limit their spread should they occur. Sodium fires would not actually jeopardize the safety of the installation, but it is nonetheless necessary to take full precautions to maximize the reliability and the availability

of the power station.

In all areas, not just in the priority area of safety, a considerable research-and-devel-opment effort has preceded the design and construction of Superphénix. This program, which calls for full-scale tests in sodium of all components where innovations have been made, will continue to back up construction of the reactor in the coming years.

Phénix was built in slightly more than four years. Preliminary site preparation began in the fall of 1968, and the filling of the primary and secondary circuits with 1,400 tons

of sodium was started before the end of 1972. For Superphénix a building schedule spread over 68 months has been adopted. Construction deadlines are comparable to those set for other types of nuclear power plants. The fact that breeder reactors are not pressurized and that their components, even the large ones, are made of comparatively thin stainless-steel sheet and pipe makes it possible to perform most of the final assembly on the site. The Phénix experience clearly showed the advantages of this approach and the flexibility that it engendered in adherence to the construction schedule.

The expansion program of the French national utility company Electricité de France (EDF) already calls for a series of breeder plants, employing plutonium provided by a large number of pressurized-water reactors built simultaneously. It is reasonable to expect that two pairs of fast-neutron plants will be initiated in France between 1980 and 1985, representing, together with Superphénix, about 8,000 megawatts of electric-generating capacity in service in the early 1990's. Commitments may grow to 2,000 megawatts per year after 1985, so that by the year 2000 fast-neutron plants may account for about a fourth of the installed capacity and a third of the total energy output of all the nuclear plants in France. Simultaneous with the successive launching of these plants will be the construction of plants for the fabrication and reprocessing of fast-breeder fuels, thus closing the fuel cycle. The latter will be high-capacity plants (with an output of about 200 tons of oxides per year) aimed at achieving a low overall fuel-cycle cost.

The importance of Superphénix must be gauged in relation to the coming generation of power plants derived from it way the culmination of the technological development phase and the final stage before the commercial series, the technical defini-tion of which will rely directly on the Superphénix experience. If everything proceeds as planned, by the mid-1980's, thanks to Superphénix, one may expect to have at least a preliminary operating record with a large fast-neutron power plant. This experience, which will be shared by several large electric utilities, symbolizes the joining of efforts by the European countries involved in aiming at the earliest possible commercial launching of a type of reactor that is indispensable to their economies.

INTRODUCTION OF BILL TO ESTAB-LISH A CENTER FOR THE BOOK IN THE LIBRARY OF CONGRESS

(Mr. NEDZI asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. NEDZI. Mr. Speaker, I have introduced today a bill to establish a Center for the Book in the Library of Congress. During the last two decades, rapidly advancing technology has occupied much of the leisure time of our citizens. As a result the conventional book-which for the last five centuries has changed the course of mankind-has become in many ways, especially among our youth, a pragmatic tool to achieve greater material well-being rather than a means by which to discover new ideas, new peoples, and new places. Despite these advances in technology, the book has survived. It has not become obsolete. Classic titles still provide great enjoyment. In order to assure the book's continued influence on the learning process, we need to place greater emphasis on it as an entry to new horizons.

The Center for the Book in the Library

of Congress would provide a program for the investigation of the transmission of human knowledge and would heighten public interest in the role of books and printing in the diffusion of this knowledge.

Finally, I would like to make the point that this Center would be funded through gift funds and does not require

an annual appropriation.

THE AMERICAN COUNCIL OF YOUNG POLITICAL LEADERS

(Mr. MICHEL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. MICHEL. Mr. Speaker, I would like to call to the attention of the Congress the work of the American Council of Young Political Leaders. ACYPL educates young American politicians and public officials on foreign policy issues and exposes them to the structures of other nations. Equally as important, ACYPL introduces young foreign politicians to the American political system.

Through interchanges between young foreign and American politicians, ACYPL provides a forum through which these leaders can develop personal relationships. One day these young men and women will be making crucial decisions for their country. To understand and to trust each other when that time comes will be of incalculable value.

The ACYPL program fills a clear and obvious need in the area of international educational exchange programs. There are many programs designed for journalists, students, academicians, scientists, and so forth, but the ACYPL is the only organization whose programs focus on those young individuals who are most likely to be making policy de-

cisions in the decade ahead. Most younger politicians in this coun-

try are so involved in State and local politics and government that they simply do not have the time or energy to develop an understanding of the complex issues in international affairs. ACYPL has provided the opportunity for dozens of our leading younger politicians to become exposed to world

Mr. Speaker, at this point I would like to include background material about ACYPL in the RECORD:

The ACYPL is a non-profit, tax-exempt organization which has a Board of Trustees composed of an equal number of Democrats and Republicans. The organization has a strictly bi-partisan policy in all of its programs and activities. The delegate selection process is, of course, of crucial importance. ACYPL delegates going to other countries are young men and women who have already made a mark for themselves in the American political process, and who will more than likely go on to senior leagership positions.

Originally, the ACYPL focused on programs with young Western political leaders. Gradually, ACYPL expanded its focus to include Eastern Europe and the Soviet Union. Recently, ACYPL has begun to initiate exchanges with Japan and with nations in Latin America, Africa, and the Middle East.
Also, during the past few years, the ACYPL

has organized foreign policy conferences at the Department of State for hundreds of young politicians from throughout the United States.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. CARTER (at the request of Mr. RHODES), for today, on account of official business.

Mr. RAILSBACK (at the request of Mr. RHODES), for today, on account of official business.

Mr. STUMP, for today, April 6, 1977, on

account of official business.

Mr. CHARLES H. WILSON of California (at the request of Mr. WRIGHT), after 12:30 p.m. today, on account of illness in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. MARRIOTT) to revise and extend their remarks and include extraneous material:)

Mr. Young of Alaska, for 10 minutes, today.

Mr. KEMP, for 15 minutes, today.

(The following Members (at the request of Mr. Bonion) to revise and extend their remarks and include extraneous material:)

Mr. Brown of California, for 10 minutes, today.

Mr. FASCELL, for 5 minutes, today.

Mr. Wolff, for 5 minutes, today.

Mr. Annunzio, for 5 minutes, today. Mr. Gonzalez, for 5 minutes, today.

Mr. LE FANTE, for 5 minutes, today.

Mr. McFall, for 10 minutes, today. Mr. Mitchell of Maryland, for 30 minutes, today.

Mr. Sharp, for 5 minutes, today.

Ms. HOLTZMAN, for 20 minutes, today.

Mr. Fraser, for 15 minutes, today. Mr. Burke of Massachusetts, for 10 minutes, today.

Mr. ALEXANDER, for 60 minutes, today.

Mr. LUNDINE, for 15 minutes, today.

Mr. AuCoin, for 15 minutes, today.

Mr. Weiss, for 5 minutes, today.

Mr. Dopp, for 5 minutes, today.

Mr. ROSTENKOWSKI, for 10 minutes, today.

Mr. Levitas, for 5 minutes, today.

Mr. Jones of Tennessee, for 5 minutes, today.

Mr. Andrews of North Carolina, for 5 minutes, today.

Mr. Brademas, for 10 minutes, today.

Mr. ZABLOCKI, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. ZEFERETTI and to include extraneous matter.

(The following Members (at the request of Mr. MARRIOTT), and to include extraneous matter:)

Mr. ERLENBORN in three instances.

Mrs. Petris in two instances.

Mr. RINALDO. Mr. Young of Alaska in two instances.

Mr. FINDLEY.

Mr. LENT in two instances.

Mr. Steiger in two instances.

Mr. GILMAN.

Mr. RUPPE in three instances.

Mr. Buchanan in two instances.

Mr. Anderson of Illinois in two instances.

Mr. Kemp in three instances.

Mr. Pursell in two instances.

Mr. Dornan in three instances.

Mr. SARASIN.

Mr. WINN.

Mr. DEL CLAWSON.

Mr. STEERS.

Mr. WALSH.

Mr. DERWINSKI in three instances.

Mr. McKinney.

Mr. Pressler.

Mr. Symms in five instances.

Mr. McCloskey.

Mr. WALKER.

Mr. Lagomarsino in two instances.

SENATE JOINT RESOLUTION REFERRED

A joint resolution of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S.J. Res. 44. Joint resolution to authorize the printing and binding of an edition of Senate Procedure and providing the same shall be subject to copyright by the author; to the Committee on House Administration.

ADJOURNMENT

Mr. BONIOR. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER. Pursuant to the provisions of House Concurrent Resolution 186 of the 95th Congress, the Chair declares the House adjourned until 12

o'clock noon on Monday, April 18, 1977. Thereupon (at 6 o'clock and 25 minutes p.m.), pursuant to House Concurrent Resolution 186, the House adjourned until Monday, April 18, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1203. A letter from the Deputy Director, Office of Management and Budget, Executive Office of the President, transmitting further information to accompany the previously submitted reports (Executive Communica-tions Nos. 403 and 689) on the reapportionment of the appropriation to the South-western Power Administration for Operation and Maintenance for fiscal year 1977, pursuant to section 3679(e)(2) of the Revised Statutes, as amended; to the Committee on

Appropriations. 1204. A letter from the Acting Deputy Attorney General, transmitting a report on the activities of the Department of Justice under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552(d); to the Committee on Government Opera-

tions. 1205. A letter from the Secretary of Agriculture, transmitting notice of an existing records system, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Opera-

1206. A letter from the Administrator, U.S. Small Business Administration, transmitting notice of four proposed new records systems, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

1207. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to amend the Jury Selection and Service Act of 1968, as amended, by revising the section on fees of jurors and by providing for a civil penalty and injunctive relief in the event of a discharge or threatened discharge of an employee by reason of such employee's Federal jury service; to the Committee on the Ju-

diciary. 1208. A letter from the Secretary of Transportation, transmitting the fifth semiannual report on the effectiveness of the civil avia-July 1-December 31, 1976, pursuant to section 315(a) of the Federal Aviation Act of 1958, as amended (88 Stat. 415); to the Committee on Public Works and Transportation.

REPORTS OF COMMITTEES ON PUB-LIC BILLS AND RESOLUTIONS

PETITIONS, INC.

Under clause 1 of rule XXII.

77. The SPEAKER presented a petition of the Coalition for Health Funding, Washing-ton, D.C., relative to appropriation levels for discretionary Federal health programs, which was referred to the Committee on Interstate and Foreign Commerce.

FACTUAL DESCRIPTIONS OF BILLS AND RESOLUTIONS INTRODUCED

Prepared by the Congressional Research Service pursuant to clause 5(d) of House rule X. Previous listing appeared in the Congressional Record March 31, 1977 (page 9931)

H.R. 1001. January 4, 1977. Education and Labor. Authorizes the Secretary of Labor to develop and implement programs to provide year-round recreational opportunities for underprivileged youth. Authorizes the Secretary to make grants to localities for urban recrea-

tional facilities and urban planning.

H.R. 1002. January 4, 1977. Education and
Labor. Directs the Secretary of Labor,
through the Bureau of Labor Statistics, to publish a monthly price index reflecting the retail prices of items purchased generally by individuals 62 years of age and older, such index to be known as the Consumer Price Index for the Elderly.

H.R. 1003. January 4, 1977. Government Operations. Establishes the Department Health in the executive branch to be headed by the Secretary of Health who shall have transferred to him the health functions of the Secretary of Health, Education, and Welfare.

Establishes the National Advisory Commission on Health Planning to determine what health functions carried on by the segments of the Government should be transferred to the Department of Health.

H.R. 1004. January 4, 1977. Government Operations. Requires the President to include in the budget transmitted to Congress additional information showing the regional impact by State and Congressional districts of budget proposals. Requires the Director of the Office of Management and Budget to file with the Congress specified information re-lating to Federal expenditures within the States and Congressional districts.

H.R. 1005. January 4, 1977. Government Operations. Requires the Secretary of State to reimburse States and political subdivisions thereof for the amount of revenue such States or subdivisions would derive from real property taxes on exempt United Nations property if such taxes were imposed on such property

H.R. 1006. January 4, 1977. Government Operations. Requires the Administrator of General Services, when intending to dispose of any real property by the United States, to notify the Members of Congress representing

the district in which such property is located. H.R. 1007. January 4, 1977. House Administration. Designates the library of the New York Law School as a depository for Federal Government publications

H.R. 1008. January 4, 1977. House Administration. Amends the Legislative Reorganization Act of 1970 to require the Librarian of Congress to prepare and conduct seminars for freshmen Members of Congress shortly after each Congressional election.

Authorizes freshmen Members to hire interim staffs and to take an advance on their Congressional stationary allowance for use during the period from the time they are declared elected until the first day of the next regular session of Congress.

H.R. 1009. January 4, 1977. House Administration. Directs the Secretary of the Interior to permit the National Committee of American Airmen Rescued by General Mihailovich to construct and maintain with private funds a monument to General Draza Mihailovich.

H.R. 1010. January 4, 1977. House Administration. Creates a charitable, educational, and nonprofit corporation, to be known as the National Trust for the Preservation of Historic Ships.

H.R. 1011. January 4, 1977. International Relations. Amends the Foreign Assistance Act of 1961 to prohibit assistance for 12 months to any country in which the President determines property of the United States Government has been willfully damaged or destroyed by mob violence, unless the President certifies to Congress that such assistance is necessary to the national security.

H.R. 1012. January 4, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 by extending the maximum terms of licenses and license renewals for the operation of broadcasting stations. Revises the conditions for approval of applications for licensing or license renewal.

H.R. 1013. January 4, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to require the Federal Communications Commission to establish procedures for television broadcasting station licensees to ascertain the needs and interests of certain residents in certain areas. Requires that certain television broadcasting stations include foreign language subtitles in programs of local origin.

H.R. 1014. January 4, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to prohibit harassing telephone calls made to collect alleged debts. Requires all telephone companies to notify each telephone subscriber by means of a notice on the front of the local telephone directory of his right to be free from such harassing calls.

H.R. 1015. January 4, 1977. Interstate and Foreign Commerce. Revises the prohibition against the manufacture, sale, or transportation of a switchblade knife in interstate commerce or the manufacture, sale, or possession of a switchblade knife within any territory or possession of the United States or within the special maritime and territorial jurisdiction. Encompasses within such prohibition any folding knife having an exposed blade of at least three inches.

Amends the provision declaring switchblade knives unavailable to: (1) prohibit the mailing of such knives to supply officers of a State or local government; and (2) include folding knives.

H.R. 1016. January 4, 1977. Interstate and Foreign Commerce. Amends the Flammable Fabrics Act to extend the provisions of that Act to construction materials used in interiors, and to require the Secretary of Commerce to determine toxicity standards or promulgate other regulations when there is determined to be a danger from toxic byproducts produced by the burning of such substances.

H.R. 1017. January 4, 1977. Interstate and Foreign Commerce. Directs the Secretary of Health, Education, and Welfare to establish a program under which life insurance with a face value of not less than \$5,000 shall be made available at affordable rates to individuals who have cancer.

Specifies the percentage of the face value of the policy to be paid beneficiaries of insureds who die from cancer within four years of having obtained the policy.

H.R. 1018. January 4, 1977. Interstate and Foreign Commerce. Establishes the Health Action Corps to provide opportunities for young Americans to participate in programs which provide training and practical work experience in the allied health field including career counseling, exposure to various health-related occupations, and training and work experience in clinical settings. Authorizes the Administrator of the Health Action Corps to select volunteers, to provide allowances and incentive bonuses to volunteers, and to enter into agreements with any public or nonprofit private entity whereby the Administrator will make grants to assist such entity in providing training and practical work experience to volunteers.

H.R. 1019. January 4, 1977. Interstate and Foreign Commerce. Amends the National Traffic and Motor Vehicle Safety Act of 1966 to require the installation of passive restraint devices in motor vehicles manufactured after a specified future date. Stipulates

that no motor vehicle safety standard promulgated under such Act may require the installation of a safety belt interlock system or continuous buzzer to indicate that safety belts are not in use.

H.R. 1020. January 4, 1977. Interstate and Foreign Commerce. Requires each State to have a motor vehicle mechanic licensing program approved by the Secretary of Labor. Sets forth criteria for such approval.

Reduces Federal aid highway funds to any State not implementing an approved State motor vehicle mechanic licensing program.

H.R. 1021. January 4, 1977. Interstate and Foreign Commerce. Establishes the Electric Power Production Authority in the Department of Commerce with the duty to assure that adequate supplies of electric energy are available to meet anticipated demand. Directs the Authority to assist in the construction of new electric power plants and transmission facilities.

H.R. 1022. January 4, 1977. Interstate and Foreign Commerce. Prohibits refiners or distributors of petroleum products from canceling franchises without prior notice. Prohibits distributors and refiners from canceling petroleum franchises without cause.

H.R. 1023. January 4, 1977. Interstate and Foreign Commerce. Establishes, under the Public Health Services Act, a National Center for Clinical Pharmacology within the Department of Health, Education, and Welfare for the purpose of supporting the study of clinical pharmacology.

Amends the Federal Food, Drug, and Cosmetic Act with respect to regulation of the manufacture, distribution, and sale of drugs.

H.R. 1024. January 4, 1977. Judiciary. Establishes, under the Immigration and Nationality Act, a Board of Visa Appeals as a separate agency within the Bureau of Security and Consular Affairs to review decisions of a consular officer refusing or revoking an immigration visa. Revises the Act with respect to the numerical limitations on lawful admissions, revocation of naturalization, and limitations on deportation.

Establishes a Select Commission on Nationality and Naturalization to study the nationality and naturalization provisions of the Immigration and Nationality Act.

H.R. 1025. January 4, 1977. Judiciary. Increases immigration quotas under the Immigration and Nationality Act for immigrants in specified preference categories if the number of visas issued to such immigrants in the previous year has decreased below specified levels.

H.R. 1026. January 4, 1977. Judiciary. Prohibits: (1) any individual from carrying into effect, or attempting or conspiring to carry into effect, any scheme in commerce to influence through bribery the conduct of any State or local law enforcement officer, including a judge, or other appointed or elected official; and (2) any such officer or official from accepting a bribe pursuant to such a scheme or from failing to report any scheme violating this Act designed to influence his conduct

H.R. 1027. January 4, 1977. Judiciary. Establishes an office of the United States Correctional Ombudsman to: (1) investigate acts of the Bureau of Prisons or the Board of Parole pertaining to the treatment of Federal prisoners or parolees and conditions in certain correctional facilities; and (2) report to Congress on unfair or otherwise objectionable laws relative to corrections.

H.R. 1028. January 4, 1977. Judiciary. Penalize the following activities which occur in commerce: (1) stolen airline tickets; (2) counterfeit, forged, or altered airline tickets; and (3) equipment for forging or counterfeiting airline tickets.

H.R. 1029. January 4, 1977. Judiciary. Makes it a Federal crime to kill or assult a fireman or law enforcement officer engaged in, or on account of action taken in, the performance of duty when the offender travels in interstate commerce or uses any facility of interstate commerce for such purpose.

H.R. 1030. January 4, 1977. Judiciary. Amends the Omnibus Crime Control and Safe Streets Act of 1968 to condition certain assistance thereunder on the inclusion in comprehensive State plans and on the establishment and implementation of: (1) a grievance procedure with respect to complaints submitted by law enforcement officers; and (2) a law enforcement officers; bill of rights.

a law enforcement officers' bill of rights. H.R. 1031. January 4, 1977. Judiciary Prohibits the transportation of contraband cigarettes in interstate commerce.

H.R. 1032. January 4, 1977. Judiciary. Amends the provision of law requiring the Attorney General to acquire and preserve identification records to direct that personal fingerprints voluntarily submitted from registered national security exchanges, their members, affiliated stock clearing corporations, and brokers and dealers registered with the Securities and Exchange Commission be collected, classified, preserved, and identified in the same manner and subject to the same terms and conditions as personal fingerprints voluntarily submitted from insurance companies and national banks.

H.R. 1033. January 4, 1977. Judiciary. States that quota visa numbers not issued under the Immigration and Nationality Act during fiscal year 1977 shall be transferred to an immigrant pool to be issued to specified preference classes of immigrants and to others who are otherwise admissible but unable to obtain prompt issuance of a preference visa solely because of the oversubscription of visas.

H.R. 1034. January 4, 1977. Judiciary. Guarantees to every athlete who wishes to engage in an organized professional team sport, the right to enter into a contract for such a purpose with any person without: (1) agreeing to permit that person to control his right, upon expiration of the contract, to enter into a contract with another person for such purpose; or (2) agreeing to perform under such a contract for an unreasonable period of time.

States that any person who deprives or conspires to deprive an athlete of his rights under this Act shall be deemed guilty of a misdemeanor.

H.R. 1035. January 4, 1977. Judiciary. Creates a Federal Lobbying Disclosure Commission. Requires lobbyists to: (1) register with the Commission; (2) make and retain certain records; and (3) file reports with the Commission regarding their activities.

Repeals the Federal Regulation of Lobbying Act.

H.R. 1036. January 4, 1977. Merchant Marine and Fisheries. Prohibits any waiver for national security purposes of the requirement of the Merchant Marine Act, 1920, that vessels engaged in coastwise trade be built and documented under the laws of the United States and owned by citizens of the United States unless, at least 60 days prior to the effective date of such proposed waiver, notice that it is being considered is published in the Federal Register and an opportunity is given for a public hearing regarding such action.

H.R. 1037. January 4, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1936, to direct the Secretary of Commerce to require that a specified percentage of United States oil imports be transported on United States-flag vessels.

H.R. 1038. January 4, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1920, to establish a monetary penalty, in lieu of forfeiture of the merchandise being transported, for violations of such Act requiring that vessels engaged in coast-

wise trade be built and documented in the United States and that they be owned by United States citizens.

H.R. 1039. January 4, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1920, to extend the coastwise laws of the United States with respect to the transportation of crude oil, residential fuel oil, and refined petroleum products, to the Virgin Islands.

H.R. 1040. January 4, 1977. Ways and Means. Revises the Internal Revenue Code by amending and repealing portions of the Code with respect to capital gains and losses, income derived from the extraction of minerals, individual and corporate income, the estate and gift tax and State and local obligations.

H.R. 1041. January 4, 1977. Ways and Means. Revises the Internal Revenue Code by amending and repealing portions of the Code with respect to capital gains and losses, income derived from the extraction of minerals, individual and corporate income, the estate and gift tax and State and local obligations.

H.R. 1042. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to authorize any taxpayer to elect to have any portion of any overpayment of tax or any contribution in money which the taxpayer forwards with the return for such taxable year be available, as the taxpayer may designate on such return, for the National Endowment for the Arts or the National Endowment for the Humanities.

H.R. 1043. January 4, 1977. Merchant Marine and Fisheries. Authorizes and directs the Governor of the Canal Zone to proceed with work to change the lock and anchorage capacities of the Panama Canal.

Establishes a Presidentially-appointed Panama Canal Advisory and Inspection Board to supervise all efforts of the Governor of the Canal Zone in making changes to the Pan-

ama Canal.

H.R. 1044. January 4, 1977. Merchant Marine and Fisheries. Authorizes commercial fishermen to apply to the Secretary of the Interior for grants to cover losses of earnings due to Federal or State restrictions on fishing imposed because of a deterioration of the aquatic environment.

H.R. 1045. January 4, 1977. Merchant Marine and Fisheries. Stipulates that the method of linkage between any tug and any barge in an articulated tug-barge system shall not be deemed to establish the weight of the tug for purposes of ship inspection and certification. Stipulates that, with respect to tonnage assignments, any tug which is capable of independent operation shall be deemed to be a separate unit for such inspection and certification purposes.

H.R. 1046. January 4, 1977. Post Office and Civil Service. Permits employees in all executive agencies and in the government of the District of Columbia to take an active part in political management and in political campaigns so long as such participation does not involve the official authority or influence of such employees.

H.R. 1047. January 4, 1977. Post Office and Civil Service. Prohibits any officer of an executive department or agency, any officer of the Civil Service Commission, and any commissioned officer from requiring or requesting any civilian employee, or person seeking employment, in the executive branch to: (1) disclose certain personal and financial information; (2) submit to specified tests and examinations; (3) participate in activities not related to job performance; (4) support the election of certain persons; and (5) invest in government securities.

Establishes a Board of Employees' Rights to: (1) investigate complaints arising from violations of this Act; (2) conduct hearings; and (3) render final decisions.

H.R. 1048. January 4, 1977. Post Office and Civil Service. Prohibits the Postmaster General from making available to the public any mailing or other list of post office box

patrons. Prohibits the Postmaster General and all Government agencies from furnishing any mailing or other lists of names or addresses to the public for any purpose.

H.R. 1049. January 4, 1977. Post Office and Civil Service. Requires that the following information be posted in a prominent place in each post office: (1) the qualifications, dates, and places for voter registration and voting in the area served by the post office; (2) the names and office addresses of the United States Senators and Representative for the area served by the post office; (3) the names and office addresses of the State Legislators representing the area served by the post office; and (4) the cost and availability of Western Union public opinion messages to the President, Vice President, and Members of Congress.

H.R. 1050. January 4, 1977. Post Office and Civil Service. Designates the anniversary of Martin Luther King, Jr.'s, birth, January 15, as a legal public holiday.

H.R. 1051. January 4, 1977. Post Office and Civil Service. Designates the anniversary of Susan B. Anthony's birth, February 15, a legal holiday.

legal holiday.

H.R. 1052. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to prohibit any air carrier from discontinuing any air service provided under its certificate of public convenience and necessity unless, after public notice and hearing, the Civil Aeronautics Board determines that such discontinuance is in the public interest.

H.R. 1053. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to direct the Civil Aeronautics Board, after a determination that the laws or requirements of a foreign country or foreign air carrier result in discrimination against American citizens traveling abroad on the basis of race, color, or religion: (1) to suspend the operating certificates of all air carriers under such Act to serve such country; and (2) to suspend the permit issued to any foreign air carrier of such nationality until such country has acted to end such discrimination.

H.R. 1054. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to authorize reduced rate air transportation for persons between the ages of 12 and 21, inclusive, on a space-available basis.

H.R. 1055. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 and the Interstate Commerce Act to authorize free or reduced transportation rates for persons over 65 and handicapped individuals and their attendants. Amends the Urban Mass Transportation Act of 1964 to give funding priority under such Act to public bodies which offer reduced rates to such individuals. Authorizes the Secretary of Transportation to prescribe standards for facilities funded under such Act to insure ready access to such facilities by these individuals. Amends the Older Americans Act of 1965 to authorize a grant program for special transportation research and demonstration projects for such individuals.

H.R. 1056. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to authorize reduced air fares for persons 65 years of age or older.

H.R. 1057. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to make it unlawful for an air carrier to demand payment from or to assert legal liability against, a ticket agent for the usage by persons of stolen airline tickets under specified circumstances.

H.R. 1058. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to direct the Administrator of the Civil Aeronautics Board to prescribe regulations: (1) which require the screening of any property being placed in a public storage area of an airport by weapon-

detecting and explosive-detecting procedures or devices; and (2) which require that property placed aboard an aircraft or placed in airport storage areas bear identification marks which positively identify the owner or bearer.

H.R. 1059. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to direct the Secretary of Transportation to prescribe regulations governing the humane treatment of animals transported in air commerce.

H.R. 1060. January 4, 1977. Public Works and Transportation. Directs the Secretary of Transportation to carry on a national education campaign to educate drivers and pedestrians as to the danger of driving on, or crossing the highways.

H.R. 1061. January 4, 1977. Science and Technology. Authorizes and directs the Secretary of Commerce to make grants to local fire departments to pay up to one-half the cost of purchasing firefighting equipment.

H.R. 1062. January 4, 1977. Science and Technology. Authorizes and directs the Secretary of Commerce to make grants to local fire departments to pay up to 90 percent of the cost of purchasing heat-protective fire-fighting suits and breathing apparatus.

H.R. 1063. January 4, 1977. Small Business. Amends the Small Business Act to make loans available for small businesses suffering economic injuries as the result of the disruption of operations and services of public utilities.

H.R. 1064. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to permit the payment of old-age insurance benefits to a married couple on their combined earnings record where that method of computation produces a higher combined benefit.

H.R. 1065. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 1066. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to increase to \$7,500 the amount of outside earnings which is permitted an individual each year without any deduction from benefits under such Title.

H.R. 1067. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) to increase by 50 percent the primary insurance amount for individuals covered under such Title.

H.R. 1068. January 4, 1977. Ways and Means. Amends Title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to require the Secretary of Health, Education, and Welfare to provide emergency financial assistance to recipients of benefits under specified circumstances Excludes cost-of-living increases in social security benefits when determining an individual's income. Makes supplemental security income recipients eligible for food stamps. Amends the definition of "eligible spouse" to require that such individual be living with the disabled individual in order to receive SSI benefits.

H.R. 1069. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to deny a tax exclusion to interest on industrial development bonds, the proceeds of which are used to provide facilities for the furnishing of electricity, unless those facilities utilize domestic fuel or no fuel.

H.R. 1070. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a deduction for donations of blood to charitable organizations in an amount equal to \$25 for each pint donated.

H.R. 1071. January 4, 1977. Ways and

Means. Provides that the first \$5,000 of compensation paid to full-time law enforcement officers shall not be subject to income tax.

H.R. 1072. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a limited tax deduction for amounts paid by the taxpayer to a tax exempt educational institution for the tuition of the taxpayer, his spouse, or a dependent.

H.R. 1073. January 4, 1977. Ways and

H.R. 1073. January 4, 1977. Ways and Means. Amend the Internal Revenue Code to allow a limited income tax credit for the tuition paid to a private, nonprofit elementary or secondary educational institution for the education of a dependent. Grants tax-payers standing to challenge the Act's constitutionality in the District Court for the District of Columbia.

H.R. 1074. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow an income tax deduction for all reasonable and necessary expenses, including food and lodging, which are paid for the education of a dependent at a primary or

secondary educational institution.

H.R. 1075. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to permit individuals to deduct contributions to a qualified fund, where the beneficiary is a child dependent of the taxpayer, and where the distributions from the fund are to be made only to defray the cost of room, board, and tuition at an institution of higher education.

H.R. 1076. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide a limited exclusion from gross income of interest deposits paid or accrued by an individual taypager.

an individual taxpayer.

H.R. 1077. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a deduction for a percentage of the amounts paid by the taxpayer in acquiring recycled solid waste materials. Provides an amortization deduction with respect to the amortizable basis of any solid waste recycling facility based on a 60 month period.

H.R. 1078. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide an additional income tax exemption for taxpayers, spouses, or dependents with serious mental or physical disabilities which result in death, or which can be expected to result in death or be of long-continued or indefinite duration.

H.R. 1079. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide identical income tax rates for single persons and married couples filing joint returns. Limits the earned income that must be reported by a married person filing a separate return to the amount actually earned by that individual.

H.R. 1080. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow nonrefundable income tax credit for a portion of the wages paid previously unemployed Vietnam veterans.

H.R. 1081. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a nonrefundable income tax credit for a portion of the wages paid previously unemployed Vietnam veterans.

H.R. 1082. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a nonrefundable income tax credit for a portion of the wages paid previously unemployed handicapped Vietnam veterans.

H.R. 1083. January 4, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on: (1) articles assembled abroad with components produced in the United States; and (2) certain metal articles manufactured in the United States and exported for further processing.

H.R. 1084. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to allow Federal officers and employees to elect coverage under such Title.

H.R. 1085. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a nonrefundable income tax credit for a portion of the wages paid previously unemployed Vietnam veterans and former prisoners of war and missing in action individuals.

H.R. 1086. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a nonrefundable income tax credit for a portion of the wages paid previously unemployed Vietnam veterans who were missing in action or prisoners of war.

H.R. 1087. January 4, 1977. Ways and Means. Directs the Secretary of Transportation to carry on a national education campaign to educate drivers and pedestrians as to the danger of driving on or crossing the

Imposes an additional tax on gasoline and other motor fuels to pay for the cost of such campaign.

H.R. 1088. January 4, 1977. Armed Services; Post Office and Civil Service. Entitles members of the armed forces and Federal employees who were in a missing status during the Vietnam era to a double credit for such period for retirement eligibility and pay purposes.

Directs the Secretary of Defense to provide such members of the armed forces and their dependents with additional health benefits including psychological and counseling services.

Specifies additional pay and allowance benefits to which such individuals are entitled

H.R. 1089. January 4, 1977. Interstate and Foreign Commerce; Ways and Means. Creates a national system of health insurance. Establishes a Health Security Board in the Department of Health, Education, and Welfare to administer such health insurance program.

Repeals the Medicare provisions of the Social Security Act and all health benefit plans for employees of the Federal Government.

H.R. 1090. January 4, 1977. Interstate and Foreign Commerce; Ways and Means. Requires every employer to offer qualified health care insurance to his employees and their families. Establishes a program of Federal participation to provide qualified health care insurance to low-income, nonemployed and self-employed individuals and their families. Requires the Secretary of Health, Education, and Welfare to pay the full premium for continuation of qualified health care insurance for individuals receiving State or Federal unemployment benefits.

H.R. 1091. January 4, 1977. Merchant Marine and Fisheries; Armed Services. Amends the Maritime Academy Act of 1958 to authorize the Secretary of the Navy to appoint students at maritime academies or colleges assisted under such Act as Reserve midshipmen in the Navy and to commission such individuals as Reserve ensigns upon graduation.

H.R. 1092. January 4, 1977. Merchant Marine and Fisheries; Judiciary. Amends the National Environmental Policy Act of 1969 to authorize class actions on behalf of persons adversely affected by air pollution, water pollution, or noise. Stipulates that United States district courts shall have jurisdiction of such class actions brought against persons engaged in activities affecting interstate commerce, without regard to the amount in controversy.

H.R. 1093. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends the Social Security Act to increase the level of Federal reimbursement under Aid to Families with Dependent Children and Medicald to 100 percent for State payments made to native Hawaiians, Indians, Aleuts, and Eskimos.

Increases the level of Federal reimbursement under the minimum supplementation of the Supplemental Security Income program and the supplementary cash payments program to 100 percent for State payments to native Hawaiians, Indians, Aleuts, and Eskimos.

H.R. 1094. January 4, 1977. Veterans' Affairs. Directs the Secretary of Defense to cause to be brought to the United States the remains of an unidentified member of the Armed Forces of the United States who lost his life during the Vietnam conflict, and to provide for his burial near or beside the Unknown Soldier of World War I at Arlington National Cemetery.

H.R. 1095. January 4, 1977. Interstate and Foreign Commerce. Requires the Federal Communications Commission to amend its regulations to permit transmission of non-emergency communications relating to official fire department business over fire department radio frequencies.

H.R. 1096. January 4, 1977. Judiciary. Amends the Atomic Energy Act of 1954 to impose a mandatory term of imprisonment of not less than 20 years or for life upon individuals committing specified offenses thereunder if such offense was committed with intent to convert source material, special nuclear material, byproduct material, or authorization or production facilities.

H.R. 1097. January 4, 1977. Judiciary. Requires Members of Congress, the President, the Vice President, and specified military and civilian officers and employees to file financial disclosure statements with the Comptroller General annually.

Comptroller General annually.

H.R. 1098. January 4, 1977. Post Office and Civil Service. Increases to 60 days the period before an election during which a Member, or Member-elect, of Congress may not make a mass mailing as franked mail if such individual is a candidate in such election.

H.R. 1099. January 4, 1977. Rules. Establishes a Joint Committee on Intelligence Operations to conduct continuing oversight of, and to exercise exclusive legislative jurisdiction over, the foreign intelligence activities of the United States.

H.R. 1100. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow handicapped individuals a deduction for their employment-related expenses.

H.J. Res. 101. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Authorizes the President to call a White House Conference on Long-Term Care to be planned and conducted by the Secretary of Health, Education, and Welfare.

H.J. Res. 102. January 4, 1977. Post Office and Civil Service. Authorizes the President of the United States to proclaim the second week in April of each year as "National Medical Laboratory Week."

H.J. Res. 103. January 4, 1977. Judiciary. Constitutional Amendment. Requires the President and the Speaker of the House of Representatives to review Government revenues and expenditures at specified times and to determine a surtax rate when expenditures exceed revenues to ensure that receipts will equal outlays.

Authorizes the suspension of such measures in the case of a grave national emergency declared by Congress.

H.J. Res. 104. January 4, 1977. Government Operations. Requests the Advisory Commission on Intergovernmental Relations to prepare a proposal for a major study of the proper role of the Federal Government in relation to the States and their political subdivisions with respect to domestic programs in which these levels now share responsibilities.

H.J. Res. 105. January 4, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate September 18 of each year as "National Jogding Day"

of each year as "National Jogging Day."
H.J. Res. 106. January 4, 1977. Post Office and Civil Service. Authorizes the President of

the United States to issue a proclamation each year designating the 29th day in May as "John Fitzgerald Kennedy Memorial Day.

H.J. Res. 107. January 4, 1977. Judiciary. Constitutional Amendment. Eliminates the force and effect of any treaty provision which denies or abridges any constitutionally enumerated right. Prohibits a treaty from permitting any foreign power or international organization to supervise, control, or adjudicate (1) the rights of United States citizens or (2) matters essentially within the domestic jurisdiction of the United States.

Predicates the effectiveness of a treaty as internal law of the United States upon the

passage of appropriate legislation.

Requires executive agreements with for-eign powers or international organizations to be made in the manner and to the extent prescribed by law.

H.J. Res. 108. January 4, 1977. House Administration. Provides for the erection of a memorial on public grounds in the District of Columbia to honor and commemorate members of the Armed Forces of the United States who served in the Vietnam war.

H.J. Res. 109. January 4, 1977. Judiciary.

Constitutional Amendment. Provides that ap propriations made by the Congress for any fiscal year shall not exceed the total revenues of the United States for such year, and pro-hibits spending by, or on behalf of, the United States which exceeds the total revenue for that year.

H.J. Res. 110. January 4, 1977. Judiciary. Constitutional Amendment. Permits religious observances in governmental institutions and public places. Permits reference to a supreme being in a governmental or public document, activity, place, or on money. Declares that this amendment shall not constitute establishment of religion.

H.J. Res. 111. January 6, 1977. Judiciary. Constitutional Amendment. Prohibits interpretation of the United States Constitution to require school systems which assign pupils on a neighborhood basis to assign such pupils in any other manner.

Grants Congress the power to enforce this

article by appropriate legislation.

H.J. Res. 112. January 6, 1977, Judiciary. Constitutional Amendment. Prohibits assignment or transportation of children to a region beyond that covered by the neighborhood school, unless such assignment or transportation is voluntary.

Grants Congress the power to enforce this

amendment by appropriate legislation. H.J. Res. 113. January 6, 1977. Judiciary. Constitutional Amendment. Provides that total appropriations shall not exceed estimated revenues. Authorizes the suspension of such prohibition in time of war or by a concurrent resolution passed by the Senate and the House stating that a national emergency requires suspension.

H.J. Res. 114. January 6, 1977. Judiciary. Constitutional amendment. Provides for the direct popular election of the President and Vice President of the United States

H.J. Res. 115. January 6, 1977. Judiciary. Constitutional amendment. Deems every human being to be a person from the moment

of fertilization. H.J. Res. 116. January 6, 1977. Post Office and Civil Service. Designates the John Philip Sousa composition known as "The Stars and

Stripes Forever" as the national march of the United States.

H.J. Res. 117. January 6, 1977. Judiciary. Constitutional amendment. Permits prayer in public buildings.

H.J. Res. 118. January 6, 1977. Judiciary. Constitutional amendment. Provides for the direct popular election of the President and Vice President of the United States.

H.J. Res. 119. January 6, 1977. Post Office and Civil Service. Designates the week starting with the third Monday in February of each year as "National Patriotism Week.

H.J. Res. 120. January 10, 1977. Judiciary. Constitutional amendment. Amends

Constitution to require Congress to assure that the total expenditures of the Government, during any fiscal year, do not exceed the total receipts of the Government during such fiscal year. Permits an exception to such requirement in time of declared national emergency, but states that expenditures shall never exceed receipts by more than 10 per-cent. Provides a schedule for the institution of such requirement.

Sets forth a schedule for the elimination

of the Federal indebtedness

H.J. Res. 121. January 10, 1977. Judiciary. Constitutional amendment. Permits prayer in public buildings.

H.J. Res. 122. Januray 10, 1977. Post Office

and Civil Service. Designates January 4, 1978, as "Haym Salomon Day." H.J. Res. 123. January 11, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate the week beginning November 6, 1977, and ending November 12, 1977, as "National Volunteer Firemen Week."

H.J. Res. 124. January 11, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate the week of June 29 through July 5 each year, as "Why I Love America Week."

H.J. Res. 125. January 11, 1977. Judiciary. Constitutional Amendment. Provides that the President and Vice President shall be chosen by popularly elected electors.

H.J. Res. 126. January 11, 1977. Post Office and Civil Service. Authorize the President of the United States to designate October 17 to October 23, 1977, as "Anne Sullivan Week."

H.J. Res. 127. January 11, 1977. Judiciary. Constitutional Amendment. Provides for the direct popular election of the President and Vice President of the United States

H.J. Res. 128. January 11, 1977. Judiciary Constitutional Amendment. Provides for the prompt election of a Vice President whenever there is a vacancy in the office of the Vice President by reason of the succession to the office of President of a Vice President who was nominated and confirmed under the 25th Amendment.

H.J. Res. 129. January 11, 1977. Banking, Finance and Urban Affairs. Establishes the National Commission on Housing for the Elderly which shall have responsibility for investigating specified aspects of Federal

housing for the elderly.

H.J. Res. 130. January 11, 1977. Judiciary Constitutional Amendment. Amends the Constitution to require Congress to assure that the total expenditures of the Government, during any fiscal year, do not exceed the total receipts of the Government during such fiscal year. Permits an exception to such requirement in time of declared national emergency, but states that expenditures shall never exceed recipts by more than ten percent. Provides a schedule for the institution of such requirement.

Sets forth a schedule for the elimination

of the federal indebtedness.

H.J. Res. 131. January 11, 1977. Government Operations. States that it is the general policy of the U.S. Government to rely upon private commercial sources for goods and services required to meet Government needs, and that this policy shall be administered by the Office of Federal Procurement Policy.

H.J. Res. 132. January 11, 1977. Banking, Finance and and Urban Affairs. Authorizes the President of the United States to recognize Marian Anderson through award of an appropriately designed gold medal.

H.J. Res. 133. January 11, 1977. Judiciary. Constitutional Amendment. Prohibits abortion after the fetus' heart begins to beat except to save the life of the mother.

H.J. Res. 134. January 11, 1977. International Relations. Proposes that the President seek a treaty or appropriate international agreement to establish criteria for tanker safety and to take whatever other steps may

be necessary to protect international waters from further pollution.

H.J. Res. 135. January 12, 1977. Post Office and Civil Service. Requests the President of the United States to issue annually a proclamation designating the week beginning with the third Monday in February as "National Patriotism Week."

H.J. Res. 136. January 13, 1977. Armed Services. Directs the President of the United States to issue a citation restoring to Doctor Edwards Walker the Congressional Medal of Honor which was awarded to her in

1865 and revoked in 1917. H.J. Res. 137. January 13, 1977. Post Office and Civil Service. Requests the President of the United States to issue a proclamation designating the week beginning October 9, 1977, and ending October 15, 1977, as "National Gifted Children Week.'

H.J. Res. 138. January 13, 1977. Judiciary. Constitutional Amendment, Provides for the direct popular election of the President and Vice President of the United States.

H.J. Res. 139. January 13, 1977. Judiciary. Constitutional Amendment. Allows the people of the District of Columbia to elect two Senators and the number of Representatives to Congress to which the District would be entitled if it were a State.

H.J. Res. 140. January 13, 1977. Judiciary. Constitutional Amendment. Requires the President and the Speaker of the House of Representatives to review Government revenues and expenditures at specified times and to determine a surtax rate when expenditures exceed revenues to insure that receipts will equal outlays.

Authorizes the suspension of such measures in the case of a grave national emer-

gency declared by Congress.

H.J. Res. 141. January 13, 1977. Ways and Means; Interstate and Foreign Commerce. Establishes a nine-member National Commission on Social Security. Requires the Commission to study and investigate titles II (Old-Age, Survivors, and Disability Insurance) and VIII (Medicare) of the Social Security Act.

H.J. Res. 142. January 13, 1977. Judiciary. Constitutional Amendment. Allows the people of the District of Columbia to elect two Senators and the number of Representatives to Congress to which the District would be entitled if it were a State.

H.J. Res. 143. January 13, 1977. Judiciary. Constitutional Amendment. Permits prayer in public places or institutions. Permits religious instruction in public places or institutions if such instruction is given under private auspices.

H.J. Res. 144. January 13, 1977. Judiciary. Constitutional Amendment. Provides for the direct popular election of the President and Vice President of the United States.

H.J. Res. 145. January 13, 1977. Judiciary. Constitutional Amendment. Permits any State to regulate or prohibit abortion.

H.J. Res. 146. January 13, 1977. Judiciary. Constitutional Amendment, Prohibits assignment of public school students to a particular school based upon their race, creed, or

Grants Congress the power to enforce this Amendment by appropriate legislation.

H.J. Res. 147. January 13, 1977. Judiciary Constitutional Amendment, Permits persons to participate or to decline to participate in voluntary prayer or meditation in public buildings or places supported by public

H.J. Res. 148. January 13, 1977. Judiciary. Constitutional Amendment. States that nothing in the Constitution shall empower any official or court of the United States to issue any order requiring or encouraging, or directing or permitting any funds to be used or withheld or require or encourage, the transportation or busing of students from one school to another or one school district to another or to force any student or students attending any elementary or secondary school in their own neighborhood, where such school is not established purposely to perpetuate segregation, to attend any other against his or her own choice, the choice of his or her parents, parent or guardian, in

order to accomplish any objective or purpose, express or implied, under the Constitution.

H.J. Res. 149. January 17, 1977. Judiciary. Constitutional Amendment. Provides for the direct popular election of the President and Vice President of the United States.

H.J. Res. 150. January 17, 1977. Judiciary. Constitutional Amendment. Increases the term of office of a Representative of Congress to four years. Sets forth the procedures applicable when a Representative becomes candidate for the Senate.

EXTENSIONS OF REMARKS

BROWNSTOWN TOWNSHIP TO CELE-BRATE 150TH BIRTHDAY

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 5, 1977

Mr. FORD of Michigan. Mr. Speaker, I would like to bring to the attention of you and my colleagues the approaching sesquicentennial of the township of Brownstown, in my 15th Congressional District, of Michigan.

Brownstown Township will be 150 years old next Wednesday, April 12, and the people of this fast-growing community are planning a year-long celebration

of this historic event.

On April 12, 1827, Brownstown was one of the original nine townships created in Wayne County, in what was then the Territory of Michigan. Tradition relates that the community was named for Adam Brown, who was captured by the Wyandot Indians in 1764, when he was 8 years old, and grew to manhood among the Indians. He married an Indian wife and became a highly respected man, among both the Indians and early white settlers.

Among the prized possessions preserved in the Brownstown Township Hall is the original township minute book dating back to 1827. It lists the original township officers, and gives a fascinating picture of daily life in that far-off era.

Brownstown originally covered 43 square miles, but has since been reduced to its present 24 square miles by the incorporation of four cities from the original area-Gibraltar, in 1961; Rockwood, in 1964, and the cities of Flat Rock and Woodhaven in 1965.

From the few scattered settlers and trappers of the 1820's, the township today has grown to a thriving community

of some 16,000 persons.

Among the early settlers was George Busenbark, who in 1837 received from the general land office in Detroit the deeds to two 40-acre tracts in Brownstown. These deeds, signed by President Martin Van Buren, are in the possession of Mr. Busenbark's great-great-granddaughter, Mrs. Bernice Thomas, who has presented copies to the township. Her father, John Busenbark, aged 83, still lives in the com-

Among the other early settlers were Michael Vreeland and Henry Woodruff, whose names live on in Brownstown Township roads, and B. F. Knapp, George C. and P. T. Clark, William Munger, John Forbes, Dr. John Leteur, and Col. Nathaniel Case.

The first township officers included Moses Roberts, supervisor; James Vreeland, clerk; Jacob Knox, William Hazard, and David Smith, assessors; Elias Vreeland, William Fletcher, and Isaac Taylor, constable and collector, and Freeman Bass, poundmaster.

Arthur Rurak and Garrett Vreeland were directors of the poor; Herman Hecox, Clyde Compeau, William Fletcher, Isaac Thurston, John Conrad, and Thomas Long were fence viewers, and George Clark and Isaac Taylor were

highway overseers.

From the old township minute books, local officials have compiled a list of all top township officials from 1827 down to the present

The township administration today includes W. Curt Boller, supervisor; Mrs. Rose Legg, clerk; Steve C. Berecz, treasurer; Phoebe Stromp, Charles Galdes, Edmund E. Lazar, and Charles R. Starkey, trustees, and Milton A. Coop, Edward A. Lezotte, Patrick LaFede, and Bradford G. Porath, constables. Gerald A. Mc-Nally and Mrs. Audrey Stroia are judges for the 33d district court.

Mr. Speaker, Brownstown Township is planning a yearlong celebration to mark this historic milestone in the community

A committee to plan and carry out the celebration is headed by Mrs. Louella Machcinski, and also includes Mrs. Clara Sypes, Mrs. Andree Jones, Craig Seger, Virginia LaPointe, Mrs. Irene Starkey, Mrs. Yvonne Boller, Mrs. Joanna Loeschner, Raymond Michaels, Mrs. Gloria Cooper, and Gilbert and Betty Flotte.

A kickoff festival is planned for April 12, the actual birthday date, followed by a birthday cake program in May, and an elaborate Township Field Day celebration in August. Included will be the publication of a Brownstown memorial booklet by the local Jaycees; the presentation of awards to long-time residents, and the sale of souvenir patches, bumper stickers, and glasses.

Local historians are conducting research to locate other descendants of the first settlers, particularly descendants of the first township officers.

The commitee, and the township administration, are striving for an all-out community effort to make the Brownstown Sesquicentennial an event that will long be remembered.

I am proud, Mr. Speaker, to help publicize this historic observance, and to bring it to the attention of my colleagues here in the House.

A GALLANT DEFENSE OF LIBERTY

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1977

Mr. KEMP. Mr. Speaker, one of the most heroic examples of a free people's

highway commissioners; Isaac Taylor, fight against tyranny during World War II was that of the resistance movement in Poland in 1939

> The gallant fight of the Polish people was witnessed by other free peoples around the globe, and the hearts of the West were with them. In September of that year, 19 days after the Nazi invasion of Poland had begun, the people of Great Britain sent the following message to the defenders of Warsaw:

> The entire world admires your courage. Poland once again became a victim of ag-gression by her neighbors. Through her heroic struggle against the aggressor she once again became the standard bearer of Europe's freedom. We, your allies, shall continue the war to restore your liberty.

> Mr. Speaker, I enter into the RECORD at this time a letter to the editor of the Washington Star from Mr. Walter Zachariasiewicz, president of the American Counsel of Polish Cultural Clubs, in which Mr. Zachariasiewicz recounts the last days of free Poland:

> > A GALLANT DEFENSE OF LIBERTY

I read with great interest Alan Simons' "Q and A" interview with Dan Kurzman (Jan. 25). Mr. Kurzman's book is a moving testimony to the heroic Polish Jews who died in the ruins of Warsaw's ghetto, hoping that their sacrifice would shake the conscience of the world. It rightfully pays justice to the indomitable spirit and courage of men and women who refused to be enslaved and debased.

I am, however, puzzled as to why, in ex-tolling the undeniable virtues of the defenders of the Warsaw ghetto, Mr. Kurzman chose to denigrate another historic example of unparalleled human fortitude and patriotism. "When you consider that all of Poland fell to the Nazis in a few days," he said, "you can realize what this means for the Jews to have held off these Germans for about a month, at least."

Even if this statement were true, I fail to see the necessity for any comparison to illustrate the dimensions of the ghetto battle. The unfortunate truth, however, is that Mr. Kurzman grossly distorted the facts surrounding this tragic period of Polish history. Poland was first to challenge Hitler's Germany, but it did not fall in a few days, and when it did fall, not all of it fell to the Nazis. Poland fell to two aggressors: Germany and Soviet Russia.

The first German motorized detachment, part of three German invading armies, reached the suburbs of Warsaw on Sept. 8, 1939 (the invasion started on Sept. 1). After three weeks of battle and furious, uninterrupted bombing by the Luftwaffe, Warsaw without water, light, food and ammuni--was forced to capitulate. That was Sept. 29.

Ten days earlier, while Warsaw was continuing its heroic resistance, the following message was sent from the people of Great Britain to the gallant defenders of Warsaw: "The entire world admires your courage. Poland once again became a victim of aggression by her neighbors. Through her heroic struggle against the aggressor she once again became the standard bearer of Europe's freedom. We, your allies, shall continue the war to restore your liberty.

Mr. Kurzman chose to pass over lightly these testimonies to Poland's gallant defense of her liberty and human dignity. He also ignored the crucial fact that, on Sept. 17, Soviet armies had invaded Poland from the East. This was the triumph of the treacherous Ribbentrop-Molotov collusion to impose their reign of terror on the bleeding and suffering nation. Even at that hopeless moment, however, armed resistance continued in many parts of Poland.

Finally, attacked front and rear by the joined armies and huge air forces of two superpowers, the Poles were forced to give ground to their oppressors, continuing their heroic resistance underground until the end

of the war.

Thus Hitler had to wait an entire month—not "a few days"—for his armies to enter the proud Polish capital. And during the 1944 Warsaw uprising, it took the Nazis 63 days to reign there once again supreme. This Nazi victory, however, took place on the smoldering ruins of the totally destroyed city, amidst the graves of 200,000 Poles who gave their lives so that future generations would see no holocaust of war, no Warsaw ghetto, no Oswiecim, no Dachau, nor any new, perfidious versions of mental coercion.

WALTER ZACHARIASIEWICZ,
President, American Counsel of Polish
Cultural Clubs.

WASHINGTON, D.C.

TWENTIETH ANNIVERSARY OF THE METROPOLITAN WASHINGTON COUNCIL OF GOVERNMENTS

HON. JOSEPH L. FISHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. FISHER. Mr. Speaker, during all my years in public office, both as a member of the Arlington County Board in Virginia and as a Member of the Congress, I have always participated in the activities of the Metropolitan Washington Council of Governments.

I represented my county on the COG board of directors for nearly 10 years. I also was privileged to serve as the president of COG and as its chairman of the

board.

COG has never been an organization to seek publicity for publicity's sake. Because it is a voluntary and cooperative organization at the metropolitan level, it does not set our tax rates or collect our trash or operate our buses and subway or put out fires and direct traffic on our streets. As a result, COG is not always as well known as other organizations, but its record is there—and it is a record of which COG can be proud and for which the rest of us can be grateful.

This month COG is 20 years old. Its record is one of achievement in behalf of our local governments and compiled by our elected officials through COG, their own regional organization. Through transportation improvements, police and fire agreements, the obtaining of additional housing funds, a regional air quality program, the first coordinated effort to clean up the Potomac River, cooperative purchasing by our local governments to save money, and so many other programs and projects, COG has shown its worth.

All of these accomplishments have been achieved on a strictly voluntary, cooperative basis, with the city and county officials of 16 jurisdictions working together through their own regional organization, the council of governments, for the betterment of their own communities in particular and the metropolitan community in general.

No new layer of government was necessary or even desired, no "super government" was established or even sought, no traditional local authority was surrendered or even threatened.

It is a record, Mr. Speaker, of which the late Virginia State senator, Charles R. Fenwick of Arlington County, would be particularly proud and which he anticipated with his sense of vision in his role as one of COG's founders 20 years ago. And it is a record which another distinguished Virginia public official, Mayor Harold L. Miller of Falls Church, is continuing today as chairman of the board of COG.

All of us can be proud of COG and grateful for its presence, and its accomplishments, Mr. Speaker. And we can be equally proud of and grateful to the 20 years of local elected officials who have made it so.

RAILROAD RETIREMENT BENEFITS FOR CERTAIN SPOUSES

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. FRASER. Mr. Speaker, the 1974 amendments to the Railroad Retirement Act were aimed at putting the railroad retirement trust fund on a sounder financial base. However that law also contained a provision to permit spouses of retired workers to collect benefits at age 60, instead of having to wait until age 65. This liberalization, however, was not retroactive. As a consequence, spouses of railroad retirees who retired before July 1, 1974, must continue to wait until age 65 to receive benefits.

A railroad pensioner who retired before that date and whose wife is not yet 65 brought this inequity to my attention. I agree with my constituent that his wife and the approximately 25,000 other spouses in this situation, mostly women, deserve the same liberalization.

Accordingly, I am introducing a bill that would permit the spouses of workers retired before July 1, 1974, to receive benefits when they reach 60 years of age. Those between the ages of 60 and 65 whose spouses retired before that 1974 date would no longer have to wait to collect these benefits.

The cost of removing this inequity of the Railroad Retirement Act is not expensive. In 1977, the added cost would be \$11 million and that figure will decline as the group receiving this liberalization decreases.

The railroad retirement trust fund cannot pay many additional benefits because it is still in precarious shape. But neither can it afford unfair and arbitrary discrimination in benefits.

I understand that the Commerce Committee has decided not to take up legislation affecting railroad retirement pro-

grams until 1978. At that time I hope that the first priority of the committee will be to consider the arbitrary distinctions made in the 1974 act. My proposal will eliminate one of those distinctions which has caused a hardship to retired workers and their families.

VOTER REGISTRATION CAMPAIGN

HON. THOMAS F. EAGLETON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, April 6, 1977

Mr. EAGLETON. Mr. President, last year on July 29, the Senate passed resolution No. 498—"to invite and encourage this Nation's private sector to initiate an extensive effort to increase voter registration and voter turnout in the 1976 General Election."

That resolution also provided:

It is the further sense of the Senate that the private sector, acting as individual entities, through committees, associations and organizations, and utilizing valuable resources such as the Advertising Council Incorporated, can greatly contribute to the increase of the Nation's voter participation rate.

With Senate passage of the resolution on July 29, the Advertising Council already had a volunteer advertising agency standing by to contribute its services to create the public service advertisements, as it had in earlier elections—1972, et cetera. These PSAs would then be offered to the various communications media—television and radio stations, magazines, newspapers, outdoor and the transit industry—for the information of the American people.

The American Revolution Bicentennial Administration agreed to act as the sponsor of the campaign and cover all of the out of pocket expenses. ARBA Administrator John W. Warner formally requested Ad Council President Robert P. Keim to undertake a register and vote campaign—because, as ARBA felt, it would be "the Bicentennial thing to do."

When this "go ahead" was given to the Ad Council, it immediately put its task force into action. This included its volunteer advertising agency, Needham, Harper & Steers, Inc., of New York City; a volunteer coordinator, Walter L. Olesen, manager, advertising and promotions, Xerox Corp., Stamford, Conn.; and a campaign manager, Collingwood Harris of the Ad Council staff in Washington. This production team began work accelerating "normal" immediately, lead-time timetables. In a report to me the Ad Council indicated that voter registration and voter turnout mailings went to every newspaper and every radio and television station in the country and to over 400 major transit advertising companies.

The National Broadcasters Association asked all of their member stations to fully utilize the advertisements. The Secretary of State's association also asked their members to encourage the airing of the spots.

The response by the media follows: Based on reports received from TV

stations-29 percent of the 796 in the United States-it is estimated that the typical TV station in the Nation carried at least 13 PSA's during the last 6 weeks of the national election.

Likewise, reporting radio stations-31 percent of the 5,517 in the Nationbroadcast an average of 23 PSAs during the last 6 weeks of the national election.

Reports from the Nation's newspapers—also show striking results. Of 105 newspapers that reported, it is estimated that, if all of the ads printed were put in one newspaper the size of the Washington Post or Star, it would total more than 18 pages, to say nothing of the many newspapers that ran council messages but did not report their usage. Put another way, if all the newspapers in the Nation contributed an equal amount of space it would add up to 295 full pages.

The transit industry's response was equally impressive. The ad council provided a total of 96,512 car cards and/or posters which were carried by buses, trains and seen on wall posters through-

out the Nation.

I am confident that the slowing of the decline of voter participation that we saw in the last election is in large part due to the media campaign carried out by the Advertising Council, Inc., and the American Revolution Bicentennial Administration.

CAUSE OF BALANCE OF PAYMENTS DEFICIT: OIL IMPORTS

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. VANIK. Mr. Speaker, if it were not for oil imports, last year, the United States would have had a trade surplus of \$25.9 billion. Instead, because we paid \$31.8 billion in valuable goods, produce, and cash for oil, we ended up with a deficit of \$5.9 billion. The last several months have seen even higher levels of energy imports as a result of the excep-

tionally cold winter.

If it were not for oil, the position of the United States in world trade would never have been better. In 1974, 1975, and 1976, we had a surplus in nonmanufacturessuch as agricultural goods-of \$35.8 billion. In manufactured goods, we sold an incredible \$41.8 billion more than we bought. In other words, in the areas where people work to produce something, during the past 3 years we exported \$77.6 billion more than we imported. For the United States of America, world trade is intensely job-producing.

The following statistics which I have just received from the Department of Commerce vividly prove the value of international trade to our total economy.

But these statistics also point out that

there are serious problems:

First. The need for oil imports and a way to pay for those imports means that we need to keep our other exports as high as possible. It also means that we are trading over \$30 billion per year of the wealth of our land, much of it in the form of capital goods, for oil which is burned away, often in inefficient and wasteful processes. The need for energy conservation and the development of new sources of energy is crucial;

Second. Despite the overwhelmingly successful performance of American industry and agriculture in selling overseas, there are sectors of the American economy in which foreign trade is costing jobs-such as the shoe industry and the color television industry. Ways must be found to support such essential industries and their workers without disrupting the world trade which creates so many jobs for Americans.

Third. The enormous industrial and agricultural surpluses piled up by America become our trading partners' deficits. When our trading partners also have to import expensive oil and absorb the industrial and agricultural surpluses of the United States, it is obvous that their economic situation must be bleak. Because of the oil crisis, the world trading economy is in a very fragile condition. The United States, as a nation which does not have to import all of its energy and which has surpluses in its trade. must play a leadership role in the world economy-there is no one else who can.

The Department of Commerce statistics follow:

U.S. TOTAL TRADE AND TRADE IN PETROLEUM, OTHER NONMANUFACTURES, AND MANUFACTURES, 1965-76

(In billions of dollars)

Year	Total			Petroleum and products

Note: Values for total exports, imports, and the balance are the official U.S. f.a.s. figures published by the Census Bureau. These include reexports and exclude military grant-aid. Exports of the 3 commodity categories do not add to the total because they relate only to domestic merchandise, excluding reexports, and including military grant-aid shipments. Figures do not always add because of rounding.

PERSONAL EXPLANATION

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. DRINAN. Mr. Speaker, I was unavoidably detained on official business

yesterday and consequently missed the vote on final passage of the Federal Water Pollution Control Act Amendments of 1977, H.R. 3199. I was detained at the White House, where I and other member of the Massachusetts congressional delegation met with President Carter with regard to Fort Devens, which is located in my district.

Had I been present for the vote on final passage of H.R. 3199, I would have

voted "yea."

PRIDE OF OUR SHORELINE: THE U.S. COAST GUARD

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. BAUMAN. Mr. Speaker, during the recent winter crisis which caused great difficulty for all waterborne traffic of vital energy resources on the Chesapeake Bay, the economic and physical well-being of the people of Maryland might have been permanently impaired were it not for the excellent work of the U.S. Coast Guard. Their ingenious and courageous work made it possible to deliver these badly needed supplies by maneuvering ships up the bay and its tributaries during the most inclement weather and hazardous conditions. During the crisis, I was pleased to work with a number of fine leaders who serve the Coast Guard as well as they serve their country. Six men especially come to mind, men who went to all lengths to handle emergency assistance for people in my area. These men are:

Rear Adm. Julian Johansen, Commander, 5th Coast Guard District, Nor-

folk, Va.

Capt. Raymond Wood, Chief of Staff, 5th Coast Guard District, Norfolk, Va. Lt. Robert Sitton, Officer in Charge,

U.S. Coast Guard Group, Chicoteague, Va.

Lt. Gary Bird, Commander, U.S. Coast Guard Cutter, Red Cedar.

Lt. George Naccara, Commander, U.S. Coast Guard Cutter, Red Birch.

Lt. John A. Gaughan, U.S. Coast Guard, liaison officer.

We should take every opportunity to celebrate the service and duty of such men, and to let them know how much we appreciate them. In this regard, I call to your attention a WBOC-TV editorial of March 13 which I am pleased to insert into the RECORD:

THE COAST GUARD

It wasn't too long ago that we were working in offices hardly warm enough for per-sonal comfort. We would go home at night to houses with thermostats turned way back . and we had the additional worry about how much oil was left in our tanks, and whether there was enough fuel in the area to give us a refill. The weather has improved . . . the crisis hopefully is a thing of the past . . . and we think it in order to express a commendation to a branch of the service we often take for granted . . . the United States Coast Guard. Without the Coast Guard, needed fuel supplies would never have gotten up the Nanticoke and Wicomico rivers . . . and it was an around the clock 24 hour a day vigil they maintained.

Lt. Robert Sitton happens to be the man

in charge for he is the commander of the Coast Guard group based at Chincoteague ... the group which oversees the coast from Ocean City to Cape Charles, and from Cape Charles to Vienna. During the emergency their icebreakers escorted over 50 convoys without a single oil spill or major vessel damage. And while we can sit back and consider the crisis only a memory, the Coast Guard still has a major task of replacing the many navigational aids uprooted by the ice . . not only on the rivers but in the Chesapeake Bay. This is something that can't be done overnight.

We owe the Coast Guard not only a vote of thanks, but an expression of sincere gratitude for a tough job well done. The Coast Guard lived up to its motto of Semper Paratus . . . meaning always ready. And they still live up to their creed which is . . . you have to go out. You don't have to come back.

ENERGY, WATER, AND CLIMATE

HON. GEORGE E. BROWN. JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. BROWN of California. Mr. Speaker, the links between energy and broad environmental concerns like those of climate are particularly noteworthy when large economic impacts are involved. In hearings this week before the Subcommittee on the Environment and the Atmosphere, testimony on the proposed National Climate Program Act of 1977 has again reinforced the importance of better understanding and forecasting regional climate in order to plan for energy supply and demand situations.

In one aspect, Federal Energy Administration head John O'Leary has said that the bitter weather this winter cost Americans between \$4.3 and \$7.8 billion in extra-high heating bills. With better advance warning, more timely decisions on energy supply allocation and transportation could have been made.

Another aspect of relating climatic fluctuations and anomalies to energy considerations is reservoir management. Water is stored for hydroelectric power, as well as for use in generating electricity in other types of powerplants. Where the premium on water is high, as in the West, skillful reservoir management becomes very critical.

Mr. Speaker, I submit two articles to be inserted in the Record, exploring the present ability of reservoirs to store water for hydroelectric power generation in the face of multiyear water shortage and exploring particularly the effects of drought on water supply in the West.

It is the hope of the sponsors of national climate program legislation that better understanding of climate, and with it better planning information and forecasting, will lead to refinement of our water/energy management capabilities.

The articles follow:

[From the New York Times, Apr. 5, 1977] DROUGHT IN NORTHWEST PERILS HYDRO POWER

(By Steven Rattner)

San Francisco.—The continuing drought, which has blanketed the Northwestern section of the United States, has raised the

specter of widespread power losses as the reservoirs on which this region depends for much of its electricity become depleted.

much of its electricity become depleted.

Hydroelectric power, where available, is the least expensive and most environmentally acceptable type of electricity. Over the years it has provided as much as 80 percent of the region's electric power.

Great dams along the Columbia River, the Snake River and a host of smaller waterways store millions of gallons of water, sending it through turbines—Northern Callfornia alone has 64 such generating stations.

But in Northern California, for example, which is now in the midst of its second year of drought, rainfall totaled only 19 inches from Oct. 1, 1976, to last March 28, compared with normal precipitation of 57.6 inches. As a result, the giant reservoir at Shasta, which usually has about 1.3 billion gallons of water in storage, now has less than half that amount.

And more trouble is on the way. The utilities depend for their stored water on the spring runoff as the snow melts on the mountains. But in the Feather River area of California, where there was 70 inches of snowpack at this time last year, there is only 22 inches this year.

"We'll need substantial imports of energy," said Barton W. Shackelford, senior vice president of the Pacific Gas and Electric Company, the nation's second-largest investor-owned electric utility. "In the absence of any major equipment breakdowns, we should barely make it."

Because of the ability of hydroelectric plants to, in effect, store electricity in the form of water, the crunch will not suddenly materialize on the hottest day this summer nor on the coldest day next winter, but rather over a period of time as the water gradually runs out.

Experts expect the impact will be felt next fall and into the winter, as the full effect of the sparse runoff this spring is felt. Some executives are already predicting cutbacks.

executives are already predicting cutbacks. "If we continue to draw out of our reservoirs until they're dry, we'll only be able to serve 50 percent of our load," said Hector J. Durocher, power manager of the Bonneville Power Authority, a Federal agency that operates several massive projects across the Northwest. "If voluntary curtailments don't work, we are looking at mandatory curtailments this fall."

To try to avoid serious disruptions of service the utilities have developed a strategy that includes avoiding use of hydro generators during periods of low demand to save water, importing as much as possible from regions with surpluses and trying to inspire conservation.

One such instance would be the sending of excess natural gas by Pacific Gas to the municipal utility in Los Angeles, which would burn it in a now-mothballed generator and send the power back to San Francisco.

Whether or not the region is successful in avoiding serious blackouts, consumers throughout the Northwest face the prospect of sharply higher electricity bills. Buying power from outside sources and turning on old, inefficient oil-burning generators are both far more expensive than the free-flowing hydro power they will replace. In normal years, about 28 percent of California's power is generated by water; this year, the figure is likely to be 12 percent.

Pacific Gas alone estimates that consumer bills will rise by \$500 million this year some estimates for the region points towards \$1 billion.

AIM IS TO BURN GAS AND OIL

"The cost will become variable," said Richard Maullin, chairman of the California Energy Commission, "but the general strategy is clear—to burn as much gas as we can get and as much oil as we have to."

The effect of the drought will vary for

different utilities. On the one hand, the Bonneville Power Authority—whose business is selling bulk power—is estimating that revenues will be about \$80 million short of original projections. But Pacific Gas and most other utilities can recover higher power costs through fuel-adjustment charges and are not expected to be seriously affected.

"The drought will have no net effect on our earnings estimate (for Pacific Gas) of \$3.10-\$3.25 but only on cash flow," Merrill Lynch, Pierce Fenner & Smith, the broker-

age firm, reported recently.

The economic impact has already begun to be felt in the Northwest, where service has been reduced to the electricity-gobbling aluminum industry in accordance with certain "interruptible" power-supply contracts. The result is that virtually all of the dozen plants, which together produce one-third of the nation's aluminum have laid off several hundred workers and cut back production more sharply.

Beyond the aluminum industry, reductions in electricity use have not been ordered, nor, according to utility officials, does a comprehensive plan exist for sharing in a shortage. When the natural gas crisis struck last winter, a rationing plan was already in place, as a result of past Federal Power Commission actions on gas. But in the case of electricity, opinion seems to be divided over whether homes or factories should be cut off first, particularly if the shortage appears in milder months.

"There's only way that a utility can handle an absolute shortage and that's through rotating blackouts," said Mr. Maullin.

So far, voluntary conservation has been pushed with only the most modest success. The power authority called for a 10 percent reduction in use and got about 3 percent. The Tower Building in the heart of downtown Portland is still outlined every evening by strings of incandescent bulbs and skepticism is rampant.

"What drought?" said Lawrence Sanders, a 59-year old hardware store owner in Portland on a rare damp day last month. "Can't you see it's raining?"

Despite the agonizing water shortage, at least one group is finding its wellbeing safe-guarded. Recently the governors of the four Northwestern states agreed to release 3.66 million acre-feet of water—enough for electricity to heat 300,000 homes for a year—to carry baby salmon over the top of the dams so they would not be sucked into the turbines.

[From The New York Times, March 15, 1977] DESPITE DROUGHT YEAR, 6 HUGE RESERVOIRS ON UPPER MISSOURI RIVER ARE NEARLY FULL

(By Seth S. King)

OMAHA, March 10.—While many of the great reservoirs that produce hydoelectric power and irrigation water for the Pacific Northwest are now dangerously low, the six huge "mainstream" reservoirs on the upper Missouri River are filled today close to capacity.

In addition, many of the 18 smaller, tributary reservoirs on the east slope of the Rocky Mountains and in the Great Plains have enough water in them now to last through a summer of drought.

These storage levels have been maintained despite the driest autumn on record along the Missouri itself and despite Rocky Mountain snows, which run off into these reservoirs, that are only 37 percent of normal depths. The amount of water on hand in these areas guarantees a normal navigation season on the Missouri as far up as Sioux City, Iowa, for the next eight months.

With each passing year, shipping on the Missouri has become more essential for the export of grain and soybeans downriver into the Mississippi and the Gulf of Mexico. This shipping also moves large dry cargoes of fertilizers and other agricultural chemicals to corn-belt farmers. Last year more than three million tons of these cargoes moved up or down river between Sioux City and St. Louis.

ENOUGH WATER IN THE PLATTES

Today's reservoir storage levels also mean that despite continuing drought there should be enough irrigation water in the Platte River reservoir system to keep stream flows near normal on the North Platte and at least adequate on the South Platte for the rest of the growing season. These stream flows on the Platte will mean enough irrigation water for hay and corn crops with which Nebraska and Colorado ranchers can sustain their herds if their range grass is stunted by the drought.

There is even a modest account of reservoir water in supplemental storage on the upper Colorado River system to provide emergency supplies for the orchards and vegetable and small grain crops near Grand Junction, Colo.

And when a transfer station is completed soon near Scottsbluff, Neb., it will be technically possible to transfer a small amount of hydroelectric power from the Missouri drainage dams to the Pacific Northwest in an emergency.

The six mainsteam dams on the Missouri, completed in the 1950's as part of the Pick-Sloan plan for development of the Missouri River Basin, now create long, narrow lakes that stretch almost continuously from the southeast corner of South Dakota all 'the way into eastern Montana.

Here at the headquarters of the Army Corps of Engineers' Missouri River Division, the charts illustrating the reservoir system fill all of one wall of the central briefing room.

FOR POWER AND FLOOD CONTROL

The mainstem dams at Gavins Point, Fort Randall, Big Bend and Oahe in South Dakota, Garrison in North Dakota, and Fort Peck in Montana were built for the primary purposes of flood control and power generation.

Diversion canals for the irrigation of cropland east of Oahe have been started. But a larger diversion system from Garrison Dam into the Souris River in North Dakota was among the 19 projects the Carter Administration has postponed.

Water from rains over the Great Plains and from snows in the Montana Rockies is stored in these mainstem reservoirs during the spring flood season.

In the last years before the reservoirs were created by the dams, the Missouri fell to a trickle in the summer. Now the water stored behind the dams is released into the Missouri after the spring floods, maintaining a nine-foot-deep channel for the barges of grain and fertilizer that are pushed up and down the river from April until November.

The generators in the six mainstem dams and those in the two smaller tributary dams built by the Bureau of Reclamation have been producing an average of 10 billion kilowatt hours of electricity annually. This would be more than enough to light up all of Nebraska if this state had no other source of power except the mainstem dams.

SUFFICIENT FOR NAVIGATION

"Even though the Great Plains suffered a severe drought in 1976, the snowfall at the upper end of the system was above normal and we had an above average inflow into the reservoirs," Elmo W. McClendon, chief of the reservoir control center at the Omaha headquarters, told a recent visitor.

"As a result, we're full and there is enough water in the mainstems, regardless of how little more we get this spring, to supply a normal navigation season. We'll also have more than enough to maintain power generation for the rest of the year."

The Bureau of Reclamation, which administers the sale of power from all generators in

the Missouri drainage system, is completing a switching station at Scottsbluff.

The electrical grid system from the dams can be hooked into other grids to the east and those leading to the Pacific Northwest, William Plummer, assistant regional director of the bureau's Region 7 in Denver, explained.

"This would provide a weak link to the Northwest, but the opportunity is there to transfer power to that area," he added. "We are studying the possibilities now."

SUPPLIES STILL AMPLE

The Colorado-Big Thompson project, which diverts water from Lake Granby on the west side of the Continental Divide through the mountains, supplies the headwaters of the South Platt system. Its supply reservoirs on the west slope are still ample from last year, and with stored water from the bureau's reservoirs on the North Platte in Wyoming and Nebraska, there should be enough irrigation water for normal farming throughout the summer.

To the south, the snow melt supply for the Arkansas River drainage in southeastern Colorado and Kansas is only a little more than half the normal today. The Frying Pan-Arkansas diversion project is not completed, and the bureau's water experts expect problems for Irrigators along that system this summer.

But the Ruedi and Green Mountain reservoirs on the west slope, built to supplement water diverted into the Arkansas, are now filled enough to provide emergency irrigation water to the Grand Junction area this summer if it is needed.

LITHUANIAN INDEPENDENCE DAY

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. MIKVA. Mr. Speaker, I would like to join my colleagues in commemorating the occasion of Lithuanian Independence.

On February 16, 1918, the Lithuanian people proclaimed their independence, a goal for which they had been striving for over a century. Lithuanians have a long tradition as an enlightened and freedom-loving nation, contributing significantly to the development of European civilization. Upon achieving independence, their passion for freedom, education and toleration was amply demonstrated. The Lithuanians based their state on democratic principles and made great social, economic and cultural strides.

Tragically, her period of independence lasted for only two decades. Despite her efforts to remain free, she fell victim to Soviet aggression and forced annexation. The personal and civil liberties which she had so diligently provided for her people were abrogated. At times the very survival of the Lithuanian culture has been threatened, yet they have remained faithful to their religion, language, and traditions.

Having recently celebrated our own Bicentennial of freedom from foreign oppression and democratic government, we must not forget that there are others who have not been so fortunate. In commemorating Lithuanian Independence, we wish to assure the people of Lithuania and Americans of Lithuanian descent

that their struggle for political, cultural and religious freedom is not forgotten. Our refusal to recognize the forcible incorporation of Lithuania into the Soviet Union reflects the continuing U.S. support for their cause.

As Americans, we can appreciate the meaning of freedom. We must strive to make its meaning known to all. On this occasion, we reaffirm our pledge to uphold the Lithuanians' aspiration toward this just goal.

UNIONS AND THE ARMED SERVICES

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. McDONALD. Mr. Speaker, the U.S. armed services can have only one allegiance, to the country they serve. Some labor unions are viewing the armed services as an area for recruiting large numbers of dues paying members which would enhance their power and influence. Although certain union leaders have asserted that military unions would voluntarily renounce strikes in time of war, the risk of insubordination and refusal of legitimate orders would be present for every military action short of formal war.

An article in a recent edition of the Information Digest, a newsletter on security matters, provides a review of attempts by U.S. revolutionaries to organize military unions and notes problems of insubordination experienced in European countries with unionized armies. The article follows:

UNIONIZING THE MILITARY

Since the summer of 1975, efforts have been underway by a variety of groups including the American Federation of Government Employees (AFGE), the National Maritime Union (NMU), the Teamsters Union, and the Center for National Security Studies (CNSS) to establish programs for unionizing the members of the Armed Services.

While bills to prohibit the unionizing of the U.S. Armed Services are pending in both the Senate and the House, with Senator Strom Thurmond (R-SC) taking a leadership role, the AFGE states it is "Pretty much ready to go." It has been reported that efforts are being made to sign up military personnel at Fort Dix, McGuire Air Force Base, Fort Bragg, and Fort Devens.

The concept of military unions as labor organizations, rather than as professional or fraternal associations, appears to have originated in Sweden in 1932 when the Swedish Officers Union, a professional organization, assumed some roles usually taken by a labor union. This concept has taken root in five other European countries—Norway. Denmark, Belgium, the Netherlands and West Germany which with Sweden now have more than sixty military associations.

In the U.S., demands for military unionization emerged during the Vietnam era from the "G.I. Movement" largely motivated by organizers from Students for a Democratic Society (SDS) and the National Lawyers Guild (NLG) who used the concept as a means of opposition to U.S. involvement in Indochina.

The U.S. organization that received most

CXXIII-683-Part 9

media publicity during this period was the American Servicemen's Union (ASU), founded in December 1967 by Andy Stapp, a member of the militant Trotskyite communist Workers World Party (WWP). Stapp, who had burned his draft card at an SDS Penn State rally in 1965, joined the Army in 1966 "believing I could be more effective joined the Army and organized from within."

Stapp's ASU had an 8-point program which included demands for enlisted men's control over court martial boards, collective bargaining, election of officers by enlisted men, and "the right to disobey illegal and immoral orders." Following two court martial trials and a Field Board Hearing on charges of "subversion and disloyalty," during which Stapp was represented by Michael Kennedy of the National Emergency Civil Liberties Committee (NECLC), Stapp given an undesirable discharge and continued with his military organizing as a civilian

Radical proponents of U.S. military unions consider the Dutch army unions as impor-tant models, particularly the VVDM, founded in 1966, which represents 60% of all conscripts and which receives assistance from the Dutch government. During its eleven year history, the VVDM has used mass pro-test demonstrations and petition campaigns to secure change. These changes have ranged from regulations on hair length and saluting [both now optional] through distribution of revolutionary literature, to major revisions in the military penal code and increases in pay and overtime compensation.

A little publicized result of the VVDM's organizing was the granting of conscientious objector status to conscripts who refused take part in a 1975 counter-terrorist

operation.

Terrorists seeking Dutch support for South Moluccan independence from Indonesia seized a train and the Indonesian Embassy in December 1975. In the train attack, two persons were killed initially and a third was in an explosion. Fifty persons were held hostage for twelve days. Dutch Army conscripts had to be replaced by Marines when some of the Army draftees refused to accept orders.

The AFGE does not advocate the refusal of orders by unionized military personnel. Indeed, its unionization program has been attacked by the extremists of the Center for National Security Studies whose chief "expert" on military unions is David B. Cort-

right.

Cortright first emerged as a leader of the anti-Vietnam movement as a speaker for the Fifth Avenue Peace Parade Committee April 5, 1969 Moratorium. His military service was from 1970-71. Cortright and his former wife, Monica Heilbrunn, were leaders of GI's for Peace at Fort Bliss, TX, and served on the staff of the group's antiwar newspaper, Gigline. In January 1971, Cortright participated in the founding of the National Coalition Against War, Racism and Repression (NCAWRR), the successor to the New Mobilization Committee which soon changed its name to the People's Coalition for Peace and Justice (PCPJ).

In January 1972, Cortright joined the staff of the Institute for Policy Studies (IPS) on the joint research and internship program of IPS and the Union Graduate School of Antioch College. At IPS Cortright was a protege of IPS co-director Marcus Raskin. Upon completion of his book, "Soldiers in Revolt: GI Resistance and the Decline of the Military" [Doubleday, 1974], in mid the Military" [Doubleday, 1974], in mid 1974, Cortright joined the staff of CNSS, as did a number of IPS alumni.

In addition to IPS figures such as Marcus Raskin "my principal adviser," Richard Barnet, Ralph Stavins, Leonard Rodberg, and Joe Collins, the principal credits for the ideas in the book, an encyclopedia of anti-military organizing and sabotage which argues that widespread drug abuse and racial hatred in the armed forces were the principal cause of U.S. abandonment of Southeast Asia, are given to David Addlestone, National Lawyers Guild member and principal attorney for the ACLU's Lawyers Military Defense Committee (LMDC); George Schmidt, formerly of the Chicago Area Military Project; and Max Watts, "friend of resisters in Europe."

Memoranda from the AFGE's legal and research departments in June and December 1976 suggest that the military "locals" should voluntarily agree to restrain their activity and should only become involved in "noncombat" matters. Strike action options are to be renounced and representation termi-

nated in time of war.

Generally, AFGE, a non-militant, relatively conservative union, intends to limit its activities to "playing a positive role and assisting management by identifying sources of friction before they become larger problems and by improving the attractiveness of the all-volunteer force."

While these views may appear reasonable, AFGE's reasons for wishing to organize military personnel are suspect. According to the AFGE National Secretary, Nicholas J. Nolan, "What is important to the government and to our own status within the labor movement is that we have this weapon in the holster."

AFGE National Vice President Allen H. Kaplan has further stated, "We now have a professional army. It is subject to very little * *. The rank and file in the milicontrol * tary have their associations which are quite broad and quite extensive, but they weak * * *. The Congress have very The Congress have very little check on what happens in the military."

From these statements of the AFGE leadership it is implied that the AFL-CIO may be seeking to usurp control of the military which rightfully belongs to the President and

Congress

On January 18, 1977, Senator Thurmond, with 34 co-sponsors, introduced Senate Bill 274 which would prohibit unionization of the armed forces. S. 274 would provide criminal sanctions against both those in uniform and civilians who attempt to unionize the military

In introducing the Bill, Senator Thurmond

"For the President, as Commander-in-Chief, and the Congress to share civilian control of the military with union bosses would make the beginning of the end of a sound defense force in this Country. We cannot permit this Our nation cannot afford to put service personnel in the position of deciding whether their first allegiance is to the union boss or to their commanders and Country."

However, within the Administration support for the AFGE and AFL-CIO attempts to gain unionization of the two million members of the U.S. armed services may be provided by Secretary of Labor Ray Marshall who during his Senate confirmation hearings stated his support for military unionization.

BUYING OF ELECTIONS

HON. JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. ERLENBORN. Mr. Chairman, today I am introducing a bill to ban all special interest group contributions from Federal election campaigns.

The reason for such a measure is ob-

vious: the American public now believes that Congressmen are for sale: that Capitol Hill is a playground for special interest groups. It is hard to refute this when more than \$22 million in special interest contributions flowed into congressional campaigns last year. It is difficult to say with a straight face that this money was not meant to buy influence when most of it went to incumbents and most special interest groups targeted their money to Members of House or Senate committees handling legislation affecting them.

I am not alone in believing that this practice crowds out the voter and individual campaign contributor in the election of our national legislators. President Carter has proposed that the present system be changed; so has Common Cause. However, both of them have proposed public financing, which as we saw from the Presidential election last year. is an imperfect solution at best.

The most flagrant flaw is that public financing did not eliminate special interest contributions. The National Journal recently reported that the Carter ticket spent its full allotment of \$21.8 million. but labor kicked in at least another \$8.5 million in exempted campaign activity. Spending for the Ford ticket was no different.

I have two other objections to public financing. One involves the kindred principles of political and religious freedom. Just as we do not use Government funds to support religious philosophies, so too should we not support political philosophies with taxes.

Make no mistake about it, public financing last year did have the effect of frustrating third party candidates and perpetuating the two-party system. As the Chicago Tribune pointed out recently, the public financing provisions of 1974 had the effect of writing into law the two-party political tradition.

Sure, this problem could be remedied by making it easier to obtain the funds, but then we will have a huge number of nonserious candidates taking advantage of the law to promote their issues. I, for one, am not interested in requiring the taxpayers to subsidize the Save the Snail Darter Candidate for President, for example.

There are no such problems in my bill. It would encourage people to participate in the political process as individuals and eliminate bulk-rate influence buying of

Therefore, I urge my colleagues to give this measure serious consideration as a viable alternative to public financing.

WHY TAX RATE REDUCTIONS HIS-TORICALLY LEAD TO INCREASES IN TAX REVENUE

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. KEMP. Mr. Speaker, Andrew Mellon is considered by many to be the greatest Secretary of the Treasury the United States has ever had. His greatest accomplishment was passage of a substantial tax rate reduction following World War I. He argued that high rates of taxation do not produce increased revenues, but simply increase the incentive for leisure or to find tax shelters. Consequently, a reduction of high marginal tax rates will actually lead to an increase in the tax base, and therefore tax revenues.

In the following extract from his book, "Taxation: The People's Business," Mellon explains the reasons why tax rate reduction leads to increased tax revenues—which is exactly what happened in the 1920's, and again in the 1960's when President Kennedy did the same thing:

TAXATION: THE PEOPLE'S BUSINESS FUNDAMENTAL PRINCIPLES

The problem of the Government is to fix which will bring in a maximum amount of revenue to the Treasury and at the same time bear not too heavily on the taxpayer or on business enterprise. A sound tax policy must take into consideration three factors. It must produce sufficient revenue for the Government; it must lessen, so far as possible, the burden of taxation on those least able to bear it; and it must also remove those influences which might retard the continued steady development of business and industry on which, in the last analysis, so much of our prosperity depends. Furthermore, a permanent tax system should be designed not merely for one or two years nor for the effect it may have on any given class of taxpavers, but should be worked out with regard to conditions over a long period and with a view to its ultimate effect on the prosperity of the country as a whole.

These are the principles on which the Treasury's tax policy is based, and any revision of taxes which ignores these fundamental principles will prove merely a makeshift and must eventually be replaced by a system based on economic, rather than political, considerations.

There is no reason why the question of taxation should not be approached from a non-partisan and business viewpoint. In recent years, in any discussion of tax revision, the question which has caused most controversy is the proposed reduction of the surtaxes. Yet recommendations for such reduchave not been confined to either Republican or Democratic administrations. My own recommendations on this subject were in line with similar ones made by Secretaries Houston and Glass, both of whom served under a Democratic President. Tax revision should never be made the football either of partisan or class politics but should be worked out by those who have made a careful study of the subject in its larger aspects and are prepared to recommend the course which, in the end, will prove for the country's best interest.

I have never viewed taxation as a means of rewarding one class of taxpayers or punishing another. If such a point of view ever controls our public policy, the traditions of freedom, justice and equality of opportunity, which are the distinguishing characteristics of our American civilization, will have disappeared and in their place we shall have class legislation with all its attendant evils. The man who seeks to perpetuate prejudice and class hatred is doing America an ill service. In attempting to promote or to defeat legislation by arraying one class of taxpayers against another, he shows a complete mis-

conception of those principles of equality on which the country was founded. Any man of energy and initiative in this country can get what he wants out of life. But when that initiative is crippled by legislation or by a tax system which denies him the right to receive a reasonable share of his earnings, then he will no longer exert himself and the country will be deprived of the energy on which its continued greatness depends.

This condition has already begun to make itself felt as a result of the present unsound basis of taxation. The existing tax system is an inheritance from the war. During that time the highest taxes ever levied by any country were borne uncomplainingly by the American people for the purpose of defraying unusual and ever-increasing expenses incident to the successful conduct of a great war. Normal tax rates were increased a system of surtaxes was evolved in order to make the man of large income pay more proportionately than the smaller taxpayer. If he had twice as much income, he paid not twice, but three or four times as much tax. For a short time the surtaxes yielded a large revenue. But since the close of the war people have come to look upon them as a business expense and have treated them accordingly by avoiding payment as much as possible. The history of taxation shows that taxes which are inherently excessive are not paid. The high rates inevitably put pressure upon the taxpayer to withdraw his capital from productive business and invest it in tax-exempt securities or to find other lawful methods of avoiding the realization of taxable income. The result is that the sources of taxation are drying up; wealth is failing to carry its share of the tax burden; and capital is being diverted into channels which yield neither revenue to the Government nor profit to the people.

Before the period of the war, taxes as high as those now in effect would have been thought fantastic and impossible of payment. As a result of the patriotic desire of the people to contribute to the limit to the successful prosecution of the war, high taxes were assessed and ungrudgingly paid. Upon the conclusion of peace and the gradual removal of war-time conditions of business, the opportunity is presented to Congress to make the tax structure of the United States conform more closely to normal conditions and to remove the inequalities in that strucwhich directly injure our prosperity and cause strains upon our economic fabric. There is no question of the fact that if the country is to go forward in the future as it has in the past, we must make sure that all

retarding influences are removed. Adam Smith, in his great work, "Wealth of Nations," laid down as the first maxim of taxation that "The subjects of every state ought to contribute toward the support of the Government, as nearly as possible, in proportion to their respective abilities," and in his fourth and last maxim, that tax ought to be so contrived as both to take out and to keep out of the pockets of the people as little as possible over and above what it brings into the public treasury of the state," citing as one of the ways by which this last maxim is violated a tax which "may obstruct the industry of the people, and discourage them from applying to certain branches of business which might give maintenance and employment to great multitudes. . . . While it obliges the people to pay, it may thus diminish, or perhaps destroy, some of the funds, which might enable them

more easily to do so."

The further experience of one hundred and fifty years since this was written has emphasized the truth of these maxims, but those who argue against a reduction of surtaxes to more nearly peace-time figures cite

only the first maxim, and ignore the fourth. The principle that a man should pay taxes in accordance with his "ability to pay" is sound but, like all other general statements, has its practical limitations and qualifications, and when, as a result of an excessive or unsound basis of taxation, it becomes evident that the source of taxation is drying up and wealth is being diverted into unproductive channels, yielding neither revenue to the Government nor profit to the people then it is time to readjust our basis of taxation upon sound principles.

It seems difficult for some to understand that high rates of taxation do not necessarily mean large revenue to the Government, and that more revenue may often be obtained by lower rates. There was an old saying that a railroad freight rate should be "what the traffic will bear"; that is, the highest rate at which the largest quantity of freight would move. The same rule applies to all private businesses. If a price is fixed too high, sales drop off and with them profits; if a price is fixed too low, sales may increase, but again profits decline. The most outstanding recent example of this principle is the sales policy of the Ford Motor Car Company. Does anyone question that Mr. Ford has made more money by reducing the price of his car and increasing his sales than he would have made by maintaining a high price and a greater profit per car, but selling less cars? The Government is just a business, and can and should be run on business principles.

Experience has shown that the present high rates of surtax are bringing in each year progressively less revenue to the Government. This means that the price is too high to the large taxpayer and he is avoiding a taxable income by the many ways which are available to him. What rates will bring in the largest revenue to the Government experience has not yet developed, but it is estimated that by cutting the surtaxes in half, the Government, when the full effect of the reduction is felt, will receive more revenue from the owners of large incomes at the lower rates of tax than it would have received at the higher rates. This is simply an application of the same business principle referred to above, just as Mr. Ford makes more money out of pricing his cars at \$380 than at \$3,000.

Looking at the subject, therefore, solely from the standpoint of Government revenues, lower surtax rates are essential. If we consider, however, the far more important subject of the effect of the present high surtax rates on the development and prosperity of our country, then the necessity for a change is more apparent. The most noteworthy characteristic of the American people is their initiative. It is this spirit which has developed America, and it was the same spirit in our soldiers which made our armies successful abroad. If the spirit of business adventure is killed, this country will cease to hold the foremost position in the world. And yet it is this very spirit which excessive surtaxes are now destroying. Any one at all in touch with affairs knows of his own knowledge of buildings which have not been built, of businesses which have not been started. and of new projects which have been abandoned, all for the one reason-high surtaxes. If failure attends, the loss is borne exclusively by the adventurer, but if success ensues, the Government takes more than half of the profits. People argue the risk is not worth the return.

With the open invitation to all men who have wealth to be relieved from taxation by the simple expedient of investing in the more than \$12,000,000,000 of tax-exempt securities now available, and which would be unaffected by any Constitutional amendment, the rich need not pay taxes. We violate Adam Smith's first maxim. Where these high surtaxes do

bear, is not on the man who has acquired and holds available wealth, but on the man who, through his own initiative, is making wealth. The idle man is relieved; the producer is penalized. We violate the fourth maxim. We do not reach the people in proportion to their ability to pay and we destroy the initiative which produces the wealth in which the whole country should share, and which is the source of revenue to the Government.

In considering any reduction the Government must always be assured that taxes will not be so far reduced as to deprive the Treasury of sufficient revenue with which properly to run its business with the manifold activities now a part of the Federal Government and to take care of the public debt. Tax reduction must come out of surplus revenue. In determining the amount of surplus available these factors control: the revenue remaining the same, an increase in expenditures reduces the surplus, and expenditures remaining the same, anything which reduces the revenue reduces the surplus. The reaction, therefore, of the authorization of extraordinary or unsound expenditures is twofold—it serves, first, to raise the expenditures and so narrow the margin of available surplus; and, second, to decrease further or obliterate entirely this margin by a reduction of the Treasury's revenues through the disturbance of general business, which is promptly reflected in the country's income. On the other hand, a decrease of taxes causes an inspiration to trade and commerce which increases the prosperity of the country so that the revenues of the Government, even on a lower basis of tax, are increased. Taxation can be reduced to a point apparently in excess of the estimated surplus, cause by the cumulative effect of such reduction, expenses remaining the same, a greater revenue is obtained.

High taxation, even if levied upon an economic basis, affects the prosperity of the country, because in its ultimate analysis the burden of all taxes rests only in part upon the individual or property taxed. It is largely borne by the ultimate consumer. High taxation means a high price level and high cost of living. A reduction in taxes, therefore, results not only in an immediate saving to the individual or property directly affected, but an ultimate saving to all people in the country. It can safely be said, that a reduction in the income tax reduces expenses not only of the income taxpayers but of the entire 110,000,000 people in the United States. It is for this basic reason that the present question of tax reform is not how much each individual taxpayer reduces his direct contribution, although this, of course, is a powerful influence upon the individual affected; the real problem to determine is what plan results in the least burden to the people and the most revenue to the Government.

FEDERAL WATER POLLUTION CONTROL ACT AND SEAFOOD PROCESSORS

HON. LES AuCOIN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. Aucoin. Mr. Speaker, yesterday I joined in a colloquy with my distinguished colleagues from Minnesota, Mr. Oberstar, and Alaska, Mr. Young, concerning the impact of the Federal Water Pollution Control Act on the Nation's seafood processors.

The point of the colloquy was to underscore the fact that seafood processing effluent, unlike industrial effluent, is a natural, nontoxic, organic, biodegradable material. When adequately dispersed in tidal waters these fish wastes are not harmful to marine life. In fact, some opinions hold that they are beneficial to marine life inasmuch as they add nutrients to the water and are consumed as food by fish and other organisms. For this reason, I believe fish wastes should be treated differently than industrial effluents under the law.

I also want to state for the record that some seafood processors in my district have already spent hundreds of thousands of dollars to have the required pollution control technology installed. The problems they are facing now is what to do with those fish wastes which have been collected. It is conceivable that allowing these wastes to accumulate on land will pose a far greater health hazard to the surrounding community than would allowing the release of these wastes into the marine environment. I hope that the Administrator of the Environmental Protection Agency will be sympathetic and responsive to this problem and will work closely with these companies to help them overcome the

Finally, I would like to share with my colleagues a statement on the potential effects of fish wastes on the marine environment which was prepared for me by Prof. J. J. Gonor of the School of Oceanography at Oregon State University. Professor Gonor's well-known commitment to the protection of the marine environment give his remarks added meaning and I commend them to my colleagues' attention.

STATEMENT ON THE POTENTIAL EFFECTS OF SEAFOOD PROCESSING WASTES ON ESTUARINE ENVIRONMENTS

(By J. J. Gonor)

After processing, presently unused or inedible parts of crabs, shrimp, fish and other seafoods remain as liquid and solid wastes. They are natural organic materials differing mainly in concentration from similar animal matter resulting from ecological processes such as natural deaths, feeding by predators and moiting by crustaceans. Like such naturally occurring materials, they can be assimilated into marine and estuarine ecosystems through decomposer and detrital food chain processes.

Seafood wastes become problems in marine waters when they are disposed of by being dumped in quantities which concentrate decomposing matter in poorly flushed areas faster than natural water circulation can disperse or oxygenate it. These problems could be more effectively managed by controlling the discharge quantity and method on a caseby-case basis rather than by categorically banning all seafood waste discharge regardless of local conditions.

When areas of estuaries with good tidal flushing and circulation are available, some seafood wastes could be adequately dispersed in a form appropriate for effective absorption into natural systems. Wastes could be ground and pumped into a high flow seawater waste discharge system delivering greatly diluted material by pipe to a well flushed region of the estuary. To aid dispersion, effluent pumping could be restricted to ebb tide periods. If quantities were controlled and dispersion were effective, seafood processing wastes could enter the detrital food

chain as does naturally occurring animal debris, rather than causing environmental problems. Feasibility, load limits and appropriate disposal methods would have to be determined by local conditions.

HUMAN RIGHTS IN NICARAGUA

HON. WILLIAM M. BRODHEAD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. BRODHEAD. Mr. Speaker, today the House of Representatives is debating the question of human rights in connection with major foreign policy legislation. I have recently received an English translation of the pastoral letter issued by the Bishops of Nicaragua which alleges the denial of human rights in that country. Government censorship prevented the letter from being published in Nicaragua although it was read from the pulpits of the Catholic Churches in January and February.

According to the Nicaraguan bishops, the Government of President Anastasio Somoza Debayle has denied human rights by initiating a reign of terror which includes arbitrary arrests, torture, execution without trial, and interference with the right to worship freely. An American foreign policy which supports governments that terrorize citizens and deny religious freedom cannot be justified. I bring the Nicaraguan situation to the attention of my colleagues in the hope that this Nation will use its power and influence to insure human rights for the people of this Nation and all the nations of the world. A copy of the English translation of the pastoral letter of the Bishops of Nicaragua follows:

PASTORAL LETTER

As Bishops of Nicaragua placed at the service of the People of God to teach, govern and sanctify their Church, we feel the obligation of announcing the Good News of Salvation, concretizing its message in order to renew the sense of justice in our country. The events and situations of the present time oblige our consciences as pastors to give you this message of hope and love.

Our duty of freely preaching the message of the Gospel (Ev. Nunt. no. 78) at all times and in all places is not completely fulfilled without renewing the joys and hopes of mankind.

In inviting you to live a new year more in accord with the Gospel which we announce, we wish to reflect with you on some problems which are very disturbing to Christian consciences and to citizens in general.

WE CONDEMN ALL TYPES OF VIOLENCE

The suffering of our people distresses us very much, be they urbanites or campesinos, rich or poor, civilians or military, who cry to God seeking the protection of the right to life and to the peaceful enjoyment of the fruits of their work.

Unfortunately, much of the sufferings are provoked and caused by our own Nicaraguan

brothers.

With no partisan political intentions, we present and recall here some of the many facts with the sole intention of obtaining a sincere conversion in each one and in all of us who are committed to the search for peace.

The state of terror obliges many of our campesinos to flee in desperation from their homes and farm lands in the mountains of Zelaya, Matagalpa and Las Segovias.

The arbitrary accusations and subsequent arrests because of old grudges and personal envies continue to disturb the peace.

The investigations of those under suspicion continue employing humilating and inhuman methods from tortures and rapes to executions without previous civil or military trial.

It has been verified that many villages have been practically abandoned; houses and personal belongings have been burned and the people desperate and without help have fled.

These happenings, far from bringing any justice, rather enflame passions and greatly upset the public order. They tend to make government officials consider themselves beyond the jurisdiction of the institutional laws of the nation and outside the sane principles of public order. In a word, these ministers become marginalized.

And what is worse, there looms a certain lawlessness not unlike that fostered by so called freedom movements which also stir passions, lead to personal vendettas and end up in "new lords" who take charge of government but without regard for human

We make this overall, global summary of the problem which disturbs us not with the intention of exhausting its every aspect but with the aim of promoting a serious, constructive and shared reflection. The grave moral and social consequences which actually are undermining public order urgently demand it.

As a practical result of these facts, confusion and the ills of the Nation are growing:

On the one side the accumulation of lands and riches in the hands of a few is increasing.

On the other, the powerless campesinos are deprived of their farm lands through threats and are taken advantage of because of the state of emergency.

Many crimes go unpunished, which hurts the respect for fundamental rights.

The number of prisoners who have not been presented for trial and who cannot have legal recourse is increasing.

INTERFERENCE IN THE RELIGIOUS REALM

Another violation which disturbs the exercise of the fundamental freedoms is the interference in the religious order.

In some towns of the Segovias the commandants demand special permission for each religious meeting of Catholics. In other places in the mountains of Ze-

In other places in the mountains of Zelaya and Matagalpa, the patrols have occupied the Catholic chapels, using them for barracks

Some Catholic Delegates of the Word of God have been pressured to suspend their cooperation with the missionary priests.

There are cases in which Delegates of the Word have been captured by members of the army, have been tortured and some have disappeared

Some directors of the committees of the rural communities have suffered the same fate.

HUMAN DIGNITY

All these practices and others like them, in themselves contrary to human dignity and to the fundamental rights of man, degrade civilization and are totally contrary to the plan of God. Christ's words are decisive: "What you did with one of these the least of my brothers, you did to me." (Mt. 25:40)

Let us reflect: whom does this situation of terror and unjust extermination benefit?

Do we perhaps wish to usurp God's right and make ourselves the lords of life and death?

Can the mere personal convenience of a few be the criterion for harassing one's neighbor? Can violence be the remedy or the path for a renewing change of our institutions?

"To take away life, is to take away peace."
To violate rights and the constitutional laws of the Nation is to provoke institutional disorder.

To destroy man unjustly is to tempt God.

CHRISTIAN HOPE

Christian faith constantly demands a change of attitudes, conversion in subjection to God's laws and a better co-existence with our neighbor. "The time has come. The Kingdom of God is close at hand. Repent and believe the Good News." (Mark 1:15)

We all want to earn a living and our daily bread without disturbance from repressive forces. We don't want to feel ourselves fenced in; we want to feel ourselves free to serve God and our neighbor with love and dedication.

It is true that while we live on earth we cannot fully realize a life of justice and love; but at least let us lay the fundamental bases, so that in respect and mutual esteem we can build a working country, and try to carry out the Christian task of living in love without destructive hatreds.

CONCLUSION

The prospect of a new year invites us to review seriously our deeds and our present social order, which are fruits of the attitudes of our consciences.

Peace is born in the intimacy of our conscience. Pope Paul VI tells us in his call to peace for the year 1977, "If you desire peace, defend life." As Christians, as citizens, we have the unescapable obligation to seek this peace, building it up out of the depths of our hearts.

We sum up this call to the conscience of all Nicaraguans and to our governmental authorities in three petitions. Concretely we ask for:

 Guarantees of life and of work and a return of civil rights.

Proper trials for common crimes as well as for so-called political crimes.

Freedom to promote a more just and equitable order.

These, we emphasize, can only be had where there is freedom of expression and religious freedom.

To all we impart our blessing in the words of the Apostle St. Peter, "There is no need to be afraid or to worry about them. Simply reverence the Lord Christ in your hearts, and always have your answer ready for people who ask you the reason for the hope that you all have." (1 Peter 3:14-15)

Given in Managua on the eighth day of January in the year of the Lord 1977.

Signed by Manuel Salazar E., Bishop of Leon & President of Episcopal Conference; Salvador Schlaefer B., Bishop of Vicariate of Bluefields & Vice President, Episcopal Conference; Leovigildo Lopez F., Bishop of Granada; Miguel Obando Bravo, Archbishop of Managua; Julian L. Barni S., Bishop of Matagalpa; Pablo A. Vega, Bishop—Prelate of Julgalpa; and Clemente Carranza L., Bishop of Esteli & Secretary of Episcopal Conference.

IN TRIBUTE TO JESS NEVAREZ

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. ANDERSON of California. Mr. Speaker, it is not often that a man, through his inherent generosity and goodness of nature, leaves a mark on his community that will last as long as his memory in the hearts of his family and

friends. Jess Nevarez of Gardena, Calif., was such a man, and on April 23, 1977, the city and people of Gardena will hold a memorial dance in his honor.

Jess Nevarez would have been pleased. He was a person who enjoyed life to the fullest, who rejoiced in the company of the people whom he loved. A dance is truly a fitting memorial to him, because he was at his happiest when bringing joy and comfort to others.

Born in El Paso, Tex., on December 26, 1920, Jess lived with his family in Texas, Mexico, and Los Angeles, before becoming a resident of Gardena over 40 years ago. After his graduation from Gardena High School, Jess joined the Army Medical Corps in 1942, receiving his discharge from the service in 1946. Soon afterward he opened his own dental laboratory in Gardena, which he operated for 27 years until shortly before his passing this January.

As an active, involved citizen whose heart went out to help others, Jess was without a peer. He was an active parishioner at Saint Anthony's Church, and it was through his efforts that a weekly Spanish language mass at the church was initiated. In addition, he was the first president of the Guadalupano Child; and was an active member of the Knights of Columbus.

Jess became active in organizations with the full intent of performing some task for the benefit of others. Once an Indian reservation was in desperate need of water. As a member of the American Legion Post 187, Jess raised the money to drill a new well to meet the Indians' daily needs.

One of the activities that Jess was especially devoted to was the Gardena Sister City program. When the city of Huatabampo, Mexico, was hit by a disastrous hurricane last year, the people of Gardena collected the supplies needed to aid their strickened sister city. Despite poor health, Jess Nevarez helped deliver the provisions to the city almost 2,000 miles to the south. On his return, he found his place of business destroyed by fire

Despite that, and his increasingly poor health, Jess continued to help gather supplies for another trip to Huatabampo, a trip he was destined never to make. Shortly after being admitted to the hospital for a series of tests, Jess Nevarez suffered a heart attack and passed away last January.

Jess Nevarez was a man of unfailing good humor and cheerfulness. He enjoyed riding a motorcycle cross country, and was planning to take a trip through Baja California in the near future. Those whose lives he touched will remember not only his community activities, but the thousands of acts of kindness that he performed daily to help his neighbors.

My wife, Lee, joins me in expressing our most sincere condolences to Jess' lovely wife, Millie, and their children, Christine Mallet and Charles. They are fortunate indeed to have known this great man more than anyone else, and for having shared their lives together over the years. The warm, fond memories he left behind will be cherished by many through the years ahead.

VETERAN BENEFITS FOR INDIVID-UALS WHO SERVED IN CIVILIAN CAPACITY IN THE ARMED FORCES

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. TEAGUE. Mr. Speaker, there is currently pending before the Veteran's Affairs Committee a series of bills, H.R. 3277, 3321, 5087, 5171, 5211, 5666, and 5718 which seek to provide veterans status for women who served in the Women's Air Force Service Pilots-WASPS-in World War II. These are very important bills, and the subject matter deserves the most careful scrutiny before the Congress acts upon any one of these proposals. It has a long, interesting history; and if legislation of this type should be enacted, it would, in my judgment, be a mistake and one which would inevitably create a precedent for use of groups and organizations which might not have such a list of prestigious sponsors as the WASPS proposal.

The most recent activity in this field occurred when the substance of the proposal was included as an amendment to H.R. 71, 94th Congress, a bill which dealt with providing health care for certain groups allied with the United States during periods of war. The WASP bill was not considered by any committee of the other body, but was added as an amendment to this bill by the senior Senator from Arizona on the Senate floor. At that time, the chairman of the Veterans' Affairs Committee, the gentleman from Texas, the Honorable Ray ROBERTS, and the ranking minority member, the gentleman from Arkansas, the Honorable John Paul Hammerschmidt, advised the Senator that if a bill incorporating the provisions of this amendment is introduced in the next Congress-95th-appropriate agency reports will be obtained and the subcommittee with jurisdiction would hold hearings. The chairman of the Committee on Veterans' Affairs advises me that agency reports are being requested from the Veterans' Administration, the Department of Defense, and the Department of Labor.

Now a little bit of history-

The rapid military and industrial mobilization during the early days of World War II placed considerable strain on all available manpower resources. Naturally, one of the areas affected by this mobilization was aircraft pilots. In order to ease the strain of this shortage, the Women's Auxiliary Flying Squadron-WAFS, and later the Women's Air Force Service Pilots-WASPS-were established. They were activated in 1942. The WASPS were civil service appointees and they received \$150 a month for maintenance and after assignment, \$250 per month. After student status in ungraded positions, they received the amount I have indicated, \$250 per month plus \$36.25 overtime based on a 48-hour workweek. In contrast it should be pointed out that a private in the Army in 1942 received a base pay of \$50 per month. In the early days of World War II, sergeants assigned to the Air Force were pilots before the concept of having officer pilots only was established. A staff sergeant in 1942 received \$110 per month and a second lieutenant received \$150 per month.

They-WASPS-were civil servants with war service appointments subject to the National Retirement Act and Civil Service leave regulations. They paid for their own housing and food at \$1.65 per day. They wore clothing which had been issued to them and later were issued a type of dress uniform. They were supervised by civil service establishment officers. They had a right to resign at any time, and most important of all, it should be noted that they were not subject to any form of military discipline. They were not subject to normal military command. As civil servants, they were not entitled to medical care at an Army installation.

The WASP program was deactivated on December 20, 1944. The military situation in Europe had changed substantially with the successful invasion of Normandy. With the slakening of demand for pilots, it was agreed that there would be no specific justification for a training program for women noncombatants. Arrangements were made with the Civil Aeronautics Administration to recognize flying experience of WASPS in the issuance of commercial pilots licenses. In 1948, the Air Force offered all former WASPS who met tstandards and qualifications commissions in the Air Force or the Air Force Reserve in a nonflying status. However, such WASPS service did not count toward either reserve or regular retirement. An unknown number of former WASP pilots availed themselves of this opportunity.

In early 1944 a proposal to militarize the WASPS was introduced in the House and was favorably reported by the then Military Affairs Committee. The Appropriations Committee report referred to the belief of their subcommittee that the WASPS should be militarized. Despite this favorable action, the bill failed of passage. The House report on H.R. 4219. 78th Congress, March 22, 1944, stated:

In recognition of these principles, the Army Air Forces now employ as Federal civilservice employees over 500 women pilots. These women are engaged in piloting all types of aircraft within the continental limits of the United States.

It should be pointed out that those individuals who were injured on duty were not eligible for service-connected compensation from the Veterans' Administration, nor were they eligible for retirement based on disability but rather were compensated as other civilian employees of the Federal Government are today and always have been by the office of workers' compensation program. formerly known as the Bureau of Employees' Compensation, Department of Labor, a civilian agency.

Mr. Speaker, there are many individuals and groups of individuals, all classified as civilians, who over the years from at least the time of the Spanish-American War down to and including World War II have made claims for veterans' benefits and felt that they were entitled to consideration on the part of Congress

to amend existing veterans' laws. In the 75th Congress, the Committee on Pensions compiled a list of individuals who had asked for veterans' status which included:

Civil War. Civil War Slaves. Military Telegraph Corps. State Troops. Missouri Militia. Montell Guards. Confederate Veterans.

Indian Wars.

Packers, teamsters, surgeons, and civilian scouts.

Deputy Marshals. Scouting Service. Indian Scouts.

Spanish War, Nurses, male, Surgeons, assistant and contract. Veterinarians, contract. Teamsters.

World War I

American Red Cross.

American Secret Service, State Department, Treasury, women citizens and welfare workers.

Adjutants general, United States Property and disbursing officers' service.

Civilian clerks, Engineer Department. Civilian employees as defined by War Department.

Civilian employees and contract surgeons. Secretaries, dieticians, bacteriologists. Customs Intelligence Bureau, Port of New

Draft Board, appointment under Selective Service Law.

Draftees, induction not completed prior to Nov. 30, 1918.

Engineer field clerks.

Employees, Engineer Department. Field clerks.

Enlisted men accepted and assigned to educational institutions.

Merchant Marine, U.S. Shipping Board vessels in war zone.

Midshipmen and cadets. Nurses, student, Army.

Nurses, students, and reconstruction aides. Postal Service employees of American Expeditionary Forces in Europe and Asia. Russian Railway Service.

Signal clerks at large, service overseas in Signal service and Air service. Telephone operators, Signal Corps.

Training Corps, Students, Army. Warrant officers. Women who served with American Expedi-

tionary Forces. Women who served in base hospitals.

Since, the 75th Congress suggestions have been made to include:

Aviation Midshipmen. Merchant Marine Service. Civil Defense Workers.

Civilians serving aboard troop ships operated by U.S. Army.

Army Indian Scouts. Russian Railway Service Corps. Draftsmen and Clerks, Engineer Corps. Auditors of War Department.

Contract Nurses with Army Contract Medical or Dental Personnel Serving with Armed Forces.

State Guards During WW II. The American Field Service. Accredited War Correspondents. Civilian Engineers, Department of the

Army. Students, Army Training Corps, WW I. Civilian employees engaged in and about the construction of the Panama Canal.

Red Cross ambulance drivers Persons who served on the U.S. Revenue Service in the Arctic-1898.

Security Patrol Force of Guam-WW II. Telephone Operators—WW I.

its significance.

Teamsters in Spanish-American War and

Individuals who served in the Army but who were placed on agricultural furloughs, Coast Guard Reserve.

Others, I am sure, could be added to this rather lengthy list.

I want to close these remarks by pointing out that this is not a simple question. It is not a matter which should be considered favorably or not favorable because all of those involved happen to be women. It should be considered on the basis of logic and the facts, which in my judgment would indicate it not be approved because the individuals, WASPS, were not in the military and not under military discipline. If we ever depart from this basic rule which has been the hallmark of veterans' benefits, then I submit that there will be no logical stopping place, and we will degrade the meaning of military service and reduce

I would not be among those who do not appreciate the service of the WASPS during World War II, nor would I in any way want to criticize the merchant seamen who risked their lives to get men and cargo to distant places in World War II. I would not in any way criticize the role of the thousands of members of the American Red Cross who did yeoman service in World War I and II in serving with our troops, nor would I in any way want to do anything but praise the role of the entertainment world which performed for our troops at various Army and Navy stateside installations, nor the thousands of topflight performers who gave shows on or near the battlefield in order to maintain the morale of our fighting forces. But these individuals were individuals, like the WASPS, serving the Government and their Nation on a patriotic basis. They were not subject to military discipline, which meant they could come and go as they pleased. In most instances they received far more rights, rewards, salary, and other benefits than individuals who were serving in the Army or Navy in the enlisted status or on the officers level. I applaud them all and others that I cannot mention at this time. But if we let down the standards for the WASPS, we must in equity do the same for all who serve on a similar basis. For these and other reasons, I am opposed to the favorable considera-

tion of this legislation. Mr. Speaker, it should be noted that some who served in the Women's Air Force Service Pilots—WASPS—in World War II do not support legislation to grant veterans benefits for such service. I recently received a copy of a letter with attachments from Ms. Virginia F. Wise, of Tallahassee, Fla., which was sent to the distinguished senior Senator from Arizona, the Honorable BARRY GOLD-WATER, with reference to pending bills in the House and Senate. I think the feelings expressed by Ms. Wise are similar to those of hundreds of thousands of dedicated Americans who served their country during World War II in a civilian capacity:

TALLAHASSEE, FLA., March 16, 1977.

Re Senate Bill S. 247; House Bills H.R. 3321 and H.R. 3277.

DEAR SENATOR GOLDWATER: At the risk of losing valued friendships, I feel I must con-

vey to you my feelings on the militarization of the WASP.

So as not to repeat myself. I am enclosing copies of correspondence forwarded to our President and another WASP active in promoting this.

I sincerely feel, I must put my country's economic security above personal security or recognition and hope you will try to understand my position.

Respectfully,

VIRGINIA F. WISE.

TALLAHASSEE, FLA. March 10, 1977.

Mrs. Frankie Bretherick. Sarasota, Fla.

DEAR FRANKIE: I appreciate hearing from ou about the Senate Bill S. 247 and about Pappy Boyington's show about the WASP. I can readily see you are quite concerned about getting the G.I. benefits for us.

I too, am quite concerned but it's along other lines. First, President Carter has just added another 20 billion dollars to an already deficit 1977 budget. Having been an independent business woman for 20 years, I can truthfully say, "that's no way to run a show!"

Secondly, and most important, I am grateful to my fellow countrymen for the very unique and rare opportunity to receive such a wonderful experience as the WASP, that I do not have the heart to add to their already unreal tax load. And, down deep in my heart I cannot believe that is the path to our desired recognition. Pappy Boyington did more for us in one hour than any government handout ever could. I agree with my classmate (encl.) we are indeed a unique group so why can't we turn the tide in this country and retract our outstretched hands. It might stun many people into facing reality and truly give us recognition.

Perhaps those of us who don't look upon this move with pride is the reason for your lack of response.

If there are any of our group in need what a wonderful opportunity for us to be truly Christians and to give instead of receive.

Please don't feel badly with me. I just happen to have an opposite view.

Yours very sincerely,

VIRGINIA F. WISE, Realtor.

However, before I fall asleep, I do wish the Waspies would shape up & retract their outstretched hands. Think how they could revolutionize the country—setting an example of "we don't want anything from the govt." Guess I don't understand the problem. Maybe if they are seeking only recognition & hospitalization, they should state their case more positively as to what they don't want. Other benefits whatever they might be. After all there was a whale of difference between being stuck in the Service & being able to quit whenever you wanted.

Oh well that's heretical, but as I say I guess I don't understand the problem. Yesterday was yesterday & today is today. Why are we fighting yesterday's grievances? I don't remember being shot at or tramping in anything but Texas mud.

Enuff—happy real estating.

May Florida get warm & Washington get

A. B.

TAX CREDIT FOR VIETNAM COMBAT VETERANS

HON. WILLIAM F. WALSH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. WALSH. Mr. Speaker, I would like to express my support for a bill to be

introduced in the House which would grant a \$1,000 tax credit over a 3-year period to those men who served in a combat zone during the Vietnam era and received an honorable discharge.

I already have joined with my colleagues who have denounced the administration's plan to upgrade bad conduct military discharges received during the Vietnam era, and I continue to feel the move is a grave insult and a great disservice to those men who served our country honorably and as decreed by the armed services, often at great personal expense.

The blanket criteria set up by President Carter makes upgrading of the discharge virtually automatic rather than setting up a comprehensive review of each case individually, and that means few discharges will remain in a category that is less than honorable. That also will open the door for those who either refused to serve their country or carried out their duty under less than minimal standards to claim veteran's benefits that are paid by the hard-earned money of American taxpayers. I feel this is morally wrong, especially when, as a Nation, we are hard-pressed to meet the needs of many causes which are more deserving.

The taxpayers of this country should not be required to pay up to \$1 billion in veteran's benefits to men who either refused to serve or left the defense of their country under less than honorable circumstances. We owe them no debt for not performing what was required or expected of them.

I join in support of this bill, because it excludes veterans whose discharges are upgraded under the Carter plan and because it is an expression of the gratitude the American people feel to those men who carried out their duties in Vietnam.

TRIBUTE TO RICHARD J. NEUTRA

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. WAXMAN. Mr. Speaker, I have the privilege to bring to your attention the honoring of a distinguished former resident of my district, Richard J. Neutra, who has been selected to receive the highest honor which can be bestowed by the American Institute of Architects: its Gold Medal.

This medal, awarded only 38 times during the 71 years since its first presentation has been received only twice before by Californians, both from San Francisco. The Gold Medal is an international award presented only when the institute identifies an exceptional candidate. Last presented in 1972, this year's award will mark the first time this honor has gone to a southern California architect in the history of the American Institute of Architects. The medal will be presented during the AIA annual convention in San Diego in June, and will be received on behalf of his father by Dion Neutra, architect, who began his long association with his father in the early 1940's and continues the firm known as Richard and Dion Neutra Architects and Associates which celebrated its 50th year of practice in 1976.

Richard Neutra, who died in 1970 at the age of 78, gained a worldwide reputation as one of the developers of "California style." One of the first architects to make a conscious application of the findings of biology and the behavioral sciences to the design of human environments, he was also a pioneer in the use of modern industrialized building materials and techniques. His work has had a profound effect on architectural thinking for the past 50 years and his timeless buildings testify to the enduring significance of his achievement.

Born in Austria, Neutra grew to maturity in the lively cultural atmosphere of early 20th century Vienna. One of his earliest mentors was architect Adolf Loos, whose rejection of the highly ornamented beaux arts style laid the groundwork for Neutra's characteristic clarity and simplicity of form.

Neutra came to the United States in 1923, worked briefly in New York and in Chicago, and in 1924 went to Taliesin where he studied and worked with Frank Lloyd Wright.

In 1925 he settled in southern California which had long attracted him because of its widely diversified climate and range of natural environment which provided the setting and the inspiration for much of his work.

His spectacular "health house" constructed in 1929, brought him immediate international recognition. With its revolutionary steel frame construction and use of prefabricated elements, this "floating house" on its steep hillside established his reputation as an innovative architect and was the first of the numerous private residences in which he developed and refined his philosophy of "nature near" design.

Like its successors, this glass and steel house reflects his overriding concern with the creation of environments encompassing human needs in balance with natural surroundings.

During the 1930's Neutra became firmly established as a designer of residences, most of them in California. Not all were luxurious dwellings for wealthy clients. Many of the houses were completed on minimal budgets; yet in each he devoted great care to understanding the lifestyles and individual needs of the families for whom he built.

Also during this decade Neutra began to design apartments and multiple housing projects. Among the most significant of these was Channel Heights, a Federal public housing project completed in 1942. This was the first project in which his son Dion, just completing high school, engaged in a meaningful way, acting as a field draftsman supporting the construction process.

Notable among the Neutra works of the 1940's was the "desert house" in Palm Springs. Here the architects created a remarkable oasis that protects its inhab-

is fully open to its natural setting.

Throughout their half century of practice, the Neutras designed a wide range of building types, from the homes and schools by which they first became known, to office buildings, churches, clinics, libraries, college facilities, and museums.

Many of their major works were designed for public clients: The U.S. Embassy in Karachi, Pakistan: The Lincoln Memorial in Gettysburg, Pa.: The Los Angeles County Hall of Records, and Orange County Courthouse are outstanding examples.

As a consultant to the government of Puerto Rico, Neutra designed extensive systems of schools and health facilities for the entire island. This commission led to further work in the field of design for tropical climates, suited to the economic constraints faced by developing countries.

Perhaps the most prolific writer among contemporary architects, Neutra was the author of numerous articles and several influential books on his philosophy of design. These include: "How America Builds," 1927; "New Buildings in the World," 1930; 'Architecture of Social Concern," 1948; "Mystery and Realities of the Site," 1951; "Survival Through Design," 1945; "Life and Human Habitat," 1957; "Realismo Biologico," 1958; "World and Dwelling," 1962, and an autobiography, "Life and Shape,"

His wife Dione, who worked closely with him throughout his career, is presently preparing a biography based on their correspondence.

Neutra pioneered in attempting to find more secure-and even scientificbasis for design decisions.

Neutra's concern with Earth's limited resources and the danger of Man's ever increasing technology without due regard for natural limits has accompanied his writing and thinking almost from the beginning. He was a true pioneer in the "ecology movement."

Neutra's own view of the role and task of the modern architect illustrates the abiding concern for human beings that gives his architecture its continuing impact. He wrote:

The architect is by his professional tradition a coordinator, a "charmer of special-ists." By intuition he has felt himself on occasion into other human beings. In future he will cultivate this skill and be helped in it by the increasing amount of current research

The future architect may emerge from being the assemblyman of well-advertised material novelties, from being a mechanistic constructivist. He must enthusiastically become an "applied physiologist," a "biological realist," full of sympathy for man, whom he endeavors to recognize in his indivisible individuality, in his wonderful organic responses and life processes, all fused with one another.

It gives me great pleasure to ask the Members to share in honoring this man who has contributed so greatly to our country's culture.

itants from the harsh desert climate yet HON. JOHN M. MURPHY OF NEW YORK ON THE MARINE FLEET MERCHANT THE

HON. LEO C. ZEFERETTI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. ZEFERETTI. Mr. Speaker, the American merchant marine fleet and the American maritime industry have reached a crossroads in our Nation's history. What the House Merchant Marine Committee and the Congress do in the 95th Congress could very well determine the future of the U.S.-flag merchant marine and our shipbuilding industrial base.

The chairman of the Merchant Marine and Fisheries Committee, John M. MURPHY of New York, has given a series of speeches outlining a program for the House Merchant Marine Committee which many of us hope will mark a turning point in the downward spiral of the U.S.-flag fleet. In a speech on February 18, 1977, before the AFL-CIO maritime trades meeting in Miami, Fla.. Mr. Murphy outlined in great detail a part of his program to guarantee that the United States has a strong merchant marine fleet before the last half of the 20th century. I commend this speech to my colleagues and urge that they study it so that they can understand the issues involved when appropriate legislation is reported from the full Merchant Marine Committee to the House floor which will help achieve America's historic place on the high seas:

REMARKS OF THE HONORABLE JOHN M. MURPHY

Thank you, Paul, for that very kind introduction.

It is an honor for me to be with you today. I appreciate the opportunity to give you my thoughts on some subjects that vitally affect the future of us all.

I am speaking to you today not only as an old friend, but as the Chairman of the House Merchant Marine and Fisheries Committee. Because of my intense interest in the American merchant marine I worked hard to become chairman, and was gratified to have received the overwhelming support of my colleagues in the House of Representatives. And you can be sure that I will work just as hard at the job of being chairman as I did to get it.

There have been attempts in the pastand one very recent attempt—to eliminate the Merchant Marine Committee from the Congress, I vigorously fought these attempts and along with a few colleagues we have thus far been successful in staying alive.

I intend to see that that is the last time the future of this committee—and the maritime industry—is put in jeopardy. And make no mistake about it up until today these have been very real possibilities. The com-mittee survived the Bolling reform movement and the recent moves within the Democratic study group. Now the industry must overcome the Ford administration away present—an attempt to sabotage the operating differential subsidy program. With your support I was successful in stopping the efforts of those who sought the end of the Merchant Marine Committee in Congress and I am convinced that with no "Ford in our future" we can be just as effective with the Carter administration concerning the operating-differential subsidy program.

In view of the forces opposing our merchant marine industry I make this pledge

to you this morning.

I did not serve in Congress and on the Merchant Marine and Fisheries Committee for 14 years and become chairman of that committee to preside over its demise or the demise of the maritime industry. I guarantee that both will survive and thrive in the future.

But if I am to accomplish this and get done what must be done in the 95th Congress, I will need the unified support of the entire maritime industry. I am here to request your assistance on several pieces of legislation that are not only vital to the future well-being of the United States, but would also result in increased employment for American workers at a time when unemployment is at an intolerable level—

about 8 percent.

First, I will comment briefly on where we are going with respect to ocean mining. As you know, this subject is the major source of controversy before the United Nations Law of the Sea Conference. At the present time, the United States is the only nation with the technical expertise to engage in deep seabed mining. The underdeveloped nations do not have this expertise, but can and do-out-vote us at the conference. They want to control these operations through an international seabed authority which could very well lead to an international cartel similar to the organization of petroleum exporting countries. Equally disturbing to me has been the position of the Ford administration, which appeared willing to give up anything just to reach an agreement. I do not think that the recent appointment of Elliot Richardson as chairman of the American delegation indicates a continuation of such a policy by President Carter.

If it does however, I will do everything in my power to reverse the "give-away" hand that the American Government has followed in the past. At the present time there is too much uncertainty about the LOS negotiations for American companies to start deepsea mining operations, and it is no secret that I strongly favor unilateral legislation to permit United States companies to com-

mence such operations.

Are you aware that in 1973, the United States imported 82 percent of its nickel, 77 percent of its cobalt, 82 percent of its manganese, and 5 percent of its copper? If the United States were to move ahead and mine the seabed, we could become totally independent in the production of copper, nickel, and cobalt by the early 1990's, and would be importing only about a quarter of our manganese requirements.

I introduced legislation in the last Congress that would give American companies the investment climate they need to finance such operations. The bill was approved by the subcommittee, but due to pressure from the Ford administration, never got out of

the full committee.

But now it is time for the Congress to act.
While we were waiting for some action by
the Ford administration, and while the ocean
mining industry geared down because of the
uncertainty of the future, foreign competitors have been rushing to catch up with the
United States.

Congress can no longer sit back and watch this erosion of our technical lead.

We can no longer sit back and watch the State Department bargain away U.S. interWe can no longer sit idly by and watch as a secure source of minerals evaporates before our eyes. We must enact legislation that will enable the U.S. ocean mining industry to commence these vital operations with American workers,

Therefore, on February 10, 1977 I introduced a bill, H.R. 3350, that would establish an interim program to create a stable investment climate for the American ocean mining industry. The bill contains a number of technical provisions to achieve this result until—if ever—a law of the sea treaty becomes binding upon the United States. Of particular interest, however, is the fact that all vessels engaged in the transportation of these minerals to the United States would have to be U.S.-flag vessels, manned by American citizens, and my bill stipulates that all processing of recovered minerals would be performed in the United States thereby guaranteeing us from being "held up" by any international cartel—any international gang if you will—in the area of these vital minerals.

I have no doubt that this will be one of the more controversial issues to come before the Merchant Marine Committee and the 95th Congress, and I will need your strong sup-

port

Now—to move on to another important piece of controversial legislation—my amendments to the Outer Continental Shelf Act. At the suggestion of your Washington representatives, I have modified the amendment so that it will now generally require that any vessel, rig, or platform, used in the exploration, development, or production of oil and gas on the shelf must be manned by U.S. citizens. As you know, at the present time there is no such restriction, and as the American offshore business begins to accelerate, we face the possibility of being over-run with foreign operated rigs.

You may be assured that the so-called Murphy amendment will be offered again in the 95th Congress, as I continue to be of the firm belief that if we are to retrieve our own petrochemical resources in the OCS, then we should assure that the exploration occurs in such a way as to bring the maximum in benefits to our economy and to

American workers.

On this one, I could use a little more help than I received the last time such an amendment was brought up on the floor. I am hopeful that with the modification we have made, this time the amendment will be adopted.

I will now comment on the current status of the U.S.-flag merchant marine.

It is obvious that the American maritime industry is at a cross-roads. What we do in the 95th Congress—together—may very well determine the future role of the U.S.-flag merchant marine and our shipbuilding industrial base.

The maritime industry has just about been studied to death.

We all know that the fundamental problem is the lack of cargo for U.S.-flag merchant vessels.

It is time for action and I intend to get such action.

Since the enactment over 40 years ago of the Merchant Marine Act of 1936, the United States has traditionally looked to the commercial marketplace to provide the U.S.-flag merchant marine required by the military during periods of national emergency—critical times such as World War II, the Korean war, and the Vietnam war. And, of course, it looks to the commercial marketplace during peacetime to protect our legitimate economic interests as the world's greatest trading Nation.

The act of 1936 recognized that U.S.-flag merchant vessels cannot effectively compete in the commercial marketplace with lower cost foreign-flag vessels without some form of assistance. Therefore, to insure that we will have U.S.-flag vessels, the Government provides the following aids:

Construction and operating subsidies that are meant to place our merchant vessels on a rough sort of cost parity with foreign-flag

competitors:

The capital construction fund that is designed to offset, in part, the virtual tax-free

world of international shipping;

And, finally, the title XI guarantee program that is designed to assist U.S.-flag merchant vessel operators to obtain needed capital to replace and/or expand their fleets at reasonable rates of interest.

These half-way measures are no big "give-away" as our critics would have the Ameri-

can people believe.

Construction subsidy can be no more than half the vessel construction cost. Recently, it has been much lower than half; reaching a low of about 16 percent for the construction of certain LNG vessels. And operating subsidy generally covers only about 20 percent of the U.S.-flag operating costs. During the first 5 years after the Merchant Marine Act of 1970, the average annual outlay construction subsidy was about \$180 million, and the average annual outlay for operating subsidy was about \$246 million. The tax deferral provisions of the capital construction fund do not represent a cost to the Government, but can be construed as resulting in a tax loss to the Nation of about \$40 million a year. The title XI guarantee program operates at no cost to the Government, and currently has a profit of about \$88 million.

Offsetting these costs are the economic benefits which naturally result from the construction and operation of U.S.-flag merchant vessels. I refer, of course, to balance of payments benefits, increased employment, increased taxes, and the ocean transportation service that facilitates our international trade. For what they provide, the net cost of these Government programs is miniscule—a mere pittance in the overall picture. Given this limited assistance, the U.S.-

Given this limited assistance, the U.S.-flag merchant vessel operator is expected to find his own profit so as to maintain and expand his fleet that contributes so much to the well-being of the United States—both in peacetime and during times of national emergency. And it is the construction and repair of U.S.-flag merchant vessels that supports our shipbuilding industrial base so that it will be available in times of national emergency.

It's a good deal for the U.S. Government.

And it's a good deal for the American people.

The U.S.-flag operator is required to commit most of the capital required for the vessel, and then earn a profit if he can. Subsidy insures neither cargo nor profit; yet cargo is basic to staying in business, much less earning a profit.

Profit is not a dirty word.

And Government subsidy does not guarantee profit

Profit is a function of cargo. Without profit, the United States cannot maintain a merchant marine. And without the new construction generated by such profit, the United States cannot maintain an adequate shipbuilding industrial base.

For a number of reasons, the existing subsidy system and the commercial market-place have not been successful in providing for the merchant marine we require—and

the time has come to admit it.

In times of normal trading, such as now exist, the U.S.-flag merchant marine has been almost completely shut out of certain markets by means of various devices, exposed to

predatory rate practices by certain foreign-flag carriers such as the Soviets, and increasingly frustrated as the world of international free trade evolves into a world where some form of cargo reservation is rapidly becoming the rule rather than the exception. Unable to secure the cargo necessary for the profit required to replace and expand our fleet, the capability of the U.S.-flag merchant marine remains at a dangerously low level. As a result, the number of U.S.-flag merchant vessels available to the Department of Defense in a major conventional war would not be adequate, and we would be forced to rely on foreign-flag merchant vessels.

These problems directly impact on U.S. shipyards

I repeat that without cargo, there can be

no profit. Without profit, new vessels will not be constructed.

And without new construction, our shipbuilding industrial base is seriously en-

All of the capacity of the 13 large commercial shipyards now engaged in the construction of ships for the Navy and for commercial operators, with or without subsidy, would be needed to meet minimum critical requirements for a long-term war. If subsidized construction were eliminated from these yards, about five or six would be eliminated from the business of ship construction. The failure of the building program provided by the Merchant Marine Act of 1970 has resulted in five of these shipyards re-

quiring new contracts now.

Traditionally, the United States has been committed to the so-called "free trade" con-cept, according to which vessels of all nations are eligible to compete for cargoes moving in the foreign commerce of the United States. The most glaring defect in our national maritime policy since the enactment of the Merchant Marine Act of 1936 has been the failure of the United States to give recognition to the growing practice of many other nations to guarantee their flag vessels some part of their international trade. These cargo reservation measures by foreign nations generally reflect the growing worldwide philosophy that the ocean transportation of a nation's cargo is a privilege and not a right. Although these measures have rendered the "free trade" concept of international shipping increasingly less meaningful, the United States has generally adhered to this out-moded policy to the detriment of the U.S.flag merchant marine.

Therefore, even before I move the authorization bills for the Maritime Administration and the U.S. Coast Guard out of the way, I intend to commence action on legislation that would institute certain cargo reservation measures for U.S.-flag vessels to insure that we will have the merchant marine, the shipbuilding industrial base, and the skilled American personnel for both, required both in times of peace and during periods of na-

tional emergency.

The first thing I intend to do is hold hearings on legislation that would initially require 20 percent of oil imported into the United States to be carried in U.S.-flag tankers; increasing to 30 percent after 2 years. This is essentially the so-called "Energy Transportation Security Act" that was pocket-vetoed by former President Ford in what was basically a politically motivated and orchestrated move in late 1974.

As the need and desirability for this type of legislation has already been demonstrated. there is no reason why we cannot proceed to move it to President Carters desk at once. As we all know, many countries already have such oil cargo reservation measures. Swift action is required, as the Arab oil-producing

countries are actively expanding their merchant fleets, and there is every likelihood that cargo reservation measures will be instituted for these vessels.

It is bad enough being dependent upon these countries for oil.

To be dependent upon them for oil and ocean transportation would be a disaster!

Perhaps the single most important reason for the failure of the United States to maintain a fleet of U.S.-flag tankers and dry bulk vessels after World War II is the concept of "effective U.S. control" against which charges have been made characterizing it as a legal fiction. And during these hearings I intend to find out once and for all the truth about the availability of these vessels.

The doctrine of effective control is based upon contracts and agreements between the U.S. Government and the American owners of "flags of convenience" vessels. In view of the established principle of international law that allows only the country of registry to seize a vessel on the high seas, some argue the United States does not have sufficient legal authority to gain control over EUSC

vessels in an emergency.

With respect to the international law aspects of the EUSC theory, the argument that nations promoting "flags of convenience" would never exercise their right to control vessels of their registry was finally laid to rest on November 2, 1973, when President William Tolbert of Liberia issued an executive order prohibiting any vessels flying the Liberian flag from participating in the riage of arms to the Middle East, regardless of ownership.

Aside from the purely legal questions of international law, there are other practical factors that cast serious doubt on the availability of EUSC vessels in a crisis:

The physical size of many EUSC "flags of convenience" vessels is too large for all existing U.S. Atlantic and Gulf ports;

About 80 percent of the EUSC "flags of convenience" tanker fleet is employed in tanker fleet is employed in shipping vitally needed petroleum to Western Europe and Japan. Thus, in an emergency, it appears unlikely that the United States could exercise its option to withdraw very many of these tankers from this service without creating serious economic and political consequences. Further, any with-drawal of tankers from Europe could have an adverse impact on the petroleum supplies which support military and civilian needs of the European countries of the NATO Alliance; and, finally,

Although the owners of EUSC "Flags of convenience" vessels have pledged that in an emergency their vessels will revert to the U.S. flag, this concept has never been tested. Whether these ships are "effectively U.S. is a function of where they are controlled" registered, the nationality of the crew, nature and type of emergency, and their location at the time of the emergency.

In short, it has been charged the doctrine of "effective U.S. control" is pure sham. I promise you today that I will determine early on in my chairmanship if this is the

While the hearings on the oil bill are going on, I intend to pry cut of the Maritime Ad-ministration and the Department of Defense some accurate figures on the amount of dry bulk commodities moving in our foreign commerce. During the past few years, there has been a growing awareness that the United States has in many respects become a nation deficient in raw materials. of these commodities are essential to fueling the U.S. economy, particularly in times of war or other types of national emergency. In all, there are over 70 stra-tegic raw materials that must be imported

by ship. At the present time, there are only 16 active U.S.-flag dry bulk vessels, and this fleet accounts for only 1.6 percent of our trade in dry bulk commodities.

Foreign-flag merchant vessels carry over 98 percent of these strategic materials. In my judgment this is a national dis-

gracel

When the Merchant Marine Act of 1936 was originally enacted, the preponderence of our foreign trade was breakbulk cargo transportable by liner vessels. As a result, operating-differential subsidy was limited to liner vessels. Later, the nature of our foreign trade changed so that by 1970, the great preponderence of our exports and imports, in tonnage, was in bulk commodities. The Merchant Marine Act of 1970 gave belated recognition to this change in the composition of our foreign trade. The 1970 act was supposed to have provided us with dry bulk

But it has been an almost total failure in this regard.

Cargo is the name of the game, and if cargo reservation measures are required for dry bulk commodities-so be it. But as the exact configuration of the problem is not known at this time, I intend to give the Maritime Administration and the Department of Defense only a brief period of time to come up with some numbers before introducing any legislation.

That leaves U.S.-flag liner vessels to be dealt with. It is clear that the percentage of our foreign commerce transported by U.S.flag liner vessels is substantially more than that moved in U.S.-flag tankers and dry bulk vessels. However, as I mentioned, U.S.flag liner vessels are currently not adequate to meet the requirements of the military during emergencies. Some of the cargo problems adversely impacting on the orderly growth of the U.S.-flag liner fleet are again—the predatory rate practices of the Soviet Union, the growing trend of cargo reservation measures throughout the world, and the inability of the Federal Maritime Commission to effectively regulate foreignflag liner vessels operating in the foreign commerce of the United States.

Subsidy alone cannot provide cargo for U.S.-flag liner vessels if the controller of the cargo finds it desirable to institute irregular commercial practices favoring his own flag vessels. Therefore, our maritime policy should acknowledge that the traditional free enterprise approach to cargo solicita-tion used by U.S. shipping lines is ineffec-tive when confronted by foreign discriminatory practices, and encourage cargo sharing arrangements with our trading partners when necessary to ensure U.S.-flag participation in those trades. Serious consideration, therefore, should be given to a maritime policy which promotes so-called bilateralism. And I can assure you that I will be looking into this element of the overall prob-

In these remarks, I have attempted to touch on three of the major areas where the Merchant Marine and Fisheries Committee will be concentrating its efforts durour collective efforts in these areas will

not only strengthen the United States as a world power, but also result in thousands of

badly needed jobs for American workers; Jobs in shipyards which are generally located in areas of chronic unemployment;

Jobs aboard ship; and,

Countless jobs in various supporting industries that rely on the construction and operation of U.S.-flag vessels. The social and economic benefits that will naturally result from the legislative measures that I have mentioned are enormous.

The United States is a great nation be-

cause our citizens came from sterner stockpeople who had the powerful motivation to leave their lands of origin to settle in a new continent.

We are also great because we have vast

natural resources to work with.

But these resources would have been of little value without the second and third generation citizen workers to hammer out the country we have today.

You men and women here realize the significance of the action I plan to take during

the 95th Congress.

With your help, there is no way this industry and this Nation can lose.

IN TRIBUTE TO FRANCES P. BOLTON

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. SARASIN. Mr. Speaker, Frances P. Bolton, a former Member of this body and a truly great American, passed away recently, to the great sadness of her many friends and admirers. Daughter of a distinguished American family, first woman to represent Ohio in the Congress, a pioneer in legislation advancing the causes of women and children, of health, educational and social legislation, and an expert in foreign affairs, Mrs. Bolton left a legacy few could equal.

A champion of world peace, member of the U.S. delegation to the United Nations and a leader of her party, this estimable lady was in the forefront of almost every important cause for well over two decades. I regret that I did not have the personal privilege to know Mrs. Bolton, but I would like to offer for inclusion in the CONGRESSIONAL RECORD a tribute by another distinguished American who served with her in this Chamber.

The Honorable John Davis Lodge, who represented a portion of Connecticut in this Chamber during Mrs. Bolton's incumbency and who went on to serve as Governor of Connecticut and as a U.S. Ambassador, formed a lasting friendship with this great lady.

He penned this heartfelt tribute which I offer for your consideration:

HON. FRANCES PAYNE BINGHAM BOLTON

(A Tribute By A Former Colleague, Hon. Davis Lodge)

The disappearance from our earthly scene of Frances Bolton shortly before her 92nd birthday truly leaves "a lonely place against the sky". Exemplary wife, mother, and grandmother, she devoted some thirty years of her life to notable public service.

A woman of great wealth, she could have avoided the bloody arena of American politics with its harsh ordeals and its gruelling struggles and spent her time enjoying her family, her fortune, and her friends.

Instead, she served in the Congress for many years, and with great distinction. She performed constructive and lasting service as a member of the Foreign Affairs Com-mittee. She was ahead of her time in her understanding of the importance of Africa and the significant implications of the profound changes occurring there. She had an abiding sense of responsibility for the great **EXTENSIONS OF REMARKS**

American community. She was generous and kind to many people, Democrats as well as members of her own party. She was a woman of high intelligence and noble purpose. She lived her life on an elevated plane of thought and action. She was a considerable and helpful colleague. She was a devoted friend.

Some two years ago, she invited my wife and me to lunch on the beautiful terrace of her handsome house in Palm Beach, We looked out over a huge well-kept lawn and beyond to the eternal sea. She was not well but she had lost none of her verve-none of her interest in life-none of her faculties. She still radiated goodness and high erected thoughts. After lunch, she escorted us to the edge of her property and waved good-bye though she had a premonition that it might be the last time.

I now wave good-bye to Frances Bolton, an outstanding public servant of her time, a distinguished lady, a dear friend, a great American. We shall not look upon her likes

DECOMMISSIONING OF NUCLEAR FACILITIES

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

BROWN of California. Speaker, I have introduced a bill today which requires a study by ERDA on the environmental, health, safety, and economic consequences of the decommissioning, disposal, and decontamination of all elements involved in the utilization of nuclear energy. An understanding of the problems and costs of decommissioning and disposal of nuclear facilities and waste products is of the utmost importance. Already we are provided with examples of the difficulties which arise from not properly taking into account the final disposition of these facilities. The Nuclear Fuel Services reprocessing plant in West Valley, N.Y., is a prime example, where radioactive waste have been left to the State of New York and the bill for disposal and decommissioning has been estimated at \$500 million. Also, I am sure all of you are aware of problems with radioactive wastes at several sites involved in the military weapons program. My bill would require a study by ERDA of these issues for all facilities, both civilian and military, including reactors, mill tailings, radioactive wastes, reprocessing plants, et cetera. Also, ERDA would be required to study other organizational, financial, and institutional means for handling these problems, including the possibility of an independent waste handling corporation financed by current fees or preposted bonding procedures. The degree to which ERDA is helping to meet State enacted requirements on decommissioning, disposal, and decontamination must also be included in the report. The purpose of my bill is to insure that all environmental and economic costs of decommissioning, disposal, and decontamination are included in the societal decisions regarding the utilizaton of nuclear energy. CIVIL ENERGY FROM LASER FU-SION: A GROWING REALITY

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. PURSELL. Mr. Speaker, today I am inserting my sixth installment regarding laser fusion. You will note that on April 4, Mr. RINALDO shared with us, his and 18 of our colleagues' response to President Carter's cut of \$80 million in the fiscal 1978 budget for fusion power research. Today, I would like to share the letter that I and 10 other Members sent to Mr. GIAIMO; chairman of the Budget Committee, and Mr. Latta, ranking minority member of the Budget Committee, urging them to support an increase in fusion energy funding over the amount recommended by President Carter. The text of my March 30 letter follows:

Washington, D.C., March 30, 1977.

Hon. ROBERT J. GIAIMO,

Chairman, House Budget Committee, Washington, D.C.

Hon. DELBERT L. LATTA, Ranking Minority Member, House Budget Committee, Washington, D.C.

DEAR COLLEAGUES: The Budget Committee will play a major role in determining the future of fusion energy development. urge that you support an increase in fusion energy funding over the amount the President has recommended.

President Carter has proposed a cut of approximately 25% in the fusion funding recommended by President Ford. Ironically, the prospects for fusion energy have never been more promising. Both laser and magnetic fusion have made important steps forward in recent months.

Perhaps the President is so intent upon short term solutions that he has failed to recognize that without development of longer term alternatives, tomorrow's crisis will be even greater.

What is needed today is a strong Federal commitment to develop fusion power. Fusion has the potential for providing abundant, environmentally clean energy—both electric power generation and synthetic fuels—from an inexhaustible source, seawater.

We hope you will give your strongest support to an increase in fusion funding over what the President has proposed. The nation can ill afford to slow down the development of these highly promising technologies by denying adequate research support.

Sincerely, Carl D. Pursell, Thomas N. Kindness, Matthew J. Rinaldo, David F. Emery, Paul N. McCloskey, Robert E. Badham, Edward J. Derwinski, Claude Pepper, Frank Thompson, Jr., Dan Daniel, Bob Traxler, Edward W. Pattison.

Also, I would like to share with you. Mr. James R. Schlesinger's, Assistant to the President on Energy Matters, letter of March 3, asking our citizens to share their ideas regarding the U.S. efforts to attain energy independence. Following Mr. Schlesinger's letter is one response from Dr. Henry J. Gomberg, president of KMS. Fusion, Inc., in which he comments on the importance of laser fusion in our quest for energy independence:

THE WHITE HOUSE, Washington, D.C., March 3, 1977.

DEAR FELLOW CITIZEN: President Carter plans to submit to the Congress a proposed comprehensive National Energy Plan that will seek to assure that the United States will become energy sufficient in the years ahead and avoid the problems so recently witnessed this year.

Many of the country's outstanding experts are working daily to solve the energy problems that now confront the Nation, but often some of the best solutions have come from the people themselves. For this reason, as well as to ensure that the American people have a more direct line into their government, your comments on the energy situation are welcomed and needed.

Inside is a reprint of a Public Notice that appeared in the March 2, 1977, edition of The Federal Register requesting recommendations. Since you may not have seen the Notice, please take the time now to read and send us your thoughts on it. It is your opportunity to comment on one of the most critical problems this Nation faces and to relay your recommendations to your government.

The President needs your response before March 21 in order for it to receive due consideration. Due to the short time involved, a number of mailing lists had to be used so you may receive more than one copy of this Notice. We apologize for any inconvenience this may cause you.

We look forward to receiving your comments.

Sincerely,

JAMES R. SCHLESINGER, Assistant to the President.

KMS Fusion, Inc., Ann Arbor, Mich., March 21, 1977. Hon. James R. Schlesinger, Assistant to the President,

Washington, D.C.

Dear Dr. Schlesinger: You have asked for my comments and recommendations as to goals and actions for inclusion in a comprehensive national energy program. Your invitation is a welcome opportunity. It indicates to me that the Federal Government is now prepared to reexamine existing programs and goals in light of the worsening

energy supply picture.

My comments and recommendations relate to the national program for research and development of Laser fusion. Laser fusion has the potential for making a major contribution to our energy supply system by 1990. The unique characteristics of the laser fusion process make it possible through nucleo-chemical cycles to produce hydrogen from water, establishing a base for the synthetic fuels industry. Experimentation at KMS Fusion, Inc. under sponsorship of the Texas Gas Transmission Corporation indicates that laser fusion can be the first nuclear process to make a direct contribution to our gaseous and liquid fuel requirements.

The basic laser fusion research program has made significant progress over the last few years. Its direction and control, however, have been in the ERDA nuclear weapons complex. Program goals reflect the priorities and requirements of the weapons program, with emphasis upon the immediate and near term benefits in weapons testing and development. Civilian applications have secondary priority.

I do not question the merit of the na-

I do not question the merit of the national laser fusion program as it applies to nuclear weapons development. It is an important part of our national security effort, and the program structure currently being administered by the Assistant Administrator for National Security appears ideally suited for this objective.

Civil energy is also an important goal vital to national security. Laser fusion should have the opportunity to contribute to this goal as promptly and fully as possible. Aggressive pursuit of civilian energy goals with appropriate funding and effective cooperation among government, university and industry laboratories can lead to the introduction of laser fusion energy into our supply system in the mid 1980's.

A constructive immediate move would be establishment of administrative control and support for the civil aspect of laser fusion energy within a cognizant organization concerned with civil development of nuclear energy and its applications.

We have proposed in the past and are prepared to present again a program for reduction of laser fusion energy to civilian practice in the shortest time and, we believe, most effective manner.

Sincerely,

HENRY J. GOMBERG.

EDDIE EDGAR

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. PURSELL. Mr. Speaker, this past weekend the city of Livonia, Mich., honored one of the truly fine gentlemen of my home area, and a man who has had a great influence in my life: W. W. "Eddie" Edgar. On April 2, 1977, Eddie was appropriately honored and given a lasting tribute through the official naming of the former Ford athletic center and ice arena as the "Eddie Edgar Sports Arena."

This is a very fitting accolade for one of the founders of Livonia, a city which has been one of the most dynamically growing areas of our country since Eddie helped bring it to life a quarter century ago; and to a man universally respected and loved in the sports world and in his community.

I would like my colleagues to know of my personal esteem for Eddie Edgar. And I would like to take this opportunity to congratulate Eddie on this latest honor, and congratulate the Livonia city officials responsible for this fine tribute.

The following are articles by Leonard Poger in the Observer and Eccentric newspapers—where Eddie is continuing his outstanding journalistic career—of November 15, 1976, and Sam Hudson in the April 1975 edition of the Detroiter magazine, outlining some of the many accomplishments and highlights in the exemplary life of Wilson William "Eddie" Edgar:

[From the Observer and Eccentric Newspapers, Nov. 15, 1976]

EDDIE'S 79TH BIRTHDAY MARKED BY NEW HONORS

(By Leonard Poger)

W. W. "Eddie" Edgar received an unusual and unexpected birthday gift this week.

The Livonia pioneer who helped build St. Mary Hospital and incorporate the city will have the Ford athletic center and ice rink at Ford Field named after him to honor his long-time contributions to the city and sports in Michigan.

The city council is expected to discuss tonight the suggestion of Councilman Bob Bishop to rename the center as the "Eddie Edgar Sports Arena."

The council will formally take action on the proposal the following week.

Edgar, who will be 79 years old Friday, Nov. 19, has been a newspaperman for 56 years, the last 10 as an Observer reporter, editor and columnist and winner of numerous awards for his popular "The Stroller" column.

He also worked for the Detroit Free Press sports department for more than 20 years and was the newspaper's sports editor in the 1930s and '40s.

Edgar has been active in the Plymouth community for many years serving in the Plymouth Rotary Club and providing the leadership for a "sister city" exchange with Plymouth, England, which marked the Michigan Plymouth's 100th anniversary as a city.

a city.

Bishop said he first thought of the honor last summer when talking with Edgar about the early days of Livonia's city government, which was organized in 1950 after charter approval.

The two also discussed Edgar's background in sports, which goes back to the 1920s when he was a Free Press sports writer and later sports editor.

"Here's a Livonian who is active and contributing and participating in the community," Bishop said.

Bishop admitted that he hadn't informed Edgar of his suggestion to rename the Ford athletic center in his honor.

athletic center in his honor.
"But I'd tell Eddie to his face that 'we love you and want to express our sincere appreciation for what you've done.'

"What better way to honor him than to be surrounded by the cheers of youngsters," the councilman said.

Edgar, a Livonia resident for 38 years, has had three careers, two involving sports during his 79 years.

He started out as a sports writer and during his career with the Free Press, conducted Detroit's first Golden Gloves boxing tournament. During that same period, he was one of the first to discover Joe Louis who went on to become heavyweight champion of the world, a title he held for 11 years.

He became interested in bowling in 1938 and initiated numerous major tournaments which were ultimately copied throughout the country. He also started a junior bowling program in the Detroit area and organized a youth association which now has 36,000 members.

Edgar started after-school bowling leagues for youngsters and with his leadership. Livonia has the largest school league in the country.

He left the Free Press and headed the state's bowling proprietors' association and used the sport to benefit numerous activities. Edgar, in 1954, was named national bowling chairman for the March of Dimes campaign and set up a countrywide tournament which raised an estimated \$2 million in eight years.

raised an estimated \$2 million in eight years. Edgar also organized the Detroit Bowling Hall of Fame, the first of its kind in the country.

He was eventually inducted into the hall of fame in 1962 and given a testimonial dinner attended by bowling officials from all over the nation.

He was also inducted into the University of Michigan Media Hall of Fame in 1971 for his support of that school's athletic program.

His career in sports was also recognized when he was inducted into the Michigan Amateur Hall of Fame in 1974 in honor of his 50 years of service to amateur sports in the state.

When leader of a drive to incorporate Livonia Township as a city, Edgar was at the front to urge voters to approve a city charter and organize the community's first government. He served on the charter commission and was on the first city council.

was an organizer of the community's chamber of commerce in 1948 and helped the chamber lobby for an independ-

ent post office.

Recognizing the need for a hospital in the city, he contacted the Felician Sisters, convinced them of the need, and served as chairman of their hospital advisory committee and helped in fund-raising campaigns.

Not content with the hospital, Edgar also talked the sisters into doing something more for Livonia—like creating Madonna College

and later Ladywood High School.

Edgar has had the title of "Mr. Livonia" for many years and the city council will give him an additional honor for his work in the community through the renaming of the Ford athletic center.

[From the Detroiter, April 1975] EDDIE KEEPS GOING (By Sam Hudson)

A flair for putting thoughts on paper got Wilson William Edgar into the University of Michigan Media Hall of Fame. An article he wrote with several other newsmen would have earned him a share of the Pulitzer Prize if he hadn't opened his mouth at the wrong time. A Free Press magazine article about him entitled "Livonia's Legendary Newsman" got him into the Congressional Record, via Congresswoman Martha Griffiths, who called "one of the best writers in the business

Yet, Eddie Edgar got barely past the eighth grade, and insists that he has never read a

book in his life.

There are other surprises in the long career of Eddie Edgar, one of the best known news-

men in the state of Michigan.

At age 77, for example, he earns his living in a field where youth predominates. Probably the oldest working newsman in the state, holder of card No. 1 in the Michigan chapter of the Baseball Writer's Association, Edgar is on the job every day as a columnist newswriter and occasional fill-in editor. He works for a chain of suburban newspapers. the Observer-Eccentric Group, in Livonia.

Edgar is now on what he calls his "third career." He began this one in 1966, at 69, an age when most men are content to hang up their track shoes. His first career, as a feature writer and sports editor for the Detroit Free Press, spanned the golden age of sports, from the 1920s to the late '40s. His second began in 1948 when he became executive secretary of the Bowling Proprietors of Greater Detroit. He was the area's Judge Landis of bowling until he "retired" in 1966.

Edgar was also one of the first sports announcers in Detroit. In 1924, he was drafted by the station manager of Free Press radio station WCX (now WJR) to read the sports news. For the past 20 years, he has been heard every Friday night on Bob Reynold's evening broadcast on WJR. Edgar gives bowling news.

'I believe Bob Reynolds and I make up the oldest radio team, in point of service, in the state," says Edgar. He began the association when Reynolds asked him to tape a March of Dimes bowling tournament in 1955.

At 77, Edgar is still collecting writing awards. A few years ago, the Observer Group won seven prizes in the Michigan Press Association's competition for weekly newspapers. Three of them were garnered by Edgar. His column, "The Stroller," won first place in the weekly newspaper column class. One of his feature stories also took a first. And he received second place for a combination picture and feature story about the theater fire in Plymouth. In the 100-year history of the Michigan Press Association, Edgar

is the first newsman ever to win three prizes in the same year.

When his father died, Edgar, age 13, left school in Catasauqua, Pennsylvania to become a machinist's apprentice. The newspaper business called him, however, and he soon got a job on an Allentown newspaper. He was assigned to write sports but as a cub reporter he made the front page in 1919 with an impromptu interview with William Jennings Bryan. Edgar met Bryan on a railroad station platfrom. The silver-tongued Senator said he never gave interviews because he was too often misquoted. Edgar persisted and Bryan, taking pity on the neophyte wrote a three-page statement for him.

Edgar got his second break a few weeks later. Sent to interview Boise Penrose, the Mr. G.O.P. of his time, Edgar was in Penrose's hotel room when the political boss placed the phone call that eventually made Warren

Harding President.

Edgar came to Detroit through a chance meeting with Edgar Guest, who was then writing poetry for the Free Press. Impressed with Edgar's sports writing, Guest spoke of him to Harry Bullion, Free Press sports editor. Bullion wired Edgar.

"How soon can you report for duty and how much money do you want to start?

Edgar settled for what seemed to him to be a big salary—\$2,500 a year—and got the job on two weeks' trial. Years later, when Edgar was leaving the Free Press, John S. Knight asked him why he was quitting. Edgar quipped, "I've been waiting 28 years for someone to tell me my two weeks are up."

Edgar's first day on the job in Detroit was a dilly. Assigned by Bullion to write a rou-tine sports story, he turned his copy in. The editor drew a blue pencil through it and handed it back to him without comment. He rewrote the story twice more, each time having it blue-penciled and returned to him without any explanation. In Allentown, the editor had explained what was wrong when he rejected a story. Bullion was like a sphinx.

Finally, Edgar said, "I don't know any other way to write the story, Mr. Bullion. What's wrong with it?"

"We don't allow colloquialisms at the Free Press," Bullion responded.
"Unfortunately," recalls Edgar, "I didn't know what a colloquialism was. I saw one of the older writers by the water jug. He seemed to have a sympathetic face so I told him my problem."

"Go back and take out all of the slang words, kid. He'll take it then."

Edgar had no trouble getting the story

past Bullion the next time.

When it was time to eat, some of the men in the department asked Edgar if he would like to join them at a Chinese restaurant. Edgar had never eaten Chinese food. On someone's advice he ordered chow mein. When it was placed before him, he says he couldn't stand to look at it, much less eat the concoction. He was spared the ordeal when one of the newsmen got into an argument with the proprietor, who ejected the entire crew.

When the shift was over, the newsmen suggested that Edgar go with them to a blind pig on Grand River. That, they told him, was where he would meet many of the sports figures he would be dealing with in the future. Edgar never drank, but he accepted the invitation.

Once at the watering hole, someone suggested a game of Indian dice for drinks. Edgar didn't know how to refuse but he was worried about the expense. The few dollars in his pocket were not sufficient to buy a round of drinks if he lost.

For several games he was lucky. He was eliminated early in the game. Finally, however, a game resolved into a contest between Edgar and his boss, Harry Bullion. Everyone else had been eliminated.

Both won a horse. On the first roll of the tie-breaking horse, Bullion threw five fives and was jubilant. Edgar began to sweat. If he lost on this one roll he didn't have enough money to buy a round. Finally, he shook the dice box, turned it upside down, and asked Bullion to pick up the box, exposing the dice. Bullion did, uncovering six sixes!

The editor, widely known for his sudden bursts of temper, immediately threw the box directly at Edgar, cutting his lip. It required stitches. Bullion burst into tears and was all apologies for his impulsive action.

After a first day like that, Edgar wasn't sure he had made the right decision when he left Allentown for the big city. But he stayed with the Free Press over a quarter of a century, meeting and interviewing most of the great sports figures of the '20s and the '30s. He has almost total recall of his experiences with Babe Ruth, Lou Gehrig, Joe DiMaggio, Ty Cobb, Mickey Cochrane, Gus Dorais, Jack Dempsey, Gene Tunney, Joe Louis, Gar Wood, Wilbur Shaw and many others.

His first brush with a champion occurred at the age of ten. The meeting came about because of Edgar's skill with a pool cue. His father had installed a pool table in his small restaurant and Edgar became a whiz at the game. When Ralph Greenleaf, age 15, visited Catasauqua, someone matched the local boy against the future billiard champion. Edgar almost beat him.

Twenty-four years later, in Detroit, Edgar met Greenleaf in the Recreation Building. Greenleaf asked Edgar to practice with him for his upcoming defense of the billiard title. He also asked him to help perform a stunt Fox Movietone News had cooked up. Greenleaf had agreed to play billiard's in a Ford Tri-motor plane, the old "tin goose," while it circled over the city of Detroit.

"I can't get anyone to go up in the plane and play billiards with me. Will you do it?" Edgar agreed. The plane was equipped with a miniature pool table and kleig lights. The

aim was to demonstrate the plane's stability. "We boarded the plane at Ford Field, where the Dearborn Inn is now," said Edgar. "For an hour and a half we circled over Detroit. playing pool. Ralph was scheduled to defend his championship the same night. He should have been in his hotel room, relaxing not performing up in the sky for the movies. But that night he beat Frank Taberski in the title match, setting a new world's record of 126 points."

Edgar no longer takes on all comers in

"I stopped playing when I got my first pair of bi-focals.'

In the early '30s, Edgar watched tight-fisted Ty Cobb play "a big overgrown kid" named Babe Ruth in a golf exhibition at Grosse Isle. Both were good golfers. After a 14-hole tie the match was called because the crowd was getting too large to handle.

"When it came time for them to pay their caddies," Edgar recalls, "I saw Ruth peel off a \$20 bill and give it to his boy. Then I heard Cobb say to his caddie:

What is the caddle fee for 18 holes?'

'\$1.50,' the kid answered.

'Well, we only played 14 holes,' said Cobb. 'Here's \$1.25.' '

Edgar says Cobb was the greatest baseball player he ever saw, and the closest man with dollar he ever met.

In 1932, Edgar set up the Golden Gloves program in this area for the Free Press. In that year a big black youth walked into his office to ask for an application to enter the events. That was Eddie Edgar's introduction to Joe Louis, whom he virtually managed as an amateur, before John Roxborough became Louis' professional manager. Edgar was at ringside at Chicago in 1937 when Louis won the heavyweight championship.

Among Edgar's possessions is a book pub-

lished in 1936 entitled Joe Louis, Man and Superfighter. Written by Edward Van Every, it is dedicated to "John Roxborough and Julian Black, and W. W. Edgar and Michael S. Jacobs who had a part in the making of Joe Louis and of his book."

Edgar hasn't missed an opening day Tiger

game in the past 50 years.

"A few years ago I was sitting at Tiger Stadium with the wife," Edgar recalls, "and I said to her, 'I can close my eyes and see as plain as day Mickey Cochrane sliding into home plate on Goose Goslin's blooper second to win the 1935 World Series.' Then, when I opened my eyes, it dawned on me that not a soul on either team playing today-except Al Kaline-was born then.

During his tenure with the Bowling Proprietors of Greater Detroit, Edgar "helped to bring bowling out of the saloons and on to the main corner." He also helped to establish the Bowling Hall of Fame. Among the hall's plaque is one, dated 1962, which reads:

"Wilson W. Edgar, writer, promoter and executive.: Originated the Detroit Hall of Fame. Brought national acclaim to Detroit with plan for employment of minors during the dark days of the war, promoted many events that became part of the national bowling picture, built up nationally recognized junior programs, is Michigan's first bowling coordinator. Also secretary of the Proprietor's Association and was on Mayor's committee to design Cobo Hall."

On November 20, 1974, one day after he celebrated his 77th birthday, Edgar was honored by being inducted into his third Hall of Fame. This time it was the Michigan Amateur Hall of Fame. Edgar was especially pleased on this occasion when a couple of bus loads of his neighbors showed up at the banquet to demonstrate their support and

affection for him. Edgar's boss, Phil Power, co-publisher of the Observer-Eccentric newspapers says of Edgar: "He's got countless contacts; he's a magnificent writer. But more than that, he has as fine a sense for a story as anyone I

ever knew."

Edgar lost a share of the Pulitzer Prize in 1931. Drafted from the sports room by managing editor Malcolm Bingay, he was part of a team of reporters which covered the American Legion Convention in Detroit that year. Edgar wrote two columns of the composite story. When he heard that the article was to bear a community by-line of six names, Edgar opposed the idea. "Take my name off it," he told the editor "We'll be the laughing stock of the business to have so many names on a story.'

The article won the Pulitzer. Edgar got no part of the glory or the prize money. "I had no one to blame but myself," he says, with

no apparent regret.

KEROP ARAKELIAN-"MAN OF THE YEAR"

HON. GEORGE E. DANIELSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. DANIELSON. Mr. Speaker, the Armenian American Citizens' League at their State convention on April 16, will honor Kerop Arakelian as "Man of the Year."

Kerop Arakelian's life story is one which would inspire most Americans. Twenty-five years ago a young, virtually penniless Armenian immigrant in Mexico City borrowed the equivalent of \$4 in pesos to pay a month's rent on a garage. There, working alone, he built

high chairs, took them to the gates of the city's Chapultepec Park and hawked them on a street corner. Several years ago he and his wife, Nellie, became permanent residents of the United States and now reside in Beverly Hills, Calif.

Recently he presided at the opening of the finest toy store in Mexico City. He has run his borrowed \$4 into Mexico's

largest toy operation.

Kerop Arakelian has dedicated his life to the betterment of the Armenian-American youth by establishing educational and sports programs throughout the United States. He is presently serving as the president of the Western United States Executive Committee of the Armenian General Athletic Union, Homenetmen, an international youthsports organization. He is an outstanding supporter, both with energy and money, of the Boy Scouts of America.

Kerop Arakelian has earned the respect of the entire Armenian-American community. I am sure that the evening honoring him as "Man of the Year" will be a great source of pride to him and his

STIMULATING MINORITY BUSI-AMERICAN NESSES IN THE **ECONOMY**

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. RANGEL. Mr. Speaker, minority groups in the United States currently constitute 17 percent of the population. Over the years they have contributed richly to the social, cultural, and political life of our society.

But there also exists a gap in the role minorities have played in business: only 4 percent of the Nation's business firms are minority controlled, and these account for only 1 percent of the gross business receipts nationally. Recently, in testimony before the House Ways and Means Committee, of which I am a member, Malcolm L. Corrin, president and chief executive officer of the Interracial Council for Business Opportunity—ICBO—called for the Government's participation in stimulation and economic growth of minority business.

The ICBO was started in 1963 as a full-service business development agency, giving financing, management, and marketing assistance to minority firms for expansion and growth. Mr. Corrin's testimony outlined several steps designed to relieve the structural unemployment now affecting minority businesses. I would like to share with my colleagues pertinent quotes from Mr. Corrin's testimony that I feel my colleagues will find of exceptional interest. They follow:

ICBO HEAD CALLS FOR MORE FED LEGISLATION TO AID MINORITY BUSINESS

"I would urge the enactment of tax incentives or other measures designed to encourage the majority business sector to be yet more active in stimulating minority business growth," Mr. Corrin testified.

"Such activity by the private sector in-

cludes investment in existing minority firms, investment or technical help to enable minority men and women to acquire corporatespin-offs or other existing business, buying from minority vendors, and loaning manage-ment technical personnel to assist minority

Mr. Corrin stated that the "majority" business community already has a good record in assisting minority business development, but said he believed "tax incentives would result in much much more help."

On urging the Congress to favorably consider increasing available funds through the Department of Commerce, Small Business Association and other agencies to spur the growth in size and number of minorityowned firms, Mr. Corrin pointed out the present appropriation for minority business assistance is only 48 million.

He compared this with \$5 billion "which I understand to be CETA's (Comprehensive Employment and Training Act) funding for 1977.

Mr. Corrin stated that the work of minority development, "to be done at a level that meets the need, deserves more governmental funding for capital, guarantees, bonding, and other assistance programs.

'The Office of Minority Business Enterprise, within the Department of Commerce, should be funded at a level of \$500 million to \$1 billion a year," he said. "SBA levels and amounts for direct loans, loan guarantees, and bonding help should be increased several fold.'

Finally, Mr. Corrin urged that when the Committee considers job legislation and appropriations, that special provisions be made under CETA or other auspices to subsidize hire-and-train programs specifically in mi-

nority-owned business firms.
"Not only would the trainee success rate probably be higher than in such programs overall," he stated. "In addition, the subsidy itself, and added manpower, are badly need ed in minority-owned firms, which are small in American corporate terms."

Mr. Corrin stated that since ICBO's main task is to improve the economic status of minorities his organization favors modification of the personal income tax structure" such as to help restore consumer and business confidence and spending, especially among those in low and middle income groups."

He said also that ICBO favors modification of the corporate tax rate, "or other incentives to stimulate business investment, restore economic momentum, and reduce cyclical unemployment."

ICBO gives financing, management, and . marketing help to start and expand minority services. It has aided over 14,000 such businesses and has developed over \$100 million in financing for its clients. It has a national office in New York City and locals in New York City; Newark, N.J.; St. Louis, Mo.; Los Angeles, Calif.; New Orleans, La.; Atlanta, Ga.; and Dallas, Texas. An outreach office is located in Waco, Texas and an affiliate, the Chicago Economic Development Corporation, in Chicago, Ill.

COMPETITION REVIEW ACT OF 1977

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. UDALL. Mr. Speaker, I am sure my colleagues are familiar with my distress at the trend toward economic concentration in this country. Industry after industry, market after market is dominated by a narrowing circle of powerful firms. The free enterprise system that businessmen and politicians extol has largely disappeared from vast sectors of our economy.

Today I am reintroducing a measure I proposed in the last Congress-H.R. the Competition Review Act. It is a rather modest proposal, in comparison with some, but it recognizes that there may be unique circumstances in different areas of business enterprise, calling for unique policies and programs to achieve a maximum of competition.

Under this proposal, a special Competition Review Commission would undertake a 3-year study of those bell-wether industries that set the pace for our economy and our society. The Commission would investigate the present state of competition in those industries, and the impact of Federal policies. In line with our basic commitment to free and competitive enterprise, the Commission would report back to us with recommendations for changes in Federal law and policy wherever we could help bring the discipline of competition to bear. The remedies might be relatively mild: A change in Federal contracting or procurement policies to favor independent entrepreneurs; revision of the tax code to remove biases toward merger and conglomeration. In other industries, more stringent action may be called for, such as removing antitrust exemption. stiffening antitrust enforcement policies, temporarily subsidizing new entrants, or even legislating the breakup of monopolistic combines. And of course, there will be fields where no Federal action is required.

This bill goes beyond my previous version in one particular. I have added 'newspaper publishing and communications" to the list of industries to be examined. I do this knowing that it may provoke cries of intimidation from journalistic circles, and I want to emphasize that the Commission would in no way be empowered to tread on first

amendment rights.

My concern is with the institutional importance of the locally owned newspaper in our American communities—and the rapid disappearance of such local ownership in the past few years. In a recent issue of the Columbia Journalism Review, the highly respected editor and critic Ben Bagdikian commented on these changes at some length. He documented the astonishing speed with which chain operators are snapping up independent newspapers, and now are in turn being swallowed by larger chains.

I find this trend alarming, not because these chains necessarily wield overwhelming national economic leverage, or because I smell some sinister plot by a handful of editors to manipulate our channels of communication. danger is the removal of an important element in the chemistry of our local public life—the hometown publisher, the fellow who has a personal as well as financial stake in the community, who is not just the manager of a local branch store. I do not pretend that they are saints or crusaders-like any other profession, publishing has its share of mediocrities and even a few scoundrels to balance out the best ones. But they all share a commitment to the future of their communities that is lacking in the accountants and tax lawyers in a corporate headquarters 1,000 miles away.

Congress has recognized the importance of independent journalistic voices in the past. In the late 1960's I fought for the Newspaper Preservation Act, which legalized joint printing ventures for separately owned, competing local papers. There were two such papers in my hometown of Tucson, owned by flercely independent publishers who were not afraid to argue with city the business establishment-or each other. Less than a decade later. one of those papers has been sold to the Pulitzer interests from St. Louis, and the other was just recently bought up by the Gannett chain out of Rochester, N.Y. As Mr. Bagdikian's article makes clear, this is not an isolated case. Indeed it simply reflects the national trend.

I urge my colleagues to read this article, and to give thought to this road we are traveling toward chain store food. chain store gas, chain store pharmacies, and now chain store newspapers.

Excerpts from the article follow: NEWSPAPER MERGERS-THE FINAL PHASE

(By Ben H. Bagdikian)

In 1887 a twenty-three-year-old Canadian factory owner named George Gough Booth married the daughter of a Detroit newspaper publisher, a union whose descendants in 1976 played leading parts in the last act of the decline and fall of the independent daily newspaper in the United States.

He and his brother, Ralph, were lively entrepreneurs and they bought eight other

dailies in Michigan.

By 1976 the heirs of George and Ralph Booth were doing very well. The eight papers, owned by Booth Newspapers, Inc., were monopolies in sizable cities outside Detroit. covering almost 40 percent of the entire Michigan newspaper audience. Through interlocking shares and directors, pretty much the same people controlled The Evening News Association, owner of, among other things, *The Detroit News*, which covers 22 percent of the Michigan audience. Both corporations make lots of money.

But two things were fated to end the family dynasty. First, fecundity; second, the Booth Newspapers' old-fashioned ways of business: the concern ran a tight operation, made profits, and saved some of

it money for a rainy day.

An excess of heirs has always created problems for family owned newspapers and it did for Booth. By 1976, there were 125 descendants and in-laws of George and Ralph taking

money out of the corporation.

Thirty-seven of the descendants held 1,320,000 shares of Booth Newspapers, Inc., or 18 percent of the company. Their dividends came to about \$1 million a year, or an average of \$27,000 each. But the thirty-seven were unhappy. Modern newspaper companies, they had heard, are not supposed merely to pay handsome dividends. They are supposed to be financially "aggressive," which means squeezing profits from existing papers in order to buy other payers in other places. It means borrowing on assets for tax purposes and to help speed acquisitions. It means trading in "funny money" instead of cash, swapping unissued stock certificates fromthe company safe for smaller corporations. By such means are formed the diversified conglomerates favored by Wall Street in-

vestors, who then buy up the stock and provide even more money to buy even more papers. As the largest single organized block of stockholders in Booth, the unhappy thirtyseven accused their management of violating these rules of the game.

And, indeed, the Booth managers had sinned. They had saved \$50 million in the bank and they had amassed \$130 million in assets on which they had failed to borrow a dime. In the modern corporate game this is like leaving an unshackled ten-speed bicycle in the doorway of a reform school. The unhappy thirty-seven warned that they could liquidate the newspapers, piece by piece, and make a profit of \$23 million, or an average of \$621,000 each. Confronted with this threat, management

made one move toward modernity. It entered the funny-money business. In 1973 it agreed to give John Hay Whitney's Whitcom Investment Company 18 percent of Booth stock and three seats on the Booth board in a swap for Whitney's Parade magazine, supple-

ment for 113 Sunday newspapers.

There are varying theories on why Jock Whitney sold *Parade*, just as there still are on why he bought and disposed of the old New York Herald Tribune. Whatever the motives, bad blood developed between the old directors and the new directors

The scene now shifts to Samuel I. Newhouse, the country's most aggressive buyer of newspapers and a man extraordinarily sensitive to newspapers' family squabbles. He is the leading volunteer family counselor to troubled journalistic households. He has consistent advice for estranged family members: sell. He always has generous amounts of money for relieving siblings of burden-

Whitcom shareholders went secretly to Counselor Newhouse, sobbing that Big Daddy Booth was a stick-in-the-mud who wouldn't let Whitcom come out and play adult games like all the other kids. Newhouse gave them comfort, advice, and \$31 million for their shares. His urge to console unabated, he bought up another block of Booth stock from a foundation and in February 1976 emerged with holdings of 25.5 percent. He issued a statement, possibly from a file kept ready for such occasions, declaring that he had no intention of taking over Booth Newspapers, Inc.

Booth management, in a state of alarm, made a defensive move. They paid U.S. Senator Howard Metzenbaum and a partner \$5 million for ComCorp, Inc., an outfit that owns ten weekly newspapers in the Cleveland area. They knew that among Samuel I. Newhouse's properties (twenty-two newspapers, five magazines, six TV stations, four radio stations, and twenty cable systems) was The Plain Dealer, Cleveland's morning newspaper and now a competitor with Booth's newly acquired weeklies. The Booth management expected that the new Booth properties in Cleveland would create an antitrust barrier against Newhouse control of Booth.

The Antitrust Division of the U.S. Department of Justice occasionally comes out of its slumber to murmur in protest when direct, profitable competitors enter into a notoriously public relationship. But in this instance the Department of Justice continued its beauty sleep and Newhouse continued to tighten his embrace.

With the help of profits from his other newspapers and a loan of \$130 million from the Chemical Bank of New York, he had ready money. He came up with \$47 a share and took over Booth in the single biggest newspaper deal in history, estimated at \$305 million, or \$592.88 a reader, according to an

estimate in *The Nation*.

This is not a morality story of virginal Booth against an evil old Sam Newhouse. Booth, while better than many other chains,

was not outstanding in its journalism. One of its papers, The Jackson Citizen Patriot, was founded by Wilbur F. Storey, the man who said, "It is the duty of a newspaper to print the news and raise hell." But after newspapers joined the Booth chain they usually raised no hell. The papers had a reputation for efficient business management and intelligent use of modern technology, but when it came to news they generally made few local waves. Booth, although more conservative in its business methods and acquisitions, had been in the same chain game as Newhouse: the chief difference between Newhouse and most other chain builders is that he is faster and less pretentious.

The approaching end of the independent daily is not the result of a conspiracy among media barons. It is a largely impersonal process, operating in harmony with the rest of the American economy. In that sense, newspaper companies are no different from concerns that deal in oil, automobiles, pharmaceuticals, or underarm deodorants.

Today 71 percent of daily newspaper circulation in the United States is controlled by 168 multiple ownerships. Concentration of control over daily news is accelerating. In 1930, chains controlled 43 percent of circulation; in 1960, 46 percent. In terms of control of individual newspapers, the share held by chains has grown even more sharply: 16 percent in 1930, 30 percent in 1960, 60 percent today. The approaching disappearance of even small independent newspapers is not only economically but politically important, because almost all dailies are local monopo-lies, exerting substantial influence in their congressional or state legislative districts. Most of the dailies still independent can be found among those with less than 10,000 circulation, a size that has a cash flow too small to attract major chain operators.

And the trend goes on. The employee-held Kansas City Star and Times has announced that it has accepted an offer of more than \$100 million from Capital Cities Communications, a conglomerate based in broadcasting. The Oakland Tribune, once a major influence in California Republican politics, recently announced that it was up for sale, too.

The top chains in number of papers owned as of December 31, 1976, according to data collected by Paul Jess of the University of Kansas, are:

Gannett	73
Thomson	57
Knight-Ridder	34
Walls	32
Newhouse	30
Freedom	25
Harte-Hanks	24
Scripps League	20
Worrell	19
Cox	18
Stauffer	18

In terms of daily circulation, the leading chains are:

Knight-Ridder	3, 725, 000
Newhouse	3, 530, 000
Chicago Trib	2, 995, 000
Gannett	
Scripps-Howard	1, 750, 000
Times Mirror	
Dow Jones	1,700,000
Hearst	1,550,000
Cox	1, 200, 000
N Y Times Co	1. 005, 000

Three related developments have intensified concentration of control over news in America:

Among chains, the big are getting bigger. Thomson newspapers started 1976 with fiftyone U.S. dailies and ended the year with fifty seven; Newhouse began with twenty-two and ended with thirty; Gannett, the biggest collector of papers, began the year with fifty and ended it with seventy-three. In 1960, the twenty-five biggest chains controlled 38 percent of all circulation; in 1976 the top twenty-five had 52 percent.

Now that practically all the financially attractive individual newspapers have been bought by groups, the process of concentration is taking the form of chains buying other chains. In 1976 four big chains bought six smaller chains, the two most notable cases being Newshouse's purchase of Booth and Gannett's of Speidel's thirteen dailies.

While fewer owners control more newspapers, almost all newspapers are now monopolies in their own communities. Of the 1,500 cities with daily papers, 97.5 percent have no local daily newspaper competition. In 1920, there were 700 United States cities with competing papers; today there are fewer than fifty. The reader has no choice even of absentee owners.

A particularly disturbing form of concentration in the news business is the conglomerate-the collection under one corporate roof of many different kinds of companies. In such a setting, news can become a mere by-product and there is maximum potential

for conflict-of-interest pressures.

The New York Times Company, one such communications conglomerate, suffered its moment of truth in 1976. The Times Company has twenty-seven subsidiaries, including Tennis magazine, Goif Digest, Family Circle, ten Florida newspapers, three North Carolina dailies, one radio station, one television station, and three publishing houses. Among the properties the company bought from another conglomerate, Cowles Communications, Inc., was a group of seven specialized journals in the health field, headed by Modern Medicine. In 1976 The New York Times-a daily paper published by the conglomerate-ran a series of articles on medical incompetence. In retaliation, medicine-re lated industries threatened to withdraw advertising, not from the Times, for which they provided only insignificant revenue, but from Modern Medicine, in which the medicine industries were major advertisers. The threatened withdrawal of 260 pages of advertising placed the Times Company in a position to lose half a million dollars. Not long after, the Times Company decided to sell the magazines to Harcourt Brace Jovanovich, the book-publishing conglomerate, which bargained for them on the ground that they would create constant conflicts for the Times the Times company. One wonders whether Harcourt Brace Jovanovich will now think twice before publishing an otherwise acceptable manuscript if it contains material displeasing to the advertisers who are now a source of the concern's revenues. One wonders, moreover, if other newspaper conglomerates would have been as willing as the Times Company to get rid of such property; it would strike many as simpler not to assign reporters to stories that might offend someone doing business with a subsidiary.

(Incidentally, the comparatively low recent profits from The New York Times have led some observers to conclude that companies acquire subsidiaries to prop sagging news papers. In practically all conglomerates, their newspapers are highly profitable.)

In broadcasting, also, concentration of control over the news function by networks means control by conglomerates, whose nonjournalistic subsidiaries represent potential conflicts with independent news.

The RCA Corporation, for example, owns NBC. The parent corporation does more than \$5 billion of business a year, of which NBC represents less than 20 percent. RCA owns Random House, the book publisher, together with its subsidiaries which include Ballentine Books, Alfred A. Knopf, Pantheon, Vintage, and Modern Library. It owns the Hertz Corporation. It is a major defense industry, producing military radar, electronic-warfare equipment, laser systems, instruments that guide aerial bombs to targets, hardware that

does intelligence processing, guidance for surface-to-air missiles, and it has wholly owned subsidiaries around the world. It controls telecommunications among 200 nation states through its RCA Global Communica-Inc. RCA is also a subcontractor on the Alaska pipeline project, and it has produced guidance systems for Apollo and Skylab spacecraft. One wonders what might have been lost to RCA in its multimillion-dollar Apollo and Skylab space contracts if its wholly-owned broadcasting arm, NBC, had produced a convincing documentary against spending all that money on space explora-

Throughout the Vietnam War, CBS, too, was involved in defense contracting. In 1975 it sold its high-technology government-contract business to Espco, a Massachusetts concern with a German branch. Now the company owns X-acto tools, Steinway pianos, Creative Playthings, the publishing house Holt, Rinehart and Winston, Field & Stream magazine, Road & Track, World Tennis, Cycle World, and Popular Library paperbacks. It has businesses in thirty foreign countries, while subsidiaries make and sell recordings in twenty countries. It recently bought Fawcett Publications, adding to its stable the magazines Woman's Day and Mechanix Illustrated, a mass-market paperback opera-

tion, and a printing company.

American Broadcasting Company, Inc., is an entertainment and amusement-park conglomerate, as well as a major purveyor of national news. It owns 277 theaters in eleven states. It is a major manufacturer and producer of recordings under a number of popular labels, and owns a water-bottling company, and Word, Inc., of Waco, Tex., a major producer of religious records, tapes, music sheets, and books that is doing especially well during the recent vogue of evangelism. In a recent year, Les Brown reported in The New York Times, the ABC network's newsdocumentary budget was cut to make up for unsatisfactory profits in the unrelated amusement and recording subsidiaries of the parent corporation.

Even conglomerates that have no obvious corporate connection to American news or-ganizations still may have an impact. An American oil company, Atlantic Richfield, recently acquired a 90-percent interest in the influential London Observer. The Observer's news service is distributed by the New York Times News Service to fifteen American newspapers. Mobil only buys ads. Arco

bought the paper.

As large American corporations become increasingly multinational in scope, foreigners are showing that they can return the favor by penetrating United States markets. The company of the Canadian-born Lord Thomson of Fleet, who died in 1976, owns fiftyseven newspapers in the United States (many of them weeklies), thirty magazines in South Africa, and is a partner in oil exploration with Occidental and Getty oil companies and Allied Chemical.

A spectacular entry from abroad is Rupert Murdoch of Australia, who recently bought the New York Post for more than \$30 million. According to news stories, he then tried to hire some writers from The Village Voice and the writers declined, saying they would not work for a sex-and-sensation peddler. later, Murdoch bought The Voice in a deal with New York magazine that gave him both those publications plus New West. Murdoch now owns eighty-eight newspapers in Australia, England, and the United

Nothing on the horizon indicates that the trend toward concentration of power in the news business and the mixing of news with other enterprises will diminish. All the present signs are that consolidation will increase.

The existence of monopoly in local markets and the stable, high profits monopoly papers enjoy have made American newspapers prime

targets for big investors. Foreign investors seem to be more candid than their American corporate cousins. Rupert Murdoch has said, "You pay three times the revenue because it's a monopoly and a license to steal money forever." Lord Thomson once said, "I buy newspapers to make money to buy more newspapers to make more money. As for editorial content, that's the stuff you separate the ads with."

Chains traditionally have enjoyed savings simply by virtue of their owning several papers in several places: they provided consistent, centralized management; they could bargain more effectively for the paper, equipment, and news services; they had better access to credit; and they could sell ad space more easily. But these advantages were limited because the American newspaper is a local enterprise and newspaper chains could not consolidate their several small production centers into one big, efficient central factory, as could the makers of automobiles and steel.

The electronic automation of newspapers has now given chains new economies of scale, an incentive to become larger. Crucial to automation is the computer, and with the decreasing cost of communications through satellites and microwave towers, papers can now have central computers serving several papers. Booth became a target for takeover partly because it had so completely automated that in four years it doubled its productivity per employee. As centralized functions develop, profits will become even larger and the sound of huge fish swallowing big fish that have already gulped several little fish will become ever louder.

Adding to the rush to concentration is the trend for newspaper companies to be traded on the stock market. As recently as 1962 no paper was publicly traded. Today thirteen companies offer their stock to the public and these companies control a fifth of all daily circulation. As newspaper operations get bigger, they will be publicly traded to avoid taxes and inheritance duties.

From 1970 to 1976, fifty-two daily papers were bought with thirteen million pieces of paper printed by the winning chains. For example, the Times Mirror Company bought the Dallas Times Herald for 1.8 million shares of Times Mirror stock; Dow Jones bought the Ottaway chain of newspapers for a million shares of Dow Jones; Gannett bought the Federated chain of papers for 1.5 million shares of Gannett; Knight merged with Ridder for 5 million shares of Knight; and Gannett bought the Speidel chain for 4.3 million shares of Gannett. If cash had been used in these and other newspaper deals, half a billion dollars would have changed hands.

Size and money-making by themselves are not contrary to good journalism. Some of the best papers are the big ones. And unless they are profitable they will not remain in business or, if they do, they will not remain free. But the present concentration of power over the news reduces the diversity of voices in the marketplace of information and ideas. As companies get bigger they are able to in-crease their influence over the rules of the marketplace and make government policy sympathetic to themselves and harder for smaller competitors. A daily newspaper publisher always has disproportionate access to politicians. But if, like Gannett, the publisher controls papers in twenty-eight states, that access is obviously greater. In the United States Senate, for example, voting on a bill in which Gannett, as a corporation, has a lively interest, will naturally have special meaning for the fifty-six senators who come from states with Gannett papers.

Growing size means more conglomerates. It is too late to apply antitrust laws literally. Too many consolidations have already taken place, and the giants in the business are too influential in policy to make likely corrective action by any forseeable govern-

ment. The Internal Revenue Code lets newspapers set aside profits at special tax advantages in order to buy other papers, calling it a "necessary cost of doing business." Even it that strange code should be abandoned, the most attractive papers are already in chains.

There is, in my opinion, one small thing that can be done here-namely, to make disclosure of ownership public in a meaningful way. The United States Postal Service grants special mailing privileges to news-papers on the ground that they are educational. In the past, secret owners ran what should have been paid propaganda as news. To prevent this, the postal service requires each publication using the second-class mailing privilege to publish the names of all owners of 1 percent or more interest. Postal regulations should be amended to require what the Securities and Exchange Commission does of traded companies—the listing of the exact holdings of each major investor and officer, and the listing of all other significant holdings in other enterprises by the owners. The postal service should make this listing public in the local post office. The Minneapolis Star, privately owned, voluntarily produced a complete disclosure of who owned the evening Star and the morning Tribune and all relevant financial informa tion, as well as for other media operations in the city. The papers survived the experiment and continue to run annual financial state-

Growing conglomerates also mean potential corporate conflict of interest in the news. And this calls for a more profound change. It is time for professional staffs of American newspapers and broadcasting stations to choose their own top editor, to have a delegate on the company board of directors, and to have access to the committee that allocates the annual news budget. This is done on a number of quality European papers, including Le Monde.

Broadcast and newspaper news is too important an ingredient in the collective American brain to be constantly exposed to journalistically irrelevant corporate policy. There are still crude operators who issue high-level orders to cheat on selection of news. But, as Warren Breed and other social scientists have shown, management usually socializes news staffs by the more subtle methods of selection through hiring, granting or withholding promotions and pay increases, decisions on what goes into the paper and what stays out, playing up some stories and playing down others.

Staff autonomy in the newsroom has not been the ordinary way of running business, even the news business. But there is no reason to expect that a person skilled at building a corporate empire is a good judge of what the generality of citizens in a community need and want to know. Today, news is increasingly a monopoly medium in its locality. its entrepreneurs are increasingly absent ones who know little about and have no commitment to the social and political knowledge of a community's citizens. More and more, the news in America is a by-product of some other business, controlled by a small group of distant corporate chieftains. If the integrity of news and the full information of communities are to be protected, more can be expected from autonomous news staffs than from empire builders mainly concerned with other businesses in other places.

Frank Munsey was a turn-of-the-century Maine Yankee who learned how to buy, sell, and liquidate newspapers. In 1903 he said: "In my judgment, it will not be many years—five or ten perhaps—before the publishing business in this country will be done by a few concerns—three or four at most."

Munsey was wrong. It is taking longer. But he did his best to hasten the day and when he died, another kind of publisher, the Kansan William Allen White, wrote in his Emporia Gazette:

"Frank Munsey, the great publisher is dead. Frank Munsey contributed to the journalism of his day the great talent of a meat packer, the morals of a money changer, and the manners of an undertaker. He and his kind have almost succeeded in transforming a once noble profession into an eight per cent security. May he rest in trust."

Munsey was a piker. It is now a 15-percent

security.

AUTOMOBILE AIR POLLUTION CONTROL

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. FORD of Michigan. Mr. Speaker, many of us in Congress are keenly aware of the limited time left for final legislative action on the issue of the automobile emission control standards for the upcoming 1978 model year.

coming 1978 model year.

I am pleased to insert today a discussion of this timing problem and the need for swift enactment of an environmentally and economically balanced schedule of such auto emission standards as contained in a March 30, 1977, speech by my colleague, Congressman John D. DINGELL of Michigan.

THE CLEAN AIR ACT AND AUTOMOBILES: BAL-ANCING ENVIRONMENTAL, ENERGY CONSER-VATION, AND CONSUMER PROTECTION OBJEC-TIVES

(By Hon, John D. DINGELL)

I am sincerely pleased to have this opportunity to address your Air Pollution Control Association government affairs seminar today. Your scheduling of this conference and the subject matter could not be more timely when one views the current Capitol Hill attention to clean air issues. Whoever picked this date is to be complimented—and I wish to thank Richard Grundy for his timely and kind invitation to speak.

You will recall that the House of Representatives acted overwhelmingly last year in voting 224 to 169, to adopt our amendment which at that time was referred to as the Dingell-Broyhill (Train) amendment. It was so named because the auto emission standards in the amendment had been recommended to the Congress a full year earlier by the head of the U.S. Environmental Protection Agency, Administrator Russell Train.

My good friend, Russ Train, who of course

My good friend, Russ Train, who of course has now left EPA with the beginning of the new Carter administration, perhaps did not realize how accurate and on the mark he and his staff was back in 1975 when he passed auto recommendations on to the House and Senate subcommittees holding hearings on amendments to the Clean Air Act.

That was a full two years ago. The auto emission issue remains unresolved although several of us in the House and Senate are striving to settle the score this year. It has to be done and done soon regarding automotive mobile source clean air standards and other related automotive issues affected by the law.

Maybe I really don't need to mention it to this seminar today, but for the record the auto manufacturing cycle is about to be interrupted if certain legislative bodies on the hill do not act promptly. The 1978 model year cars begin production in mid-summer but at the same time that is to occur, if Congress sets a new auto emission schedule into law with a signature from the White House, the auto industry has to begin applying for EPA certification of the 1979 model year cars.

And, automakers and their suppliers should be well into engineering planning for 1980

and later year autos.

This truly sounds like a repeat of where we were last year when Jim Broyhill and I and our numerous supporters were working diligently to get the 1976 Clean Air Act amendments bill on the floor of the House—and the Senate was not pushing its version any faster. You will recall the unmanageable delays the amendments of last year underwent before the full House finally had a chance to work its will and adopted our original emission amendment.

Both House and Senate subcommittees with jurisdiction of the clean air legislation took all of 1975 to hold hearings and markup sessions for what became the Clean Air Act Amendments of 1976. It was last year, early in 1976, before either Chamber's full committee—interstate and foreign commerce in the House and Public Works in the Senate—truly got started into the committee amendatory process on the respective bills. Granted, these were both comprehensive and controversial bills dealing with the very lifeblood of a major portion of this nation's environmental concern and with the very lifeblood of major industry and its many related businesses and all the people they employ.

nesses and all the people they employ.

But, delay after delay beset both House and Senate bills—delays that had no pinpointed reason for occurring. The Senate committee reported its bill in early spring and the Commerce Committee voted its bill out March 18, 1976—but the delays really then began. It was not until May 15, the deadline for authorization bills last year, when the Commerce Committee sponsors of the old bill reported the measure and its accompanying committee report to the floor

of the house for action.

Then the long hot summer, and long wait for full House and full Senate action. The clean air Bill of 1976 began to look like a terminal case. As it turned out, it ended up dead. Late in the summer though, August of 1976, after automotive industry timetables had been screwed back, the Senate action occurred and finally, House action got started. But, the House action was on again, off again, and finally, on September 15, the auto emission vote occurred with Dingell-Broyhill (Train) in the success column.

It was to no avail. The majority of the House conferees caved in to Senator Muskie and voted in conference to accept what almost was the original Senate-passed bill auto emission control schedule, a schedule that Jim Broyhill and I were able to pinpoint as much too stringent. It would have been devastating to the industry, the Nation's energy finances and resources, the Nation's consumer pockets, and did little to improve air quality from mobile sources when compared to Dingell-Broyhill. Nevertheless, the Senate took up the conference report and—well—the rest is history. It died.

Now, there are no luxuries nor any softness in the Congressional timetable this year. The Nation—its economy and workers—cannot afford such delays of 1975 and 1976 this time. We must, and I urge each and everyone of you in this room today, to work as effectively as you can to secure final action on the auto emission issue. There are numerous industries both directly and indirectly involved in auto production.

The Dingell-Broyhill/Riegle-Griffin auto emission standards pending in Congress today carry the same weighty, supporting arguments for their enactment as did our emission schedule of last Congress that the House adopted. The emission levels in our bill this year, H.R. 4444 and S. 919, the mobile source emission control amendments of 1977, are just slightly more stringent, but still achievable by automakers, than were our successful Dingell-Broyhill (Train) standards of 1976.

Thus, our new schedule is even more en-

vironmentally sound. It has been carefully and tediously worked out with input by certain technicians of the administration, the engineers from foreign and domestic auto manufacturers, and the United Auto Workers Engineer and Counsel.

I want you to know, and also Members of Congress and the administration, the public and the press to know; that we have literally stripped from every available document we know of all the facts pertinent to automotive issues confronted in the clean air law and

pending legislation.

By thorough research and analysis we have been able to conclude, with several other participating groups who now support our legislation, H.R. 4444 and S. 919, that our bill contains emission levels to provide the best possible mix of environmental controls, energy conservation goals and the assurance of the production of fuel efficient autos, along with keeping consumer purchase and maintenance costs in check so autos will be affordable.

The emission schedule in our legislation is indeed balanced—it is reasonable—it is assuredly believed to be sufficient for public health protection—it will help produce improved fuel economy gains in autos—and the automakers will have the technology to achieve the standards each year so that the so-called bottom line pollution control levels will be reached by 1982.

The urgency which demands final congressional and White House action within just a few weeks is due to the fact that the 1978 statutory standards are unattainable.

Certain congressional sponsors of extremely stringent standards have said, "Well, Volvo

can do it, why can't the others?"

Volvo did not meet the statutory standards and could not have been certified by EPA. Volvo representatives have testified to the fact that their car could not be certified to statutory standards. In the just completed congressional hearings in the House health and environment subcommittee, Volvo's Dan Werben, manager, project engineering and development, testified in response to a question on the Volvo technology—and I quote—

"... It is important to note that the very low emission figures which have recently been quoted for the Volvo Lamda-Sond system are the average results from the four 4,000-mile certification test vehicles with 4-

cylinder in-line engines.

"It should also be noted that during the 50,000 mile durability portion of the EPA test procedures, the durability vehicle equipped with Lamda-Sond exceeded the statutory limits, according to the Federal certification procedure. Thus, we could not have been certified to the statutory emission levels."

Volvo went on to testify—and I quote—
"Volvo has recommended that U.S. exhaust

emission levels be set at 0.9/9.0/2.0 grams per mile for HC, CO and NO_x respectively for model years 1978 through 1982."—End of quote.

No congressional sponsors of auto emission legislation are pushing for statutory standards the next model year nor is anyone that we know of in the administration. It is widely agreed, we believe, that the statutory standards truly are not necessary at any point in the next several years. We believe the schedule in our legislation to be the most acceptable and balanced.

Our bill would continue the current 1977 model year standards of one-point-five hydrocarbons, fifteen-point-0 carbon monoxide, and two-point-0 grams per mile of oxides of nitrogen through model year 1979. The 1978 auto certification by EPA at those levels is for all intents and purposes, completed. Government and auto makers assumed those levels would be in law for the coming model year.

This is based on the fact that the statutory standards were dropped by Congress during last year's deliberations, Additionally

the lead-time engineering and planning for the 1979 model cars has been lost so the 1977 standards likewise must be established for 1979.

In 1980 under Dingell-Broyhill/Riegle-Griffin, we tighten down the standards for two years with a 90 percent reduction required for hydrocarbons, point-four-one; a tighter, 60 percent reduction, carbon monoxide standard of nine-point-0; and we retain the oxides of nitrogen level at two-point 0 grams per mile NOx. That's for 1980 and 1981. It is important that these standards be set at least for two years at a time.

We believe our documentation solidly substantiates these standards for 1980 and 1981.

Allow me to elaborate.

We have established the point-four-one HC standard as early as 1980 in response to concerns about hydrocarbon emissions generally—even though calculations using Environmental Protection Agency methodology show that this will change the health impacts by less than 1 percent.

This minimal change is because California cars in the area where the photochemical oxidant problem is acknowledged to be most serious, are already meeting and will continue to meet the more stringent standard.

Present estimates for manufacturers indicate that the fuel economy penalty of a point-four-one HC standard in 1980 is between 2 percent and 10 percent. I continue to be concerned that this is a high price to pay for these slight gains in air quality. However, of the three pollutants, automotive HC emissions are strongly implicated in smog formation; and if any clean-up should be accelerated, it is agreed that HC control is probably the priority.

The revision to the ultimate CO standard

The revision to the ultimate CO standard is based on recent data that indicates that the original three-point-four grams per mile standard is not needed for health reasons. Technical data shows that three-way catalyst systems may have great difficulty attaining both low NOx levels and the three-point-four grams per mile CO standard. On the health side, there is increasing evidence that a nine gram per mile standard is more than adequate to protect public health.

The State of California has recently decided that a carbon monoxide standard of nine grams per mile is sufficient for its needs.

Before completing my discussion on our new standards, I must comment on the serious concern that is held regarding the three-way catalytic converter. This device, that is not in mass production, shows some sign of being able to achieve somewhat lower emission levels than those currently in effect. The three-way converter, planned to be placed on some new cars, is to be combined with an overall complex system of emission control devices which may not have durability even for the EPA 50,000 mile certification test.

There is no indication though that the motorist would have incentive to have the three-way catalyst repaired. Also, there is the question of the availability of repair services for the device that would be sufficient to maintain the Federal fleet emission standards.

It is also known that the three-way converter will require excessive amounts of rhodium at this stage of its development. Rhodium is a rare and expensive metal, a by-product of platinum whose only known sources in any amounts today are South Africa and the USSR. These are questionable sources. This is a fact that could lead to short supplies of rhodium, especially in consideration of mass produced vehicles, ten million a year.

The final emission level, thus the standards that would become statutory in 1982 model year under Dingel-Broyhill/Riegle-Griffin, is the change in oxides of nitrogen. While the point-four-one HC standard and the nine-point-0 standard for CO continues

through 1982 and beyond, our bill permits EPA the authority to set the NO₂ standard in the range of one to two grams per mile. This appears to be the range that will ultimately represent a balance of fuel economy and air quality goals.

Factors to be considered in determining the ultimate NOx include technical availability and practicability, impact on fuel consumption, and cost of compliance. If these factors determine that the NOx standard should be revised upwards toward two-point-0 grams per mile, the revision will occur if it will not endanger public health.

Also the Administrator may grant a waiver up to two-point-0 grams per mile NO_x for innovative technology that is shown to be extremely fuel efficient and if the waiver upwards to two-point-0 would not endanger public health. I cite the diesel, the CVCC, stratified charge, and lean burn as some examples.

Also, our basis for this NOx standard beginning in 1982, to range from one- to two-point-0 grams per mile, is due to the continued debate over what level of control oxides of nitrogen is needed for health reasons—and because of the concern that a final standard for NOx that may be too stringent could preclude a number of technologies I have just mentioned that show real promise of achieving both air quality and fuel economy improvement.

In my opinion, the original 1976 Dingell/ Broyhill (Train) bill offered a reasonable balance among the objectives of air quality and full economy improvement, minimized cost and stable auto employment. It appears that the new proposal we sponsor is technologically achievable and offers good balance.

I will further cite that another analysis that has contributed to the auto emission debate is the three-way interagency analysis produced at my request last Congress by the EPA-Federal Energy Administration and the Department of Transportation.

That is the April 8, 1976 document that showed, without a doubt, that the original Dingell-Broyhill (Train) standards of last year were far more advantageous when compared to the great fuel penalty and higher consumer costs associated with the House committee or Senate committee standards of 1976.

The analysis, which became widely quoted in our debate, pinpointed that there would be no statistically significant air quality improvements under the House committee or Senate committee stringent standards when compared to Dingell-Broyhill.

Because our revised Dingell-Broyhill/Riegle-Griffin bill this year only slightly tightens up on the standards, but still not to the unnecessary stringent degree of the current Senate committee bill, nor the bill pending in the House Health Subcommittee; we can determine that the fuel saving advantages and consumer cost saving advantages of our new emission schedule remains the better and most balanced choice for the Nation's overall best interest.

And, they are environmentally sound, thus fulfilling the objectives of the Clean Air Act.

In our current effort we have requested of the Carter administration an update of the 1976 analysis to include our revised emission schedule and compare it with other pending emission schedules in the Senate and House, along with last year's defunct conference report standards.

Our fear is that our request for the update is getting crossed-up in the attempt within certain agencies of the administration to produce environmental recommendations to the White House, which, of course, must be accomplished. But, we in Congress are most anxious for that interagency analysis we requested to be fully completed for committee and full House and Senate floor consideration.

In our pending request we have again asked

that the air quality, fuel economy and consumer cost comparisons be made. A premature document did arrive inadvertently on the Hill earlier during a Senate Environmental Subcommittee clean air hearing. The document was incomplete as it did not contain the air quality and health impact data. However, from the fuel economy and consumer cost data, it is determined that again, the original Dingell-Broyhill standards of 1976, were more advantageous in fuel and consumer savings than other, tighter schedules.

Both the current and advanced automobile technology cases in the incomplete document, which had a date of February, 1977 on it, gave our original standards the edge. One of the major advantages for our schedule under that study, and which we believe would be true for the revised Dingell-Broyhill/Riegel-Griffin UAW schedule, is that definite fuel savings would result.

For example, our schedule saves the diesel engine, a known energy saver with potential for an over 20 percent fuel economy improvement in the Federal fleet of cars. That's an engine technology that must not be put out to pasture due to too stringent auto emission standards.

One standard for one of the pollutants has to be discarded and it is a standard that does not appear in our legislation. That is the original statutory point-four NO_x standard, upon which there has been great controversy. Analytical data to date does not prove point-four NO_x is necessary to control emissions from automobiles and it severely penalizes fuel economy. It is contained in the House bill under consideration by the Health and Environment Subcommittee of the Commerce Committee and would establish point-four NO_x as early as 1981. That must be defeated.

The Senate committee has wisely discarded point-four NO_x as a standard for the near future.

Congressman Broyhill and I, when we first worked out the provisions of the new bill, sought to produce a complete bill capable of being enacted on its own, if necessary, dealing directly with only mobile source emission control issues.

Therefore, we have included several provisions dealing with different segments of the automotive industry. These sections of the bill are intended to preserve a competitive situation and thus safeguard the rights of the consumer as well as of the independent businessman.

Specific provisions address the "after market" parts industry as well as the thousands of independent repair and maintenance stations upon which we all depend.

The 1970 Clean Air Act included a provision which has diminished competition in the automobile aftermarket and which threatens to have an even greater anti-competitive effect in the near future.

Our bill would provide that the maintenance instructions must include notice to consumers that they might have their service performed at independent service centers. It would also reduce the warranty to 18,000 miles or 18 months so as to lessen the anticompetitive effect and reduce consumer cost.

Another section of H.R. 4444 and S. 919 concerns language substantially similar to that which the House and Senate enacted last year to provide for high altitude auto emission performance adjustments. This is to assist consumers and auto dealers in high, mountainous regions of the country where certain adjustments are necessary for performance of the car and meeting auto emission standards.

Our legislation is a complete package dealing with mobile source issues. Depending on progress of the House subcommittee timetable and full Commerce Committee action,

and progress of the Senate bill, the other cosponsors and I will be seeking to amend the comprehensive clean air legislation where it deals with mobile source provisions.

It appears now that neither the full House Interstate and Foreign Commerce Committee nor the Senate floor will have the opportunity to act on the comprehensive bills until after the upcoming congressional district work period, April 7 through April 17. Action must move swiftly upon our return to the Capitol.

The point will soon be reached when the determination will have to be made by automakers regarding whether or not they will begin production this summer of 1978 models.

Likewise, in Congress, the determination soon will have to be made as to whether or not there will be a comprehensive bill or a bill, like H.R. 4444 and S. 919, to deal with the urgent issues of automotive emission controls and other mobile source provisions.

There can be no dilatory tactics imposed on clean air legislation this year such as the legislation suffered last year. If there are, the other cosponsors and I, and those supporting our efforts, will be carefully considering an auto only bill and methods to achieve its enactment.

DR. ARIE J. HAAGEN-SMIT

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. ROGERS. Mr. Speaker, a giant has passed: Dr. Arie J. Haagen-Smit, the biochemist whose love of life and the organisms that inhabit the Earth, led him to discover the cause of smog, died in Pasadena, Calif., on Thursday, March 17.

This noble man preferred a life of scholarly research at California Institute of Technology, where he taught for 34 years until his retirement in 1971. But in 1950, his intellectual curiosity and concern for his environment led him to discover the interrelationship of hydrocarbon and oxides of nitrogen and their byproduct—smog.

Additionally, Dr. Haagen-Smit identified the oil and automobile industries as the major source of smog, and challenged them to correct this. He was thus thrust centerstage into the political arena where he was to be a prime mover in the struggle to control airborne pollutants and clean the air we breathe.

In 1968 he became a member of the California Motor Vehicles Pollution Control Board, the precursor to the State Air Resources Board and served as its chairman until 1973. He was also chairman of the committee which sets air quality standards for the Nation, the National Air Quality Criteria Advisory Committee for the Environmental Protection Agency. A member of the Committee on Motor Vehicle Emissions for the National Academy of Sciences, Dr. Haagen-Smit also served on President Nixon's Task Force on Air Pollution in 1970. Combining the skills of the scientist with the concerns of the humanitarian, Dr. Haagen-Smit earned the respect of ally and adversary alike in his quest and received numerous awards from his contemporaries in recognition of his service. We will miss him.

Mr. Speaker, I submit for the RECORD two articles that more fully chronicle this remarkable man's accomplishments. [From the Washington Post, March 20, 1977]

ARIE J. HAAGEN-SMIT, 76, DIES; SMOG SCIENTIST, POLLUTION FOE

PASADENA, CALIF.-Dr. Arie J. Haagen-Smit, who discovered how smog is formed and then tried to force the oil and auto industries to clean up urban air, died Thursday of cancer at his home. He was 76.

His laboratory creation of smog in 1950 at California Institute of Technology marked a breakthrough in the understanding of how sunlight acts on pollutants to form the brown haze that often blankets urban areas.

The biochemist had been ill for several years with cancer of the colon, which apparently spread to his lungs, said Graham Berry, spokesman for Caltech.

Dr. Haagen-Smit retired from Caltech in 1971, after having taught and conducted research there for more than 20 years.

After discovering how smog is created, he turned his efforts toward getting the auto and petroleum industries to build cleaner cars and refineries. His efforts were met with

attempts to discredit his work.
"I felt I was competent in chemistry but not in government," he once said. "However, the job had to be done. I never walk away from anything."

He joined the Motor Vehicles Pollution Control Board which became, in 1968, the state Air Resources Board, and served as chairman until 1973.

He was chairman of a committee which sets air quality standards for the nation, the National Air Quality Criteria Advisory Committee for the Environmental Protection Agency. He was also a member of the Committee on Motor Vehicle Emission for the National Academy of Sciences, and he was on former President Nixon's Task Force on Air Pollution in 1970.

A native of Utrecht, The Netherlands, Dr. Haagen-Smit graduated from the University of Utrecht and received a Ph.D. in 1929. In 1936 he lectured at Harvard, then in 1937 joined the faculty at Caltech, where he taught until his retirement.

He is survived by his wife, Maria; four children, and a sister.

[From the Los Angeles Times, Mar. 6, 1977] THINK OF HIM WHEN SKY IS BLUE, AIR SWEET

(By Al Martinez)

"We will always have some bad days," he said, coughing and trying to smile.

there are so many more good days now . ."

The battle for clean air has been long and difficult for the man who never intended to fight a war in the first place.

All that Dr. Arie Haagen-Smit ever intended to do was indulge his curiosity. He wanted to know why trees grow, and why they died.

As a biochemist, life was his essential interest-its beauty and its processes.

And then one day, as a friend tells it, he stepped out of his ivory tower at the California Institute of Technology in Pasadena, and discovered air pollution.

That was more than a quarter of a century ago. It has never been the same for the man they call, with some irony, "the father of smog."

He was abruptly taken from the scholarly ambience of his scientific workshop into the chaotic public arena at a time when there were no winners on the ecological front.

Environmentalists fought him with the

same ferocity as private industry.
"It was a case," says Haagen-Sm says Haagen-Smit today. "of being handed your own death certificate There was simply no point in arguing with anyone."

His simile has some chilling aspects. The Holland-born scientist, winner of all but the Nobel Prize-and there isn't one in ecology is a dreadfully ill man.

A serious lung condition that causes spasms of coughing has sapped his strength and confined him mostly to his quiet and lovely home on a tree-lined street of Pasa-

But it has not clouded the mind or crimped the humor of the "gentle European," nor has it dampened his optimism.

What Dr. Haagen-Smit, the man they call "Haggy," did back in 1950 was discover the sources and processes of air pollution and create them in a test tube.

No one had done that before ("Although someone would have done it eventually," he says modestly), and the subsequent attention was life-changing.

Haagen-Smit not only laid out in scientific principle what smog is-hydrocarbons and oxides of nitrogen-but also pointed a finger at who caused it. The prime sources, he told the world, were the oil and automotive industries. Then he waited for their

"At first," he said, "they were very quiet." Haagen-Smit leaned back in a contour chair and stared at the ceiling, half-smiling, remembering.

"Then they laughed at me and tried to discredit me." He brought the chair forward to face his interviewer. "Then there was a

He entered that war reluctantly. To be a hero, and a target, in the environmental movement had not been the gentle European's intention.

"But I suppose," he mused, "It was not the intention of the fly to catch the flypaper either, if you know what I mean."

Such was the impact of his discovery that Haagen-Smit, then a professor of biology at Caltech, was to become in 1968 chairman of the California Air Resources Board, a post he held until 1973, and a leader in the fight for clean air.

That the air remains polluted, to a lesser degree than it was 27 years ago, is no cause for distress, he says. What matters to him is that "the show is on the road."

'We will always have some bad days," he said, coughing and trying to smile. "But there are so many more good days now . . ." Arie Haagen-Smit is 76. He recevied his

Ph.D. in chemistry in the Netherlands and came to the United States for the first time in 1936 to lecture at Harvard.

A year later he was invited to join the faculty at Caltech, and was there until his retirement in 1971.

His primary concern was biochemistry. "I was interested in the problems of nature," he would tell a reporter. "Why does a plant grow? Why does a fly have red eyes?"

It was an interest based in his youth. He

remembers running through the fields of Holland, picking flowers and trying to determine what they were.

'My interest was in life," he said, "and in the chemical processes that sustain it.'

That interest was expanded in 1949 to include air pollution. The compelling force, he says simply, was curiosity.

"No one could miss smog in those days," Haagen-Smit said. "I felt it would not be difficult to find out what it was. And so I began."

The result was what some have termed "Haagen-smog"—that is, air pollution in a test tube. He had isolated the recipe for goop in the air."

The first announcement of his achievement was carried inconspicuously in the press, and was greeted initially with only passing interest.

To Haagen-Smit,, pollution was an affront to beauty, a stinking cloud that rolled across the landscape every afternoon. But to most it was a Jack Benny joke, a kind of Los Angeles

symbol that no one was taking too seriously back then.

The mild response to his discovery did not trouble the slightly built Dutch scientist. He had satisfied his curiosity.

"As far as I was concerned," he said in a clipped accent, "it was then up to others to do the dirty work. I went back to the lab-

He was not to remain in peace much longer, however. The industries he had named as major polluters were beginning to react.

"They said my work was not scientific," Haagen-Smit said, never too concerned about their efforts to discredit him. "But major studies which cost much more than mine were undertaken and they all reached the same conclusion."

Then he added, not so much immodestly as factually "You can't beat the truth."

As the impact of his discovery Haagen-Smit ("A scientific Don Quixote," an industrialist once sneered) edged into center stage.

From a Chamber of Commerce scientific committee he stepped up to the state level, joining the new Motor Vehicle Pollution Control Board-a stepchild of his discovery

It was an uneasy venture into public life. felt I was competent in chemistry, Haagen-Smit said, sipping water to control his cough, "but not in government. However, the job had to be done. I never walk away from anything."

That was to be his pervasive philosophy over the next several years, but he was never at ease in the uncertain environment of pub-

"I guess I'm just not a government man," he told an interviewer in the heat of one battle. "You can't let your hair down in government, and they can't just look at me and say, 'You're getting old, Haggy . . . '" -

In 1968, the Motor Vehicles Pollution Control Board became the 14-member Air Resources Board and Haagen-Smit was its chairman.

The battle heated. Industry criticized him on one hand for being too tough, and the environmentalists were on him for being too

But the shouters, he said with a small shrug, never influenced him one way or the

'They got awfully excited, but I just stayed quiet. It's better not to talk back. You always lose."

What Haagen-Smit was doing instead was approaching the top men in the petroleum and automobile industries to get something done.

"I have found," he said, "that it does no good to go to anyone unless he is in charge. All a company president has to do to get something done is send out a little memo

The results of the "little memos"-and some legislative muscle-were gratifying to Haagen-Smit, and he is quick to compliment both industries for the actions they have taken to reduce air pollution.

He estimated in 1953 that they were each responsible for pumping 800 tons of pollutants into the air daily. The oil industry, he points out now, is down to about 150 tons a day and the auto industry down to 300 tons.

"It just proves," he says, "that if you give people time there is no reason to be pessimistic. The oil and auto industries learned

Meanwhile, pressure was mounting for the unwieldly ARB to be reorganized, and it was. In 1972, the agency was reduced from a 14-member to a five-member board.

Haagen-Smit, who had retired from Caltech the previous year, wanted to quit the state job too but was prevailed upon to continue—still as board chairman.

"Let's face it," one member would say

later. "His prestige alone was holding the whole thing together."

Haagen-Smit reached his decision to stay by facing a simple truth. "The public has a right to clean air. Perhaps I can help.'

Despite high praise, an increasing number of scientific honors and the best of motives, they were not halcvon days for the softspoken Dutchman.

He was even accused of letting speakers ramble on too long at public meetings.

To such criticism, after one man had talked for 45 minutes, Haagen-Smit replied, "He's a human being. He would feel badly if no one listened."

That attitude continues today. "If they are public meetings," he asks simply, "should not the public be allowed to speak?"

He thinks about that for a moment and then adds: "My work was not so perfect, but I did the best I could."

At the time, Haagen-Smit conceded that perhaps it was time for someone else to take his place on the board—"someone with the ability to knock heads together in an acceptable manner."

Some agreed, some didn't. One board member liked the persuasive style of the "foxy grandpa." A national magazine said of him, "He undoubtedly knows more about airborne pollutants' than, anyone else in the world."

Once more, however, Haagen-Smit made his own decision, and that decision in 1973 was that he'd had enough. He retired from the ARB.

"I'm just an old sailor," he said, "who is fading away."

He didn't fade far. He was honored at an international symposium in Geneva, given the prestigious Smithsonian Medal, awarded the \$50,000 Alice Tyler Ecology Prize and the Rhineland Award for Western Europeall in recognition of his work on behalf of clean air.

More recently, a building at an ARB facility in El Monte was named after Haagen-Smit, to which he puckishly observes,

"Everyone ought to have a pyramid."

He has no regrets about his time of public service. "They were exciting years," he says softly, "although they may have lasted a little too long."

Nor does he regret the intensive lab work that went on for years after his discovery, often with himself as the guinea pig in a smog chamber built to study the effects of air pollution on plant life.

Haagen-Smit is adamantly opposed to the that the tests had anything to do

with his critical lung allment. He said then, "Smog is an aesthetic and economic nuisance that should be fought as such. Don't believe the stories that death in the form of smog stalks the streets of Los Angeles."

hasn't changed Haagen-Smit's Illness mind. He holds to the original contention and adds, "A chemical laboratory is never a paradise of odors and chemicals. Sometimes I've had the skin peel off my hands from chemicals, and I've had to say to myself 'I must be more careful."

Is he satisfied now that the battle for clean air will one day be won?

Arie Haagen-Smit leaned back in his contour chair and thought about it.

"If the goal is zero smog," he finally said, we'll never reach it. There will always be some contamination. But our air on the average is 50% cleaner than it was in 1970. We have made progress.

"From now on, progress will be slower," he added, thumbing absently through scientific journals on a table at his side. "The first gains are always easier. The battle will go on."

His own battle now is a lonelier one, far from the noisy public arena, in a chair by a window on a sunlit day. He fights the war against failing health with the love of his wife, four grown children, and six grandchildren.

Beyond that-beyond the solitary nature of his struggle-he has become a towering figure in both scientific and political circles.

Charles Heinen, an executive with the Chrysler Corp. in Detroit, who has known Haagen-Smit as adversary and friend for 25 years, said:

'He was once my judge and jury, because I am an automobile company man. But never did I doubt his competence, integrity or humanity. Never did I question his dignity.

"All that I am trying to say is that Haggy

is a special person . .

One whose concern in a private way is what his concern has always been in a public way. Life.

METROPOLITAN WASHINGTON COUNCIL OF GOVERNMENTS CELEBRATES 20TH ANNIVERSARY

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. FAUNTROY. Mr. Speaker, as the central city in this metropolitan area, with over 3 million people living and working in the Nation's Capital and its suburbs, the District of Columbia has always been a proud partner in the Metropolitan Washington Council of Govern-

I am happy to note that today the Council of Governments observes its 20th anniversary. It was 20 years ago this month that this respected organization was founded under the leadership of a District of Columbia official and two suburban officials at a meeting in the District Building. The President of the District of Columbia Board of Commissioners. Robert E. McLaughlin, joined two suburban officials in bringing some 40 local officials together for the first time.

In the 20 years since, the District of Columbia has continued its participation in COG. Other District officials have served in COG's leadership posts right up to the present. Our Mayor, Walter Washington, has served as the president of COG, and the chairman of the District of Columbia City Council, Sterling Tucker, was elected to two terms as chairman of the board of COG.

This participation has produced rewards for the District of Columbia. COG has helped obtain millions of dollars for the city of Washington in Federal housing funds. Major transportation improvements in expanded bus service and fringe parking have made it easier for our citizens in the South Capitol Street corridor to get to and from work. They were accomplished through a special COG proj-

The District of Columbia was facing a refuse disposal crisis of severe dimensions when its officials, working with their colleagues in three suburbs, established one of the few regional sanitary landfills in the Nation. The vehicle for solving this extreme problem was the Council of Gov-

As the Member of Congress representing the city of Washington, I am pleased to serve as a member of COG, along with my colleagues in this body from the portions of suburban Maryland and northern Virginia which combine with the District of Columbia to form Metropolitan Washington. Our colleagues in the Senate representing Maryland and Virginia also enjoy membership in the Council of Governments.

For all these reasons, Mr. Speaker, I am happy to join other elected officials and the news media in paying tribute to the Metropolitan Washington Council of Governments for the unique and effective role which it has played in our behalf over 20 years. It can be said with accuracy that COG is the reason that 16 cities and counties, 2 States, 10 Congresses and 6 Presidents have been able to cooperate toward a better Metropolitan Washington for all of us.

FW VOICE OF DEMOCRACY SCHOLARSHIP PROGRAM UTAH WINNER

HON. GUNN McKAY

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. McKAY. Mr. Speaker, I am pleased to submit for the RECORD the winning script from the State of Utah, as delivered by Mr. Richard Martin Geiger for the 1976 VFW Voice of Democracy Scholarship program, I congratulate Mr. Geiger and commend his essay to my colleagues for their consideration:

VFW VOICE OF DEMOCRACY SCHOLARSHIP PRO-GRAM UTAH WINNER

(By Richard M. Geiger)

I have been alive about eighteen years . The United States of America have lived for two hundred. That's just more than ten times as long as I lived. But is 200 years so long in the life of a nation? Just as eighteen years is only the beginning of my life, two hundred is just the beginning of the life of our country. The eighteenth year of my life will be a turning point for me. I will begin to assume the responsibilities this country assigns to its adult citizens, I will have the responsibility of casting my vote in the next election for President. The vote is part of the heritage handed down to me.

I will use that vote, and other channels of democracy to help institute necessary change, for as in the first years of my life, democracy the first years of my country's life have been, at times, turbulent. Just as I have made mistakes, and will continue to make them, so has and so will the United States. But it's my responsibility to do everything I can to protect and preserve the aspects of my heritage that I believe in. It's also just as important to try and rid my country of any aspects I feel are not right. That is the responsibility of a democracy, and no other system of government asks as much from its people.

The means I can use to imput my voice into this democracy are all parts of my heritage. If the freedoms of speech, religion and press are violated or abused, I must act to preserve that heritage.

Another part of my heritage is the responsibility to keep a watch for violation of others' rights. I must act to insure against future Kent States and Watergates.
At times I will be a dissenting voice, and

that, too is a part of my heritage. The birth of our nation was conceived in dissent.

In striving to improve the United States we must all never forget the mistakes of the past, and we must fight to maintain the good things we have. In remembering the Thomas Jeffersons we must also remember the Joe McCarthys and Richard Nixon.

Perhaps Millard Fillmore said it best in his

message to Congress in 1850:

"I believe no event would be hailed with more gratification by the people of the United States than the amicable adjustment of some questions of difficulty, which have,

for a long time, agitated the country."
So just as my life is only beginning, and I turn my eyes to my past then look to the future, so must all Americans search the past to find a path to the future, and there is no more fitting a time to do this than this, the two-hundredth anniversary of the Declaration of our Independence. But as we celebrate our first two hundred years, we must look forward to our next two hundred years, and be willing to lend our hands to the molding of the future with as much care and energy as those before us. Let's make sure that we will be around to celebrate in two hundred more years.

SCHOOL LUNCH REFORM

HON. CHARLES ROSE III

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. ROSE. Mr. Speaker, I rise today to take note of a recent editorial presented by Mr. Young H. Allen, superintendent of Robeson County Schools in North Carolina's Seventh Congressional District.

Mr. Allen's remarks specifically relate to the present school lunch program and the inequities and absurdities which sometimes result from it. Whatever position Members of the House may take on the school lunch program, I feel the following article will be informative.

It is a pleasure, therefore, to commend this reading to my colleagues:

> SCHOOL LUNCHES FOR ALL (By Young H. Allen)

One of the most perplexing tasks in public school operation is that of carrying out the free or reduced-price school lunch policy. School administrations fully recognize that they are administering a program they know to be unfair, unrealistic, and in the long run, detrimental to public support of the public

First, let's make it clear that there is almost unanimous agreement that every child needs a nourishing meal at noon to prepare his body and mind for development taking place during the school day. This is probably more pertinent today than in the past as research shows that fewer children are getting a good breakfast, partly due to working mothers, and partly due to the fad of snacks all during the day, rather than three substantial meals. Therefore, the school lunch is a wholesome addition to the school program and is here to stay.

The school lunch program began some years ago primarily as a means of disposing of surplus agricultural products. It proved not only to serve that purpose, but to meet the nutritional needs of millions of school children throughout the nation. Bascially, it is a program supported and controlled by the federal government. When you as a citizen receive or see an announcement of the school lunch policy adopted by your county or city Board of Education, you are only seeing a rubber stamped" policy. The only input the local boards of education have in the policy is name and address of the Board of Education and the date of formal adoption.

The policy on free or reduced-price lunches is so structured as to encourage some parents to certify untruths about their family income, and thus to contradict the foundations of self-respect and wholesome self-

When a parent files application for his child or children to be given a free lunch, the school official (principal) will notify the parent or guardian within a reasonable period of time of acceptance or denial of the request. Schools are not staffed with sufficient personnel to make in depth or thorough investigations, and attorneys advise us that if a child should be denied a free or reducedprice lunch without justifiable cause, school official is subject to a personal libel suit. The risk is hardly worth the effort. As a result, here in the Robeson County Unit, almost 90 percent of our school children receive either a free or reduced-price lunch. The 10 percent who do pay the full price are not necessarily those most able to.

The problems as stated above seem to point out an impossible situation with no solution. This is not the fact-there is an answer. The answer is simply-serve every student a tax paid lunch. We accept the premise that a midday meal for developing our youth is wholesome, if not a necessity. If we have the responsibility of all children ages 5-18 for seven hours of the day, ministering to the needs of their developing minds, then why are we not also responsible to minister to their physical needs with a daily nourish-

ing meal?

In reality, there is no such thing as a free lunch. Someone is paying and possibly the parents who do send money for their child's lunch are also paying through taxes for many

of those so-called "free" lunches.

The present lunch program, while serving a good purpose, is creating mistrust and negativism towards the public school. The time has come when a positive action should be faced reasonably by serving all children a noonday meal, just as we provide them an English, math, or physical education course.

Such a change can come about only through action of the Congress of the United

TRIBUTE TO THE NEW ARTEF PLAYERS

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. WAXMAN. Mr. Speaker, we are fortunate, in southern California, to be enriched by a Jewish repertory company called the New Artef Players. Named after a Yiddish theater ensemble active in the 1920's and 1930's, this group of actors, writers, designers, and musicians, led by Paul Bennet, its administrative director and Armand Volk as artistic director, is contributing greatly to the cultural life of the communities it reaches. In the most exciting manner, the traditions of Jewish consciousness are preserved and fostered for the enjoyment of Jews and non-Jews alike. The company performs at synagogues, college campuses, and has a special education program for children which is presented at public schools.

On April 30, 1977, the New Artef Play-

ers will open a new and original play at Temple Emmanuel of Beverly Hills, titled, "Passions," the production explores Jewish life during the medieval period, Jewish-Christian relationships, and the roots of anti-Semitism. The date marks the 1-year anniversary of the opening of "Survivors," a chronicle of the emotional aftereffects of the European holocaust of World War II. The company, in a lighter vein, also has in its repertory, "The Tales of Chelm," colorful adapta-tions of old Eastern European folk tales about the legendary town of fools.

I am happy to be the means of bringing this exceptional theater group to the attention of the House, so that we may join in the New Artef Players anniversary

celebration.

A SOLAR ENERGY BILL

HON. JIM LLOYD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. LLOYD of California. Mr. Speaker, today, I am introducing a solar energy bill which provides incentives to both builders of solar heating and cooling units and to taxpayers who install these units in their homes.

I realize that more than 60 similar bills have been introduced this session and I am happy to see such enthusiastic support among my colleagues. However, my bill is unique, because it combines both tax credits for taxpayers and loans to builders to form a package that will stimulate the growth of this infant industry.

Since the initial cost of a solar heating and cooling system is high, my bill provides tax credits which will assist taxpayers who wish to make this purchase. Taxpayers will receive a credit of 25 percent for all solar energy equipment ex-

penditures up to \$8,000.

Studies show that those who wish to build homes that utilize solar energy may have difficulty financing the home. Consequently, the bill I am introducing today provides loans to help builders finance homes that use solar energy. Builders may obtain low-interest loans of up to one-half of the cost of installing solar energy equipment.

The Sun's energy is inexhaustible and consequently can provide many economic advantages. If only 1 percent of the Nation's buildings are heated by the Sun. 30 million barrels of oil will be saved each

As I have stated, my bill directs its aid to the solar home and this may significantly conserve energy, since 25 percent of our Nation's energy is consumed by residences.

Moreover, the future price of fuel is an indication of the great economic return from the use of solar energy. Rising prices of fuel may soon make solar energy the most practical energy source available. Immediate economic impact can be felt as this burgeoning industry provides jobs for installers, plumbers, carpenters, and other construction workers as well as architects, engineers, and other professionals.

Clearly, the Sun is a great untapped energy source and it will become more attractive once solar energy equipment installation becomes less expensive for both builders and homeowners. So, by cutting down this expense my bill provides help where it is needed most.

LITHUANIAN INDEPENDENCE

HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. RINALDO. Mr. Speaker, last February 16, Lithuanians throughout the world commemorated the 59th anniversary of Lithuanian independence. This anniversary is a celebration of heritage. But it is just as importantly a rededication to the struggle for a new day of freedom.

Since 1940, Lithuanians have lived under the repression of the Communist regime in Moscow. They have withstood attacks on their language, their religion, their culture, and their civil and political liberties. They have witnessed Soviet leaders from Stalin to Brezhnev endorse international agreements—the latest being the Helsinki Final Act—guaranteeing human rights, only to suffer from the systematic denial of those rights.

Yet they are no less strong. Their patriotism, their strength in the face of adversity, and their spirit of ultimate victory are testimonials to people throughout the world who suffer from tyranny.

On January 28, the Lithuanian Americans of Linden, N.J., representing many of my constituents, adopted a resolution reaffirming these beliefs. In my judgment, this resolution succinctly and eloquently testifies to their endurance and their unflagging commitment to liberty.

I would like to insert this document as an official part of the RECORD.

The resolution follows:

RESOLUTION

We, the Lithuanian-Americans of Linden and vicinity assembled this 28th day of January, 1977, at the Lithuanian Liberty Park Hall, 340 Mitchell Avenue, Linden, New Jersey, to commemorate the restoration of Lithuania's independence, do hereby state as follows:

That February 16, 1977 marks the 59th anniversary of the restoration of independence to the more than 700 year-old Lithuanian State, which was restored by the blood sacrifices of the Lithuanian people during the wars of independence of 1919-1920, and recognized by the international community of states;

That the Republic of Lithuania was forcibly occupied and illegally annexed by the Soviet Union in 1940, in violation of all the existing treaties and the principles of international law;

That while so many countries under foreign colonial domination have been given the opportunity to establish their own independent states, Lithuania is still exposed to the most brutal Russian oppression and is nothing more than a colony of the Soviet Empire;
That although the Soviet Union, through

programs of resettlement of peoples, intensirussification, suppression of religious freedom and political persecutions, continue in its efforts to change the ethnic character of the population of Lithuania, the Soviet invaders are unable to suppress the aspirations of the Lithuanian people for self-government and the exercise of their human rights.

Now, therefore, be it resolved

That we demand that the Soviet Union withdraw its military forces, administrative apparatus and the imported Russian colonists from Lithuania and allow the Lithuanian people to govern themselves freely;

That we demand the immediate release of all Lithuanians who are imprisoned for political reasons and religious reasons and who for years have been lingering in various Soviet jails and concentration camps or kept

in psychiatric wards;
That, meanwhile, we protest against the degradation of the Lithuanian people by the Soviet rulers in proclaiming that Lithuanians shall be grateful to the Soviet Union for their "liberation" and that we further protest against the corruption of the minds of the Lithuanian people by the preaching of lies about all kinds of human rights in occupied Lithuania which in fact do not exist.

That we are deeply grateful to the 94th Congress of the United States for passage of new resolutions expressing the sense of the Congress relating to the status of the

Baltic states.

That in expressing our gratitude to the United States Government for its firm position of non-recognition of the Soviet occupation and annexation of Lithuania, we request an activation of the non-recognition principle by stressing at every opportunity in the United Nations and other international forums the denial of freedom and national independence to Lithuania and other Baltic States.

That copies of this Resolution be forwarded to the President of the United States, to the Secretary of State, to the United States Senators and Congressmen from our state

and the news media.

EDWARD PODLECKIS, Secretary, Lithuanian-American Council, Linden Division.

TRIBUTE TO RALPH L. WILLIAMS

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mrs. BURKE of California. Mr. Speaker, today, I would like to bring to the attention of my colleagues the many outstanding contributions of Mr. Ralph L. Williams, of Los Angeles. As one of the founders of the Southwest Comprehensive Medical Corp., Mr. Williams was instrumental in securing the corporation's first contract from the county of Los Angeles for the treatment of alcoholics in the city's southwest area. Soon after this, Ralph Williams was chosen to be the corporation's first executive administrator. In this capacity, he secured the corporation's second program, the minidetoxification treatment and referral program, set up to meet the critical needs of alcohol abusers in Greater Southwest Los Angeles.

In 1972, Mr. Williams assumed the position of chairman of the Southwest Health Council. Since that time he has negotiated with the Los Angeles County board of supervisors and the department of health services to remodel the Southwest Health Clinic.

In addition to these noteworthy accomplishments, Mr. Williams has the distinction of being the first black American in California to actively serve on the California State Alcoholism Advisory Board.

I ask my colleagues in Congress to join with me in tribute to a great American, Mr. Ralph L. Williams, for his outstanding contributions to the fight against alcoholism in the city of Los Angeles and throughout the State of California.

THE QUIET DEATH OF THE VIETNAM VETERANS JOBS PROGRAM

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Ms. OAKAR. Mr. Speaker, last January, President Carter's announcement of a program to provide 200,000 jobs for unemployed Vietnam veterans in 1977 and 1978 received banner headlines. I was particularly interested in his proposal, as 1 week earlier I had proposed my own bill for more jobs for veterans. sought was a special provision for Vietnam veterans in the economic recovery program, so that the terribly high rate of unemployment among these men and women might be reduced. Both President Carter's proposal and my proposal envisioned providing more of the public service jobs created under the Comprehensive Employment and Train-Act-CETA-to Vietnam veterans. My bill, H.R. 2847, would have required that 20 percent of all the new jobs be given to unemployed Vietnam veterans.

Last Tuesday, however, the House effectively closed the door on such a program for the coming year. It did so, without fanfare or even a recorded vote, by approving, without any special provision for veterans, the only bill that could have served as the vehicle for providing more public service jobs for Vietnam veterans. Much to my regret, this bill, H.R. 2992, merely extends the CETA programs through fiscal year 1978 and does not

amend them at all.

Frankly, it seems to me that once the White House announcement splashed over the newspapers, a bare minimum was done for the purpose of seeing that the Vietnam veterans proposal would be enacted. The House Employment Opportunities Subcommittee held only one hearing on the matter, on March 16, and at that hearing it heard only one witness, Ernest Green, the As-

sistant Secretary of Labor.

I understand that it was not until a short time before this hearing that the subcommittee even received a proposed bill from the administration embodying its Vietnam veterans jobs proposal. Incidentally, despite all of the newspaper commentary that the administration proposal would provide 145,000 public service jobs to Vietnam veterans, the bill did nothing of the kind. Rather, it would have amended the law to establish a 'preference" for Vietnam veterans in filling public service jobs, and the 145,000 figure was to be only a "national goal." But the House Education and Labor Committee did not see fit to include even this provision, which is more limited than the proposal I offered, in H.R. 2992.

Of course, the administration has stated that it will pursue employment of Vietnam veterans with all the means currently at its disposal, and the Subcommittee on Employment Opportunities has indicated its intention to study closely the problem of unemployment among veterans and to find solutions to it. I support both of these efforts, and I hope they will succeed.

But I do not believe that these actions accord the problem the urgency it deserves, and I am certain that the approach embodied in my bill H.R. 2847, would have been far more effective in providing jobs to the men and women who served in our Armed Forces during the Vietnam war. Thus I am deeply disappointed that this approach was not adopted now, and I will continue my efforts to see that it will be enacted.

EXPLANATION OF VOTE ON H.R. 4477

HON. JIM GUY TUCKER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. TUCKER. Mr. Speaker, on the 16th of March the House voted to amend the supplemental appropriations bill to include an additional \$200 million for the purpose of aiding those poor families who were unable to pay increased home heating bills caused by the unusually cold winter. I voted against that amendment, and I believe the people of my district deserve to know why.

I voted against this program, because neither on the floor during debate nor since that time have I found anyone who could provide details about how this \$200 million is going to be spent. Even the amount of money going to each of the States is unknown. The best answer the Comunity Services Administration can give is that Arkansas will get between \$1.67 and \$1.86 million—over a 10-percent variation.

What is going to be done with this money once it is determined how much each State gets? The answer is that it is to be turned over to the Governors of each of the States who, in the words of the sponsor of this amendment, "* * * would then decide on the best way to distribute the funds to those most in need * * *." The Governor of my State is a fine individual, as I am sure are the Governors of the other 49 States, but they are not charged with the constitutional responsibility of seeing that, "No money is drawn from the Treasury, but in consequence of appropriations made by law."

Even setting aside that objection, the Governor of each State is left to decide not only what method to use in distributing these funds, but also to decide who gets the money and how much. The maximum grant is \$250 and there is obviously not enough money to give every eligible person or family that amount. The eligible elderly in Arkansas are estimated to

number 365,000. If Arkansas got the maximum amount of funds each of these persons could get just over \$5.

Mr. Speaker, no Member of this body is more concerned about the effects of the unusually cold winter we have just gone through than I. I know how the people of the Second District and Arkansas generally suffered both physically and economically through it. But I cannot believe that appropriating \$200 million to be spent in an as yet undetermined fashion is going to be of any real assistance to them. For that reason I voted against the amendment to the supplemental appropriations bill.

OPPORTUNITIES FOR ADOPTION ACT OF 1977

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mrs. BURKE of California. Mr. Speaker, I recently introduced the Opportunities for Adoption Act of 1977 (H.R. 5550), to improve the prospects of adoption for more than 100,000 children now considered unadoptable because of the lack of clear direction and objectives in our many public and private adoption agencies. Many of these are "special needs" children, generally defined as those who have not been adopted due to their age—usually over 6 years—race, ethnic group, mental, physical or emotional disability, or because they are members of a sibling group.

For those who could not attend the April 4 Senate hearings on the companion bill, S. 961, which was introduced by Senator Cranston, I am placing into the CONGRESSIONAL RECORD today an article written by the distinguished columnist, Mary McGrory of the Washington Star-News. Her reporting of the poignant testimony of several adoptive parents of special needs children provides valuable insight into the problems of the present adoption system. I recommend this article highly to my esteemed colleagues in the Congress and to all those interested in helping special needs children find the love and security of permanent homes.

THE U.S. GOVERNMENT SHOULD HELP SAINTS (By Mary McGrory)

"You really are absolute saints," Sen. Alan Cranston, D-Calif., told the six people who were seated before him in the hearing room.

The is not something that senators usually say to witnesses, but there was nothing usual about the three young couples who had come to testify about his adoption subsidy bill—which is, incidentally, opposed by the Health, Education and Welfare Department because it would, as a spokesman said, "fragment the delivery of social services."

It is hard to see how the efforts of the adoptive parents could have been more "fragmented." Red tape, jurisdictional tangles and begrudged information had impeded seriously their quests to become parents of children nobody wanted.

The three couples, one from Pennsylvania, two from Virginia, had persevered, and insisted on taking children the professionals regarded as unadoptable, children whose

afflictions ranged from sickle-cell anemia to functional blindness, deafness and severe emotional disturbance.

"My admiration for you," Cranston told them, "is matched by my outrage at the bureaucracy, so I find it hard to ask questions."

Allen and Meg Tucker of Great Falls, he a cheerful mathematics professor at Georgetown, she a lively, black-haired former French teacher, have adopted Brian and Jenny, and would have taken two more if they could have counted on some outside financial help.

Jenny, at age 3 could not see and would not talk when she came to them. She also had serious birth defects. She had been in eight foster homes, taken to a new one after each of the numerous operations required for her eyes and her deformed hands. The sight of a suitcase made her hysterical.

Jenny's medical bills were so high that the Tuckers "seriously" considered giving her up. The difficulty was that Jenny had been taken from New York and became ineligible for the state's adoption subsidies when she went to Virginia. Both states claimed she was the other's responsibility.

Jenny was initially diagnosed as retarded.

Jenny was initially diagnosed as retarded. Her father diffidently took the microphone to boast to Cranston: "Despite the diagnosis of retarded, Jenny is now at the top of the second grade."

Ruthann and Henry Haussling have adopted five children, all but one of them with severe physical or emotional problems. They are black. The Hausslings are white. Mrs. Haussling is the president of the local Council for Adoptable Children.

The Flynns, Laurie and Joseph of Lancaster, Pa., are no less remarkable. They have five children of their own and acquired five more, including one 9-year-old black, half-Vietnamese boy, adopted "unexpectedly" during the Vietnam baby lift.

They insist that there are thousands of other Americans who are dying to take on the challenge—and rewards—of taking so-called "difficult" children home with them for good.

Two months ago, the Flynns tried to organize a modest service for would-be adoptive parents. They were not well received by the professionals. At the local Children's Bureau, Joseph Flynn said, he and his wife were viewed as "somewhat threatening." Besides, the prevailing social service wisdom is that children who have been in foster home care for three years are unadoptable. The Flynns have two teen-age boys who had been in foster homes for six years.

What emerged from the touching testimony was a pattern. Children are sent to foster homes almost casually, and moved around—"bounced around" is more like it—to whatever is available, then often forgotten. Adoption is still a rigid and difficult procedure, and subject to wild variations in rules and standards from state to state.

The federal government currently spends \$700 million to provide foster care for children.

The Cranston bill would authorize \$20 million in its first year, to promote adoption—impose federal standards, provide a subsidy for hard-to-place children, eliminate barriers on exchange of medical and personal information between states—and would retrain social service workers to think adoption for long-term foster-care children.

Mrs. Hausseling reported that 85 people turned up at a recent meeting sponsored by the Council on Adoptable Children in Arlington. But there is one social worker for adoption cases in Arlington County and the difficulties of making the necessary "case studies" prove sometimes insuperable.

The three couples say they are not so special in their desire for "special needs children." Cranston's bill would make it possible

to prove it. The lack of administration support for his bill does not deter him. HEW wants to delay any action until it has completed its welfare reform study.

But Cranston believes that if people want to be saints, the federal government should not only allow it but actively encourage them. The way it is now, the hard-to-place are shuffled around indefinitely.

"That only aggravates their problems, doesn't it?" asked committee member Don Riegle, D-Mich. The answer is yes, and no-

body disputes it.

TRIBUTE TO BRUCE CORWIN

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. WAXMAN. Mr. Speaker, Bruce Corwin, whom I am proud to call my friend, and whom California is proud to have as a citizen, will be honored as Man of the Year by the Brotherhood of Temple Israel of Hollywood at a dinner on

April 27, 1977.

It is difficult to enumerate all of the accomplishments that this young man of 37 already has to his credit. Bruce was born and reared in Los Angeles. At 12. Bruce was president of the student body at John Burroughs Junior High School. At 17, Bruce served as president of the Los Angeles High School student body. Continuing this pattern of leadership. Bruce held the presidency of his senior class at Wesleyan University in Connecticut. In 1974, he completed a 3-year term on the board of trustees of Wesleyan University, the youngest trustee every named to the board in the 144-year history of that distinguished institution.

Bruce also became the youngest president of Temple Israel of Hollywood in its 50-year existence, serving with distinction for two terms in 1973 and 1974.

At the age of 30, Bruce Corwin succeeded to the presidency of Metropolitan Theatres Corp., the third generation of his family to be involved in the theater business. He is also president of the National Association of Theater Owners of California, and of the Spanish Pictures

Exhibitors Association.

Despite Bruce's heavy business responsibilities, his concern has always been with people and their needs. After the disastrous Watts riots in Los Angeles he. with—then—Councilman Tom Bradley, brought into existence "People. Incorporated" to give the residents of Watts a low-cost movie theater and entertainment center. He was cochairman of the NAACP Legal Defense Fund, an intern and later chairman of the board of trustees of the Coro Foundation, a nonprofit public affairs group. As a member of the executive committee of the Variety Boys Club of East Los Angeles, Bruce has been instrumental in helping the club award annual scholarships to nine young men to finance their first year in college. The Spanish Pictures Exhibit-Association, under Bruce Corwin's leadership, also maintains a scholarship fund for meritorious young men of Mexican-American heritage.

CXXIII-684-Part 9

Following Mayor Bradley's election, Bruce Corwin was appointed a member of the mayor's Blue Ribbon Committee of 40. He was also appointed to the Los Angeles City Fire Commission and was subsequently elected president of that commission, serving for two terms. The achievement of which he is most proud. as president of the fire commission, was the increasing of paramedic ambulances in the city from 7 in 1973 to 35 in 1976, giving Los Angeles the largest fleet of paramedic ambulances in the world. He now serves on the Los Angeles County Paramedic Commission, to coordinate the program throughout the county. Bruce has chaired fund drives for the theatrical division of the United Jewish Welfare Fund since 1972, and also occupies the Western U.S. cochairmanship of the movie industry's annual Will Rogers Hospital Fund.

Bruce Corwin is also a political activist. He held a top leadership post in the Carter for President campaign in California. and served as a delegate to the 1976 Democratic National Convention. He has been a campaigner for innumerable Democratic candidates at every level from local to national office, and is the newly elected southern California chairman of the Democratic State Central Committee.

Bruce and his wife, Toni, an alumna of USLA, have two sons, David 8, and Daniel 5. The Corwin family deserves the gratitude and admiration of the country at large. I ask the Members to join me in recognizing the many contributions made by Bruce Corwin to his community and for fellow human beings.

YOUTH EMPLOYMENT AND TRAIN-ING ACT OF 1977

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. HAWKINS. Mr. Speaker, I rise today to introduce legislation prepared by the administration along the lines of President Carter's message on youth employment. I am joined in this effort by the distinguished chairman of the Committee on Education and Labor, the Honorable CARL PERKINS.

This legislation has three parts. The first part would establish a National Young Adult Conservation Corps similar to the YACC Act which passed the House last session. The second part would establish a community service jobs program primarily for urban areas. The third part would initiate comprehensive employment and training programs targeted to low-income, unemployed youth, including innovative programs.

The Subcommittee on Employment Opportunities will consider this measure along with the various youth employment and training proposals currently before the subcommittee. The subcommittee intends to continue our series of hearings on these various proposals in order to obtain information on the scope of the youth unemployment problem and the effectiveness of the solutions suggested to this problem.

We will be hearing testimony from the administration, manpower experts of national stature, representatives of State and local government, public interest groups, and community-based organizations concerned with employment and training matters.

It is the intention of the Subcommittee on Employment Opportunities to act expeditiously on this proposal in order that young people may be enrolled at

the earliest possible date.

ANTARCTIC CRIMINAL LEGISLATION

HON. DALE MILFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. MILFORD. Mr. Speaker, today I am introducing legislation to amend title 18 of the United States Code to include offenses committed in Antarctica by U.S. nationals and certain foreign nationals.

Mr. Speaker, the Committee on Science and Technology, on which I serve, has long been concerned about the lack of legislation dealing with criminal con-

duct in Antarctica.

This concern arises from the committee's jurisdiction over the National Science Foundation-the civilian organization most heavily involved in Antarctic exploration.

Presently, the United States has five year-round stations on the Antarctic Continent with a summer population of about 3,000 persons and a winter population of about 300. In addition, 10 other countries maintain another 25 stations supporting another 1,000 people in the summer and 400 in the winter.

Aircraft, traxcavators, underground stations, and other modern devices—including a nuclear reactor—have replaced

sled dogs and puptents.

It is obvious that the various nations are in Antarctica not only to stay, but to multiply their efforts.

With the increase in population, as well as improvements in safety and comfort to Antarctic life, comes the attendant increase in social interrelationships.

Whether we wish to or not, we must face up to some of the grimmer implications of such increased interrelation-

Under existing conditions, it is very doubtful that American civilians committing a crime on Antarctica are covered by U.S. criminal law. However, such a person would still enjoy his constitutional guarantee of due process of law. Thus, a person who commits arson, assault and battery, or even homicide, may not be technically criminal; even worse, restraining such a person who commits such an act may constitute a violation of his right to due process of law and grounds for a tort action for assault, false imprisonment, or false arrest.

Legislation is needed to clear up this

ambiguity, to help deter possible crimi-

nal conduct, and to permit the orderly handling of such incidents that may arise.

Mr. Speaker, this is the purpose of the legislation I am introducing today.

This legislation amends chapter 1 of title 18, United States Code, by adding a new section, section 16, dealing with offenses committed in Antarctica by U.S. nationals and certain foreign nationals.

The legislation makes punishable as a crime any offense committed in Antarctica by a U.S. national, a foreign national who is a member of a U.S. expedition, or a foreign national with respect to the person or property of a U.S. national, member of a U.S. expedition, or the U.S. Government.

In recognition of provisions of international law, the legislation does not apply to persons exempt from U.S. jurisdiction under the Antarctic Treaty or to any foreign national over whom jurisdiction has been asserted by his state of nationality.

Mr. Speaker, this legislation is very similar to legislation that was introduced in previous Congresses—H.R. 10548 and its predecessor H.R. 5248.

However, I feel that it is a significant improvement upon these former bills.

The legislation I am introducing today is the result of input and refinements of the Congressional Research Service, the State Department, the Justice Department, and the National Science Foundation.

All have unofficially agreed that this is the legislation needed to protect our people in Antarctica.

I commend it to my colleagues and hope that the House will act expeditiously in its consideration of this legislation.

I am pleased that Mr. TEAGUE, chairman of the Committee on Science and Technology, has joined me in sponsoring this legislation.

LAW ENFORCEMENT EDUCATION CENTER NEAR TALLAHASSEE IS MODEL FOR NATION

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. FUQUA. Mr. Speaker, a bold and innovative concept in educational training of law enforcement personnel has opened in my district and I'am proud to call this fact to the attention of the law enforcement profession and to the Congress.

It is the Lively Law Enforcement Education Center and Frank Stoutamire Law Library, located 13 miles west of Tallahassee, Florida's capital city, in a rolling field and wood in Gadsden County.

The center is a division of the Lively Vocational Technical School in Tallahassee. The first classes were held in January of this year. Courses are offered to prepare a person to work in law enforcement as a sworn officer, as well as programs in specialized and advanced areas.

I am told that this is the only institution of its kind in the Southeast and I am confident that those in the law enforcement profession will hear more of its work in the days to come. It is my hope that this good work can be duplicated elsewhere as a valuable tool in combatting the horrendous rise in the rate of crime in these United States.

Most law enforcement centers do not have the capability, equipment or property to carry out the program which is envisioned for this facility. Most have not had the dedication and drive of those who have made all of this possible through a series of legislative acts, land swaps, and an upheaval of plans that started with a modest dream and resulted in a new classroom center and a sophisticated firing range.

The academy is to draw recruits from a six county area, including local, county and municipal law enforcement officers.

In addition to the police standards and training commission recruit course, specialized and advanced training will be offered to officials throughout the State along with courses for civilians.

It is a remarkable facility consisting of a 15,000-square-foot building equipped with four large classrooms, laboratories, library, and dark room.

One classroom is outfitted as a motel room to simulate crime scenes enabling instructors to place students in an active situation, rather than using a podium to teach investigation techniques.

Officials of the facility are excited about the concept for its firing range. It provides not only the conventional range, but also two pistol or defensive training ranges.

I am told that it will enable fire-don't-fire situations where an officer is confronted with a man with a gun or a woman with a baby situation to test the response.

If you will pardon a very personal reference, the center recognizes one of the finest men I have ever known and in whose honor the library at the academy is named. He was the late Frank Stoutamire whose family gave \$25,000 to Lively for law enforcement training. In so doing, it was in keeping with the man and his beliefs.

Frank Stoutamire served 35 years in the Leon County sheriff's office, 6½ as a deputy, and 28½ as sheriff. That would have been enough of a contribution for anyone but upon his retirement, he was prevailed upon to take over the Tallahassee Police Department as its chief. For the next 15 years he served in that office, again a model of administration for his fellow law enforcement officers.

His 50 years of service are not only a landmark in law enforcement for its length but for its quality. Frank Stoutamire was a leader who inspired. It was never by force nor intimidation, but by example and inspiration, that he led and became a legend in law enforcement in his own time.

Might I add that I am one of those who he inspired to do just a little better, to try a little harder, to contribute a little more. He was a remarkable person, a beloved friend, a loving father and family man, and will always live as an in-

spiration to all of us who knew and loved

Everything about this new facility is remarkable. Not only will it make a tremendous contribution to the area it serves, but in a larger sense its contributions will be in demonstrating what can be done.

To all those who have played a part in establishing the center I express my congratulations. To all those interested in law enforcement education, I call your attention to this new concept and facility. It is my hope that it is the foreunner of many more. If so, it will surpass all of the dreams of so many who have worked so hard to make it a reality.

JAMAICA FALLING TO CASTRO'S SURVERSION

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. McDONALD. Mr. Speaker, in recent weeks there has been increasing speculation about the possibility of establishment of diplomatic and trade relations between the United States and the Castro regime in Cuba. One of the claims made by supporters of such a move is that the Cuban Communists have long ceased to export revolution in the Western Hemisphere. This is totally misleading and contrary to the experience of many nations in Latin America and the Caribbean. Even in our own country, the Cubans have supplied training and other support for the Weather Underground, the Puerto Rican FALN, and other terrorist groups.

Castro has also targeted the English-speaking countries of the Caribbean and Central America. The government of Prime Minister Michael Manley of Jamaica has veered sharply to the left and has become alined with the Cuban Communists. Manley has declared a "state of emergency," and jailed and otherwise harassed the leaders of the opposite Jamaican Labour Party. This has given rise to the fear that Manley may be planning an Allende-style "autocoup."

During 1976, prior to the elections, Manley received considerable support from U.S. Castroite media figures such as Daniel Schechter of Boston and admitted propagandist Saul Landau, successor to Orlando Letelier as director of the Institute for Policy. A special attraction for the Manley circus was an appearance by CIA turncoat Philip Agee who had stopped off in Moscow possibly to obtain "research" materials.

The distinguished journalist and commentator M. Stanton Evans has written a highly perceptive analysis of the political degeneration of Jamaica and its rush toward communism. As Mr. Evans has pointed out in his Human Events article, while America's attention has been turned toward the Middle East, Africa and Europe, "a Red wind is rising in Jamaica."

I commend Mr. Evans' article to the urgent attention of my colleagues.

RED WIND IN JAMAICA (By M. Stanton Evans)

While the attention of American diplomats is focused on problems in far-off Africa, the United States has massive trouble brewing in

its own back yard.

To wit: The island nation of Jamaica, sitting athwart the sea lanes to the Panama Canal, is rapidly being converted into a Marxist police state. Given its commanding posture in the Caribbean, and its key importance as a source of bauxite and aluminum, a pro-Communist Jamaica would pose a major strategic danger to the United States.

The facts are slow in penetrating the American media, but those available so far suggest Prime Minister Michael Manley is following, almost to the letter, the course pursued by Salvador Allende in Chile. And Manley makes no secret of the fact that his political model is the Communist state di-

rectly to the north in Cuba.

Jamaica by all accounts is swarming with Cuban operatives, as many as 3,000 by one estimate. Many of these are members of the Cuban secret police, engaged in training Marxist cadres in Jamaica. In addition, several hundred Soviet "advisers" are present on the island. A triangular exchange of students is reportedly occurring among Jamaica, Cuba and the Soviet Union, and Jamaican intelligence types are being trained in Cuba and Guvana.

As Arnaud de Borchgrave reports in a recent Newsweek, Manley's electoral power derives in part from "the direct support of Cuba's secret service, the Dirección General de Intelligencia (DGI).... Cuba has the biggest embassy in town, and two-thirds of its staff are said to be DGI agents. Cuban airliners shuttle in and out at all hours, loading and unloading crates and people with no questions asked and no records kept."

Manley flaunts his Marxist sympathies, apparently stemming from a meeting with Castro back in 1975. During an interview with Izvestia, Manley praised the Soviets for their "rich experience in building a new society," talked of selling aluminum and bauxite to East European Communists, and said "we are actively supporting the national liberation movement of the African people and fully approve of the fraternal aid of friendly Cuba to the Angolan people."

According to Jamaican refugees, internal opposition to Manley's People's National party is being systematically rooted out or silenced by a variety of strong-arm techniques. An emergency order is in effect that permits detention of troublesome opponents, and some 500 of these, including many leading backers of the opposition party, are now in jail. In addition, the refugees tell of mounting vandalism and violence, gerrymandering of electoral districts, and efforts to control the Jamaican media.

These tactics helped Manley win 48 of 60 seats in the Jamaican parliament last December, and he has proceeded since then to consolidate increasing power in his own hands. In a particularly Allende-like move, he is organizing a "people's militia" that will outnumber the Jamaican regular army and police forces put together. Also, Jamaicans trained by Cuban intelligence are being deployed to "politicize" the uniformed serv-

ices in Manley's behalf.

True to the Marxist model, Manley's government has been working steadily to take control of economic life as well. U.S. aluminum companies operating in Jamaica will henceforth be 51 per cent controlled by the government, the banks are in process of being nationalized, smaller private businesses are also being taken over. People travelling out of the country are not permitted to take more than \$50 with them.

more than \$50 with them.

All of this comes on top of disruptive economic measures recounted on these pages a year ago (Judge Wanniski, "Dismantling an Island Paradise," Human Events, March 20, 1976). These include punitive taxes (60

per cent on \$12,500 of annual income), a money-losing Jamaican airline, rent rollbacks, price controls, harassment of builders, landlords and professionals and what amounts to a program of land confiscation.

The predictable result of this activity is that Jamaica is experiencing serious economic problems. Skilled professionals are leaving the island; according to one estimate, as many as one-third of the doctors, one-half of the lawyers, and a majority of independent entrepreneurs have left. Foreign capital is understandably reluctant to come in, and tourism, scared off by the increasing violence, has dropped off to perhaps a quarter of its previous level.

As almost always occurs in such situations, Manley blames his problems not on his own policies, but on the American CIA, thereby using his self-created emergency to push the country even further into Marxism. As he put it to Izvestia, "imperialism bears the main guilt for all the economic difficulties, for the exploitation and suppression and robbery of natural resources of Jamaica and other developing countries, and this is precisely why we are speaking out for a new world order. . . ."

In short: While we direct our energies elsewhere, a Red wind is rising in Jamaica.

CAMPAIGN MAIL DISCARDED

HON. LES AuCOIN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. AuCOIN. Mr. Speaker, I believe it would be safe to guess that every Member of this body has heard from his constituents about problems with their mail service. My own constituents write and call frequently—and more than 5,000 residents of Beaverton, Oreg., once sent me a petition to protest plans of the Postal Service for downgrading their post office.

Among the complaints made against the Postal Service in my district were those alleging that third-class campaign mail was discarded last fall even though it proved—upon recovery from a trash heap—to have been adequately addressed.

The Postal Inspection Service made a thorough investigation but concluded the "trashing" of deliverable mail was all inadvertent, and the problem was min-

Now, however, the postal district manager for Portland reveals that he did, indeed, have a problem, and that campaign mail was, indeed, discarded. This is troubling, inasmuch as some local elections were so close that they could have been decided by the presence—or absence—of mailed campaign literature.

Mr. Speaker, I would like to share with my colleagues in the U.S. House of Representatives a news story from the Oregonian, published April 1, 1977, in Portland, Oreg., which I believe demonstrates how seriously we must review, this year, the operation and management of the U.S. Postal Service. While corrections are said to have been made in Portland, we should pay heed to the district manager's comment that discarding of deliverable mail "is nothing unique to Portland."

The article follows:

SOME POLITICAL LETTERS SAID POSSIBILY
JUNKED

Portland Postmaster Benjamin Luscher told The Oregonian Thursday that as much as 2 percent of properly addressed and deliverable political mail could have been destroyed by postal officials at the time of last November's general election in Oregon.

Several political candidates have complained that some of their mailings were destroyed as undeliverable mail, even though

they were properly addressed.

Until Thursday, Luscher and other postal officials had contended that they could find no instances in which deliverable third-class mail had been destroyed. Luscher attributed most of the undelivered mail to outdated mailing addresses, mailings to apartment houses without listing apartment numbers or mailings to homes from which former occupants had moved.

But Thursday, he told The Oregonian: "We knew that we had a small error rate of about 2 per cent, and we knew there was some of this type of mail (third-class and political mail) going to our waste. . . A few pieces slipped through our quality control. But this is nothing unique to Portland."

He said the Postal Service's quality control system has been greatly improved since the 1976 general election period. "Now the operation is just about 99.99 per cent pure."

On a Channel 2 television newcast Thursday night, Luscher told reporter Dean Jones:

"I'd known for at least six months when this started that we had a real problem, and I didn't realize prior to that it was such a high percentage rate of mail. But since then, we have expanded our quality control and we have reduced this to practically nothing."

At the time of the general election mail problem, Jones scrounged one of the mail dumps. He said of the 1,000 pieces of third-class mail he retrieved, 100 of the pieces proved to be properly addressed and deliverable.

Jones added he has since been informed by Jim Finch, assistant postmaster general, that as much as 5 per cent of destroyed thirdclass mall in Portland may have been properly addressed and deliverable.

HEROES OF THE MOVEMENT

HON. DON YOUNG

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. YOUNG of Alaska. Mr. Speaker, today, I would like to submit for the RECORD an article recently published in the Wall Street Journal about the in-creasingly high cost of environmental protection to the working people of this Nation. Although the need to protect our quality of life in the physical environment is certainly great, there is also an important responsibility to improve the economic and social well-being of our people. As shown in this article, projects are being delayed and canceled on questionable environmental grounds while our unemployment increases and production declines. As Alaska's Representative in Congress, and the Representative of the people of Homer, Alaska, I again call for the need to strike a balance between environmental protection and the production so important to our survival as a nation. I urge my colleagues to carefully consider this article and join with me in the effort to reach this balance:

[From the Wall Street Journal, Feb. 22, 1977] Heroes of the Movement

Jack B. Weinstein, a federal district judge in Brooklyn, decided last week that there hasn't been enough environmental paperwork—only 4,043 pages—on the sale of federal oil and gas leases off New Jersey last August. So he voided the \$1.1 billion deal.

A few days before, Interior Secretary Cecil Andrus, an Idaho environmentalist, canceled the sale, scheduled for tomorrow, of oil and gas leases in the lower Cook Inlet of Alaska. He plans an environmental and geological "review" of this and five other lease sales scheduled by the previous administration.

If we go back a little further, there is the injunction granted against completion of a \$116 million TVA hydroelectric project on the Little Tennessee River by a federal judge in Cincinnati on grounds that it threatened a little fish called the Tennessee snail dearter.

And before that there was the \$2 billion Seabrook nuclear power project in New Hampshire, first approved by the government and then held up by an EPA man in Boston over some implied threat to clam larvae, and

still pending in Washington.

Then there was the proposed \$700 million Dickey-Lincoln hydroelectric project on Maine's Upper St. John River, stalled by a controversy over environmentalist claims that it would threaten 30 specimens of a plant called the Furbish lousewort. And before that, Appalachian Power's proposed New River hydroelectric project in Virginia and North Carolina, was scotched when the U.S. declared the river a "wilderness" area.

Then there are those oil shale projects in Utah and Colorado. They may not have panned out economically, but it will be some time before we know for sure, because they too are stalled on environmental grounds. Finally, there was that famous Kaiparowits coal fired electric plant in Utah, scrapped last year by the utilities that had proposed to build it. During the 13 years the project was being considered, estimated costs increased sevenfold to a prohibitive \$3.5 billion and the utilities spent \$5 million on paperwork alone. In that case, it was the black-footed ferret, the kangaroo rat and several other species in the vicinity of the project that supposedly would have been threatened.

The ideas that man should never again disturb the environment for his economic ends, that after eons evolution shall end and even the most insignificant species shall never again vanish, that nothing shall go forward until the most remote danger to the environment is resolved through an endless judicial process, are responsible for the billions in economic losses represented in the above projects. It may be time to ask if that is truly a rational way to address the future.

It is certainly time to ask whether anyone can honestly believe that the energy shortages now besetting the nation are the result of a lack of natural resources. And time to ask whether the heroes of the environmentalist movement—the men and women who blithely damage the future prospects for millions of American workers and their families on dubious grounds—are as heroic as their admirers think.

YOUNG PEOPLE AND THE MINIMUM WAGE

HON. JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. ERLENBORN. Mr. Speaker, as we in Congress and the people we represent

worry about our 3 million-plus young people who are unable to find jobs, the Subcommittee on Labor Standards is moving to increase the minimum wage. Whatever good may be said of the minimum wage, we need only to look at statistics to see that as the minimum wage goes up so does unemployment among teenagers and young adults.

We can also look around us. Seldom do we find young people bagging our groceries. When we go shopping or out to eat, we wait to be served; and getting our prescriptions or our groceries delivered to our homes is a part of the past. These jobs—jobs that give people a chance to get experience and to learn good work habits—are simply disappearing.

What we need to slow this disappearance of jobs is a two-tiered minimum wage, one for those who have worked and another, lower level for the young and inexperienced.

An organization whose prime concern is the youth of our Nation endorses this concept. Mr. Speaker, I urge our colleagues to read the following letter from the National Association of Secondary School Principals, urging that Congress establish an apprentice wage for young people:

NATIONAL ASSOCIATION OF SECONDARY SCHOOL PRINCIPALS, Reston, Va., March 14, 1977.

Hon. John Erlenborn,
Ranking Minority Member, Subcommittee
on Labor Standards, House of Repre-

on Labor Standards, House of Representatives, Washington, D.C.
DEAR CONGRESSMAN ERLENBORN: We were

very interested to read of the Subcommittee's recent hearing on H.R. 3744, at which the suggestion was reportedly made to make certain exceptions from the minimum wage requirements concerning youth employment.

As the largest organization of educational administrators, NASSP is vitally concerned with the improvement of the economic welfare of youth, and particularly with provision of an orderly transition from youth to adulthood. Accordingly, while we understand and accept the purposes of the minimum wage law, we believe the time has come to make some exceptions to that law if our young people are to be able to find entry into many parts of the world of work.

As long ago as 1973 the Panel on Youth of the President's Science Advisory Committee recommended that a careful review be conducted of the occupational restrictions and administrative procedure designed to protect youth from adult exploitation. The panel then went on to specifically recommend that there be broad experimentation with a dual minimum wage, lower for youth than for adult workers.

We are aware that current regulations administering the minimum wage law provide for payment of a reduced wage to student employees participating in a formal cooperative education program. Nevertheless, we feel that this is not enough. Many young people are unable to participate in such programs. The high unemployment rates for youth, and particularly urban youth, are clear evidence of the need to do more to bridge the gap between school and work.

We would recommend serious consideration by the Subcommittee of Title V of S. 3784 introduced in the last session of the 94th Congress as a means of meeting this problem. The bill provided for a reduced minimum wage for young people, but limited its application to those who are in their first six months of full-time employment, or who are still full-time students. These limitations should meet the concerns of those who might otherwise fear that the change in the law would weaken the protections it

is intended to provide. The bill afforded further protection against abuse by placing regulatory authority in the Secretary of Labor, should it be needed.

We believe that the enhancement of youth opportunity through the modification of the minimum wage law should not be a partisan political matter, and were therefore pleased to hear that sympathetic interest was expressed at the hearing by members from both sides of the aisle. We would hope that the Subcommittee could accept this proposed change as an amendment to H.R. 3744 when it is reported to the full House of Representatives.

Yours most sincerely,

Executive Director.

THE PART-TIME CAREER OPPORTUNITY ACT

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mrs. BURKE of California. Mr. Speaker, today I am reintroducing legislation which will significantly increase the employment opportunities in the departments and agencies of the Federal Government for those persons who are unable to work the standard 40-hour workweek such as women with young children, students, the handicapped and retired persons.

The Part-Time Career Opportunity Act will encourage agencies of the Federal Government to make available parttime positions in responsible positions up and down the career ladder and across the spectrum of Federal agencies.

At the heart of my legislation is the requirement that, except where an agency can show that converting positions to part time would either impairis efficiency or adversely affect current full-time employees, part-time positions in each agency be increased to 10 percent within 5 years. This would be accomplished by providing a 5-year phase-in period during which 2 percent of Federal jobs would be restructured each year by attrition until a maximum of 10 percent is reached.

Part-time working opportunities in the Federal Government are now few in number and limited mostly to low-level positions. At the same time, the demand for such opportunity has grown rapidly. Between 1963 and 1972, the number of people working part time grew from 7.8 million to 12.6 million. A major New York placement agency reported that it receives "five times as many responses for a part-time job as for a comparable full-time job" and that "for many jobs, the best people on the market are people who want to work part time." As the demand for part-time employment grows, the Federal Government will lose access to a significant source of talent if it fails to promote flexible hours scheduling.

By helping to end the discrimination imposed by the basic pattern of working hours in our society, my bill would also benefit working parents, particularly working mothers, men and women approaching retirement age, students and the handicapped whose special needs may preclude them from working the standard workweek.

By increasing the available quantity of part-time positions, the Government will expand its access to segments of the work force now beyond its reach. Married women with children, many of whom hold impressive professional credentials, could qualify for part-time Federal employment. Many highly experienced, expensively trained civil servants approaching their final years of Government service would choose to stay on in less than full-time capacity rather than retire early. By providing employment opportunity to people continuing their education, the Government would gain increased access to new ideas as they evolve in the various academic disciplines.

There have already been a number of successful experiments with programs to provide part-time work opportunities at professional levels in the Atomic Energy Commission, the Veterans' Administration and the Department of Health, Education, and Welfare. A study by Margaret A. Howell and Marjorie G. Ginsberg entitled, "Evaluation of the Department of Health, Education, and Welfare," published in the February 1973 issue of Public Personnel Management. assessed the effectiveness of the HEW part-time program for professionals on the basis of the opinions of supervisors. Some of the key findings are as follows:

First, 77 percent of the supervisors found no difficulty or slight difficulty in terms of availability for conferences or consultations;

Second, 86 percent of supervisors thought many jobs could be part time;

Third, 100 percent felt women could handle high-level policymaking jobs and should be given the opportunity for such jobs.

Current full-time employees need not feel threatened by my bill. It provides several explicit prohibitions against the creation of part-time work opportunities at the expense of full-time employees.

First, the bill specifically prohibits the creation of part-time jobs where it would be necessary to force full-time employees into a position of choosing either to work part time or not at all.

Second, it provides for a gradual phase-in of part-time jobs at the rate of 2 percent per year for 5 years. The part-time employment now extant in the civil service will count toward the percentage targets and annual attrition is more than sufficient to permit the adaptation of full-time positions to part-time positions with no loss of employment by those employed full-time.

Finally, it includes a mechanism by which an agency can request and obtain a waiver from the percentage target when, for reasons of a major reduction in force, a hiring freeze or other major personnel action, it is not possible to attain the target percentage without adversely affecting full-time employees.

A meaningful system of part-time employment in the United States would provide jobs for those who are presently unemployed, would increase productivity and efficiency in Government and serve

as a model for private industry and other public employers. My Part-Time Career Opportunity Act would do this and more; it would help lead the way in opening up the work force at all levels to groups that are presently excluded.

SUPPORT THE CONSUMER FOOD LABELING ACT

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. MOAKLEY. Mr. Speaker, the Consumer Food Labeling Act performs an important service for all Americans, by letting our consumers know exactly what they are eating and exactly how they should care for the foods they buy. This bill, which requires labeling foods to disclose all ingredients, nutritional content, accurate weight data, storage informatrue manufacturer-packer-distributor identity, uniform product grading, unit prices, and ingredient changes and to bar misleading brand names is an integrated set of rules which leads to complete public information on the content of food products.

The benefits of such labeling information are multiple. First of all, those Americans with allergies, dietary problems, religious or personal food preferences can avoid those food products which they find harmful. Second, the requirement for dating perishable foods and listing optimal storage procedures for them, insures that the consumer buys fresh food and stores it properly. Morethe requirements for printing weight data, uniform grading information, and ingredient changes combine with the perishable food precautions to advance further our national concern for improving our food supply. Finally, the manufacturer-packer-distributor identity requirement and the ban on misleading brand names similarly encourage a responsible attitude toward providing our consumers with healthy, fresh food.

The information we wish to make available to the consumer through labeling is not, however, geared solely toward inducing a greater sense of responsibility within the producers of our food supply. It is also directed toward the consumers. Science tells us that to be healthy and alert, we need a nutritionally balanced diet. Through research, it has become increasingly evident that the links between good food and disease-prevention, emotional stability, and a general sense of physical and mental wellbeing, are vital ones. Nutritional education, then, must be viewed as an important goal for the general welfare of all our constituents. But before we learn to follow sensible eating rules, we must be able to gage the nutritional content of the individual foods we buy. Congress-man Rosenthal's bill specifically requires such a listing, and so prepares the way for a more nutritionally conscious populance.

Both sectors of the food industry, the producers and the consumers, need to develop greater awareness of our food supply. Fresh healthy food must be available, ingredient and storage data evident, and nutrition information listed, so that Americans can improve their diets and thus, their health. I urge you to vote for the Consumer Food Labeling Act which provides these necessary services.

OPPOSITION TO H.R. 3199

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. STEERS. Mr. Speaker, I did not vote for H.R. 3199. I feel that we could have streamlined the process of getting money to the States without sacrificing our environmental quality. Specifically, I am referring to the removal of the Army Corps of Engineers as the regulator of the Nation's waterways. Without proper safeguards, I feel we have left the inland waterways open to environmental abuse and degradation. These inland wetlands comprise 80 percent of all of the Nation's wetlands and are havens for wildlife. While some States protect these wetlands very well, others would allow for the destruction of wetlands, destruction that is abhorrent to me.

I feel that if the House version of water pollution control amendments are accepted, the original intent of the 1972 act may well be lost, and it will be much more difficult to make our waterways clean in the future. It is my hope that some of the amendments offered unsuccessfully in the House will be adopted in conference.

SEEKS RELIEF FOR LOW-INCOME ELDERLY AND VETERANS

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. APPLEGATE. Mr. Speaker, today I am introducing two bills designed to grant relief to the low-income elderly of this Nation. These are the people who have contributed so much to this Nation, but now must live in poverty due to unfair laws.

One of these inequitable laws concerns the limit imposed on social security recipients for earning outside income. By doing this, we not only place our citizens in a low-income bracket, but also essentially prevent them from seeking meaningful gainful employment. Therefore, I am introducing legislation to remove the outside earned income limitation.

Another bill I have introduced deals with an inequity in the veterans' pension law. Most of us have heard from our veteran constituents on this problem. The inequity centers around the inability of a veteran, who is receiving a pension, to realize an increase in social security. My bill provides that the recipient of a veterans' pension or dependency and indemnity compensation

will not have the amount of such pension or compensation reduced because of cost-of-living increases in social security benefits.

The purpose of my two bills is to help those on low, fixed incomes, particularly the elderly. During these trying economic times, we must assure these individuals every deserving break.

PERSONAL EXPLANATION

HON. MARTHA KEYS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mrs. KEYS. Mr. Speaker, on Monday, April 4, 1977, I was unavoidably absent from the House. Had I been present, I would have voted on matters coming before the House as follows:

"Yea" on House Resolution 469, roll No. 123 the rule under which the bill, H.R. 5294. Debt Collection Practices Act, was to be considered.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee-of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur. As an interim procedure until the com-

puterization of this information becomes operational, the Office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the Congressional

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, April 7, 1977, may be found in the Daily Digest section of today's RECORD.

The schedule follows:

MEETINGS SCHEDULED APRIL 8

9:00 a.m.

Governmental Affairs

To continue hearings on S. 826, to establish a Department of Energy in the Federal Government to direct a coordinated national energy policy.

APRIL 11

10:00 a.m.

Governmental Affairs

Subcommittee on Governmental Efficiency To receive testimony on a GAO study alleging inaccurate financial records of the Federal flood insurance program. 6226 Dirksen Building

APRIL 18

8:00 a.m.

Energy and Natural Resources Public Lands and Resources Subcommittee To mark up S. 7, to establish in the Department of the Interior an Office of

Surface Mining Reclamation and Enforcement to administer programs to control surface coal mining operations. 3110 Dirksen Building

9:30 a.m.

Appropriations Interior Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior, to hear Members of Congress.

1114 Dirksen Building

10:00 a.m.

Appropriations

SENATE-Thursday, April 7, 1977

(Legislative day of Monday, February 21, 1977)

The Senate met at 2 p.m., on the expiration of the recess, and was called to order by the Acting President pro tempore (Mr. Metcalf).

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God, our Father, bless all who serve in and with this body. Be with us in our work, in our homes, in our worship, in our travels, in our dealings with our colleagues, and in our dealings with ourselves. Be with us in our coming in and in our going out. Wherever we are, whatever we do, may we never forget Thee. And if we should forget Thee do not forget us, for in Thee we live and move and have our being. When this day is done and we depart, we pray Thee to bring us back strengthened to do Thy will.

In the Redeemer's name we pray.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Wednesday, April 6, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, there are various nominations on the Executive Calendar, I believe all of which have been cleared on both sides of the aisle.

I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

The second assistant legislative clerk read the nomination of Harry K.

CXXIII—685—Part 9

Schwartz, of Pennsylvania, to be an Assistant Secretary of Housing and Urban Development.

Mr. BAKER addressed the Chair. The ACTING PRESIDENT pro tem-

pore. Without objection— Mr. BAKER. No, Mr. President.

The ACTING PRESIDENT pro tempore. The Senator from Tennessee.

Mr. BAKER, Mr. President, I sought recognition a moment ago to say that the majority leader is correct in announcing that all of these nominations on the Executive Calendar today have been cleared on both sides. I am referring to three nominations for the Department of Housing and Urban Development, and two nominations for the Securities and Exchange Commission.

There is no objection to their confirmation on this side of the aisle.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is confirmed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all nominations on the Executive Calendar be considered and confirmed en bloc.

The second assistant legislative clerk read the nomination of Donna Edna Shalala, of New York, to be an Assistant Secretary of Housing and Urban Development; and Geno Charles Baroni, of the District of Columbia, to be an Assistant Secretary of Housing and Urban Development.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en

SECURITIES AND EXCHANGE COMMISSION

The second assistant legislative clerk read the nomination of Harold Marvin Williams, of California, to be a member of the Securities and Exchange Commission for the remainder of the term expiring June 5, 1977; and for the term expiring June 5, 1982.

The ACTING PRESIDENT pro tempore. The nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nominations were confirmed en bloc.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AUTHORIZING DISTRICT COURT TO BE HELD AT CORINTH, MISS.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 68 which has been cleared on both sides of the aisle.

Mr. BAKER. Mr. President, there is no objection to the disposition of this matter by unanimous consent on this side.

There being no objection, the bill (S. 662) to provide for holding terms of the District Court of the United States for the Eastern Division of the Northern District of Mississippi in Corinth, Miss., was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the third sentence of section 104(a) (1) of title 28, United States Code, is amended to read as follows:

"Court for the eastern division shall be held at Aberdeen, Ackermann, and Corinth.".

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-87), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to authorize an additional place for holding court in the Eastern Division of the Northern Judicial District of Mississippi.

STATEMENT

This bill is identical to S. 2412 of the 94th Congress, which was reported by the Committee on the Judiciary and passed the Sen-

ate as reported on May 11, 1976.

The State of Mississippi is divided into two judicial districts, denominated as the Northern and Southern Districts. The Eastern Division of the Northern District consists of 13 counties in the northeastern corner of the State of Mississippi and extends in a north-south direction of approximately 140 miles. The principal place of holding court for this division is Aberdeen, Mississippi, which is located approximately 60 miles from the southern boundary of the division. Ackerman, Mississippi, which also designated as a statutory place of hold-ing court in the Eastern Division, is approximately 91 miles southwest of Aberdeen. However, no trials are held at Ackerman, which was included in the statute primarily as a location where chambers are provided for a circuit judge from the State of Mississippi. The designation of Ackerman was required since section 142 of title 28 of the United States Code specifies that the General Services Administration can provide court quarters only at places where regular terms of court are authorized by law to be held.

The City of Corinth, which this bill would add as an additional place for holding court in the Eastern Division of the Northern Judicial District, is located in the extreme northern part of the Eastern District, approximately 85 miles north of Aberdeen. Corinth has a population of approximately 15,000 residents and is a principal commercial center in that part of the State. Litigants and counsel from 5 of the 13 counties can more conveniently attend court located at Corinth than at Aberdeen, which is the sole place of holding court. One of the judges of the court is a resident of Corinth. Since the closest Federal courthouse is at Aberdeen, 85 miles away, the judge must spend 4 hours of travel time for each trip from his residence to the court chambers at Aberdeen. If Corinth is designated as an official place for holding court, the General Services Administration, pursuant to section 142 of title 28, United States Code, would be authorized to provide chambers for the judge at Corinth. It is not proposed to provide a courtroom at Corinth. The committee is advised that the Federal post office building at Corinth has vacant space on the second floor of the building which at relatively small expense can be remodeled to provide suitable chambers for the judge. These chambers will be used by the judge for study, research and preparation of orders and opinions. The judge will also hear motions and conduct certain pretrial and posttrial proceedings at Corinth in cases where the parties and their counsel are located closer to Corinth than they are to Aberdeen.

It has been the policy of the committee to refrain from creating new courts or from authorizing new places for court to be held, unless such change has been approved by the Judicial Conference of the United States. When this bill was introduced, the committee requested the views of the Judicial Conference of the United States. In addition Corinth, Mississippi, as a place of holding court, has been approved by all judges of the Northern Judicial District and by the Judicial Council of the Fifth Circuit. This bill was approved by the Judicial Conference of the United States at its semiannual meeting on April 7, 1976, as indicated in the following letter.

[Communications]

ADMINISTRATIVE OFFICE OF THE UNITED STATES COURTS,

Washington, D.C., April 8, 1976. Hon. James O. Eastland,

Chairman, Committee on the Judiciary, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in further reference to your letter of October 7, 1975, transmitting for comment S. 2412, a bill "To provide for holding terms of the District Court of the United States for the Eastern Division of the Northern District of Mississippi in Corinth, Mississippi."

The Judicial Conference of the United States, at its session on April 7, 1976, considered the provisions of S. 2412 and voted its

approval of the proposal. Sincerely.

> WILLIAM E. FOLEY. Deputy Director. COST

No authorization for appropriation is contained in this bill. The committee has been advised that, through normal budgetary procedures, the cost of remodeling and equipping a three-room suite of offices in an existing Federal building at Corinth can be accommodated in the funds already appropriated for fiscal year 1977 for the Federal judiciary. The committee estimates that cost at \$90,000.

SECTIONAL ANALYSIS

Section 1 of the bill amends section 104(a) (1) of the title 28, United States Code, by adding "Corinth" as a designated place of holding court in the northern judiciary district of Mississippi.

COMMITTEE MEETINGS ON APRIL 18 AND 19, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Special Committee on Aging be authorized to meet during sessions of the Senate on Monday, April 18, between the hours of 1 and 3 p.m., and on Tuesday, April 19, between the hours of 1 and 3 p.m.

This request is necessary because ofthe inability of the Special Committee on Aging to secure hearing rooms on the mornings of the respective dates.

Mr. BAKER. Mr. President, reserving the right to object—and I will not object to this request which was very kindly cleared on our side of the aisle-I might say for the benefit of the majority leader and for others of our colleagues that from time to time during our consideration of the tax bill, particularly the principal amendments to it, it may be necessary for me to object to committees meeting while the Senate is in session other than as provided under the resolutions and Standing Rules of the Senate. I simply wanted my colleagues to be

on notice that I may do that from time to time.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I appreciate what the distinguished minority leader has said. I hope it will be possible for him and myself to discuss this matter so that I can be alerted as far in advance as he would possibly do it with respect to the particular amend-ments he has in mind. This would enable us to get consent for the committees to meet on days other than on those days and hours when those specific amendments are before the Senate, and I think it would be only fair to the committees if we could alert them to the days on which they can or cannot meet as far in advance as possible.

Mr. BAKER addressed the Chair.

The ACTING PRESIDENT pro tempore. The Senate will receive a message from the President of the United States.

Mr. BAKER. Could the Chair withhold just 1 minute so that I may reply to the distinguished majority leader?

I simply wanted to say that I will indeed try to supply as much in advance as possible and, of course, as has been my pattern in the past, I intend to confer thoroughly and frequently with the majority leader in that respect.

I am not sure I can always give much advance notice, but I will do the best I can. It is not my intention to try to slow down the committee processes but rather to focus attention on important legisla-

tion when it is on the floor.

I might also say, Mr. President, I hope the majority leader might consider and pursue his pattern of earlier weeks of possibly setting aside a day here and there when the committees can meet for extended periods of time without being in conflict with the sessions of the Senate, But, in any event, I certainly intend, and will try, to cooperate with the ma-

jority leader in this regard.

Mr. ROBERT C. BYRD. Yes, it will be my intent, as in the past and, when possible, to convene the Senate as late as possible without imposing upon Members of the Senate so as to allow committees as much uninterrupted time as possible to conduct their business as far into the Senate session as is possible which, of course, as we get further into the session becomes more difficult, and especially with respect to certain legislation as it comes upon the floor like the tax bill, where it will be more difficult to come in in the afternoon when measures like that are pending, more difficult than might otherwise be the case.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I yield 2 minutes of the time allotted to me under the order to Mr. EAGLETON.

Mr. EAGLETON. I thank the distin-

guished majority leader.

Mr. ROBERT C. BYRD. Mr. President, and may I do this first, I ask the distin-guished minority leader if he needs time for himself prior to my yielding to Mr. EAGLETON?

Mr. BAKER. No. Mr. President. I 'thank the majority leader. I do not.

Mr. EAGLETON. I thank my colleagues.

DUDLEY MILES

Mr. EAGLETON. Mr. President, on the evening of April 5, I was stunned to learn of the death of Dudley Miles, the staff director of the Appropriations Agriculture Subcommittee. I was designated as chairman of that subcommittee earlier this year and since that time I have gotten to know Dudley Miles very well. He was a marvelous, marvelous personable, conscientious, thorough and many other equally complimentary things. As a new subcommittee chairman, I am frank to say that I valued and relied heavily upon his expertise. I repeat, he was a marvelous human being.

Mr. President, I would like at this point to summarize very briefly Dudley

Miles' career.

Dudley Miles was born in Youngstown, Ohio, and moved to Wyoming at an early age and attended public schools there. He was graduated by the University of Wyoming College of Law in 1953. He served as the county attorney in Rawlins, Wyo., until 1961 when he moved to Washington, D.C., to become research director on the staff of Senator Gale McGee. He remained in that capacity until 1971 when he joined the staff of the Senate Committee on Appropriations. He was director of the Agriculture and Related Agencies Subcommittee.

And he was only 51 years of age when

he suddenly died last Tuesday.

He served in the Army Air Corps during World War II and was a member of the BPOE and a Shriner in the Masonic Lodge. He is survived by his wife Rayma; a daughter, Julie, two sons, Daniel and Dudley, Jr., all of Fairfax, Va. He is also survived by his father, John Miles of Cheyenne, Wyo.; a brother, Daniel, of Douglas, Wyo., and three sisters, Myrtal Miles, Mrs. Joan Lore, and Mrs. Percy Hawkins, all of Douglas, Wyo.

Finally, Mr. President, I know I speak the sentiments of my colleagues in the Senate when I say that all of us have suffered a great loss by reason of Dudley Miles' death. May God be good to him

and his family.

Mr. President, I ask unanimous consent that additional tributes to Dudley Miles, specifically one from Senator John STENNIS, of Mississippi, one from Ambassador Gale McGee, and one from the Secretary of Agriculture, Mr. Bob Bergland, be printed in the Record.

There being no objection, the tributes were ordered to be printed in the RECORD,

as follows:

STATEMENT BY SENATOR STENNIS

I am deeply saddened by the sudden passing of Dudley Miles. He will be greatly missed by all of us who are members of the Senate Agricultural Appropriations Subcommittee, and I am sure by all other members of the Senate as well. Every Senator has agricul-tural production in his state, and an interest in agricultural problems. Dudley was unfailingly helpful to each member who came to him for information, advice, or assistance.

He was a tremendously hard worker, dedicated to his duty, and it may well be that by working so hard and so fast, at this particular time of stress, with several ap-propriation bills pending, he injured his health. He enjoyed being responsive to the demands of his work, and being good at it. He had all the best of qualities-intelligence, a fine personality, a cheerful disposition, and built-in dynamic energy. It is a shame that such a fine and competent person should be taken so young.

We who have been associated with Dudley Miles in his work will miss him professionally and personally. My deepest sympathy is extended to his family in their great loss.

STATEMENT OF AMBASSADOR GALE MCGEE

On Tuesday, April 5, 1977, the Senate of the United States lost one of its most dedicated and talented experts. On that date, Mr. Dudley D. Miles, the Staff Director of the Senate Agriculture Appropriations Subcommittee, was fatally stricken with a heart at-

This loss comes as a deep shock to me personally, Mr. President; for not only have I known Dudley Miles on a personal friendship basis for more than thirty years, but I had the opportunity of knowing him well in many particular categories of special achievementfirst, as an outstanding student of mine and an honor graduate from the College of Law from the University of Wyoming as well as many years as a practicing attorney in the State of Wyoming. In addition, for ten years he was my legislative chief in the Senate. And then, when I was honored to serve as Chairman of the Agriculture Appropriations Subcommittee beginning in 1971, he took over as Chief Clerk. It was during this last six-year period that Dudley Miles demonstrated in the finest way the talents of a truly dedicated public servant. His integrity and expertise lent dignity to the legislative

Coming fresh to the subcommittee assignment from my own office staff. Dudley quickly immersed himself in the details of learning the job and then, in turn, of educating me on the results. Endless numbers of government agency and department witnesses who came before our subcommittee were quick to recognize that Dudley had—in a very short time-become a master of the intricacies of responsible budget management.

In those days we had many a squabble with our counterparts in the House of Representatives as we went to conference concerning our differing versions of the budget. And I recall how delighted I was, after the conclusion of our very first conference agreement, with the praise that was showered upon our "committee staff man, Miles" by our House of Representatives counterparts.

One of the enigmas of our existence on this earth is our inability to answer the question why a man such as this is taken from us at the very prime of his life career leaving, as he does, his loving wife, Rayma, and three growing children who cherished his attention and his love-his daughter, Julie,

and his two sons, Danny and Dudley.

This weekend will be a poignant one for the Miles family and all who know them. But it is also a weekend dedicated to the Resurrection and the Life; and I am confident that, just as the Good Lord has ex-tended his comfort and mercy to Dudley Miles, He will do so likewise to the members

of the Miles family.

We have lost a personal friend. We've also lost an exemplary public servant. His many acquaintances on Capitol Hill will miss him greatly. And the numerous members of the Senate and the House who have long relied

on his counsel will miss him, too.
But Dudley Miles will not be forgotten, Mr. President; for he left his mark on this body as an employee with a record and an example to be emulated by those who follow him. Loraine and I join the Members of this body in extending our deepest sympathy to the family of Dudley Miles.

STATEMENT OF THE SECRETARY OF THE DEPART-MENT OF AGRICULTURE, ROBERT BERGLAND, IN MEMORY OF DUDLEY MILES

I was shocked and saddened to hear of Dudley Miles' sudden death. One of the very first items which required my attention during the past two months was the develop-ment of the Carter Administration's budget for the Department. During this period, I had an opportunity to work with Dudley and with the members of the Committee. I was tremendously impressed with his ability, helpfulness, and with the professional

quality of his work.

As Secretary, and previously as a Congressman, I was aware of the work that Dudley and the Senate Appropriations Committee had been doing for several years. They have made an impressive contribution to American agriculture. Speaking for those in the Department who have worked closely with Dudley, want to express to Mrs. Miles and their three children our tremendous sense of grief at their loss; and, on behalf of all Americans who benefited from those programs which we administer, I would like to express to Rayma, Julie, Daniel, and Dudley our ap-preciation for the enormous contribution which Dudley made during these past six

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. EAGLETON. I yield to the distinguished chairman of the Committee on Appropriations.

Mr. McCLELLAN. Mr. President, it is with a deep sense of sadness and regret that I note the sudden and unexpected passing on Tuesday of Dudley Miles, clerk of the Subcommittee on Agriculture and Related Agencies of the Committee on Appropriations.

We, as Members of the Senate, are particularly fortunate to have the services of dedicated staff members to aid and assist us in carrying out our duties and responsibilities to the American

people.

Dudley Miles was one of the leading members of this small group of dedicated public servants whose labors are often unknown to the public at large, but who play an important role in making our system of government responsive to the American people.

As clerk of the Subcommittee on Agriculture and Related Agencies since 1971, Mr. Miles had the responsibility of helping prepare one of the most important pieces of legislation to come before

this body each year.

It not only affects those engaged in agricultural pursuits, but every American. All have lost an intelligent and efficient supporter of their interests.

Dudley Miles was born in Youngstown, Ohio, and moved to Wyoming at an early age, where he attended the public schools. After service in the Air Force during World War II, he was graduated from the University of Wyoming College of Law in 1953, and served as county attorney in Rawlings, Wyo.

Mr. Miles came to Washington in 1961 to become research director on the staff of former Senator Gale McGee, of Wyoming. He served in this post until joining the Committee on Appropriations in 1971.

I am certain that all Members of the Senate join me and Mrs. McClellan in extending our deepest sympathy to Mrs. Miles, her daughter Julie, and her two sons, Daniel and Dudley, Jr.

sons, Daniel and Dudley, Jr.
Mr. HATFIELD. Mr. President, will

the Senator yield?

Mr. EAGLETON. I yield to our colleague from Oregon.

league from Oregon.

Mr. HATFIELD. I thank the Senator

from Missouri for yielding.

Mr. President, it is with profound sadness that I join with the Senator from Missouri (Mr. Eagleton) and others of the Subcommittee on Agriculture of the Committee on Appropriations, especially, and all others who knew Dudley Miles, expressing not only profound sadness but a sense of personal loss.

In the 6 years he has served with the committee, I grew to admire and respect his intelligence, his ability and his warmth. Moreover, I came to regard him as a colleague and a friend in a common

endeavor.

Dudley Miles was born in Youngstown, Ohio, in 1926, as has been mentioned, moving to Wyoming at an early age. After graduating from the University of Wyoming College of Law, he served as county attorney in Rawlins, Wyo. In 1961, Dudley came to Washington to serve as research director on the staff of our distinguished colleague, Senator Gale McGee. In 1971, he was appointed to the Appropriations Committee staff and served in that post under Senator McGee and now under Senator Eagleton.

Dudley was admired by all who worked with him in the committee, and will be sincerely missed. It will be difficult to find an individual of equal ability, professionalism and spirit to serve as our

next clerk.

I wish to extend my deepest sympathies to his three children, and to his beloved wife, Rayma.

I thank the Senator.

Mr. EAGLETON. I thank my distinguished colleague from Oregon.

Both he and I relied very heavily on Dudley Miles to give us wise counsel and advice in this very technical area of agricultural research, et cetera, and his loss is shared, I know, by all Members on both sides of the aisle.

Mr. HANSEN, Mr. President, will the Senator yield?

Mr. EAGLETON, I yield.

Mr. HANSEN. Mr. President, a coworker and close friend to many of us, Dudley Miles, died suddenly Tuesday evening of a heart attack. We are saddened by this tragedy, and we join today with his many friends and colleagues to extend heartfelt sympathy to his widow, Rayma, his children, Julie, Daniel, and Dudley, Jr., and to others in his family.

As most Senators know, Dudley served

for a number of years with former Senator Gale McGee. More recently, he had served as chief clerk of the Appropriations Subcommittee on Agriculture. He was an uncommonly dedicated and knowledgeable man, and he will be sorely missed.

Dudley Miles lived much of his life in Wyoming, where he attended public schools and earned his law degree from the University of Wyoming. He embarked on a distinguished career of public service, having served in the Army Air Corps, as county attorney in Carbon County, Wyo., as a top assistant to a U.S. Senator from Wyoming, and as the chief adviser to the members of the Senate subcommittee charged with deciding how much money the Government should spend for a broad range of Federal programs and functions.

He was a devoted husband and father, and a faithful friend. I was honored to have known him, and I mourn his pass-

ing.

Mr. BELLMON. Mr. President, will the Senator yield?

Mr. EAGLETON. I yield.

Mr. BELLMON. Mr. President, it is with much sorrow that I pay tribute to Dudley Miles who passed away this past Tuesday night. I join with my colleagues in conveying our deepest condolences to his wife, Jay, and to his three children, Julie, Daniel, and Dudley, Jr.

Dudley was a dedicated public servant in the truest sense of the term. Since graduating from the University of Wyoming College of Law in 1953 he served as the county attorney in Rawlins, Wyo., until 1961 when he came to Washington, D.C., to join the staff of our former colleague, and now Ambassador to the Organization of American States, Gale McGee.

In 1971, Dudley joined the staff of the Committee on Appropriations and served as the clerk of the Agriculture and Related Agencies Subcommittee.

Mr. President, Dudley Miles was the epitome of the Capitol Hill professional. He served in relative anonymity, but the sum total of his contribution to the quality of our work and to the welfare of the people of our country is significant and a guide by which we all can benefit in following.

In the years that I have had the pleasure of working with Dudley, he was always a man we could depend on as a source of uncommon wisdom, of impecable integrity and true dedication. He brought to his responsibilities a love of country and a profound respect to the institution of government which we all serve.

Mr. President, every Member of the Senate is fully aware of the absolutely vital role which is filled by the able, hardworking, professional members of the committee staffs. These individuals devote their lives to gaining the depth of knowledge and understanding demanded by the legislative process. It is largely their work and their expertise which makes the operation of the legislative branch of Government possible. Dudley Miles was regarded by all who

knew him as among the ablest, most knowledgeable and most dedicated of those who serve our Nation in this essential role.

Mr. President, the sorrow we all feel at the passing of Dudley Miles can be tempered by the knowledge that he served his country and its citizens faithfully and well. He loved his work and he excelled. He will be greatly missed as a friend who was resourceful and trusted in a highly responsible position in our Nation.

Mr. ROBERT C. BYRD. Mr. President, I yield back the remainder of my

Mr. BAKER. Mr. President, I have no request for time under the standing order and no requirement on my own behalf, and I yield back all of my time under the standing order.

ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business, with statements therein limited to 15 minutes.

A CRITICAL NEED FOR THE PERSONAL INCOME TAX REBATE

Mr. MUSKIE. Mr. President, I address my remarks this morning to the rebate on personal income taxes proposed by the President and provided for in the third concurrent resolution on the budget for fiscal year 1977.

We are in the midst of recovery from the worst economic recession since the 1930's. The recovery has been underway for 2 years, but has proceeded too slowly to cut deeply into unemployment or unsed industrial capacity. Unemployment remains at unacceptable levels. Seven million persons, including 2½ million family heads, are still out of work.

In my home State of Maine, for example, unemployment remains above 10 percent, a figure essentially unchanged from a year ago, despite our hopes for a speedier recovery. And it is a measure of the seriousness of the recession that analysts concluded that 1976 was a relatively good year for Maine's economy, even though 1 worker in 10 did not have a job.

The pace of the recovery slowed down in mid 1976. The Budget Committee recognized this slackening when we proposed the fiscal policy embodied in the second concurrent resolution for 1977. We stated in our report to the Senate that we were prepared to consider a subsequent concurrent resolution early in 1977 if the economic data received by then did not indicate that the recovery was proceeding satisfactorily.

President Carter shared our sentiments. As a candidate for the Presidency, he promised to provide a fiscal policy that would stimulate the economy and reduce unemployment.

Soon after taking office, he sent his stimulus proposals to Congress. The Budget Committee also recognized the

economic recovery.

need for immediate additional stimulus early this year. In response to the President's proposals and our own recognition of the slowdown in the recovery, we reported the third concurrent resolution to the Senate. Congress reduced the revenue floor for fiscal year 1977 in order to provide additional economic stimulus as quickly as possible.

The need for the stimulus is still critical. The rebate we are now considering provides about 60 percent of the stimulus provided for in the third budget resolution for fiscal year 1977. We adopted the budget resolution with utmost speed in order to facilitate rapid enactment of the stimulus proposals. A month has now passed since the resolution was adopted; we have lost too much time already. If we fail to adopt the rebate we will fall even further behind in our schedule for

Mr. President, the worst possible mistake that could be made in fiscal policy would be to decide, at this late date, that the economy is in fine shape, that effective stimulus is no longer required in 1977, and that the rebate can be abandoned. Policymakers in this country and others have been justly criticized for a lack of steadiness in policy, for stop-go policies. To abandon this revenue reduction now, after it has been incorporated into the spending plans of millions of households and businesses, would be a flagrant example of go-stop policy.

We adopted the third budget resolution because we decided that additional stimulus was necessary as soon as possible. Let us stick to our plans. Let us not attempt to fine-tune the economy. We cannot allow our policies to be guided by every small movement of the economic statistics. Should we propose stimulus during the slowdown, oppose it when Christmas sales turn up, propose it again when the severe winter descends, and once again oppose it when spring raises the temperature and our spirits?

Some say we do not need additional stimulus in 1977 because we can expect strong growth in the second and third quarters. The economy will make up for ground lost during the severe cold and gas shortages of the winter. But these catch-up effects do not add to total employment and output during 1977—they merely redistribute it. They provide no substitute for the steady fiscal policy contained in the 2-year stimulus package originally proposed by the administration and anticipated in the third budget resolution.

What will happen if we reject the stimulus provided by the rebate? The econometric models are virtually unanimous on the point-growth will be slower in the remainder of this year. The data resources model estimated that over onehalf point of real growth-almost \$12 billion of output-will have been lost by the end of 1977, 250,000 fewer jobs will have been created, and unemployment will be higher. Is this the way to signal American business that the demand for their products will be strong in 1978, and that commitments to expand capacity will be rewarded with higher sales? The rebate was needed—and is needed—because the growth in final sales has been slow throughout the recovery, averaging only 4.3 percent. There is still no evidence that business investment will accelerate by itself. Investment waits for solid evidence of continued growth in sales. We need to support steady, solid growth at this point in the recovery, not to undermine it.

Mr. President, some of those who have opposed the rebate have done so not because they believe that additional stimulus is unnecessary, but because they do not believe it will work. I would like to speak briefly to that question as well.

It has been argued that the rebate will not increase consumption expenditures because it will go into savings instead. In particular, it is said that the rebates will simply be used to replenish savings which were used to pay fuel bills. But that is precisely the point. That is the strongest possible argument for the rebate.

How will families pay those fuel bills, and restore their savings, if the rebates are not provided? They will have to reduce other expenditures. Indeed, there is considerable danger of reduced household spending during the rest of the year for just this reason. Preliminary estimates suggest that the savings rate fell sharply in the first quarter, down nearly to 5 percent, as the fuel bills came in. Household savings were about \$17 billion lower than they would have been at last year's savings rate.

The danger is that the savings rate will now move sharply upward, and the growth of spending will be slow. The rebate provides a quick and effective way to improve the financial position of low- and middle-income families and allow them to maintain their accustomed expenditure. The February survey of consumer attitudes done by Michigan's Survey Research Center found higher confidence among consumers who expected a tax reduction than among those who did not. I have no difficulty understanding this finding, although it seems that some of my colleagues do.

I have never been able to understand why American families would treat the tax rebate very differently from any other small change in their incomes. Economists are very good at telling us what we already know, and one of the things they tell us is that people who receive very large windfalls do not spend it all very quickly. Now that is a very good theory for the winners of State lotteries and the heirs of large fortunes, but I do not see what it has to do with the average American family. For the median family the rebate would be only about 1% percent of annual income.

For once the economists have something useful to tell us, for their studies indicate that small temporary changes in income, such as rebate, get treated much like any other income. They show that the rebate should have a substantial and pronounced effect on consumption expenditure for several quarters after it is paid, which is exactly what it was intended to do.

Dr. Thomas Juster, the director of the Institute for Social Research of the Uni-

versity of Michigan, has recently done a study of the effects of permanent and temporary tax changes on consumer spending and saving. He found no significant difference between permanent and temporary tax changes.

Prof. Saul Hymans at Michigan examined the effects of the 1975 tax rebate and tax cuts on consumer purchases. He found a huge increase in purchases of furniture and household equipment associated with the additional purchasing power arising from the tax reductions.

Arthur Okun of the Brookings Institution, in studying the 1968 tax surcharge, found that the experience confirmed "the general efficacy and continued desirability of flexible changes in personal income tax rates—upward or downward, permanent or temporary."

Still other studies have confirmed the difference in the effects on spending of large and small temporary income changes to which I referred previously.

Mr. President, I do not believe we should withhold the economic stimulus this country needs because of a misapplication of economic theory, or a failure to recognize the abundant evidence which supports the use of the rebate.

I do not believe that future tax revenues should be mortgaged when the new administration is less than 3 months old, and still formulating its programs, if a clear alternative is readily available. I do not believe that we should go further in attempting to devise permanent tax reductions before we have given the administration an opportunity to present its proposals for tax reform.

Mr. President, the way to get the economy moving again is not to put up a stop sign. When the Senate returns from recess on April 18 it will immediately consider the tax bill reported by the Finance Committee. I urge my colleagues to declare themselves in support of a steady fiscal policy and continued economic recovery by supporting the fiscal stimulus provisions, including the rebate, as recommended by the Finance Committee.

One closing point, Mr. President. On yesterday the Senate Budget Committee completed its consideration of the first concurrent budget resolution for fiscal year 1978. That resolution is not directly relevant to the \$50 tax rebate, except to this degree: that if it is not enacted, it will affect the revenues we can expect to flow from the Federal tax structure in 1978.

If the \$50 tax rebate is not approved, or if in lieu thereof Congress should enact into law the permanent tax reductions proposed by several Republican Senators—and it is their prerogative to do so—revenues that we can anticipate in 1978 will be lower than those provided for in the resolution adopted by the Budget Committee yesterday. The effect will be a larger deficit, lower revenues, lesser ability to deal with tax reform later this year, and the effects on the economy which I have taken the last few minutes to describe here for the benefit of the Senate.

So for all those reasons, Mr. President, it makes sense to enact into law this fea-

ture of the President's economic stimulus proposal.

I yield the floor.

Mr. HARRY F. BYRD, JR. Mr. President, the Senator from Virginia would like to express a contrary view to that so ably and eloquently expressed by the splendid Senator from Maine, Mr. MUSKIE.

I disagree with those who feel the answer to our Nation's economic problems is more and more spending and more

and more deficits.

The Senate Budget Committee has proposed expenditures, to use round figures, of \$460 billion for fiscal 1978. The Senate Budget Committee estimates a deficit at \$63 billion. The House Budget Committee estimates a deficit of \$64

Whether it be a \$63 billion deficit or a \$64 billion deficit, that will be coming on top of a \$70 billion deficit for fiscal 1977; namely, the current fiscal year.

In my judgment, Mr. President, this

is totally irresponsible.

What the Congress has been doing. what the preceding administrations did, what the present administration is doing, is to pile deficit upon deficit.

What the Congress has been doing, what the previous administrations did, and what the present administration is doing is to say to the people of this country, "We can spend all the money we want and no one needs to pay for it. All we need to do is to add it to the national

Mr. President, in the long run, I do not think that is a sound proposition at all. Government spending must be paid for either by direct taxation or by inflation. And inflation is a hidden tax but a cruel one-hitting hardest those in fixed income and those in the lower and middle-economic brackets.

The able Senator from Maine discussed the \$50 rebate proposal of the Carter ad-

ministration.

The administration proposes to give \$50 to many who paid taxes last year as a tax refund, and to give \$50 to those who did not pay any taxes at all last year.

The total amount involved will be \$11.4 billion. The interest on that \$11.4 billion will be \$800 million a year. That interest charge will go on for at least 100 years.

Before expressing my own view on the rebate, I want to relate to the Senate the view of a taxi driver in the city of Nor-

folk. Va.

The Senator from Virginia spoke in Norfolk recently. In taking a taxi from the airport to the hotel, the taxi driver recognized me, and he said: "Senator, are you guys in Washington going to give us our \$50?"

I said, "Well, I think the Congress is going to pass it. I am not sure that I am going to vote for it, but I think the Congress will pass it. May I ask you, what do you think about that proposal?"

The taxi driver said: "Well, the way I look at it, the Federal Government is heavily in debt, and it does not make any sense to me for the Government to go out and borrow money in order to give money back to people who have already paid it into the Treasury."

I have always felt that taxi drivers had a lot of sound, commonsense, I might say, I would like to see more of that kind of taxi driver in the Congress.

Like the Norfolk taxi driver, it does not seem logical to me for the Government to borrow \$11.4 billion in order to scatter \$50 bills all around the Nation. It may be a good political gimmick, but it is very poor economics.

I believe the present administration and the Congress have their eyes on the wrong ball. The ball they should be watching is the ball of inflation. I am convinced that the greatest long-range threat to the people of the United States is inflation. Yet, nearly every action that the Congress takes is action which stimulates inflation.

The deficits of the Federal Government are ever recurring and they are accelerating in magnitude. This inevitably adds to inflation and adds to the cost of living. The best thing the Congress could do for the individual citizen of this Nation is to get its spending under control. I am convinced we will not get the

cost of living under control until we get the cost of Government under control.

I might say that neither the administration nor the Congress has shown any imagination in dealing with the economic problems of our Nation. As a matter of fact, the present economic stimulus program is just more of the same. We have been trying this for years and years now-more and more spending and more and more deficits. All we have done is to dig ourselves deeper into the financial hole.

What this country needs more than anything else are policies emanating from Washington which will give confidence to the American people and confidence to the business community.

I submit the so-called economic stimulus proposal submitted by the Carter administration cannot and will not inspire confidence. It is based on the old, discredited theory put before the Congress on the advice of the same "experts" who have been advocating deficit-spending through the years. It is as old as Lyndon Johnson and Richard Nixon.

As a practical matter, and as a matter of fact, the Carter spending and tax program is putting the economy on a more unsound basis than it has been in the past.

Mr. President, I believe the Federal Government is very much like someone who might drink too much whisky at night. The next day he must do one of two things: Either take the discomfort of a hangover or start drinking again.

What the Congress has done, what succeeding administrations have done, and what the present administration is doing, is to try to solve the hangover problem by more and more drinking or. in this case, more and more spending.

I believe it to be totally unsound.

The able Senator from Louisiana, the chairman of the Finance Committee (Mr. Long) expressed it so well when he said of the \$50 rebate proposal:

It is like throwing \$50 off the Washington Monument and hoping it will do some good.

The people of our Nation are in for some real headaches-and heartachesif the politicians do not begin to show some degree of responsibility in handling the government's finances. Unfortunately, the Congress has shown no inclination along this line.

Mr. President, I ask unanimous consent to have printed in the RECORD, a table showing unified budget receipts, outlays, and surplus or deficit for fiscal years 1958-78, inclusive.

There being no objection, the table was ordered to be printed in the RECORD. as follows:

Unified budget receipts, outlays and surplus or deficit for fiscal years 1958-78, inclusive (Prepared by Senator HARRY F. BYRD, JR., of Virginia)

THREE VIRGINIANS

Mr. HARRY F. BYRD, Jr. Mr. President, it was 60 years ago yesterday that the United States declared war against Germany. I comment on that today because of the part played by three Virginians. In 1917, the President of the United States was Woodrow Wilson, a Virginian; the majority leader of the U.S. Senate was Senator Thomas S. Martin, a Virginian, of Charlottesville, Va.: and the chairman of the House Foreign Affairs Committee was Congressman Henry D. Flood of Appomattox, Va. Congressman Flood, incidentially was my grandmothers brother. Congressman Flood introduced the war resolution in the House of Representatives and Senator Martin introduced it in the U.S. Senate. It was recommended by and approved by President Wilson, another

The Senate approved the resolution by

a vote of 86 to 6; the House approved it by a vote of 373 to 50.

I point this out not to suggest that Virginians are warlike people in any sense, but to point out the role in Government that three great Virginians had at that crucial moment, 60 years ago yesterday, when the United States entered World War I.

It is rather disconcerting to recall also that, in that short span of 60 years, the United States has been involved in four major wars—World War I, World War II, the war in Korea, and the Vietnam war. Let us pray that no other President and no other majority leader of the U.S. Senate and no other chairman of the House Foreign Affairs Committee will need to recommend a declaration of war.

APPOINTMENTS BY THE VICE PRES-IDENT AND THE CHAIRMAN OF THE COMMITTEE ON COMMERCE, SCIENCE, AND TRANSPORTATION

The ACTING PRESIDENT pro tempore. The Chair, on behalf of the Vice President, in accordnace with title 14, section 194(a) of the United States Code, appoints the Senator from Rhode Island (Mr. Pell) to the Board of Visitors to the U.S. Coast Guard Academy, and the Chair announces on behalf of the chairman of the Committee on Commerce his appointments of the Senator from South Carolina (Mr. Hollings) and the Senator from Alaska, (Mr. Stevens) as members of the same Board of Visitors.

APPOINTMENT BY THE VICE PRESIDENT

The ACTING PRESIDENT pro tempore. The Chair, on behalf of the Vice President, pursuant to Public Law 83-420, appoints the Senator from Tennessee (Mr. Sassen) to be a member of the Board of Directors of Gallaudet College.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. LONG. Mr. President, I ask unapimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

POSTPONEMENT OF EFFECIVE DATE OF CHANGES IN THE SICK PAY EXCLUSION

Mr. LONG. Mr. President, I assume that there is now at the desk the tax bill, H.R. 1828, that was passed on yesterday, involving the sick pay exclusion and section 911 of the Internal Revenue Code. Is that correct?

The ACTING PRESIDENT pro tem-

pore. The Senator is correct.

Mr. LONG. Mr. President, I am not going to ask the Senate to consider that matter at this time. I am told that there would be objection on the other side of the aisle, but I doubt that we on this side of the aisle would want to try to move it at this time, anyway. The fact is that

we had been led to believe—and I am sure that that information was conveyed to the Senator from Louisiana, the Senator from Connecticut, and others in complete good faith—that the amendment by the Senator from Connecticut to move forward the date of the provision in the Tax Reform Act of 1976 with regard to the exclusion of income for workers overseas—as was being done with regard to the sick pay amendment—would be agreed to in the House.

Obviously, no one can speak with certainty with regard to 435 Members of the House of Representatives, any one of whom may object; and, of course, one did object. So that, to satisfy the single objector, the chairman of the Ways and Means Committee moved to strike from the bill the Ribicoff amendment involving section 911.

Mr. President, when the House returns, we shall seek a conference with the House at which time I hope that we can reach some agreement with regard to this matter. It is my understanding however, that a conference agreement may not be the end of it, because the administration has opposed postponing the effective date of sick pay provisions and also the Ribicoff amendment. When I say the "administration," I mean the officials in the Treasury Department are so recommending.

That being the case, if the bill goes to the President with those two provisions and little more on it, the probabilities are that the President will seriously consider vetoing the bill and might, in fact, do so. So whether we can provide the relief that is recommended by the Senate or even that recommended by the House is somewhat dubious under the circumstances.

Mr. RIBICOFF. Will the Senator yield at that point?

Mr. LONG. I yield.

Mr. RIBICOFF. I think that, in all fairness to Chairman Ullman, Chairman Ullman talked with me on the telephone. It was a matter of embarrassment. He was willing to accept the Ribicoff amendment.

I point out, it was not just my amendment. Senator Bartlett of Oklahoma felt very strongly, Senator Matsunaga of Hawaii felt very strongly about it, Senator Griffin felt very strongly about it. Twelve Senators traveling abroad, talking to Americans, sort of had a moral commitment to those people to correct it.

Representative Ullman did say that in conference he would work for adoption, the acceptance of it.

But it is unfortunate that the other body adjourned when there was unfinished business before the Congress. I am sure if they had stayed through this day, as we have, we could have had conferees within half an hour straighten it out, but they did go home and we are here.

Mr. LONG. It is very unfortunate that this is the situation, because if the House were here, I would move that we disagree to the House action, that we insist on all our amendments, and appoint conferees. I would name the Senator from Connecticut as one of the con-

ferees because his amendment is the principal amendment in disagreement between the two Houses. We would go to work together and resolve this matter.

Unfortunately, the House has adjourned and they will not be back until after the recess. So we are simply confronted with an ultimatum.

We would like to be able to have a conference with them to discuss the differences, but we cannot, since they are not here. We will simply have to wait until after the recess.

Mr. HEINZ. Will the Senator yield? Mr. LONG. I yield to the distinguished

Mr. HEINZ. I certainly have no objection to what the Senator proposes. I think the explanation is very clear. But I do have a question as it affects all our constituents who may have concerns about the sick pay exclusion.

April 15 is the day that all of us, Senators and constituents alike, have to fill out our income tax forms and get them postmarked to the Internal Reve-

nue Service.

My question to the Senator from Louisiana, the distinguished chairman of the Finance Committee, is, What advice should we give our constituents who have to calculate their tax liability and write out a check in the appropriate amount between now and April 15?

Mr. LONG. The only thing they can do, of course, referring to those who would otherwise be able to claim the sick pay exclusion, is file their returns without claiming the advantage of the law that existed prior to the Tax Reform Act. So they would have to file their tax returns without claiming any relief that would have been provided by this measure.

If we are able to pass the measure to move forward the date on sick pay, they could file an amended return and have the benefit of the old law with regard to sick pay.

With regard to the workers overseas, of course, they would have another 60 days, until June 15, anyway to file their tax returns. So, in their case, I would advise them, to just wait to file their return. In that event, Congress may have acted favorably to their advantage and, hopefully, the President might sign the bill.

Mr. HEINZ. If the Senator will yield further, with respect to the people who are affected by the sick pay exclusion, I think it is correct to say that the legislation we have before us yesterday passed rather overwhelmingly in both Houses; is that not correct?

Mr. LONG. Yes.

It was unanimous here.

Mr. HEINZ. That would satisfy anyone's definition of overwhelmingly, I think.

Mr. LONG. The sick pay bill also passed the House unanimously, 404 to 0.

Mr. HEINZ. So it passed both Houses unanimously. Yet in spite of that, those people who may be affected by the 1976 Tax Reform Act will in all probability be forced to overpay their taxes this April 15; is that not correct?

Mr. LONG. They will have to pay what they owe under existing law and

they would not receive any benefit at all from this bill we passed in the Senate yesterday

Mr. HEINZ. Yet if the bill becomes law, then they will be required to file for a refund, is that not correct?

Mr. LONG. They are not required, but would be well advised to file amended returns to receive a tax refund.

Mr. HEINZ. They would be well advised.

Mr. LONG. They would have the money coming to them.

Mr. HEINZ. If they wanted to get their money back, they would be required to file a return.

Mr. LONG. Exactly.

Mr. HEINZ. I am sure the Senator

from Louisiana does agree.

Is there any method by which those people affected in that way may choose to avoid overpaying, since the Internal Revenue Service is sometimes a little slow at refunding money to us if we overpay?

Mr. MATSUNAGA. Will the Senator

from Louisiana yield? Mr. LONG. Yes.

Mr. MATSUNAGA. I may have a response which the Senator from Pennsylvania may be seeking. That is, for those who did receive sick pay during the reporting period, they have good reason for filing for an extension of time in which to file the return, and I would think that if they would request an extension of a month, this matter would be settled, in which event they would not need to file for a refund.

So I think that would be the best advice which we could give to those who did, in fact, receive sick pay during the

year 1976 reporting period.

Mr. HEINZ. I thank the Senator, my good friend and distinguished colleague from Hawaii, for bringing up that point.

I wanted to try and make the record clear to that effect because one is, under certain circumstances, well within one's rights to ask for an extension. But I was particularly interested in whether the chairman of the Finance Committee, my distinguished colleague from Louisiana, would agree with that as a proper mechanism for those so affected in this case?

Mr. MATSUNAGA. I say to the Senator from Pennsylvania, with this colloquy in the RECORD, the Internal Revenue Service people will take note.

Mr. HEINZ. I certainly hope so. I thank the Senator from Hawaii.

I am wondering further, Mr. President, if the Senator from Louisiana does concur in that?

Mr. LONG. I regret to say that my attention was directed to the House Record of yesterday, at which time this matter was taken up and sent back without a Senate amendment on it. I believe the RECORD is incomplete, however. That is what I was noting at that moment. But I am told that when the permanent Rec-ORD is published, it will show it was Mr. STARK who objected to this matter and that, therefore, it had to be modified in the fashion it now appears at the desk so that it could be agreed to with the deletion of Senator RIBICOFF's amendment and accepted with a unanimous

That presents us with the impasse that we find at this moment.

I did not have the opportunity to hear the Senator explain what his view of the tax consequence would be. Would the Senator mind repeating it? I wanted to make it clear about yesterday's RECORD, which will have to be corrected. The REC-ORD of the House on 10796, I regret to say, is incorrect. I hope the permanent RECORD will be corrected.

Mr. MATSUNAGA. If the Senator from Louisiana will yield, in response to the question put by the Senator from Pennsylvania, in what way should we advise our constituents who did, in fact, receive sick pay during the reporting period, because of the impasse? I suggested that we might advise them to file for an extension of time during which they may file their return, in which event they would not need to file for a rebate subsequently.

Mr. LONG. It is my understanding that even if they file for an extension, they must have paid their taxes by April 15.

The extension is only to extend the period of time during which one is to file the return. That is my understanding, as advised by the staff. One must pay his taxes on time. The extension granted is only to permit one to file the return later. If you do not pay the taxes that are due, then you owe the interest on what you owe.

Mr. MATSUNAGA. That is correct. However, normally, those who do take sick leave and receive sick leave pay are those who have had regular deductions made monthly. So that if, in fact, they do owe additional tax imposed by the Reform Act of 1976 on the sick pay, if they do not pay on it, after Congress acts they will be relieved of this additional tax.

So that I would think that by filing the tax after April 15, most of them, even without paying any additional taxes, would be covered.

Mr. LONG. What the Senator says is correct, if the bill becomes law. But even when a measure has had a unanimous vote in both Houses, I have seen measures fail to become law, even though they have the unanimous support of both Houses at one time or another.

It is absolutely beyond the power of any human mind to assess the various ways that something which appears destined to become law can fail to become law, but it happens all the time.

Mr. HEINZ. Mr. President, I thank the distinguished Senator from Louisiana for yielding, even if the news is not as good as I hoped it would be for those who are affected by the sick pay exclu-

Does the Senator have any further advice that he might recommend we give to our constituents in this matter?

Mr. LONG. I would have to suggest to constituents to follow this legislation and hope it becomes law. It is not our fault that it did not happen. We passed the bill and agreed to what the House did. We added some matters that we had been led to believe would be accepted without any difficulty in the House. Difficulties can always arise, and we have this problem that is presented to us.

When we return from the recess, we will try to resolve this matter. Unfortunately, the House has gone home, and it leaves us no choice but either to bend our knee in a fashion that we believe would not be appropriate or to ask for a conference; and the House is not here to confer with us.

Mr. HEINZ. It does appear that all those affected adversely by our ability to come to a timely agreement with the House-because the House has gone out of town before we could express our will to them or have a conference-will have

to pay the tax.

I suppose it is a reasonably accurate prediction that we will pass the bill, including the sick pay exclusion, and that there will be many people who will want to file for a refund from the Internal Revenue Service.

I mentioned to the Senator from Louisiana a moment ago that sometimes it is hard to get a refund check from the Internal Revenue Service. As I am sure the Senator from Louisiana knows, we have had many problems, particularly in States such as Pennsylvania, Ohio, and New York, with increased fuel bills, and that little extra money is quite important.

Is there anything the chairman thinks we can do to prompt the Internal Revenue Service, should the scenario I have described come to pass, to be more prompt in their refund of overpayments

by taxpayers?

Mr. LONG. We can do our best to request that they expedite it, and I am sure they will, to the greatest extent possible, if the bill becomes law.

I say to the Senator that we do not have any assurance that the bill will become law, however. The President may veto the bill. I would not be the least bit surprised if the Treasury recommends a veto. In fact, I would say that the odds are very good that that will in the case of this bill. If that should happen, then we will be confronted with the problem of overriding the veto. Many people may be reluctant to override the veto of a new President in his first few months in office. It may be that the whole thing would fall by the wayside.

So that we really cannot say for certain what is likely to happen with something like this. All I can say is that we, in good faith, have done our part in the process and will do the best we can to persuade the House to do the samewhen we have the House to talk to.

Mr. HEINZ. I certainly hope that the President would not veto this measure. I think it would be a bad way for him to start off. I speak for myself when I say that I would not have much hesitancy to vote to override such a veto. Of course, we have no way of knowing for sure whether he will or will not veto it. The Senator is quite correct in saying that we never know what is going to happen to a bill until it does pass.

I thank the Senator from Louisiana for yielding.

S. 1269—CAMILLA A. HESTER

Mr. ALLEN. Mr. President, Mrs. Hester has been denied a civil service survivor's annuity as a result of a highly technical application of 5 U.S.C. 8341 which defines a widow for purposes of qualification for a survivor's annuity as a person who is the surviving wife of a civil service employee who "(a) was married to—the employee—for at least 2 years immediately preceding his death; or (b) was the mother of issue by that marriage."

Mr. President, Camilla Hester married John Hester, a civil service employee, on May 20, 1961. She had two children by that marriage who were born in 1961 and 1963. However, in 1972 Mrs. Hester discovered that her original marriage to Mr. Hester in 1961 was void because she had not been finally divorced from a previous husband, even though she is good faith believed that a final decree divorcing her from her previous husband had been issued prior to her marriage to Mr. Hester.

Mr. President, immediately upon learning that her marriage in 1961 to Mr. Hester was void, Mrs. Hester took necessary steps to secure a final decree from her previous husband and again married Mr. Hester, thereby giving full legal validity to her status as a wife. Mr. President, several months later Mr. Hester died. Mrs. Hester, his wife for 11 years, with his two minor children to raise, made application to the Civil Service Commission for a widow's pension. Incredibly, she was denied survivor's benefits on the theory that she was not a widow of 2 years' standing and that her two children were not the issue of her marriage.

Now, Mr. President, I find that decision not only harsh but totally devoid of any proper exercise of good judgment. The Commission could have easily determined that the two children involved were the issue of the marriage since the mother was Mrs. Hester and the father was Mr. Hester and Mr. and Mrs. Hester were married. Yet, Mr. President, the Commission in its wisdom somehow determined that the two children—although the offspring of Mr. and Mrs. Hester—were not the issue of the marriage of Mr. and Mrs. Hester.

Mr. President, Mrs. Hester appealed the Commission's decision to the U.S. District Court for the Southern District of Alabama, and I regret to say that the court also denied relief.

In its decision, the court stated as follows:

Whatever reason employed by the Congress in fashioning this law, it is apparent that the legislature has considered problems such as ours before for it has been the subject of other and further relief in other aspects of compensation law. It is not, therefore, the province of this Court to act as some super legislature and change the expressed provisions of the law in order to afford an equitable relief where it might seem to be otherwise due. See 62 Cases of Jam v. United States, 340 U.S. 593 at 596; United States v. Great Northern Railroad, 343 U.S. 562 at 575; Story v. Snyder, 184 F. 2d 454. cert. den. 340 U.S. 866; Crooks v. Harrelson, 282 U.S. 55 at 60."

Mr. President, the court went on to give the following recommendation to Mrs. Hester:

The issue of this union are to be distinguished from the claimant for recovery pur-

poses. The plaintiff is not without her remedies in the matter for she may petition Congress for relief. Though this approach may appear harsh in its requirement, it is the appropriate relief within the present scheme of things and this Court will not, even if it could, substitute its approach to logic for that of the collective wisdom of the Congress.

So, Mr. President, I am today introducing legislation which would afford appropriate relief in this case.

I believe a serious injustice has been done Mrs. Hester, and I regret very much the difficulty—indeed the indignities—she has been required to face in seeking the survivor's annuity to which she is entitled.

Mr. President, Mrs. Hester has been seeking the money justly due to her for almost a full 4 years. In the last Congress I also introduced a bill for her assistance, S. 3790, which was passed by the Senate and by the House of Representatives but which, unfortunately, was vetoed by President Ford. The President did not agree with my view that it was appropriate to award special compensation to Mrs. Hester because of the very long delay involved in obtaining the pension which is rightly due to her. Specifically, the President objected to the provisions in the bill which would have paid interest at the rate of 6 percent per annum retroactive to 1972 and which would have required the Treasury to pay \$5,000 to Mrs. Hester to compensate for her prolonged efforts to secure that which is rightfully and equitably hers. However, the President very clearly stated that should the objectionable provisions be removed, he "would be pleased to consider legislation for Mrs. Hester that would provide appropriate relief." I have, therefore, revised the measure to eliminate any payment for damages suffered as a result of the delay experienced. The new bill I am today introducing provides simply that Mrs. Hester be deemed a widow within the terms of title 5, United States Code, section 8341, and that back payments due to her under that section be promptly paid.

Mr. President, in view of the very prolonged nature of the efforts involved in securing to Mrs. Hester what is justly due and since the substance of the bill has already once passed both Houses, I ask unanimous consent that the bill be considered as having been read twice, and that it be placed on the calendar. A similar measure has already been introduced in the House of Representatives by Congressman Jack Edwards of Mobile, Ala., and I understand the prospect is good that the House will take early action on the measure he introduced. I am hopeful that we will soon again be able to present to the President an act of Congress designed to correct this obvious injustice.

I have cleared the matter with the distinguished majority leader and the distinguished minority leader, and the distinguished majority leader inquired of me if the matter had been approved by Mr. EASTLAND, chairman of the Judiciary Committee. I told him it had not because the distinguished Senator is not in the Chamber today, but I agreed that if it was not entirely satisfactory to Mr.

Eastland that I would request that the bill go to the Judiciary Committee and, on the Senator's approval I would ask that the bill be considered by the Senate.

Mr. President, I ask unanimous consent that a copy of President Ford's veto message with respect to this bill be printed in the RECORD.

There being no objection, the veto memorandum was ordered to be printed in the Record, as follows:

VETO OF BILL FOR THE RELIEF OF CAMILLA
A. HESTER

The President's memorandum of disapproval, October 12, 1976

I have withheld my approval from S. 3790, a private bill which would authorize a civil service survivor annuity retroactive to September 28, 1972, to Mrs. Camilla A. Hester as the widow of the late John A. Hester.

While I am sympathetic to Mrs. Hester's circumstances, S. 3790 unfortunately contains two precedent-setting provisions which I consider very undesirable, not only for future private relief legislation, but also for ordinary claims under the Civil Service Retirement System.

The first would require the Civil Service Commission to pay interest at 6 percent per annum retroactive to 1972 on the survivor's benefit which would be authorized by S. 3790. The second would require the Treasury to pay Mrs. Hester \$5,000 as compensation for her successful effort to be awarded the benefit. Neither of these provisions are appropriate, in my judgment, in bringing Mrs. Hester equitable relief.

For these reasons I am unable to approve S. 3790. I have signed other private relief legislation during the 94th Congress designed to rectify the inequitable circumstances arising from the "length of marriage" requirement in the civil service retirement law. However, these bills did not contain the objectionable provisions contained in S. 3790. I would be pleased, however, to consider legislation for Mrs. Hester that would provide appropriate relief without the objectionable features discussed above.

GERALD R. FORD.

The PRESIDING OFFICER (Mr. MOYNIHAN). Without objection, the bill will go to the calendar.

Mr. ALLEN. I thank the Chair.

APPOINTMENTS BY THE CHAIR

The PRESIDING OFFICER (Mr. MOYNIHAN). The Chair, on behalf of the Vice President, in accordance with title 46, section 1126(c), of the United States Code, appoints the Senator from New York (Mr. MOYNIHAN) to the Board of Visitors to the U.S. Merchant Marine Academy, and the Chair announces on behalf of the chairman of the Committee on Commerce, Science, and Transportation (Mr. Magnuson) his appointments of the Senator from South Carolina (Mr. HOLLINGS) and the Senator from Alaska (Mr. STEVENS) as members of the same Board of Visitors.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate com-

(The nominations received today are printed at the end of the Senate pro-

ceedings.)

REPORT OF THE FEDERAL COUNCIL ON AGING—MESSAGE FROM THE PRESIDENT—PM 65

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States which was referred to the Committee on Human Resources:

To the Congress of the United States:

I am transmitting herewith the annual report of the Federal Council on Aging in accordance with Section 205(f) of the Older Americans Act (P.L. 93-29).

This report was prepared based upon activities of the Federal Council on Aging prior to my term of office.

JIMMY CARTER.

THE WHITE HOUSE, April 7, 1977.

MESSAGE FROM THE HOUSE

At 2:09 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that:

The House disagrees to the amendment of the Senate to the bill (H.R. 3843) to authorize additional funds for housing assistance for lower income Americans in fiscal year 1977, to extend the Federal riot reinsurance and crime insurance programs, and for other purposes; requests a conference with the Senate on the disagreeing votes of the two Houses thereon; and that Mr. REUSS, Mr. ASHLEY, Mr. MOORHEAD of Pennsylvania, Mr. St Germain, Mr. Mitchell of Mary land, Mr. Patterson of California, Mr. AUCOIN, Mr. BLANCHARD, Mr. BROWN of Michigan, Mr. Stanton, and Mr. Rous-SELOT were appointed managers of the conference on the part of the House.

The House agrees to the amendments of the Senate numbered 2, 3, and 4 to the bill (H.R. 1828) relating to the effective date for the changes made by the Tax Reform Act of 1976 to the exclusion for sick pay; that the House disagrees to the amendment of the Senate numbered 1; and that the House agrees to the amendment of the Senate to the title.

The House agrees to the amendments of the Senate to the resolution (H. Con. Res. 142) urging the Canadian Government to reassess its policy of permitting the killing of newborn harp seals.

The Speaker has appointed as members of the U.S. Delegation of the Mexico-United States Interparliamentary Group Mr. WRIGHT, Chairman, Mr. Nix, Vice Chairman, Mr. Udall, Mr. DE LA GARZA, Mr. WHITE, Mr. KAZEN, Mr. ALEXANDER, Mr. YATRON, Mr. ROUSSELOT, Mr. GILMAN, Mr. LAGOMARSINO, and Mr. RUDD.

The House has passed the following bills in which it requests the concur-

rence of the Senate:

H.R. 7. An act to authorize a career education program for elementary and secondary schools, and for other purposes;

H.R. 130. An act to provide for the protection of franchised distributors and retailers of motor fuel and to encourage conserva-tion of automotive gasoline and competition in the marketing of such gasoline by requiring that information regarding the octane rating of automotive gasoline be disclosed to consumers;

H.R. 5262. An act to provide for increased participation by the United States in the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Asian Development Bank, and the Asian Development Fund, and for other purposes.

The House has agreed to the concurrent resolution (H. Con. Res. 191) to correct the enrollment of H.R. 3365.

ENROLLED BILLS SIGNED

The Speaker has signed the following enrolled bills:

H.R. 3365. An act to extend the authority for the flexible regulation of interest rates on deposits and accounts in depository institutions.

H.R. 5717. An act to provide for relief and rehabilitation assistance to the victims of the recent earthquakes in Romania.

The enrolled bills were subsequently signed by the Deputy President pro tempore.

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred as indicated:

H.R. 7. An act to authorize a career education program for elementary and secondary schools, and for other purposes; to the Committee on Human Resources.

* H.R. 130. An act to provide for the protection of franchised distributors and retailers of motor fuel and to encourage conservation of automotive gasoline and competition in the marketing of such gasoline by requiring that information regarding the rating of automotive gasoline be disclosed to consumers; to the Committee on Energy and Natural Resources

H.R. 5262. An act to provide for increased participation by the United States in the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Asian Development Bank and the Asian Development Fund, and for other purposes; to the Committee on Foreign Relations.

COMMUNICATIONS FROM EXECU-TIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-1087. A letter from the Deputy Director of the Office of Management and Budget, Executive Office of the President, transmitting pursuant to law, a report that the Federal Crop Insurance Fund has been reapportioned on a basis which indicates the necessity for a supplemental estimate of appropriation; to the Committee on Appropriations. EC-1088. A letter from the Deputy Direc-

tor of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a report that the appropriation to the Department of Justice for 'Support of United States Prisoners" for the fiscal year 1977 has been reapportioned on a basis that indicates the necessity for a supplemental estimate of appropriation; to the Committee on Appropriations.

EC-1089. A letter from the Deputy Director of the Office of Management and Budget, Executive Office of the President, transmitting pursuant to law, a report on the reapportionment which will permit use of the existing appropriation at an accelerated rate to provide for the purchase of enough thermal power to meet SPA's contractual commit-ments; to the Committee on Appropriations.

EC-1090. A letter from the Secretary of the Interstate Commerce Commission transmitting, pursuant to law, notice of a request for a 3-month extension with respect to Investigation and Suspension Docket No. 9139 concerning lumber and forest products; to the Committee on Commerce, Science, and

Transportation.

EC-1091. A letter from the Federal Cochairman of the Four Corners Regional Commission, transmitting, pursuant to law, the 1976 annual report of the Four Corners Regional Commission (with an accompanying report); to the Committee on Environment and Public Works.

EC-1092. A letter from the Administrator of the Environmental Protection Agency, transmitting a draft of proposed legislation to extend certain appropriation authorizations of the Federal Water Pollution Control Act, as amended, for fiscal year 1977 (with accompanying papers); to the Committee on Environment and Public Works.

EC-1093. A letter from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report entitled Security at Nuclear Powerplants-at Best, (with an accompanying re-Inadequate" port); to the Committee on Environment and Public Works.

EC-1094. A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Better Management of Spare Equipment Will Improve Maintenance Productivity and Save the Army Millions" (with an accompanying report); to the Committee on Governmental Affairs

EC-1095. A letter from the Director of the Administrative Office of the United States Courts, transmitting a draft of proposed legislation to amend the Jury Selection and Service Act of 1968, as amended, by revising the section on fees of jurors and by providing for a civil penalty and injunctive relief in the event of a discharge or threatened discharge of an employee by reason of such employee's Federal jury service (with accompanying papers); to the Committee on the Judiciary.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM-126. Resolution No. 152 adopted by the Council of the City of Philadelphia, Pa., memorializing the Congress of the United States of America to hold open hearings on the proposed "Consumer Communications Reform Act of 1977"; to the Committee on Commerce, Science, and

Transportation.
POM-127. Resolution adopted by the Senate of the Commonwealth of Puerto Rico expressing the pride and joy of the Senate Puerto Rico upon the celebration next March 2 of the 60th anniversary of the granting of the American citizenship to the Puerto Rican people; ordered to lie on the

"RESOLUTION

"STATEMENT OF MOTIVES

"On March 2, 1917 the Congress of the United States of America granted the American citizenship to the Puerto Rican people. Sixty years have already elapsed since that glorious date so significant for the well-being and destiny of Puerto Rico.

"We all know and cherish the Indian origin of our beautiful Island which, though simple and primitive, is the undisputable root our personality. Also, all of us know and love our ties with Spain, which colonized us, bequeathed its language and its customs to us and, through four centuries imprinted on us that Hispanic seal we are proud of. But neither can we forget that the historical destiny of Puerto Rico changed in the year 1898 and that since such date we are united a great nation of extraordinary ideals which we should also know and love because it is the only one that will lead us to our final identity. We have the right to respect and to cherish the past with all the fervor of our hearts, but we also have the duty to look into the future with our utmost reasoning.

"Independently of the noble separatist ideal some Puerto Ricans avow, the majority of our people have always been not only proud of the American citizenship but also have consistently expressed themselves in favor of our permanent union with the United States of America. The great patrician Luis Muñoz Rivera, although of proindependence ideals, expressed himself thus in his political will subscribed in the year 1916, shortly before his death: 'About politics I have very little to tell you. I have already told you everything in my speeches, in my letters, in everything you know about me, spoken or written. The course is firmly traced. The future of Puerto Rico consists in strengthening, in consolidating its politics within a sincere friendship and frank compenetration with the people of the United States. Although the finality of the problem is the independence of our native land, we must have confidence and absolute faith in the great nation under whose influence and under whose protection our fate is to be decided. Great are the problems stirring in the political life of Puerto Rico and many are the enemies that surround us creating difficulties to our efforts. We need the help of the United States to solve them, to shield ourselves behind its strength and to shelter ourselves in its great institutions.' And on May 6, 1917, the Unionist Party, under the presidency of the illustrious Puerto Rican, Antonio R. Barceló, approved a declaration of principles which in part stated: 'That it accepts and receives as a high honor for the political dignity of the country, the American citizenship which solves the situation of Puerto Rico within the national and international law, without prejudice to the definite determination of our status'. And finally, the Republican Party, under the direction of its chief leader, José Celso Barbosa, approved on May 14, 1917 a program which in part stated: 'The Republican Party publicly states that the new Organic Act enacted by Congress completes the first stage of our political evolution and accomplishes the first part of the Party's platform, in so far as it defines the status of Puerto Ricans collectively, as citizens of the United States, separates the executive functions and establishes an elective Senate'.

"Many years have elapsed since that memorable date when we were granted the American citizenship. The excelling process of our people has been arduous and slow, but little by little we have obtained more guarantees and many rights. We have shared the happiness and the sorrows of the great American nation. We have sent our sons to the battlefields in defense of the democratic institutions and ideals. We are part and parcel of that great nation that represents and defends us in the international forum.

"We forebode where are we going and what do history and fate hold for us. But we do have the firm conviction and the faith that the American citizenship we cherish today with pride is a guarantee and a certainty that

the future must be very good for our people.
"The Senate of Puerto Rico, that also celebrates next March 2 the sixtleth anniversary of its creation, feels more than proud and joyful of sharing its anniversary with the glorious anniversary of the granting of the American citizenship to the Puerto Rican people. And it is indispensable to state so to all the people of Puerto Rico.

"Be it resolved by the Senate of Puerto Rico:

"Section 1 .- To express the pride and joy of the Senate of Puerto Rico upon the celebration next March 2 of the sixtleth anniversary of the granting of the American citizenship to the Puerto Rican people.

Section 2.—A certified copy of this resolution shall be sent to the news media of

the country for its publication.

"SECTION 3.-Certified copies of this resolution duly translated into English shall be sent to the President of the United States of America, Honorable Jimmy Carter, to the President of the Senate, Honorable Walter Mondale, and to the Speaker of the House of Representatives, Honorable Thomas

POM-128. Senate Concurrent Resolution No. 4040 adopted by the Legislative Assembly of the State of North Dakota urging Congress to require federal agencies to enhance lands under their control with woody plantings and utilize other soil and water conservation practices, including the control of noxious weeds; to the Committee on Environment and Public Works.

"SENATE CONCURRENT RESOLUTION No. 4040

"Whereas, activities of federal agencies in the operation of lands under their control in North Dakota cause adverse environmental impacts in the form of soil erosion. damage to vegetation, and the spread of noxious weeds; and

Whereas, current water management practices cause soil erosion and the consequent addition of silt to surrounding water:

"Whereas, wildlife concentrations in an area cause significant damage to vegetation;

"Whereas, noxious weeds on federal lands remain uncontrolled and therefore spread to lands owned by private landowners who are required by state law to control such noxious weeds; and

"Whereas, other activities on federal lands extend beyond the borders of those lands and affect surrounding private landowners;

"Now, therefore, be it resolved by the Senate of the State of North Dakota, the House of Representatives concurring therein:

That the United States Congress is urged to require federal agencies to enhance lands under their control with woody plantings and to utilize other soil and water conservation practices, including the control of noxious weeds; and

'Be it further resolved, that the Secretary of State forward copies of this resolution to the Speaker of the United States House of Representatives, the President of the United States Senate, to the Secretary of the Interior, Secretary of Agriculture, and Secretary of Defense, and the North Dakota Con-gressional Delegation."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CHURCH, from the Special Committee on Aging:

A report entitled "Developments in Aging," parts I and II (Rept. No. 95-88).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated.

By Mr. ALLEN:

S. 1269. A bill for the relief of Camilla A. Hester; placed on the Calendar. By Mr. LONG:

S. 1270. A bill to amend the Internal Revenue Code of 1954 to provide for the refunding of so much of a taxpayer's investment credit as exceeds his liability for income tax; to the Committee on Finance

By Mr. TOWER:

S. 1271. A bill to authorize the waiver of section 27 of the Merchant Marine Act, 1920, in the interest of friendly relations with Mexico and Canada; to the Committee on Commerce, Science, and Transportation. By Mr. CHURCH (for himself and Mr.

MELCHER):

S. 1272. A bill to reform the food stamp program; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. ALLEN:

S. 1273. A bill to authorize the Administrator of General Services to renegotiate the provisions of any contract for the benefit of the Government of the United States for the lease of real property which is under the authority of the Administrator or subject to his supervision in order to make adjustments for increased utility costs for the operation of such premises; to the Committee on Governmental Affairs.

By Mr. HOLLINGS: S. 1274. A bill to provide the Attorney General of the United States with authority to contract with State and local authorities for the safekeeping, care, and subsistence of all Federal prisoners; to the Committee on the Judiciary.

By Mr. CRANSTON (for himself and

Mr. BENTSEN):

S. 1275. A bill to establish office accounts for Senators, to require public disclosure of expenditures from such accounts, and for other purposes; to the Committee on Rules and Administration

By Mr. HEINZ:

S. 1276. A bill to amend the Internal Revenue Code of 1954 to permit the current expensing of amounts expended in connection with the construction or erection of pollution control facilities; and

S. 1277. A bill to amend the Internal Revenue Code of 1954 to provide for the rapid amortization of noise pollution control facilities; to the Committee on Finance.

By Mr. PACKWOOD:

S. 1278. A bill to facilitate the coordination of programs for the protection, management, and control of wild free-roaming horses and burros, and other resources, and for other purposes; to the Committee on Energy and Natural Resources

By Mr. BURDICK (by request):

S. 1279. A bill to provide temporary authorities to the Secretary of Commerce to facilitate emergency actions to mitigate the impacts of the 1976-77 drought and promote water conservation; to the Committee on Environment and Public Works.

By Mr. CLARK:

S. 1280. A bill to provide for the maintenance or enhancement of the quality of water in rural areas; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. HART:

S. 1281. A bill to establish a program to provide assistance to local governments for solid waste disposal programs; to the Committee on Environment and Public Works.

By Mr. KENNEDY:

S. 1282. A bill to amend the Older Americans Act of 1965 to provide assistance for legal services projects for the elderly; to the

Committee on Human Resources. S. 1283. A bill entitled "The National Home-Delivered Meals for the Elderly Act"; to the Committee on Human Resources.

By Mr. CRANSTON:

S.J. Res. 46. A joint resolution to establish a national policy for the taking of predatory

or scavenging mammals and birds on public lands, and for other purposes; to the Committee on Environment and Public Works.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. LONG:

S. 1270. A bill to amend the Internal Revenue Code of 1954 to provide for the refunding of so much of a taxpayer's investment credit as exceeds his liability for income tax; to the Committee on Finance.

REFUND OF EXCESS INVESTMENT CREDIT

Mr. LONG. Mr. President, I am introducing today a bill (S. 1270) to make the investment tax credit refundable. I shall refer to this as a long overdue improvement of the investment tax credit.

What do I mean in proposing to make the investment tax credit "refundable"? I mean that a tax incentive subsidy payment by the Federal Government to stimulate businesses' expenditure of money to buy equipment and create jobs, which is what we have in the investment tax credit that was enacted in 1962 at the urging of President Kennedy "to get the economy of the country" moving again-should be paid to any person who makes the expenditures we are trying to stimulate, whether or not he is rich enough to have to pay Federal income tax. In other words, whether the purchaser is a successful company in a profit period, whether a freshly hatched small business, whether a business in a fast growth period, or a temporary downswing-all could rest assured that the credit promised would bear fruition. In short, they could count on it. That is basically what I mean by the concept of refundability.

My idea of making the investment tax credit refundable is one I remember publicly suggesting as far back as July of 1975, when the Senate Committee on Finance was working in public hearings on that year's energy tax bill (H.R. 6860).

That idea, I respectfully submit to my colleagues, is one whose time for translation into law, and its economic reality, should arrive later this year and next when we do the work we are planning to reform our Nation's Federal tax laws.

I introduce my bill today, expressing my idea of refundability in specific legislative form, for the purpose of permitting, and indeed encouraging, my concept of the refundable tax credit to be seriously, yet deliberately, considered over the next few months by my colleagues here in the Senate and in the House, by our new President and his tax and economic advisers, and by the public at large.

This, I should point out, is not the first time I have laid before the entire Senate a specific legislative proposal to make the investment tax credit refundable. In the Tax Reform Act of 1976, as first reported to the Senate in June of last year (H.R. 10612, 94th Cong.), there was a provision—section 802—sponsored by myself, by the ranking Republican, Mr. Curtis, and my other like-minded committee members—which would have moved toward making the investment tax

credit refundable. Opposition on the Senate floor to that provision, in part because of budgetary considerations, unfortunately led to its removal from the bill. Nevertheless, the problem of unused and expiring tax credits to which the refundability concept was addressed at that time, was recognized by the Congress, but dealt with only a stop-gap basis. This was done in provisions in the Tax Reform Act, which for the next few years permit faster utilization by certain federally regulated capital intensive industries of the investment tax credit by removing the 50 percent of tax liability limitation.

There also are other occasions on which I have urged upon this distinguished body the importance of making tax credits refundable. As early as 1972, as part of the Social Security Amendments Act of that year, I led the charge, and was supported by a majority of my Senate colleagues, for the enactment of the "earned income" tax credit. This credit, which was finally enacted in 1975, was made refundable to insure that its benefits would flow to the poor and low-income individuals having little or no income tax liability.

In 1975, I also led the Finance Committee in adopting the refundability concept in connection with the tax incentives provided in the energy tax bill, approved by the committee that year. Among the incentives adopted at that time was a refundable tax credit for home insulation expenditures, a refundable credit for installation of solar or geothermal energy equipment; and, a refundable credit for installation of residential heat pumps. These refundable credits were subsequently included in the tax reform bill of 1976 as title 20 which passed this body last year, only to be deleted by the conference because of budgetary consideration.

I should also point out to my colleagues that this proposed improvement of the investment tax credit has broad bipartisan support. The administration, of President Ford, after thinking over my idea of making the credit refundable, recommended to the Congress in October of 1974 that the investment credit be made refundable, to eliminate the discrimination and unfairness that results from providing the benefits of the investment credit only to profitable, taxpaying businesses.

Again, Treasury Secretary Simon on April 13, 1976, during the hearing on the tax reform bill, discussed the administration's earlier recommendations on refundability. The Secretary and I agreed wholeheartedly on the concept of making the investment tax credit refundable at the earliest possible time. There was extended discussion by Secretary Simon and Finance Committee members of how best to implement such a provision. That discussion was another step in the developing consensus for the investment tax making credit refundable.

Moreover, if you believe as I do, that the investment tax credit is a tax subsidy that the Congress is voting to help people buy new equipment, the way to provide real certainty to the prospective purchaser whose immediate profit picture is unclear, is to make the credit refundable as part of permanent tax law. In that way, the purchaser of capital equipment will know automatically that upon purchase he will receive the credit.

I am proud to note that the distinguished Senator from Massachusetts (Mr. Kennedy) has recently come out strongly for making the investment tax credit refundable. The Senator and I have had many heated, but I hope enlightening, debates on tax reform issues. It is particularly pleasing to find that our minds coalesce on this question of refundability, the needed improvement of the investment tax credit, originally advanced by his brother, the late President John Kennedy.

Mr. President, obviously, I am not asking that we act today. We have a new President and a new administration. We must give them a fair chance to consider this proposal seriously. We also must not ask for too much too soon. To be responsible, we best have budgetary considerations in mind. We may, when we take up tax revision, decide that we want to phase in a refundable tax credit proposal. Similarly, we must be cautious about going too far; for example, in extending an investment credit to tax exempt organizations.

Mr. President, we in the Senate have affirmed our belief in the merits, and the fairness, of making tax credits refundable. We have stated our concern for the "have nots" as well as the "have." It is now time for us to urge our new administration, our colleagues in the House and the public at large, to give serious consideration to joining in support of action in the 95th Congress to eliminate this discrimination against the less fortunate in our economic society. The correction of this discrimination is long overdue.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1270

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. REFUND OF EXCESS INVESTMENT CREDIT.

(a) GENERAL RULE .-

(1) REFUNDABILITY.—Section 6401(b) (relating to amounts treated as overpayment) is amended—

(A) by inserting "39 (relating to investment in certain depreciable property)," after "(relating to tax withheld on wages)", and

(B) by inserting "38," after "sections 31,".
(2) ASSESSMENT AUTHORITY.—Section 6201
(a) (4) (relating to assessment authority) is amended—

(A) by striking out "section 39 or 43" in the caption and inserting in lieu thereof "section 38, 39, or 43", and (B) by inserting "section 38 (relating to

(B) by inserting "section 38 (relating to investment in certain depreciable property)," before "section 39".

(b) TECHNICAL AND CONFORMING AMEND-

(1) TERMINATION OF LIMITATION BASED ON AMOUNT OF TAX.—Subsection (a) of section

46 (relating to general rules) is amended by inserting immediately after paragraph (3) the following new paragraph:

(3A) TERMINATION OF LIMITATION BASED ON AMOUNT OF TAX .- The provisions of paragraph (3) do not apply to any portion of allowed by section 38 attributable to-

(A) property to which subsection (d) does not apply, the construction, reconstruction, or erection of which is completed by the taxpayer after December 31, 1977, to the extent of the basis thereof attributable to construction, reconstruction, or erection after December 31, 1977,

(B) property to which subsection (d) does not apply, acquired by the taxpayer after December 31, 1977, and

"(C) property to which subsection (d) applies, to the extent of the qualified inestment (as determined under subsections (c) and (d)) with respect to qualified progress expenditures made after December 31,

(2) CARRYOVER AND CARRYBACK PROVISIONS NOT TO APPLY TO FUTURE INVESTMENT .- Subsection (b) of section 46 (relating carryover and carryback of unused credits) is amended by adding at the end thereof the following new paragraph:

"(4) TERMINATION OF CARRYOVER AND CARRY-BACK PROVISIONS.—The provisions of this sub-section do not apply to any amounts at-

tributable to-

"(A) property to which subsection (d) does not apply, the construction, reconstruction, or erection of which is completed by the taxpayer after December 31, 1977, to the extent of the basis thereof attributable to construction, reconstruction, or after December 31, 1977,

"(B) property to which subsection (d) does not apply, acquired by the taxpayer after December 31, 1977, and
"(C) property to which subsection (d) applies, to the extent of the qualified investment (as determined under subsections (c) and (d)) with respect to qualified progexpenditures made after December 31,

SEC. 2. EFFECTIVE DATE.

The amendments made by this Act apply with respect to-

property to which section 46(d) of the Internal Revenue Code of 1954 does not apply, the construction, reconstruction, or erection of which is completed by the taxpayer after December 31, 1977, but only to the extent of the basis thereof attributable to construction, reconstruction, or erection after December 31, 1977,

(2) property to which section 46(d) of such Code does not apply, acquired by the taxpayer after December 31, 1977, and

(3) property to which subsection 46(d) of such Code applies, but only to the extent of the qualified investment (as determined under subsections (c) and (d) of section 46 of such Code) with respect to qualified progress expenditures made after December 31,

By Mr. TOWER:

S. 1271. A bill to authorize the waiver of section 27 of the Merchant Marine Act, 1920, in the interest of friendly relations with Mexico and Canada; to the Committee on Commerce, Science, and

Transportation.

Mr. TOWER. Mr. President, a very important aspect of our foreign policy in this hemisphere involves our relationship with Mexico. In rapid succession, however, new problems have surfaced even while our two countries have been attempting to resolve other matters of mutual concern. Our country has a vital interest and role in this relationship: the border States, and my State in particular.

also have a vital interest in a relationship which is both sound and mutually satisfactory.

In Brownsville, Tex., recently, a crisis arose in the city's port as a result of a negative determination which the U.S. Customs Service made under section 27 of the Merchant Marine Act, 1920, as amended (U.S.C: 883). Customs Service had no choice under the act. As a result. it refused a request to permit the transportation of fuel oil stored at one point in the port of Brownsville to another point also in the port.

The request was made to Customs Service by Pemex, the decentralized Mexican oil company which reportedly provides our country with most of its exportable oil and gas. Pemex was under an emergency to place fuel oil from one of its own storage terminals located in the port to another of its terminals in the port for transfer to Mexican rail tank cars. It was then to be shipped to the emergency site within Mexico's interior.

Pemex would have used its own oil tanker to transfer the fuel oil. The reason for trying to use its own tanker was that no American bottoms suitable for that purpose were available in the port of

Brownsville.

Mr. President, officials of the port of Brownsville and Treasury Department officials who clearly understood and appreciated the reason for the Pemex request acted swiftly to reduce and then repair any damage to the relationship with the Mexican oil company which the Brownsville community had established. I certainly commend all who participated for their efforts to restore that sensitive border relationship to its previous level of mutual trust.

At present the port of Brownsville is moving quickly to develop details for possible construction of a pipeline connection between the two fuel oil terminals belonging to Pemex. In the interim, however, a similar emergency could recur. As matters stand now, the Treasury Department, and therefore the Customs Service, still has no legal authority under which it can even consider action to waive compliance with section 27 of the Merchant Marine Act of 1920, as amended.

Mr. President, the Brownsville community and the entire south Texas community in general already have been severely affected by the devaluation of Mexico's currency and a disastrous drop in retail sales; an unusual wet winter season which has set back the area's farm and grower economy; and reduced job opportunities for migrant and seasonal farmworkers who make their homes in the area and who have been affected by drought conditions in other parts of the country. In view of these conditions, this community deserves the Senate's consideration of possible relief from the strict limitations of the Jones act in the event of another unforeseen emergency.

I am today introducing legislation to authorize the Secretary of Treasury to waive compliance with section 27 of the Merchant Marine Act, 1920, as amended. Under no circumstances will this legislation weaken the purposes of the Jones act. It does recognize, however, the critical interdependence which exists between our two countries.

I urge my colleagues to enact this legislation at the earliest possible date.

> By Mr. CHURCH (for himself and Mr. MELCHER):

S. 1272. A bill to reform the food stamp program; to the Committee on Agriculture, Nutrition, and Forestry.

NATIONAL FOOD STAMP REFORM ACT FOR THE ELDERLY

Mr. CHURCH. Mr. President, on behalf of Senator Melcher and myself, I introduce for appropriate reference the 1977 National Food Stamp Reform Act for the Elderly.

Recent statistics released by the Bureau of Labor Statistics show that lowincome-\$4,501 and below-elderly couples residing in urban areas spend about 31.7 percent of their income for food. When this amount is added to shelter costs, which are usually the elderly's highest expense, more than one-half of the typical low-income aged couple's budget is earmarked for food and housing.

These statistics show the critical need for effective income maintenance programs and social services for our indigent elderly. Time and time again, the Committee on Aging has heard elderly witnesses testify that they must skimp on medical and food costs in order to meet their escalating housing, utilities and transportation costs. Poor health care and eating habits can only intensify the elderly's problems. In the long run this will force more and more older Americans into institutions.

Over the past several years, programs which supplement the elderly's food budget have become increasingly important. Nutrition programs for older Americans have become popular in every State. Quite often the meal provided at a senior center is the only nutritious meal that the elderly person will have

all day.

The 1976 poverty report of the Bureau of the Census revealed that one out of seven persons 65 and older live in poverty-having incomes below \$2,752 for a single aged person and \$3,232 for elderly couples. All in all 3.3 million elderly live in poverty. This does not include, however, the 2 million "hidden" poor who are not counted because they are institutionalized or reside in the homes of others with sufficient incomes to raise them above the poverty line. Yet, USDA figures tell us that only about 6 percent of all food stamp participants are elderlyapproximately 1 million persons 65 and older. Yet, perhaps 3 to 4 million poor elderly could possibly benefit from the food stamp program. And this figure may be conservative.

Why are these poor elderly not participating in a program which could help to supplement their food budgets? That is a question that the Senate Committee on Aging has been studying for some time. The committee has held hearings all around the country on how the esca-lating cost-of-living affects older Americans. I have heard elderly people testify that they are not aware of food stamps;

they cannot afford to pay the \$25 to \$40 purchase price at one time; they are unable to travel to and from the welfare office to be certified and to pick up their coupons; and they are unwilling to put themselves through what they consider a demeaning process to apply for the benefits.

The bill Senator MELCHER and I introduce today would help to alleviate these obstacles so that the elderly poor can have greater accessibility to the food

stamp program.

First, our bill would eliminate the purchase requirement in order that participants could receive their stamps without making a payment based on their income. In effect they would receive the bonus value of the food stamp coupon above their purchase requirement. This provision would be very helpful to the poor elderly who frequently are unable to buy their way into the food stamp program. Since many live on limited fixed incomes they find it difficult to make a larger outlay for food stamps once a month. Our bill would assist in bringing some of the poorest elderly into the program by doing away with the purchase requirement and allowing them to receive their bonus value in stamps based on their incomes and household size.

Second, the National Food Stamp Reform Act for the Elderly would allow supplemental security income, SSI, and social security beneficiaries to apply for food stamps in their local or district social security offices. This would be accomplished by housing State assistance personnel in the social security offices. These individuals would have responsibility for assisting SSI and social security beneficiaries concerning application procedures for the food stamp program and any questions they may have. Our bill would allow the applicant to supply a simplified affidavit at the social security office and be certified on the basis of income and asset information in their SSI and social security files. This provision would enable the elderly poor to participate more readily in the food stamp program and without the redtape in the existing program. This simplification of the application process would also assist in educating more older Americans about the program, minimizing their difficulties in traveling from office to office and encouraging their participating in the program.

Third, our bill would allow for annual means that aged recipients need only go to the assistance or social security offices once a year to be certified unless they have a change of income in excess of \$25 per month. Most SSI and social security beneficiaries could be certified for the entire year since their incomes would usually not change except for the annual July cost-of-living adjustments. If the recipients adjustments exceeded \$25 a month, they would be required to report that change in income to the food stamp office. This allowance for annual recertification would help considerably to eliminate the financial and physical barriers which the elderly must overcome when traveling to and from their assistance or social security offices.

Mr. President, I endorse the need for food stamp reform. While the Congress is considering various food stamps bills. I do not want the special needs of the elderly overlooked. Without such attention, genuine reform simply would not be possible.

I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "1977 National Food Stamp Reform Act for the Elderly".

EFFICIENT CERTIFICATION

SEC. 1. Section 10 of the Food Stamp Act of 1964, as amended, is amended by adding

at the end thereof the following:

"(j) The Secretary, in conjunction with the Secretary of Health, Eucation, and Welfare, shall promulgate regulations permitting households in which all members are recipi-ents of Supplemental Security Income to apply for participation in the food stamp program by executing a simplified affidavit at the Social Security Office and be certified for eligibility based on information contained in files of the Social Security Administration.

"(k) The Secretary, in conjunction with the Secretaries of Health, Education, and Welfare and Labor shall prescribe regulations permitting applicants for and recipients of social security or unemployment compensation benefits to apply for food stamps at social security or unemployment compensation offices and be certified for food stamp eligibility in such offices in order that the application and certification for food stamp assistance may be accomplished as efficiently and conveniently as possible."

"(1) Households containing one or more elderly persons, but no wage earners, shall be certified for a period of one year; provided that a member of any such household shall report any change of income in excess of

\$25 per month."

ELIMINATION OF PURCHASE PRICE

SEC. 2. (a) The first sentence of section 4(a) of the Food Stamp Act of 1964, as amended, is amended to read as follows: "The Secretary is authorized to formulate and administer a food stamp program under which, at the request of the State agency, eligible households within the State shall be provided with a supplement to their incomes, through the use of a coupon allotment, sufficient to provide such households with an opportunity to obtain a nutritionally adequate diet.".

(b) The section head of section 7 of the Food Stamp Act of 1964 is amended by striking out "AND CHARGES TO BE MADE".

(c) Section 7(a) of such Act is amended by striking out that portion preceding "adjusted semiannually." and inserting in lieu thereof the following: "The face value of the coupon allotment which State agencies shall be authorized to issue for any period to any household certified as eligible to participate in the food stamp program shall be in such amount as the Secretary determines to be the cost of a nutritionally adequate diet, reduced by an amount equal to 30 per centum of such household's income: Provided, That the minimum allotment shall be \$10 and the coupon allotment shall be adjusted semiannually.".

(d) Sections 7(b) and 7(d) of the Act are repealed.

(e) Section 7(c) is redesignated as 7(b) and the following is deleted: "which is in

excess of the amount charged such household for such allotment".

(f) (1) Clause (6) of the second sentence of section 10(e) is repealed.

(2) Clause (7) of the second sentence of section 10(e) is redesignated as (6) and is amended to read as follows: "(6) notwithstanding any other provisions of law, the institution of procedures under which any household participating in the program shall be entitled to have its coupon allotment distributed to it with any grant or payment to which such household may be entitled under title IV of the Social Security Act, except in areas in which the Secretary determines that such distribution of coupons is impractical because of the risk of theft of coupons, or of danger to mail carriers, and". (3) Clause (8) of the second sentence of

section 10(e) is redesignated as (7). (4) Section 10(g) of the Food Stamp Act

of 1964 is amended to read as follows: If the Secretary determines that "(g) there has been gross negligence or fraud on the part of the State agency in the certification of applicant households, the State shall, upon request of the Secretary, deposit into a separate account established in the Treasury a sum equal to the face value of any coupon issued as a result of such negligence or fraud. Funds deposited into such account shall be available without fiscal year limitation for the redemption of coupons."

(g) (1) The third sentence of section 16(a) of the Food Stamp Act of 1964 is amended to read as follows: "Such portion of any such appropriation as may be required to pay for the value of the coupon allotments issued to eligible households shall be transferred to and made a part of a separate account maintained in the Treasury of the United States and such deposits shall be available, without limitation to fiscal years, for the redemp-

tion of coupons.".

(2) Subsections (b) and (c) of section 16 of such Act are repealed and subsection (d) is redesignated as subsection (b).

(h)(1) Subsection (m) of section (3) of the Food Stamp Act of 1964, as amended, is

amended to read as follows:

"(m) The term 'issuance authorization card' means any document issued by the State agency to an eligible household which shows the face value of the coupon allotment the household is entitled to be issued on presentment of such document.".

Subsection (b) of section (14) is amended by deleting the words "authorization to purchase cards" wherever such words appear and inserting in lieu thereof the words "issuance authorization cards".

By Mr. ALLEN:

S. 1273. A bill to authorize the Administrator of General Services to renegotiate the provisions of any contract for the benefit of the Government of the United States for the lease of real property which is under the authority of the Administrator or subject to his supervision in order to make adjustments for increased utility costs for the operation of such premises; to the Committee on Governmental Affairs

FEDERAL PROPERTY LESSOR ASSISTANCE ACT

Mr. ALLEN. Mr. President, the Arab oil embargo of 1973 triggered the national energy crisis for which we are now still seeking a solution. Certainly, all in this Chamber are hopeful that the national energy program to be announced by the President will provide a basis for resolution of the crisis. But, Mr. President, many thousands of additional problems have arisen as an indirect result of the energy crisis in areas not specifically associated with energy pro-

duction and distribution.

So, Mr. President, I am hopeful that the President's program will provide a framework in which we can seek remedies for the dilemma we now face. But, Mr. President, there is one problem which I do not believe the President intends to address and which ought not to wait any longer for congressional attention. Although thousands of individuals are not involved, the injustice suffered by those few who are involved is so great that I believe Congress should act to

provide specific relief. Mr. President, the General Services Administration has taken the position that it is prohibited by an opinion of the Comptroller General (26 Comp. Gen. 365), from renegotiating the provisions of a fixed-term office space lease notwithstanding the fact that the lease terms are ruinous to the lessor as a clear result of the unforeseeable utility rate increases which have occurred since the Arab oil embargo. As I am sure most Senators recognize, leases now negotiated with the General Services Administration ordinarily contain an escalation clause to protect the lessor from the erratic and skyrocketing costs of utilities. Unfortunately, prior to the oil embargo many leases were negotiated without a provision permitting such 2scalation. As a result, the unforeseeable

I am convinced the General Services Administration has misapplied existing statute and case law in refusing to consider a renegotiation of office space leases in order to take account of these radically changed circumstances; however, inasmuch as the General Services Administration has taken that somewhat obdurate position, I believe Congress ought to clarify the matter and ought to give to the Administrator clear-cut authority to take the action he now asserts he is not authorized to take.

action of these foreign states has brought

many of those involved to the brink of

bankruptcy.

Accordingly, I am today introducing a bill which, if enacted, ought to make crystal clear the Administrator's authority to renegotiate Federal property leases in order that the changed circumstances which have occurred in the past years and months could be taken into account. The bill would thereby help to correct a major injustice by taking from the shoulders of a few individual citizens the concentrated and heavy burden of massive utility cost increases which in the last analysis were caused primarily by an unforeseeable foreign response to the international policies of the same Federal Government on whose behalf the Administrator now refuses to act.

By Mr. HOLLINGS:

S. 1274. A bill to provide the Attorney General of the United States with authority to contract with State and local authorities for the safekeeping, care, and subsistence of all Federal prisoners; to the Committee on the Judiciary.

Mr. HOLLINGS. Mr. President, last Friday when the Senate considered the Supplemental Appropriations Act, 1977, as the chairman of the Subcommittee on State, Justice, Commerce, the Judiciary, and related agencies, I was compelled to offer a \$10 million amendment to cover a deficiency incurred by the Bureau of Prisons for support of prisoners. As I indicated in my remarks, this account is relatively uncontrollable, because the costs are a function of the number of prisoners being held and the contracts that the Federal Prison System negotiates with the local jails.

This situation is further aggravated by the current division of authority and responsibility between the U.S. Marshals Service and the Bureau of Prisons for services provided under the "Support of United States Prisoners" appropriation. One organization, the Bureau of Prisons, receives the appropriation, while another, the U.S. Marshals Service, actually operates most aspects of the program. This situation violates good management principles and contributes to the uncontrollability of costs under the appropriation.

I am introducing this bill to enable the Attorney General to assume authority for the custody and care of all Federal prisoners, those awaiting trial and those serving sentences of imprisonment. It is contemplated that the Attorney General can then, by appropriate orders, aline the functions and responsibilities for the program between the Bureau of Prisons and U.S. Marshals Service to assure unity of control and accountability. It would be necessary for the Department of Justice to seek approval of implementing budgetary transfers when the Attorney General has approved an appropriate division of functions.

I urge the Committee on the Judiciary to give early and favorable attention to this bill so that the necessary adjustments can be accomplished in the 1978 budget estimates which I would expect to be marking up sometime in June.

By Mr. CRANSTON (for himself and Mr. Bentsen):

S. 1275. A bill to establish office accounts for Senators, to require public disclosure of expenditures from such accounts, and for other purposes; to the Committee on Rules and Administration.

OFFICE ACCOUNT LEGISLATION

Mr. CRANSTON. Mr. President, I am introducing today a bill which proposes revisions in the consolidated office allowance to give Senators greater flexibility in using funds in the allowance, to provide a mechanism for yearly cost-of-living adjustments in the allowance, and to require annual public disclosure of the expenditures by each Senator from his allowance.

Under section 301 of Senate Resolution 110, which the Senate adopted last Friday, the Committee on Appropriations is charged with studying the adequacy of amounts and permissible uses of current senatorial office allowances. With 120 days, the committee will be reporting out legislation to adjust the funding and uses of the allowances. It is my intention that the measure which I am now introduc-

ing be considered as part of the committee's study.

It has long been my feeling that a Senator's office should operate under the principles of sound business management, in the same manner which most private companies are run. The manager of a business has the ability to shop in the open market for the tools, machinery, and systems which will enable him to accomplish his goals most efficiently. Unfortunately, that has not been the case in the Senate.

The Rule XLII accounts, which are abolished by Senate Resolution 110, came into existence for various reasons: The uses to which senatorial allowances could be put were too tightly defined and often inconsistent: the allowances themselves were inadequately funded; the priorities for types of official expenditures for a Senator's office were set by Senate employees rather than by the Senator himself. And a Senator finding himself unable to be reimbursed officially for an expense he determined was necessary for the conduct of his official duties forced to pay for these items out of personal funds—including honoraria he earned—or excess campaign funds or the Rule XLII accounts.

Since 1969 when I first came to the Senate, some of the allowance inequities have been removed—and the pressures for outside funds to pay for a Senator's nonreimbursed official expenses have eased slightly.

The consolidation of a few senatorial office allowances in 1973 was an important initial step on the road toward modern office management. It has afforded Senators the ability to prepare a budget for some of the expenditures in their offices and some flexibility in fitting allowances to the special constituent and legislative requirements of each State and its people.

To a limited extent, the population of a State is now a factor in setting the amount of each Senator's consolidated allowances. The tradition that each Senator is equal even in regard to office allowances—regardless of his State's population—is changing. But the variable is minor, and in no way proportionate to the actual differences in the size of our various constituencies.

One of the biggest hurdles still remaining is the permissible use of official office allowances.

I cite a number of problems I have had to wrestle with in my own operation:

When my foreign policy assistant travels to California to discuss foreign trade problems and foreign military sales with Californians, his travel can be paid by the Senate. However, if that same assistant travels to the United Nations for a conference on world trade which is equally important for the people of California, his travel to New York, under present regulations, cannot be reimbursed by the Senate. A Senator would need some kind of unofficial office account to pay for these expenses.

When a Senator travels to and within his home State, on official business, the actual transportation expenses are paid by the Senate. The expenditures for food and lodging are not. A Senator must travel in his home State if he is to fulfill his responsibilities to his constituents. He has no choice in the matter. These expenses, again, must come from an unofficial office account.

I am able to subscribe to any number of newspapers and magazines which are helpful to my Senate duties, the cost of which the Senate will reimburse. However, should I need books, reports, directories-or even additional copies of the CONGRESSIONAL RECORD-my honorarium account must bear the cost. It is possible, of course, to charge these purchases to my field office allowances, because the restrictions on field office expenditures are not as strictly defined. But it would clearly be a case of circumventing Senate rules.

And finally there are those expenditures which are not reimbursed simply because no one thought to put them on the list. For example, I cannot use Senate funds to purchase official lists of registered voters to use in sending out my newsletter, because mailing lists are not

a prescribed item.

The examples can go on and on. We have such problems, because the Senate in the past has attempted to enumerate in minute detail every official use for which these allowances can be spent. In drawing up such definitions, little consideration has been given to the varia-tions in Senators' needs, styles, and habits. Thus each allowance carries with it a rigidly defined list of what it can be spent for. Any item not on that list now is disallowed for reimbursement, even though for tax purposes the IRS would consider it to be a perfectly legitimate and deductible business expense.

My bill seeks to do way with this inefficient practice of trying to establish a definitive list of official expenditures. Instead it permits the Senators themselves to manage their own offices and to determine their necessary business expenses. It encourages Senators to adopt the principles of sound management under which we expect private businesses

to operate.

The requirement in my bill that the Secretary of the Senate annually disclose expenditures from a Senator's office allowances would act as a safeguard against frivolous spending. The spotlight of public and press examination coupled with the potential criticism for any unreasonable or extravagant expenditure would work strongly against the unnecessary or wasteful use of public moneys.

The bill does not permit Senators to purchase furniture or equipment with office allowance funds. However, it does give Senators the option of selecting equipment and furniture which is offered by the General Services Administration for governmentwide use. Such flexibility recognizes the diversity in Senator's

work habits and style.

The bill provides a yearly cost-of-living adjustment in the consolidated allowance to assure that expenses will be adequately covered. Otherwise, the bill is silent on the question of how much the consolidated office allowance should be. I anticipate that the Legislative Appropriations Subcommittee will be making recommendations about additions to the office allowance which are necessary now that rule XLII accounts are abolished.

Finally, the unspent moneys from a Senator's field office space rental fund are included in the consolidated office

allowance.

The abolition of the rule XLII accounts and the limitations placed on outside earned income require that we take an immediate and serious hard look at budgeting and management of a Senator's office.

The Commission on the Operation of the Senate has recommended that one of the ways to modernize this body is to "establish a simplified and uniform system of budgeting and accounting. The system should: * * * Consolidate all funds into a single amount for each."

Senate Resolution 110 has given us the impetus for considering that recommendation. I hope the measure I introduce today will be the vehicle for effecting the change.

By Mr. HEINZ:

S. 1276. A bill to amend the Internal Revenue Code of 1954 to permit the current expensing of amounts expended in connection with the construction or erection of pollution control facilities;

S. 1277. A bill to amend the Internal Revenue Code of 1954 to provide for the rapid amortization of noise pollution control facilities; to the Committee on Finance.

> ENCOURAGING THE INSTALLATION OF POLLUTION CONTROL EQUIPMENT

Mr. HEINZ. Mr. President, I am today introducing two bills designed to further encourage the installation of pollution control equipment by industry.

Our growing public awareness of environmental problems over the past 10 years has produced a series of laws relating to air, water, solid waste, and noise designed, in short, to clean up America. This recognition that the quality of our lives and our surroundings are as important as the quantity of our goods is a development that all Americans support.

We must recognize, however, that there is a cost to achieving that objective that must be paid. According to Survey of Current Business, July 1976, business spent \$6.5 billion in 1975 for new plants and equipment to control air and water pollution and to dispose of solid waste. That figure represented a 17-percent increase over 1974-\$5.6 billion. This \$900 million increase accounted for almost 60 percent of the increase in total new plant and equipment expenditures-\$1.6 billion

In addition, the ninth annual Mc-Graw-Hill Survey on Pollution Control Expenditures estimates \$9.46 billion for similar expenditures in 1976, and a grand total of \$30.6 billion as the cost of bringing all existing business facilities into compliance with present pollution control standards.

Obviously this is an expensive task, one that will become more so as environmental standards are broadened and improved. Only recently, for example, the Government has begun to issue regulations for control of noise, another form of pollution, the control of which will add significantly to the investment load of many key industries.

In examining this investment, it should be made clear that it is not "productive" in the classic sense of investment that contributes to improvements or increases in production or reduction in product costs, et cetera. While investment in pollution control facilities helps produce cleaner factories and neighborhoods and in some cases cleaner-or quieterproducts, it does not, in the strictest sense, contribute to the economic growth of the companies installing it. Obviously these are not investments that earn a monetary return to the investor. To the contrary, in addition to the cost of capital, pollution control investments usually cost a considerable amount to operate and maintain and it goes without saying that the billions invested in pollution control are not available for other job creating investments.

Thus there is clearly a price to be paid for our increased efforts to fight pollution, but there is no question in my mind that this is a price worth paying, and that we should continue to pay it to clean up our environment.

These efforts will be more successful, more quickly accomplished, and ultimately more consistent with economic growth if we provide appropriate incentives to industry to install pollution control equipment promptly and effectively. Obviously our environmental laws mandate compliance, and without a doubt compliance will occur. Since the Federal Government is imposing the burden, however, and all the taxpayers share in the benefits, it is appropriate that we absorb some of the cost more directly and more equitably than through higher consumer prices.

We have already moved in this direction to some degree through section 169 of the Internal Revenue Code which provides for the amortization over 5 years of qualified pollution control facilities, but this is really insufficient as an incentive to deal with the expenditures required. I am proposing instead to reduce the 5-year period to 1 year, allowing the facilities' cost to be expensed as regular business deductions.

Let me emphasize that this proposal is not an effort to use tax policy solely as an incentive to obtain socially desirable actions, though that is a part of it.

Rather it is an effort to move away from the overtaxation and overregulation that business-particularly small business-feels has been imposed on it, and to insure that sufficient capital remains available for economic growth. This legislation will be particularly relevant to small businesses, many of which suffer from chronic cash flow problems and find the burdens of Federal regulation simply impossible to meet financially. By providing this incentive we are easing those burdens without at the same time lowering our environmental standards.

The figures I cited earlier as pollution costs included installation of plant and equipment to deal with air and water pollution and solid waste disposal. The passage of the Noise Control Act in 1972, however, added a new element to the antipollution field, and the increasing by rapid promulgation of noise regulations by the Environmental Protection Agency and the Occupational Safety and Health Administration promises significant future financial liability for industry and business-more than \$300 million estimated annual cost for noise regulations promulgated thus far.

As a result I am also introducing today legislation to include certain noise pollution control facilities in the definition of qualified facilities in secton 169

of the Internal Revenue Code.

The would permit certain equipment to qualify for the rapid amortization provisions. This bill limits qualifying equipment to that which ameliorates work place environment noise or product noise, excluding transportational products-aircraft, autos, trucks, trains, et cetera. Transportation noise sources are excluded not because they should be discriminated against, but because the magnitude of the expense that may ultimately be involved suggest that a tax approach may not be the wisest course of action.

Both these bills will reaffirm our determination to promote strong environmental standards and will provide business with the incentive necessary to meet those standards despite the short-term costs involved. I ask unanimous consent that the texts of both bills appear at this point in the RECORD.

There being on objection, the bills were ordered to be printed in the RECORD, as follows:

8. 1276

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

(a) IN GENERAL.—Section 169 of the Internal Revenue Code of 1954 (relating to amortization of pollution control facilities) is amended to read as follows:

"Sec. 169. POLLUTION CONTROL FACILITY EX-PENSES.

"(a) ALLOWANCE OF DEDUCTION.—Every person, at his election, shall be entitled to treat amounts paid or incurred in connection with the acquisition, construction, or erection of certified pollution control facility (as defined in subsection (b)) as items not chargeable to capital account. The election shall be made in such manner, and such form, and within such time, as the Secretary may by regulations prescribe. A taxpayer which has elected under this subsection to take the deduction allowed by the first sentence of this subsection may, at any time after making such election, discontinue the deduction with respect to the remainder of the amounts paid or incurred with respect to such facility. Any such discontinuance shall begin at the beginning of any month specified by the taxpayer in a notice in writing filed with the Secretary before the beginning of such month.

"(b) DEFINITIONS .- For purposes of this

"(1) CERTIFIED POLLUTION CONTROL FACILrry.—The term 'certified pollution control facility' means a new identifiable treatment facility which is used, in connection with a plant or other property in operation before January 1, 1976 to abate or control water or atmospheric pollution or contamina-tion by removing, altering, disposing, or preventing the creation or emission of pollutants, contaminants, wastes, or heat in which

"(A) the State certifying authority having jurisdiction with respect to such facility has certified to the Federal certifying authority as having been constructed, reconstructed, erected, or acquired in connection with the State program or requirements for abatement or control of water or atmospheric pollution or contamination;

(B) the Federal certifying authority has certified to the Secretary (i) as being in compliance with the applicable regulations of ederal agencies, and (ii) as being in furtherance of the general policy of the United States for cooperation with the States in the prevention and abatement of water pollution under the Federal Water Pollution Control Act (33 U.S.C. 466 et seq.), or in the prevention and abatement of atmospheric pollution and contamination under the Clean Air Act (42 U.S.C. 1857 et seq.), and

"(C) does not significantly-

"(i) increase the output or capacity, extend the useful life, or reduce the total operating cost of such plant or other property (or any unit thereof), or "(ii) alter the nature of the manufac-

turing or production process or facility.

STATE CERTIFYING AUTHORITY.-The term 'State certifying authority' means, the case of water pollution, the State Water Pollution Control Agency as defined in section 113(a) of the Federal Water Pollution Control Act and, in the case of air pollution. the Air Pollution Control Agency as defined in section 302(b) of the Clean Air Act. The term 'State certifying authority' includes any interstate agency authorized to act in place of a certifying authority of the State.

"(3) FEDERAL CERTIFYING AUTHORITY.—The term 'Federal certifying authority' means, in the case of water pollution, the Secretary of the Interior and, in the case of air pollution, the Secretary of Health, Educa-

tion, and Welfare.

"(4) NEW IDENTIFIABLE TREATMENT FA-CILITY .-

"(A) In general.-For purposes of paragraph (1), the term 'new identifiable treat-ment facilities' includes only tangible property (not including a building and its struccomponents, other than a building which is exclusively a treatment facility) which is of a character subject to the allowance for depreciation provided in section which is identifiable as a treatment facility, and which is property-

the construction, reconstruction or erection of which is completed by the tax-

payer after December 31, 1968, or

(ii) acquired after December 31, 1968, if the original use of the property commences with the taxpayer and commences after such

In applying this section in the case of prop erty described in clause (i) there shall be taken into account only that portion of the basis which is properly attributable to construction, reconstruction, or erection after December 31, 1968.

(B) CERTAIN PLANTS, ETC., PLACED IN OPER-ATION AFTER 1968.—In the case of any treat-ment facility used in connection with any plant or other property not in operation before January 1, 1969, the preceding sentence shall be applied by substituting 'December 31, 1975' for 'December 31, 1968'.

"(c) PROFIT-MAKING ABATEMENT WORKS,

The Federal certifying authority shall not certify any property under subsection (b) (1) (B) to the extent it appears that by reason of profits derived through the recovery of wastes or otherwise in the operation of such property, its cost will be recovered over its actual useful life.

DEPRECIATION DEDUCTION .preciation deduction provided by section 167 shall, despite the provisions of subsection (a), be allowed with respect to the portion of the adjusted basis for which a deduction is not taken under subsection (a).

"(e) LIFE TENANT AND REMAINDERMAN .the case of property held by one person for life with remainder to another person, the deduction under this section shall be computed as if the life tenant were the absolute owner of the property and shall be allowable to the life tenant.".

(b) TECHNICAL AND CONFORMING AMEND-

MENTS.

(1) The table of sections for part VI of subchapter B of chapter 1 of such Code is amended by striking out the item relating to section 169 and inserting in lieu thereof the following:

"Sec. 169. Pollution control facility expenses.".

(2) Paragraph (5) of section 46(c) of such Code (relating to applicable percentage in case of certain pollution control facilities) is amended by striking out "(after the application of section 169(f)) constitutes the amortizable basis for purposes of section 169" and inserting in lieu thereof the fol-lowing: "(after the application of section 169(d)) constitutes the adjusted basis for purposes of section 169(d)".

(3) Subsection (f) of section 642 of such Code (relating to amortization deductions) is amended by striking out "for amortiza

tion"

(4) Subparagraph (B) of section 1082(a) (2) of such Code (relating to exchanges subject to the provisions of section 1081(b)) is amended by striking out "for amortization".

(5) Subsection (a) of section 1245 of such Code (relating to general rule for determining gain from dispositions of certain depreciable property) is amended-

(A) by striking out "169 or" in subpara-

graph (D) of paragraph (2) thereof,
(B) by striking out "169," each place it appears thereafter in paragraph (2), and
(C) by striking out "169," in subparagraph

(D) of paragraph (3) thereof.

(6) Paragraph (3) of section 1250(b) of such Code (relating to depreciation adjustments) is amended by striking out "169,".

EFFECTIVE DATE.-The amendments made by this Act apply with respect to amounts paid or incurred after December 31, 1977.

S. 1277

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) paragraph (1) of section 169(d) of such Code (relating to definition of certified pollution control facility) is amended—

by striking out "water or atmospheric pollution" and inserting in lieu thereof

'noise, water, or atmospheric pollution" each place it appears.

place it appears,

(2) by inserting "noise," before "pollutants,",

(3) by inserting "in the control of noise pollution under the Noise Control Act of 1972 (42 U.S.C. 4901 et seq.)," after "with the States" in subparagraph (B), and

by adding at the end thereof the

following new sentence:

"No item shall be taken into account for purposes of this section in connection with noise pollution other than an item which relates to the abatement or control of work place environment noise or product noise levels (excluding any transportational product 'items) as determined by the Secretary after consultation with the Administrator of the Environmental Protection Agency."

(b) Paragraph (2) of section 169(d) of such Code (relating to States certifying authority) is amended by inserting after "means," the following: "in the case of noise pollution the State noise pollution control agency designated by the Administrator of the Environmental Protection Agency,".

(c) Paragraph (3) of section 169(d) (re-

lating to Federal certifying authority) is amended by inserting after "means," the following: "in the case of noise pollution, the Administrator of the Environmental Protection Agency,

SEC. 2. The amendments made by this Act apply with respect to property placed in service after the date of enactment of this Act.

By Mr. PACKWOOD:

S. 1278. A bill to facilitate the coordination of programs for the protection management, and control of wild freeroaming horses and burros, and other resources, and for other purposes; to the Committee on Energy and Natural Resources.

TRANSFER OF TITLE TO EXCESS WILD HORSES AND BURROS

Mr. PACKWOOD. Mr. President, Western States, plagued by ever increasing wild horse and burro populations, are seeking relief. In Oregon alone, during the past 6 years the number of wild horses has increased from 2,800 to 8,000. There appears to be no relief from this 25 percent per year increase in these animals unless Congress provides the Bureau of Land Management the authority to gather and sell the excess animals to private parties.

Last year, we were successful in pro-viding for the roundup of excess animals by helicopter, but since then we have discovered that unless the Bureau of Land Management is given the authority to transfer title of the animals to private parties, considerable Federal expense will be required in feeding and caring for the animals prior to delivery under the adopt-a-horse program. The adoptions of animals have not occurred as rapidly as necessary, resulting in prolonged periods of time in which the horses and burros have to be placed in Federal holding pens, cared for, and fed.

Under the legislation I introduce today, the Bureau of Land Management would be permitted to transfer title of the animals to private parties. The Bureau has requested this authority in order to adequately control the horse population in Western States at reasonable expense to the Federal Treasury. In this fiscal year, \$176,000 was allocated to Oregon to protect, manage, and control these wild horses. But Oregon has approximately 5,500 horses beyond the approved population for horse management plans. We need to remove these animals from the range as soon as possible. They are in direct competition with domestic livestock. Not only do the excess animals consume precious forage remaining to domestic animals, but they add to the destruction of range plants at a much greater rate than controlled grazing by cattle and sheep. With the added urgency of the drought in Western States, grazing by wild animals can cause permanent damage to range plants. The drought has also resulted in feed supply shortages resulting in even greater Federal expense in caring for the wild horses.

With this as a framework it is imperative that we provide the Bureau of Land Management with this authority to dispose of wild horses and burros. I have contacted a number of environmental organizations and they, too, agree that the situation is serious enough that this legislation is required. I ask unanimous consent that two documents be entered at this point in the RECORD. One is a letter from the Malheur County Public Lands Drought Committee. The other is the text of the bill I propose for enactment. I ask for unanimous consent that both of these documents be printed at this point in the RECORD.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 1278

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a new subsection (f) is added to section 2 of the Act of December 15, 1971, 85 Stat. 649, 16 U.S.C. 1332 (Supp. V, 1975) to read as fol-lows: "'excess animals' means wild free-roaming horses or burros which must be removed from an area in order to preserve and maintain the habitat in a suitable condition for continued use, while also maintaining a thriving use relationship in that

SEC. 2. Subsection (b) of section 3 of the Act of December 15, 1971, 85 Stat. 650, 16 U.S.C. 1333 (Supp. V. 1975), is deleted in its entirety and a new subsection is added as follows:

"(b) The Secretary may order wild free roaming horses and burros to be captured and removed in a humane manner when in his judgment:

(1) they are excess animals: or

(2) they are old, sick or lame; or

(3) it is an act of mercy.

SEC. 3. Subsection (d) of section 3 is deleted in its entirety and a new subsection is added as follows:

"(d) The Secretary is authorized to sell or donate excess animals on written assurance that such animals will receive humane care and handling and that humane methods will be used in the disposal of such animals. The Secretary shall establish procedures which give priority to persons seeking excess animals to keep and maintain for domestic use.

SEC. 4. A new subsection (e) is added after subchapter (d) of section 3 to read as

follows:

"(e) Upon destruction, as provided in subsection (c) of this section, or sale or donation, as provided in subsection (d) of this section, animals shall lose their status as wild free-roaming horses and burros and shall no longer be considered as falling with-in the purview of this Act."

March 17, 1977.

Senator ROBERT W. PACKWOOD, New Senate Office Building, Washington, D.C.

DEAR SENATOR PACKWOOD: The Vale district is experiencing the drought that is affecting the entire western United States.

Long range forecasts by the weather bureau predict similar conditions will continue for several months.

Recent and ongoing evaluation of livestock forage and water in the district shows a serious situation. Soil moisture is very low. Many reservoirs normally containing considerable water are completely dry.

weaker springs have already stopped running. To further complicate this crisis on our public lands, we have a rapidly increasing wild horse herd, increasing at the rate of approximately 23% a year. There appears to be no relief from this situation as Congress has not properly funded the Bureau of Land Management to take care of this problem, nor has it enacted legislation that would enable a much lower gathering and placement cost.

The Malheur County Public Lands Drought Committee is deeply concerned and wishes to recommend the following:

1. Provide immediate funding for gathering and placing enough wild horses to bring their number within reasonable ecological

2. Change placing procedure from an adoption method to a clear title method which will eliminate future government expenses after adoption. Under the present adoption program, the Government gets many horses returned to them when the adopters realize the cost of maintaining the animal. These returned horse numbers will accelerate as more horses are adopted in the future.

3. Restructure present laws to allow the excess horses to be captured and maintained by reasonable means for a reasonable expense. The \$400.00 plus, per head, presently for the gathering and adoption is prohibitive. These horses should be kept for a maximum of 30 days in captivity and then sold at public auction, with these funds returned to the maintenance of the wild horse herds.

We believe that these recommendations, if acted upon, would eliminate the diversion of energy and efforts by the Bureau of Land Management and other land management groups and agencies that are now required, and allow them to get back to multiple land use management as established by Congress through the wishes of the public.

By Mr. CLARK:

S. 1280. A bill to provide for the maintenance or enhancement of the quality of water in rural areas; to the Committee on Agriculture, Nutrition, and Forestry.

SOIL CONSERVATION

Mr. CLARK. Mr. President, I am today introducing a bill to amend the Rural Development Act of 1972 by adding a new title, title VII, to authorize a new, voluntary, soil conservation cost-sharing program designed to help farmers and rural areas meet the ever more stringent requirements of the State and areawide water quality plans authorized and required by section 208 of Public Law 92-500—the Environmental Quality Act.

That legislation provides for State or local water quality management agencies to carry out a water management program, utilizing a regulatory mode, if necessary. The Federal Government, through the States and some local jurisdictions is developing increasingly strict legal requirements for water quality—rules that mag require farmers and other rural landowners to make substantial investments, in many cases, to control or restrain runoff from their land. Those who do not make the required investments may be subject to legal action.

This bill would provide cost-sharing and technical assistance to help rural landowners pay for the investments re-

quired by section 208 plans.

There are a number of reasons why it is in the public interest to assist rural landowners with such cost-sharing and technical assistance programs. First of all, society and not farmers alone reaps substantial benefits from clean water. Therefore, society would be willing to share the considerable cost of improving and maintaining water quality.

Second, in rural areas water quality and soil conservation are opposite sides of the same coin. Farmers and the public alike are concerned, on the one hand, with the sediment, pesticides, fertilizers, and other pollutants that come into our streams from our farm and forest lands. And, farmers in particular are even more concerned with the loss of topsoil from our productive agricultural lands—a loss which is occurring at a rate too great to be sustained over the long term. This loss must be reduced, Mr. President, if we are to continue as a great and prosperous Nation.

Third, we have spent billions of dollars each year to help cities clean up the municipal wastes that foul so many of our rivers and lakes. Simple equity demands that the Nation stand ready to provide parallel assistance to the farmers who must make costly investments to meet similar kinds of rules.

The link between soil conservation and water quality is important. We have a powerful case for an adequately funded national investment in a more effective soil conservation program irrespective of the national priorities for water quality. Since we have both priorities, the case for soil conservation is strengthened immeasurably. The link between these two national priorities lends urgency to the bill I am proposing today. It will, at the same time, support our rural water quality program and it will also give us a new and more effective soil conservation program.

While sediment is the result of a continuous natural process and less harmful to water quality than most industrial and municipal pollutants, it is the Nation's largest pollutant by volume. Some 50 percent or more of the sediment in our streams comes from agricultural lands. We cannot face up fully to our water quality problem without also facing up to our soil conservation problem. Both are truly national problems, fully deserving national attention.

In a recently completed report by the Government Accounting Office, it is estimated that Iowa farmland is losing topsoil at a rate of 10 tons per acre per year, on the average—twice the rate that can be sustained without loss of productivity. On unprotected sloping lands, the loss is 30 percent greater, or 13 tons per year. This amounts to nearly three times the rate at which new topsoil is formed under normal circumstances. Soil scientists estimate that much of the now productive sloping land in Iowa will be virtually barren within 50 to 100 years unless effective measures are taken to protect these soils.

The goals of soil conservation are essentially the same as those of water quality enhancement—to keep the soil and the essential chemicals we use in modern agriculture where they belong, and out of the lakes and rivers. The logical answer to both soil conservation and water quality problems is to control the rate and course of water runoff from the land.

The legislation I am introducing today would provide assistance to farmers and rural areas parallel to that available to cities to enhance water quality. It would do this by helping farmers and others with long-term investments in soil conservation.

This program would differ from existing programs in three important ways: First, it would be limited to investments in control measures with long-term benefits; second, it would include both technical assistance and cost-sharing in a single program; and third, it would be specifically tailored to link local soil conservation efforts to local water quality plans and requirements.

The bill specifically recognizes the responsibilities of the Environmental Protection Agency in approving the section 208 State and areawide water quality plans. It authorizes the Secretary of Agriculture to develop and implement a national program of voluntary cost-sharing and technical assistance to local farmers and other rural landowners, based on the expertise of USDA programs. These local USDA program activities are considered to be the most effective system available to accomplish this job.

In my view, Mr. President, the fact that the water quality activities of the Environmental Protection Agency have never included the U.S. Department of Agriculture as a full partner has been a serious limitation. The mechanisms in place in USDA can aid EPA and the States immeasurably in their water quality efforts. USDA is well equipped to provide to all local sponsoring organizations. as outlined in the bill, the technical and financial help to get the job done. Congress should now take the initiative to provide direction and funding to utilize existing USDA resources to advance both the Nation's water quality and soil conservation objectives.

The Secretary of Agriculture has two large and effective soil conservation programs now in operation; the Soil Conservation Service conservation operations program, and the Agricultural Stabilization and Conservation Service agricultural conservation program. This bill envisions that the Secretary would focus both of these proven and effective programs in a new, better coordinated and funded effort to provide long-term conservation assistance in addition to their

basic, ongoing functions. It should be emphasized that this legislation is not intended to in any way disrupt or retard the basic, ongoing functions of these programs, such as cost-sharing for individual farm conservation projects not linked to long-term conservation agreements. These basic, ongoing program functions are an important part of the total conservation effort, and should be continued. Although it is not within the scope of this legislation to do so, I would hope that funding for these basic, ongoing functions could also be considerably increased, to further assist in the overall effort to combat soil conservation problems.

There are many options open to the Secretary in terms of how he could organize to meet his new responsibilities under this bill. One logical way would be to use the Soil Conservation Service to provide needed technical assistance and the ACP program with its county committees to handle the cost-sharing efforts.

Mr. President, this bill is presented for discussion and comment. I do not regard it to be final or unchanging at this time. I would expect a number of hearings and discussions would be needed to hammer it into final form, and I would be particularly interested in specific recommendations that Secretary Bergland will have. Only after considering such a range of comment and reaction will I consider that we are ready to go forward with a final draft bill.

Finally, Mr. President, the costs of the activities authorized by this bill are considerable. It would begin in 1979 with an expenditure of \$130 million and increase to an expenditure of \$1 billion annually by 1983 and continue at that level for

the next 7 years.

This is truly an awesome cost, and we should not retreat from that fact. We have spent \$14.8 billion on USDA soil conservation programs since 1935—much of that during earlier times so that in terms of today's dollars, the total would be several times as great. This multibillion-dollar expenditure notwithstanding, the GAO study on soil conservation released last month found that on a nationwide sample of farms participating in current soil conservation programs, 84 percent had soil losses too great to be sustained without serious losses in soil productivity.

This is not because the programs are not effective, but because the tank is so difficult and so great. The importance of this task is exemplified by the fact that we have lost one-half of the topsoil over the last 100 years in my own State of Iowa. We all know of the devastating impact on regions and cultures which lost their topsoil and the productivity of their principal agricultural resource. That is the danger we risk in the United States today and in the future. Even an expenditure as great as that proposed is small compared to the cost of a significant decline in the productivity of our soil.

Mr. President, I ask unanimous consent that a summary of the bill be printed in the Record.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SECTIONAL ANALYSIS OF THE RURAL SOURCE
WATER QUALITY BILL

FINDINGS

Sec. 701 states the nature of existing rural water quality problems, why the Nation should solve these problems, and how past soil and water conservation programs have contributed toward improving water quality and can be further used to accelerate the enhancement of our Nation's waters. The institutional arrangements which can and should be used in a program of rural water quality is the U.S. Department of Agriculture cooperating with those directly or indirectly concerned with the rural water quality problems. The Department of Agriculture through its many agencies has the expertise and delivery system and is presently in direct contact with and assisting state and local agencies and individual land owners and operators who will act to carry out the water quality program in rural America. It is not necessary to develop a new Federal agency at the field level.

POLICY

Sec. 702 states that the intent of Congress is to have the Department of Agriculture provide the assistance needed to farmers, ranchers, and other land users involved in the production of food, forage, fiber, and forest products which create activities that impair water quality. There are other activities in the rural areas that create erosion and sediment and are to be included in the assistance program. Some examples would be soil disturbing activities associated with road building, construction of buildings, airports, sewage treatment facilities, housing developments, and others.

RURAL SOURCE WATER QUALITY PROGRAM

Sec. 703 directs the Secretary of Agriculture to implement a nationwide rural source water quality assistance program to maintain or enhance water quality in rural areas. The program would contain four major elements as follows:

- (a) A determination of the location and extent of the water polluting problems in rural areas. From this inventory, which will include all existing data especially data included in the Sec. 208 water quality management plans, the Secretary will decide which pollution causing activities he will provide assistance on. The Secretary will give priority to those causing the greatest problem.
- (b) The Secretary will provide cost-sharing and technical assistance for those activities he has determined to be eligible in above paragraph (a). The method of making this assistance available will be as provided in Sec. 704 of this act.
- (c) The present measures that have been proven to control erosion and sediment are basic to solving the rural water quality problem. There are measures which could be used to effectively reduce pollutants entering our Nation's waters. To find and develop these measures the Secretary will conduct a research, development, and testing program. As these new methods are developed, they will become part of the package for solving water pollution problems.
- (d) The Secretary as he determines appropriate can use state or local units of government including conservation districts to help carry out the program. It is essential that this program be coordinated with other water quality programs involving the Federal Government. The Secretary is to consult with those agencies involved in these activities and involve the advisory board in developing his program.

APPLICATION OF THE PROGRAM

Sec. 704 specifies the type sponsor eligible to submit a rural source water quality plan and elements to be included in the plans. Portions of plans prepared under Sec. 208 of

P.L. 92-500, where available, are to be used as a basis in developing the rural source water quality plans to eliminate duplication and insure consistency. These plans to be locally initiated and developed with technical-Federal assistance as needed, will foster local planning responsibility and strengthen voluntary and economic incentives for improving rural water quality. The plan will outline cost-sharing to be provided; however, individual land owners and operators assistance will be provided by long-term agreements between the Secretary and those participating. There are several programs in USDA that provide assistance to land owners and operators for soil and water conservation. These programs are directed toward the protection of soil resources for the sustained production of food and fiber. Some programs' are oriented to agricultural production. These programs are important to the Nation's welfare and should continue. These programs also are contributing toward the of water quality. The program called for in this act is directed toward rural water quality and is to be in addition to ongoing programs and not a substitute.

ADVISORY BOARD

Sec. 705 allows the Secretary to establish an advisory board to advise and consult on matters involved in the implementation of this act.

REPORT

Sec. 708 would have the Secretary prepare in fiscal year 1979 and annually thereafter to 1990 a report on the progress being made in carrying out the act. The report will include certain measurements and changes needed in the program or new legislation.

FUNDING

Sec. 709 authorizes funding necessary to carry out this act.

TERMINATION

Sec. 710 provides that the Act will terminate September 31, 1991.

By Mr. HART.

S. 1281. A bill to establish a program to provide assistance to local governments for solid waste disposal programs; to the Committee on Environment and Public Works.

NATIONAL MATERIALS POLICY ACT OF 1977

Mr. HART. I am today reintroducing the National Materials Policy Act, a bill which takes an entirely new approach to the enormous problems created by the growing quantities of refuse, or solid waste. The Senate Committee on Public Works' Panel on Materials Policy held preliminary hearings on a draft copy of this bill last year, and the results were encouraging. It is my hope that the committee will have an early opportunity this year to further probe into the subject of recycling of municipal solid wastes as it considers this bill.

The National Materials Policy Act of 1977 is designed to reduce the costs and burden of waste disposal on municipalities and at the same time provide an incentive for increased recycling of post-consumer wastes.

This objective would be achieved by levying a charge on those industries which create these solid wastes in the first place, and reducing the charge on these same industries in proportion to the amount of postconsumer wastes they use in their manufacturing process. Revenues collected from the charge will be available for distribution to localities

to offset their tremendous solid waste management costs.

Last year, the Congress took an important step towards solving this Nation's solid waste problem by passing the Resource Conservation and Recovery Act. But, we have been reluctant to act on the subject of recycling because this subject involves complex jssues including the use of our natural resources, the economics of recycling, as well as the environmental degradation which results from our failure to conserve and

Mr. President, we are doing an admirable job of recycling those waste products commonly referred to as home scrap and prompt scrap. These wastes are generated at the production and fabricating stage, and are recycled, in many cases, at a rate of between 90 and 100 percent. Although a number of factors facilitate this high recycling rate, it is primarily because these wastes are economical to recycle and need little sorting, decontamination, or shipping.

Where we find ourselves in real trouble is in the area of mixed municipal wastes. These wastes—hundreds of millions of tons a year—are not presently recycled because of high costs associated with the necessary collection, sorting, decontamination, and transportation. What we have with respect to these wastes is a one-way materials flow, with the cities at the bottom of the line, literally holding the bag.

Mr. President, this one-way materials flow, this use-it-once-and-throw-it-away system has been fostered and encouraged by the fact that many of the costs involved with these products are neither paid by the manufacturer nor directly by the consumer.

These costs are borne instead by society in general, and are usually paid out of local taxes. The present cost to local governments for simply collecting and disposing of municipal solid waste is nearly \$6 billion a year—a national average of \$26 per ton.

The results are two-fold. First, the costs of collection and disposal are a tremendous burden on the local tax base. But, perhaps more important, the exclusion of these costs from the market price of products acts as a subsidy for the manufacturer, and provides a sizable financial disincentive to recycling. Why should a manufacturer buy recycled materials and substitute them for virgin materials if the local government is going to pick up the tab for collection and disposal?

The National Materials Policy Act will attack both problems by placing a weight or unit-based charge on the manufacturer of those products which end up in the municipal solid waste stream. The charge would be \$26 per ton, the average national cost of handling the product at the local level, for paper and flexible packaging, and 5 cents per container for rigid containers.

The proposed charge would be reduced in proportion to the amount of postconsumer wastes used in the manufacture of the product, creating a powerful incentive to use postconsumer materials in order to avoid the charge. And, finally, it is intended that revenues collected from this program would be returned to local governments to alleviate the financial burden of operating municipal solid waste systems.

Mr. President, the EPA has made some preliminary investigations into the effects of this type of disposal charge. These studies indicate the possibility of a major increase in the present rate of recycling as a result—50 percent for aluminum containers and 27 percent for paper, to cite two examples.

Mr. President, since I introduced this bill in the 94th Congress, the concept embodied in the legislation has received substantial support, and has been recommended by the National Commission on Supplies and Shortages as one of the few promising strategies to significantly increase the recycling of municipal solid

I ask unanimous consent that a short chapter entitled "Internalizing Disposal Costs," taken from the National Commission on Supplies and Shortages' report, "Government and the Nation's Resources," and a speech made last year by the chairman of the citizen's advisory committee on environmental quality, Henry L. Diamond, be printed in the Record.

There being no objection, the excerpt and speech were ordered to be printed in the RECORD, as follows:

INTERNALIZING DISPOSAL COSTS

Governments discourage the recycling of containers and paper products by assessing the cost of discarding such materials against general revenues rather than against the price of the containers and paper products. As recently as 1960, 95 percent of the soft drinks and 50 percent of the beer were sold in returnable containers; the price of the beverage included the cost of distributing containers, collecting them after use, cleaning them and placing them back in service. Now the most common form of beverage container is the no deposit-no return bottle or can; the price does not reflect collection and disposal costs, which are borne not by the consumer but by society at large.

The 94th Congress considered legislation requiring EPA to establish standards of control for products which "may use an unreasonable amount of energy or of materials identified by the President as critical to national security or in short supply." Another bill would have imposed a schedule of national solid waste disposal charges on the sale or transfer at the bulk production level, of rigid consumer containers (at 0.5¢ per container), and of flexible consumer packaging and paper (at 1.3¢ per lb.); the charge would have been introduced over a ten-year period, starting at zero and increasby 10 percent per year; it would have been reduced by the percent of secondary materials content in the product. A third bill would have required a refundable deposit of at least five cents on carbonated beverage containers to take effect in five years.

The first bill is inconsistent with the general principle that the rate of recycling should reflect the true costs of materials; the bill proposes a regulatory approach similar to that of the Clean Air Act or the Federal Water Pollution Control Act. These acts establish regulatory schemes which require businesses to install the best demonstrated or available control technology. The definition of such technology for a multiplicity of industries and plants has proved a difficult regulatory task. Businesses have delayed substantial costs by engaging in protracted

litigation against regulations. Perhaps such an approach should be reserved for those situations where it is difficult, if not impossible, to estimate external costs. It is relatively easy to estimate disposal costs.

The second bill would incorporate disposal costs into the prices of products. It would leave to individual businesses the decision on how to increase recycling or reduce waste in order to obtain the greatest progress at the least cost. Accumulating tax liability would eliminate an incentive to use litigation as a delaying tactic. The bill would cover packaging and paper products which make up almost one-half of the total waste stream and 80 percent of all product-type wastes. A study prepared for EPA suggests that such a system of product charges could double present rates of paper recycling and provide a marginal incentive for more efficient use of materials in production. Administration costs have been projected at about one-half of 1 percent of the revenue raised. Gradual imposition of a disposal charge would allow time for implementing regula-tions embodying suggested "fine-tuning" changes, such as adding the costs of complying with environmental controls on disposal the base cost, or establishing a separate rate of charge for plastic containers, such as that proposed by the City of New York. It would also be appropriate to exempt con-sumer packaging which carried a refundable deposit from such a disposal charge.

A mandatory deposit on carbonated beverage containers, proposed in the third bill, would also internalize external costs. Such a deposit has been tested in the State of Oregon where it has greatly stimulated recycling and reduced the amount of roadside litter while leaving beverage prices essentially unchanged. Detailed projections of the national impact of a mandatory deposit system have been made by the Department of Commerce (which is opposed to such a system), by the Tederal Energy Administration (which not taken a position) and by the Environmental Protection Agency (which favors such a system). The average of capital cost estimates by Commerce and by FEA is \$1-\$4 billion; all three agencies predict a modest net gain in employment, but with a shift of 40,000 to 80,000 jobs from container industries to retailing and distribution. Given a 90 percent return rate (not unrealistic in light of Oregon's experience), all three agencies predigt energy savings of 150-200 billion Btu per year, somewhat less than one day's national energy consumption; EPA predicts savings of about 13 billion pounds materials. Commerce predicts a reduction in municipal solid waste of slightly less than 5 percent by weight; EPA predicts a reduction of about 20 percent by volume in municipal solid waste; FEA predicts that the value of materials thus removed from the waste stream would have no substantial effect on municipal decisions to landfill or to recover resources. Sweden is putting into effect a similar mandatory deposit system for auto-mobiles: there is a tax of SwKr 300 (\$65) on the purchase of a car; the tax is refundable when the car is turned in to a scrap yard. This system merits further study in the United States.

The Commission recommends that the Government take steps to internalize the cost of disposing of materials; means of accomplishing this include mandatory deposits on beverage containers, excise taxes on non-returnable containers, and product disposal charges on other consumer packaging and on paper.

Two Modest Proposals

I am extremely pleased to be a part of your 6th Annual Eco-Technic Recycling Conference. As a long time environmentalist and as a former operating bureaucrat, I am well aware of the contributions of your industry to environmental quality.

There are a lot of people who are out talking about resource recovery, but many of you have been out there doing it for years and sometimes even making it pay. Incidentally, I believe that that is the basic solution to recycling—making it economically attractive.

For instance, we found that there was no trouble recycling copper when it was up around \$1.00 a pound. In fact, we found cases where copper piping was recycled the night after it was installed.

Recycling has been something of a stepchild in the environmental effort. There has been a good amount of lip service paid, but in fact very little incremental use of secondary materials has been brought about by environmental rhetoric or regulation. There are two reasons for this:

First, once the initial idea is articulated, the mechanics of the marketplace are really extremely difficult and complex. The issue is not a neat, dramatic one like water pollution or air pollution where one can identify the bastards and lean on them. Recycling is a complicated systematic problem that doesn't lend itself to headlines about villains or new federal largesse.

lains or new federal largesse.

Secondly, I suspect that in some quarters recycling is thought of down deep as sort of un-American. This country grew and grew great by conquering its wilderness and turning its forests into cities and extracting wealth from the earth and turning it into useful products. These processes generated gross national product and the idea of not doing more of the same is suspect. There is still a feeling that 100% virgin material, whether it be in a sweater or a truck, is somehow more desirable, aesthetically and economically.

economically.

We need a major national change of the set of mind about how we use all raw materials, but today I would like to focus on one commodity in which some of you are involved. That is wastepaper. I believe that this commodity offers special and immediate promises for important increases in recycling.

The Citizens' Advisory Committee on Environmental Quality, which I chair, addressed itself in recent months to the recycling of paper. The Committee is a 15 member group appointed by the President to advise him on environmental matters. Its members include people like Laurance Rockefeller, Tom McCall, San Diego Mayor Pete Wilson and industrialist Willard Rockwell.

The Committee became interested in recycling of paper because we found citizens becoming frustrated in their effort to collect wastepaper for recycling. This was one of those relatively rare endeavors where seemingly a citizen could take direct action to help his environment. Enthusiasm was stirred up and the Boy Scouts and others were turned out to collect paper. Suburban station wagons of a Saturday morning were filled with kids, old newspapers and good intentions.

Some paper was recycled, but a lot of it ended up back in the town incinerators or the land fill having gone through the loving hands of householders and concerned collectors for naught.

This wasted effort can bring great citizen frustration and loss of faith—commodities in which we are already oversupplied. If good efforts end up but in dust, who can we trust? Nationally the failure of the paper recycling system adds up to the disappointing statistics that show that the United States recycles not only less paper than other developed societies, but less than we ourselves used to.

The Citizens' Advisory Committee on Environmental Quality decided, with the encouragement of President Ford, to approach this problem in the same manner as we have

others with some success. We asked a group of particularly knowledgeable individuals to join our Committee in a short but focused study. Paper industry people, government officials, paper users such as newspapers and the phone company and citizen leaders Your colleague agreed to help. Stovroff was one of the principal idea givers. Some people prepared papers and others reacted to those papers in a conference held last May.

The result was a series of recommendations which the Committee has presented to the President. Because the Committee felt that the ideas generated by the papers and at the meeting were important and potentially useful, we decided to publish a report on the conference.

I am pleased that we are using the occasion of your meeting today as the publication booklet. It is available here for you and I hope that it contributes to your

deliberations.

Let me share some of the findings with you. First, we found the obvious. The United States does not recycle very much paper. Last year the recycling rate was 23%. This means we burned or buried three tons of paper for every one we reused. And it cost some one taxpayer or consumer about \$26 a ton to bury or burn.

If we did recycle more, a lot of good would

come from it:

Local governments would have less solid waste to contend with and costs and environmental damage would go down. Governments now spend some \$11/2 billion to burn or bury wastepaper.
Forest resources would be conserved and

be available for higher uses such as building

materials.

We'd save some energy as making recycled paper requires less than making virgin fiber. We would improve the balance of pay-

ments by importing less pulp and exporting

more wastepaper.

Most experts agree, however, that unless some changes in the basic system are made, we really won't recycle much more. The tax structure and the long term investments of the papermaking industry simply don't cre-ate a favorable climate for recycling. The American Paper Institute says that the recycling rate will drop to 17% by 1985 unless there is some favorable government action. With favorable government action, the best rate API sees is 26%, still less than our World War II rate.

The Committee report urges that the federal government ought to come down on the side of recycling and urges that it take a leadership role. The Committee urges national priorities that run this way for waste-

paper: First, try to recycle it; second, store it, and third, burn it for fuel in an enivron-

mentally sound way.

The Committee says that the government should (1) rectify the inequitable relationship between recycled and virgin fibers, and (2) place the federal research emphasis on better recycling instead of higher pulpwood production.

The Committee did not specify just how the federal government should intervene in the marketplace, but I would like to express my personal view on what I consider to be two specific federal actions which hold promise-a disposal tax and a stockpiling

The disposal tax is basically an approach which would include the cost of environmentally sound disposal in the original cost of the product. Somebody eventually has to pay for disposal and the disposal charge is a concept which places the cost as part of the product itself. Economists call this "internalizing."

Politicans call it tricky. But I believe it has substantial merit. It would work basically this way. The tax would be levied by weight on products at their point of origin. Twenty-six dollars a ton has been suggested as the true cost of municipal collection and disposal and thus an equitable level for the tax. If a paper mill used 100% virgin fiber in its process, the full \$26 a ton tax would apply. However, if, for example, 50% recycled fiber were used, the tax would be cut proportionately and would be \$13 a ton.

The proceeds from the tax would be recycled as well. That is, these proceeds would be ear-marked for a grant-in-aid program for municipal waste treatment systems. That program, in turn, could be structured to give higher percentages to those communities recycling systems rather than

traditional ones.

While there are political and administra tive difficulties involved, I believe that this plan can work. It is being thought through carefully by the federal government and many local governments, and their national associations are supporting it. It does two important things at the same time: it creates real incentive for recycling, and it provides money to local governments for environ-mentally sound solid waste programs.

The second concept developed from formation supplied mainly by Haskell Stovroff during our conference. A chronic problem plaguing the paper recycling industry is the widely fluctuating demand for its products. Traditionally, wastepaper has been used only to supplement supply when demand is high. When overall demand for paper drops off, mills rely on their virgin sources and don't buy waste. It makes environmental and economic sense to stockpile whatever wastepaper we can recover in a manner that will make it readily available for at least three purposes:

(1) as a low cost raw material for the recycling industry-to be drawn upon as the

demand dictates:

(2) as an export commodity to foreign countries-where virgin fiber resources al-

ready are inadequate, and
(3) as a source of fuel for United States industrial and electric power plants-when the first two demands are inadequate to utilize the available supply.

Although the details of applying a federal subsidy for the storage of discarded papers have not been worked out, a logical means of operating such a program would be through the established wastepaper dealers and processors now operating in the private sector. Stockpiling requires some management and some money, but it is no arcane art. When we have needed to, we have stockpiled everything from feathers to peanuts. There is no reason we can't do the same with wastepaper.

Both these measures, disposal charging and stockpiling, require increased government involvement in the operation of what we like to think of as a free market society. Most of us are becoming concerned about the cumulative effect of government intervention in that society and the tendency of Washington to try to solve everyone's every problem.

In the case of recycling wastepaper, however, what is involved is an adjustment of heavy intervention that has already taken place rather than a new government initiative. The most significant barrier to increased paper recycling is the institutional arrangements, responsive to tax law and freight tariffs, which have grown up to protect the use of virgin paper.

Large paper companies and large newspapers own trees. They make money by cut-ting down those trees and selling them as toilet paper or the Sunday New York Times.

When someone comes along and says let's change the way we do this and use waste-paper instead of trees, years of corporate planning are interrupted. Carefully thoughtthrough investments and tax structures are challenged. Corporate executives, like other bureaucrats, don't want to change the way they are doing things.

If it is important to this country to recycle paper, and I think that it is, we then have to change the rules of the game to make it more attractive to recycle or at least less attractive to concentrate on virgin materials.

I have focused my remarks today on the recycling of paper because the Citizens' Committee has been active in this area recently and because we think we have something to say about it. However, the recycling of many other commodities is just as important.

It is only a matter of time until we learn the fundamental lesson that this earth is only a relatively large space ship with limited resources. The limits that apply to small satellites apply to large ones as well. The day of reckoning may be longer in coming on the larger one but it is just as inevitable if resource limits are not heeded.

Therefore, our society, as you have, must learn to think in terms of recovery and reuse. The rules of the game have long been slanted to stimulate exploration and ex-

ploitation.

Now the ecological arithmetic is clear that we must no longer reward depletion and penalize conservation. We must give that same kind of encouragement to recovering resources instead of burning or burying them. This modest program to encourage paper recycling can be a start in that direction. I hope you, who have been practicing the art so well for so long, will lead us to other initiatives in the near future.

Mr. HART. Mr. President, as the national debate on recycling has escalated in the last few years, much opposition has been raised to various approaches by the beverage industry and by labor organizations, who feel that any recycling strategy must necessarily mean "source reduction" and will involve a decrease in industrial output and jobs. This is not the case with respect to the disposal charge approach. This legislation does not attempt to cut back on waste generation, but simply encourages the manufacturer to substitute recycled materials for virgin materials in his production process.

Finally, Mr. President, I have been increasingly alarmed by the proliferation of Federal regulations designed to solve pollution problems. The regulatory approach to air and water pollution was chosen for a number of reasons. But, I suspect, it was chosen in part because we let the problems reach crisis proportions before acting, and this crisis orientation precluded any real consideration of economic alternatives.

I look to the future and see regulations for solid waste as well. And, with regulation comes the necessity for massive Federal grants to State and local governments to help them cope with the new and unfamiliar Federal requirements.

I offer the National Materials Policy Act as an alternative.

This proposal will provide a significant incentive for recycling by adding the pollution costs to society to the manufacturing decision process where it belongs; by offering a competitive advantage to the manufacturer who uses postconsumer wastes in his product; and by alleviating the local financial burden associated with solid waste management at absolutely no cost to the Federal Treasury.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1281

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Materials Policy Act of 1977".

FINDINGS AND PURPOSES

SEC. 2. (a) The Congress finds and declares that-

(1) municipal solid waste management costs are not reflected in the market prices of those materials and products entering the municipal waste stream, and that these costs have largely been borne by the general taxpayer resulting in severe financial stress to the local tax base;

(2) as a consequence materials and products that unnecessarily waste natural resources, and which contribute to environmental degradation at both the extractive and the discard stages of the materials use cycle, are placing a serious burden on interstate commerce;

(3) there is a need to reduce this burden through economic incentives to discourage inefficient, wasteful and unnecessary material use through increased recovery, reuse, and recycling of waste materials, and by designing products that are inherently less wasteful; and

(4) there is a need to provide financial assistance to local governments which have borne the environmental and fiscal costs of this excessive material use:

(b) The Congress hereby declares that the purpose of this Act, therefore, is to establish a national solid waste product charge system which will-

(1) alleviate the financial burden that the rapid increase in solid wastes and unit solid waste management costs have imposed on local government:

(2) provide incentives for the establishment of markets for materials recovered from solid waste in order to promote environmentally sound manufacturing processes and to encourage the conservation of vital natural resources;

(3) internalize the costs of collecting, transporting, and disposing of materials and products by producers and consumers in order to promote market efficiency and to enable consumers who so wish to make value comparisons based on minimizing the overall economic and environmental burdens associated with such products; and

(4) provide adequate time for producers and consumers to adjust their production and consumption practices.

DEFINITIONS

SEC. 3. As used in this Act the term-

(1) "Administrator" means the Administrator of the Environmental Protection Agency;

(2) "Secretary" means the Secretary of the Treasury;

(3) "commerce" means commerce among the several States or with foreign nations or in any State or between any State and foreign nation:

(4) "solid waste management costs" means the economic cost (measured in dollars per standard unit) of collecting and processing solid waste, obtained from a solid waste management cost survey of representative domestic solid waste management systems meeting environmental standards;

"environment" includes water, land, all living things therein, and the inter-

relationships which exist among these;
(6) "Fund" means the Environmental Quality Assistance Fund established under section 103 of this Act;

(7) "person" means any individual, government, corporation, partnership, association, trust, or organized group of persons

whether incorporated or not;

(8) "municipality" means (A) a city, town, borough, county, parish, district, or other public body created by or pursuant to State law, or an Indian tribe or authorized tribal organization or Alaska native village or organization, with responsibility for the supervision or administration of solid waste management of municipal and commercial solid waste generated within its political boundaries, and (B) includes any rural community or unincorporated town or village or any other public entity which has assumed such responsibility and for which an applicafor assistance is made by a State or political subdivision thereof;

(9) "State" means any State, the District of Columbia, the Commonwealth of Puerto Rico and any organized territory or posses-

sion of the United States;

(10) "solid waste management system" means a system for the collection, storage, transportation, treatment, recovery, utilization, processing, or final disposal, including conversion into energy, of residential or commercial solid waste;

(11) "secondary materials" means material that has already appeared in the form of a bulk or finished good and has been recovered for reuse, and includes industrial scrap generated in the fabrication and conversion of bulk material into finished goods and also any material obtained from products discarded by the final consumer;

(12) "post-consumer secondary material" means materials or products that have been used by an ultimate consumer and which would typically enter the commercial or residential solid waste stream, but excludes waste or scrap created in a manufacturing or converting operation, and m recovered outside the United States: and material

"commercial solid waste" means all (13) types of solid wastes generated by stores, restaurants, warehouses and other nonmanufacturing activities, and nonprocessing wastes generated at industrial facilities such as office and packing wastes which are stored separately from processing wastes:

(14) "residential solid waste" means the wastes generated by the normal activities

of households, including but not limited to, food wastes, rubbish, ashes, and bulky wastes;

(15) "charge" means a Federal excise tax; (16) "prevailing charge schedule" means e updated schedule of charges for the various product categories calculated by the Administrator in his periodic adjustments of the initial base charge to reflect inflationary factors, environmental pollution control requirements, and the changes in solid waste management practices;

"paper" means all kinds of matted or felted sheets of fiber (usually vegetable, but sometimes mineral, animal, or synthetic), including paper and paperboard products used for printing, writing, packaging and

sanitary purposes;

"flexible packaging" means all non-(18) paper products used to package or wrap consumer goods and includes (A) flexible plastic including cellophane, polyethylene, polypropylene, collapsible tubes, plastic sheet, and plastic closures, and (B) flexible and semi-flexible consumer aluminum products, including aluminum plates, collapsible tubes, foil, and closures; and

(19) "rigid containers" includes all nonpaper packages used to contain consumer products that retain their structural configuration after the contents are removed and includes rigid plastic containers, steel cans including aerosol cans, aluminum cans,

and glass jars and bottles.

TITLE I—ENVIRONMENTAL QUALITY AS-SISTANCE AND NATURAL RESOURCE MATERIAL CONSERVATION INCENTIVES

SOLID WASTE PRODUCT DISPOSAL CHARGE SYSTEM

Sec. 101. (a) (1) Within one year from the date of enactment of this Act, the Administrator, following consultation with the Secretary, shall prescribe and shall from time to time revise such regulations as are necessary to establish a schedule of national solid waste product charges which shall include a charge on the sale or transfer at the bulk production level of rigid containers, flexible packaging, and all paper products with the exception of building, construction, and industrial grades.

(2) The initial base charge schedule shall include a charge of 1.3 cents per pound (\$26 per ton) for paper and flexible packaging and a charge of 0.5 cents per container (\$5.00 per thousand containers) for rigid containers, adjusted for that fraction which would normally be lost in any subsequent produc-

tion stage.

(3) The Administrator shall establish a national solid waste management cost survey indexing procedure to revise the base charge periodically to reflect changes in solid waste management costs. Such periodic adjustments shall be no more frequent than every two years nor no less frequent than every four years.

(4) The charge will be introduced over a ten year period according to the following schedule: zero percent of the charge established in the initial charge schedule in the first year during which such charge is established, and 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100 percent of the charge in the prevailing charge schedule specified by the Administrator in the second, third, fourth, fifth, sixth, seventh, eighth, ninth, tenth, eleventh and all subsequent years.

(5) For any product subject to the charge, the Administrator shall establish procedures to reduce the prevailing charge for each producer by the per centum of post-con-sumer secondary materials incorporated in the product.

(6) The Administrator shall from time to time but no less than every four years consider whether the purposes of this Act would

be served by modifying this section, and shall so inform Congress in the report prepared pursuant to section 202(b)(3).

Any charges established by the Administrator under this title shall, in accordance with regulations prescribed by the Secretary of the Treasury, be levied on and paid by the person who manufactures, produces, imports the product in either its bulk or finished form as determined by the Administrator. In making this decision as to who shall pay the charge, the Administrator shall take into account the number of establishments that would have to be monitored, the difficulty of making the adjustment for secondary material content, the ability to distinguish the product stream to be charged, and such other factors as affect the administrability and equity of the charge. How-ever, it is the intent of this Act that the charge be levied at the earliest practical the product's manufacturing of sequence.

EXPORTS

SEC. 102. After consultation with the Secretary of the Treasury, the Administrator shall establish procedures to insure that products exported prior to final use do not bear the charge pursuant to section 101. The Administrator may satisfy this requirement by a rebate to the exporter or by adjusting the product charge paid by the manufacturer.

ENVIRONMENTAL QUALITY ASSISTANCE FUND

SEC. 103. (a) There shall be established in the Treasury of the United States an Environmental Quality Assistance Fund which shall be available to the Administrator and the Secretary as trustees of the Fund, to carry out the purposes of this Act.

(b) All sums received as charges under this title shall be deposited in the Fund.

(c) The Fund shall be available as provided in appropriation acts to the Administrator and the Secretary to defray the costs of administering this Act: Provided, That not more than one-half of 1 per centum of the sums accruing to the Fund over any five year period shall be available for such purpose during that five year period.

(d) Amounts in the Fund in any fiscal year in excess of those required for the purposes of subsection (c) shall be available for appropriation for the purpose of this subsection. The amount so appropriated in each fiscal year shall be allotted by the Administrator among all the municipalities in each State. Such allotments shall be made among the States in the ratio that the population in each State bears to the population in all of the States and among all the municipalities in each State in the ratio that the population in each municipality bears to population in all of the municipalities within the State of such municipality. A municipality's allotment pursuant to this section shall be available for expenditure for solid waste disposal programs within the guidelines established pursuant to subsection (f).

(e) The Administrator shall establish guidelines for municipalities receiving funds under this section that will ensure efficient and environmentally sound solid waste management practices. Such guidelines will be consistent with section 209 of the Solid Waste Disposal Act, as amended.

(f) The Administrator shall report on the distribution and use of such funds in his report pursuant to section 302.

PENALTIES

SEC. 104. (a) Any person who knowingly attempts in any manner to evade any charge pursuant to this title, or the payment thereof, shall, in addition to other penalties provided by law, be guilty of a felony and, upon conviction thereof, shall be fined not more than \$10,000, or imprisoned not more than five years, or both, together with the costs of prosecution.

(b) Any person required under this title, or regulations prescribed thereunder, to collect, account for, and pay over any charge imposed pursuant to this title who knowingly fails to collect or truthfully account for and pay over such charge shall, in addition to other penalties provided by law be guilty of a felony and, upon conviction thereof, shall be fined not more than \$10,000, or imprisoned not more than five years, or both, together with the costs of prosecution.

(c) Any person required under this title to pay any charge, or required by this title or by regulations prescribed thereunder, to make a return or statement, keep any records, or supply any information, who knowingly fails to pay such charge, make such return or statement, keep such records, or supply such information at the time or times required by law or regulations shall in addition to other penalties provided by law be guilty of a misdemeanor, and, upon conviction thereof, shall be fined not more than \$10,000, or imprisoned not moer than one year, or both, together with the cost of prosecution.

(d) Any individual required to supply information or keep certain records under this title, or regulations prescribed thereunder, who knowingly supplies false or fraudulent information, or falsifies such records shall, in addition to any other penalty provided by law, upon conviction thereof, be fined not more than \$500 or imprisoned not more than one year, or both.

(e) Any person who pursuant to this title, or regulations prescribed thereunder, knowingly delivers or discloses to the Administrator, the Secretary, or their delegates any list, return, account, statement, or other document which is fraudulent or false as to any material matter shall be fined not more than \$1,000 or imprisoned not more than one year, or both. Any person required pursuant to this title, or regulations prescribed thereunder, to furnish any information to the Administrator or the Secretary, or any other person who knowingly furnishes for the purpose of this title or such regulations, to the Administrator or such other person any in-formation which is fraudulent or false as to any material matter shall be fined not more than \$1,000, or imprisoned not more than one year, or both. Any person who for the purposes of this title or such regulations-

(1) knowingly makes and subscribes to any return, statement, or other document which contains or is verified by a written declaration as having been made under the penalties of perjury and which he does not believe to be true and correct as to every material matter; or

(2) knowingly aids or assists in, or procures, counsels, or advises the preparation on or presentation under, or in connection with any return, affidavit, claim, or other document, which is fraudulent or is false as to any material matter, whether or not such falsity or fraud is with the knowledge or consent of the person authorized or required to present such return, affidavit, claim, or document; or

(3) removes, deposits, or conceals, or is concerned in removing, depositing, or concealing any goods or commodities for or in respect whereof any charge is or shall be imposed, or any property upon which levy is authorized under this title, with intent to evade or defeat the assessment or collection of any charge imposed pursuant to this title; shall be guilty of a felony and, upon conviction thereof, shall be fined not more than \$5,000 or imprisoned not more than three years, or both, together with the costs of prosecution.

TITLE II-GENERAL PROVISIONS

STATE REGULATION

SEC. 201. Nothing in this Act shall be construed to preclude or deny any State

or political subdivision of a State the right to adopt or enforce any standard or regulation relating to the reduction of solid waste volume, the character of such waste, or the reuse or recycling of such waste, which is more stringent than standards or regulations imposed under this Act.

RECORDS, REPORTS, AND INFORMATION

SEC. 202. (a) Each manufacturer of a product to which this Act is applicable shall—

(1) establish and maintain such records, make such reports, provide such information, and make such tests as the Administrator or the Secretary may, at his discretion, reasonably require to enable him to determine whether such manufacturer has acted or is acting in compliance with this Act;

(2) upon request of an officer or employee duly designated by the Administrator or the Secretary, permit such officer or employee at reasonable times to have access to such information and the result of such tests and

to copy such records; and

(3) to the extent required by regulations of the Administrator or the Secretary, make products coming off the assembly line or otherwise in the hands of the manufacturer available for testing by the Administrator: Provided, That the Administrator or the Secretary shall require only the minimum number of products needed to conduct such tests as he finds necessary to further the purposes of this Act.

(b) (1) All information obtained by the Administrator or the Secretary, or a representative pursuant to subsection (a) of this section, which information contains or relates to a trade secret or other matter referred to in section 1905 of title 18, United States Code, shall be considered confidential for the purpose of that section except that such information may be disclosed to other Federal officers or employees, in whose possession it shall remain confidential, or when relevant to the matter in controversy in any proceeding under this Act, but only where such disclosure is essential to the conduct of such proceeding.

(2) Nothing in this subsection shall authorize the withholding of information by the Administrator or the Secretary, or by any officer or employee under the control of either, from the fully authorized committees of the Congress.

(3) The Administrator shall from time to time, but no less frequently than annually, report on the progress of this Act to the President and the Congress.

REGULATIONS, PROCEDURES, AND JUDICIAL REVIEW

Sec. 203. (a) At his own initiative, or upon the petition of any person, the Administrator and the Secretary of the Treasury are each authorized to issue regulations to carry out the purposes of this Act and to amend or rescind such regulations at any time.

(b) The Administrator or the Secretary of the Treasury shall publish any regulations proposed under this Act in the Federal Register at least sixty days prior to the time when such regulations shall become final. The Administrator or such Secretary shall also publish in the Federal Register a notice of all petitions received under subsection (a) and, if such petition is denied, the reasons therefor. Such notice shall identify purpose of the petition and include a statement of the availability of any data submitted in support of such petition. If any person adversely affected by a proposed regulation files objections and requests a public hearing within forty-five days of the date of publication of the proposed regulation, the Administrator or such Secretary shall grant such request. If such public hearing is held, final regulations shall not be promulgated by the Administrator or such Secretary until after the conclusion of such hearing. public hearings authorized by this subsec-tion shall consist of the oral and written

presentation of data or arguments in accordance with such conditions or limitations as the Administrator or such Secretary may

make applicable thereto.

(c) Proposed and final regulations issued under this Act shall set forth the findings of fact on which the regulations are based and the relationship of such findings to the regulations.

(d) Any judicial review of final regulations promulgated under this Act shall accordance with section 701-706 of title 5, United States Code, except that with respect to relief pending review, no stay of an agency action may be granted unless the reviewing court determines that the party seeking such stay (1) is likely to prevail on the merits in the review proceeding, and (2) will suffer irreparable harm pending such proceeding

(e) If the party seeking judicial review applies to the court for leave to adduce additional evidence, and shows to the satisfac-

tion of the court either-

(1) that the information is material and was not available at the time of the proceeding before the Administrator or the Secretary of the Treasury; or

(2) that failure to include such evidence in the proceeding was an arbitrary or capricious act of the Administrator or such

Secretary, the court may order such additional evidence (and evidence in rebuttal thereof) to be taken before the Administrator or the Secretary, and to be adduced upon the hearing, in such manner and upon such terms and conditions as the court may deem proper. The Administrator or the Secretary may modify his findings as to the facts, or make new findings, by reason of the additional evidence so taken, and his recommendation, if any, for the modification or setting aside of his original order, with the return of such additional evidence.

By Mr. KENNEDY:

S. 1282. A bill to amend the Older Americans Act of 1965 to provide assistance for legal services projects for the elderly; to the Committee on Human Resources.

LEGAL SERVICES FOR THE ELDERLY

Mr. KENNEDY. Mr. President, I am introducing today legislation to expand the Federal support for legal services programs serving older Americans.

This bill will fund specific programs to provide legal services to the elderly across the Nation. It will complement existing legal services corporation programs serving the elderly poor.

It will reach out to those elderly poor who are not reached today by legal services programs because of the corporation's limited funds. It will reach as well toward those elderly, living on fixed social security incomes and other limited sources of income who may barely exceed the poverty standards.

Hearings which I have held over recent years on behalf of the Senate Committee on Aging have demonstrated without question the growing need for legal protections for the Nation's elderly.

Upon reaching retirement age, older Americans increasingly rely upon Federal programs-such as social security, medicare, supplemental security income, food stamps, veterans' pensions, railroad requirement, and others.

All too frequently regulations, guide-lines, applications certifications and oth-

er requirements produce a maze that leaves many elderly bewildered.

Many simply give up and accept decisions which affect their rights without knowing the remedies available to them or even what their rights actually are.

Witnesses-including elderly clients, legal services attorneys, senior citizen leaders and others-emphasized that many old Americans now find themselves in an impossible situation when a legal problem arises.

In Boston, Dr. James Peace, the Massachusetts Director for the American Association of Retired Persons, gave this

The elderly also experience legal problems that are unique to them; for example, age discrimination in employment, protection with respect to nursing home care, involuntary commitment, enforcement of pension rights, and eligibility for special tax relief programs. The most prevalent and serious problem, however, is one that may not even be perceived as a legal one; namely, the inability of many older persons to obtain sufficient resources on which to live decently.

The elderly have legal rights to food, medical care, and money payments; things under a complex network of local, state and federal programs, including Social Security, Medicare, Medicaid and food stamps. The elderly may forfeit their legal rights because they do not recognize that they have legal problems. They may be too proud to seek what they consider 'free' help or are anxious somewhat about the uncertainties of obtaining an attorney. More importantly, the elderly at times, forfeit their rights because they are unable to obtain legal assistance.

Lessie Hill, an attorney with the Senior Citizens Advocate Center in Camden. N.J., also stressed the elderly's special need for legal services. She stated:

Often senior citizens failed to realize that a lot of their problems were legal in nature and that legal services were there to serve them. Even those that knew the problems could be solved by an attorney hesitated to contact an attorney because they could not afford one or they felt they couldn't contact legal services because lawyers, just like doctors nowadays, don't make house calls.

Elderly witnesses told the committee about their frustrations concerning erroneous social security and SSI payments; rent and utility increases without adequate notice; informal denials when applying for SSI, food stamps, and social services; and their inability to under-stand "all the fine print." Some older persons, however, were aware of legal services, and they were grateful. As Mrs. Cecilia Fennessey, of Dorchester, Mass., put it-

What would we do if we didn't have someplace to go for advice? It would only be impossible for us.

Despite these pressing needs, the elderly have been underrepresented in legal services programs. This point was made very emphatically during a hearing I conducted for the Committee on Aging last September.

Legal services offices, with their limited budgets and limited professional staffs, simply have lacked the resources to provide the degree of representation older Americans need.

Moderate-income elderly persons also experience difficulty. They have too much income for the legal services program. Yet, they cannot pay a private attorney \$40 or \$50 an hour or whatever the going

Moreover, most private attorneys are not that well versed on legal issues affecting older Americans.

Very few have had any formal legal training in social security, medicare, SSI, or other programs of direct importance to the elderly.

The net impact is that the aged client is least likely to obtain effective representation at a reasonable cost in situations where it is needed most—in complex cases involving technical issues where the outcome is uncertain and the remuneration for the attorney is modest.

Fortunately, some positive actions have occurred in recent years.

Since 1975, the Older Americans Act has provided some funding for legal services for the elderly under the model projects program.

State agencies have used this money to place an attorney on their staffs to promote and develop legal services activities. However, this attorney has no program funds. In some States, the attorney has no special legal services activities for the elderly to coordinate.

The Administration on Aging has also funded 11 legal services programs during the past 2 years. The centers provide technical assistance to State and area agencies on aging to promote the development of legal services programs for the elderly.

In addition, title III area planning and social services funding under the Older Americans Act has supported legal services programs for the elderly. In most cases, the local office on aging contracts with Legal Services Cooporation programs to provide one or two attorneys who can become aging specialists.

Mr. President, many of these existing legal services efforts on behalf of the elderly have been very successful, and I applaud them. However, they fall short of the demonstrated need. Funding is also discretionary and uncertain. Model projects are ususally short-lived demonstration projects which either prove or disprove the need for the specific service being "tested."

The bill I introduce today builds upon these demonstration projects by creating a new legal services provision under the Older Americans Act. This section would assure the continuation of a structured legal services program for the elderly. I am hopeful that it will encourage other legal services providers to give more emphasis to the elderly

My bill would authorize grants to State agencies on aging to support a staff person within the agency to oversee and coordinate the delivery of legal services to the elderly and provide legal advice and technical assistance on a wide range of issues. This person would also provide direct client representation when necessary. Additionally, funding would be authorized for area agencies on aging to contract with local or statewide legal services corporation programs in most cases, or other providers of legal services

CXXIII-686-Part 9

where the Legal Services Corporation programs are unavailable.

The Legal Services for the Elderly Act would allocate 80 percent of the funding for State and area agencies on aging and 20 percent for national legal services resource centers. These resource centers would provide technical assistance to groups providing legal services for the elderly.

Mr. President, legal assistance can be an effective linking service for elderly persons. It can assist them in obtaining urgently needed services, such as, transportation, housing, health care, and income maintenance benefits. Legal services can enhance the Older Americans Act's No. 1 responsibility: to provide the elderly with an effective advocate at the Federal level.

Mr. President, I am hopeful that this bill can be enacted promptly.

By Mr. KENNEDY: S. 1283. A bill entitled "The National Home-Delivered Meals for the Elderly Act"; to the Committee on Human Resources.

HOME-DELIVERED MEALS FOR THE ELDERLY ACT OF 1977

Mr. KENNEDY. Mr. President, I am pleased to introduce the National Home-Delivered Meals for the Elderly Act of 1977. This bill will expand the "meals on wheels" segment of the nutrition for the elderly program.

It will mean thousands more homebound elderly will receive meals each day. It will build on a program which has demonstrated its effectiveness. It will maximize existing nutrition programs that know where the homebound are and how to provide meals to reach them.

In 1971, I introduced a bill that created the nutrition for the elderly program, establishing a new title VII in the Older Americans Act. The title VII program was passed by Congress overwhelmingly in 1972. It provides at least one hot meala day to senior citizens in congregate meal sites. It has provided both nutritious meals and a social setting that draws isolated elderly back into the mainstream of community life.

The title VII program also permits the delivery of meals to the homebound elderly. However, the funding restraints, even with the more than \$200 million current level of appropriations, have permitted only a token effort to meet the nutritional needs of the homebound elderly.

The need for a program that will provide meals to the homebound-often called a meals-on-wheels program-was underlined by the Senate Nutrition Committee's 1974 national nutrition policy study. That study brought together a number of panels for a series of hearings on vital nutrition issues. One of these panels, consisting of nutritionists, economists, community representatives, and low income people, studied several recommendations for nutrition initiatives. That panel's first priority for the elderly was the passage of legislation that would establish a meals-on-wheels program.

I have worked closely with the Chairman of the Senate Nutrition Committee,

Senator McGovern, in this area. He has helped the effort to improve the nutrition for the homebound elderly. I joined with him to cosponsor S. 519 to deal with this problem. I believe that the approach taken in the legislation I am introducing today will permit the Senate Aging Subcommittee to examine the best way to deliver these services to the homebound elderly.

There are approximately 3 to 4 million elderly who are confined to their homes and are unable to participate in present Government nutrition programs. These unfortunates, many of whom are impoverished elderly, suffer from a high level of anemia, mental depression, subclinical pellagra and protein deficiency, as well as high rates of illness and longterm institutionalization. Indeed, studies carried out by gerontologists in numerous localities consistently show that 10 to 40 percent of nursing home residents are not in need of institutional care, and evidence indicates that a large percentage of these people might be able to avoid costly institutionalization if they were receiving home-delivered meals.

I believe that the National Home-Delivered Meals for the Elderly Act of 1977 can serve as a major step in alleviating the plight of the homebound elderly, particularly the elderly poor, and in avoiding the tragedy and high cost of institutionalization for many of our senior citizens. It is with this concern and conviction that I introduce his bill.

I am pleased that the National Council on Senior Citizens, the American Association of Retired Persons, the National Council on Aging and others are strongly urging action on a bill of character to improve services to the homebound elderly.

Under this legislation, title VII of the Older Americans Act of 1965 would be amended specifically to encourage the delivery of meals to the homebound elderly with a separate authorization. There are authorized to be appropriated for the purposes of this section \$80 million in fiscal year 1978 and \$100 million in fiscal year 1979.

Funds made available under this act would be distributed to the States in accordance with the current title VII formula. State Offices on Aging administering the act would give funding preference to congregate projects and presently existing meals-on-wheels projects operating in those areas of the State that contain the highest incidence of low-income individuals, and to the extent possible, projects operated by, and serving the needs of: minority, Indian and limited English-speaking eligible individuals, in proportion to their numbers in the

The act provides that, whenever possible, program funds should be provided in conjunction with congregate meal sites in order to promote an integrated nutrition system, and where home-delivered nutrition services exist without a congregate meal site, State agencies should encourage the development of complimentary congregate services.

The act also provides that in instances where presently existing meals-on-

wheels groups receive program funding, these groups must have demonstrated: a need for their services; an assurance that they will maintain, to the maximum extent possible, their previous level of non-Federal resources; and an assurance that conditions and regulations of title VII congregate meal programs, where applicable, will be met.

Any nutrition project applicant seeking funds for congregate meal programs or meals-on-wheels programs, whose application has been denied, must be afforded an opportunity for an impartial hearing before the State agency.

The act also provides that State agencies shall administer both title VII congregate meal programs and meals-onwheels programs at the least possible administrative cost, which cost cannot exceed 5 percent of the funds allotted for these programs. In addition, the act provides that the value of volunteer services, contributions, etc., provided in either of these programs, can be counted as non-Federal resources to meet title VII's requirement of 10 percent non-Federal matching funds.

Mr. President, I am hopeful that this bill can be enacted promptly.

I ask unanimous consent to have the bill printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1283

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Home-Delivered Meals for the Elderly Act of 1977".

SEC. 2. Section 706(a)(1) of the Older Americans Act of 1965 is amended by inserting "(A)" immediately after "(1)", by inserting after the semicolon the words "and, or", and by adding after such section the following new subparagraph:

"(B) to establish a project (referred to herein as a 'nutrition project') for the elderly which, five or more days per week, provides at least one home-delivered hot meal which assures a minimum of one-third the daily recommended dietary allowances as established by the Food and Nutrition Board of the National Academy of Sciences—National Re-search Council.'

SEC. 3. (a) Section 706(a) of the Older Americans Act of 1965 is amended by adding at the beginning of paragraphs 3 and 6, the following: "With regard to nutrition projects as described in subsection (a) (1) (A) of this section,"; and by striking out "and" at the end of paragraph (10), by redesignating paragraph (11), and all references thereto, as paragraph (13), and by inserting immediate ately after paragraph (10) the following new paragraphs:

"(11) With regard to nutrition projects as described in subsection (a) (1) (B) of this section, to make assessments at least quarterly of individuals receiving assistance under (a)(1)(B) of this section to determine their need for additional services or for a continuation of services, provided that, where feasible, the assessment shall be made by a professional with experience to make such assesment."

"(12) With regard to nutrition projects as described in subsection (a) (1) (B) of this section, to the maximum extent possible, to seek and utilize volunteer personnel, with preference given to the elderly, for the provision of home-delivered meals, and to compensate such personnel when appropriate for transportation expenses incurred in the de-

livery of such meals; and."

SEC. 3(b). Section 706 of such Act is further amended by striking out subsection (b) and redesignating such subsection as subsection (c), and by adding immediately after subsection (a) (13) a new subsection 706(b) as follows:

"(b) (1) In allotting funds for projects under (a) (1) (B) of this section, the grantor agency shall give preference to congregate projects and meals-on-wheels projects that are operating in those areas of each State that contain the highest incidence of low income individuals, and, to the extent feasible, projects receiving allotments shall be operated by, and serving the needs of, minority, Indian, and limited English speaking eligible individuals in proportion to their numbers in their State, provided that the grantor agency is also encouraged to make awards to projects, such as meals-on-wheels groups, which demonstrate an ability to operate such services efficiently and reasonably, if such groups—

"(A) are able to demonstrate the need for the services furnished by such groups; and "(B) provide reasonable assurance that the

"(B) provide reasonable assurance that the nutrition project for which assistance is sought will maintain, to the maximum extent possible, its level of funding from non-Federal resources for the fiscal year prior to the year for which the determination is made under title VII of this Act; and

"(C) provide assurance that the conditions and regulations of Title VII, where they are applicable to meals-on-wheels projects, will

be met by such groups;

"(2) In making awards under clause (a) (1) (B) of this section, the State agency shall assure that home-delivered nutrition services should be provided in conjunction with congregate meal sites whenever possible to promote an integrated nutrition system. Where meals-on-wheels or other home-delivered nutrition services exist without a congregate meal site, State agencies are encouraged to develop complimentary congregate services.

"(3) Title VII projects currently using funds made available under section 708(a) of this Act for home-delivered meals are encouraged to continue using such funds for the same purposes even after receiving funds for home-delivered meals under section 708

(b) of this Act.

"(4) The Commissioner, in consultation with representatives from the American Dietetic Association, the Association of Area Agencies on Aging, the National Association of Title VII Project Directors, the National Association of Meals Programs, Incorporated, the National Association of State Units on Aging, an organization representing rural areas, and any other appropriate groups, shall develop minimum criteria of efficiency and quality for the furnishing of home-delivered meal services for such projects. Such criteria shall take into account the ability of well established meals-on-wheels programs to continue such services without major alteration in the furnishing of such services."

"(5) No contract may be entered into and no grant may be made for a project under clause (a) (1) (B) of this section unless the contract or the agreement evidencing the grant includes provisions designed to assure that the furnishing of such services complies with the minimum criteria established under

this subsection."

SEC. 4(a). Section 705(a) of the Older Americans Act of 1965 is amended by inserting immediately after paragraph (5) the

following new paragraphs:

"(6) provide assurances that within its awards to Title VII projects, contracts or subcontracts shall be made, to the maximum extent feasible, with existing meals-on-wheels organizations to, at a minimum, deliver the meal service."

"(7) provide that the State agency shall require that any nutrition project applicant

whose application for approval has been denied and any nutrition project whose application for renewal has been denied, shall be afforded an opportunity for an impartial hearing before the State agency, which hearing and hearing decision, in the case of nutrition projects denied a renewal of funding, shall be provided prior to the time when the prior funding period for such nutrition project will have expired."

SEC. 4(b). Section 705(a) (2) (B) of the Older Americans Act of 1965 is amended by striking the entire subsection (B) and inserting in lieu thereof the new subsection

designated:

"(B) to provide for the proper and efficient administration of the State plan at the least administrative cost. Not to exceed 5 per centum of the funds allotted to a State under Section 708 of such Act may be used for the administration of the State plan pursuant to this section. In administering the State plan the State agency shall—"

SEC. 5(a) (1). Section 708 of the Older Americans Act of 1965 is amended by inserting "(a)" after the section designation.

(2) Section 708(a) of such Act (as redesignated by paragraph (1) of this subsection) is amended by inserting "and paragraph (1) (B), (11), and (12) of section 706(a)" after "section 707(c)" in the parenthetical.

Sec. 5(b). Section 708 of such Act is amended by adding at the end thereof the

following subsection:

"(b) (1) In addition to the sums authorized by subsection (a), there are authorized to be appropriated \$80,000,000 for the fiscal year 1978, and \$100,000,000 for the fiscal year 1979 for the purpose of providing homedelivered meals pursuant to section 706(a) (1) (B).

(2) Sums appropriated pursuant to paragraph (1) of this subsection shall be obligated and expended during the fiscal year for which they are appropriated, provided that sums appropriated pursuant to this section, shall, notwithstanding the provisions of any other law, continue to remain available until expended."

Sec. 6, Section 701(b) of the Older Americans Act of 1965, is amended by adding after the period following the word "services" the

new sentences:

"In addition, the national policy should provide home-delivered meals and other social services to those elderly who are home-bound and unable to attend a congregate center, however, it is not intended that such meals and services serve to foster dependency on the part of those who are able to attend a congregate site."

SEC. 7. Section 703(a) (2) (c) of the Older Americans Act of 1965, is amended by adding at the end thereof the following sentence:

"Voluntary contributions or services provided to projects described in Section 706 (a) (1) of this Act, shall be counted as non-federal resources for the purposes of meeting the requirements of this provision."

By Mr. CRANSTON:

S.J. Res. 46. A joint resolution to establish a national policy for the taking of predatory or scavenging mammals and birds on public lands, and for other purposes; to the Committee on Environment and Public Works.

A NATIONAL POLICY ON PREDATORS

Mr. CRANSTON. Mr. President, I introduce for appropriate reference a bill to establish a national policy for the taking of scavenging mammals and birds on public lands, and for other purposes.

Mr. President, the hour is fast approaching when Senators will leave Washington for the nonlegislative period that occurs yearly at Easter. With this

in mind, I wish to introduce my bill regarding predator-prey relationships so that Senators, their staffs, and others might have an opportunity to review the measure prior to resumption of legislative activities on Monday, April 18. Because the time is short, I will defer extended comment on the bill until the Senate reconvenes.

In brief, the bill I introduce today addresses three critical issues in national wildlife management, especially management policies as they relate to predators and prey. One is the need to establish, within the broad parameters of wildlife management policies, a clear understanding and recognition of the interdependency of predator and prey; a second is the need to establish a national policy for the taking of wolves and other predators or scavengersmammals or birds-on public lands, a policy that reflects a thorough understanding of these interdependent relationships; and a third is the need to set forth a series of clear, statutory procedures for the taking of predators on public lands that is truly responsive to the right of all Americans to know how wildlife management policies relevant to predators are being carried out on lands that are owned by the public and managed in the national interest.

Mr. President, I ask unanimous consent that the text of my resolution be printed at this point in the Record.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 46

Whereas, Article IV, Section 3, Clause 2 of the Constitution vests authority in the Federal Government to "make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States," and

Whereas, predators and scavengers are indispensible to the health and stability of natural ecosystems and to prey species in

particular, and

Whereas, the extermination of predators has resulted in dramatic instability of prey populations and attendent habitat deterioration, and

Whereas, there is no evidence that non-human predation alone is a cause of extinction of prey, and

Whereas, organisms tend to be closely adapted to their environment by evolution, whereby their survival ability is greatest, and

Whereas, evolution can occur relatively slowly in response to changing environmental parameters, including the living and nonliving components of the ecosystem, and

Whereas, a thorough understanding of the interdependent relationship between predator and prey is essential to sound wildlife and land use planning at all levels of government, and furthermore,

Whereas the Convention on International Trade in Endangered Species of Wild Fauna and Flora, as ratified by the U.S. Senate, stipulates that native species of wildlife should be maintained throughout their range at a level consistent with their role in the ecosystems in which they occur

Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,

All taking of wolves and other predators or scavengers naturally occurring on public lands for all or part of their life cycles is hereby prohibited unless such taking is approved according to the requirements of Sections 3 or 4 of this Joint Resolution. SEC. 2. For the purpose of this Act, the

following definitions apply:

WOLVES include any individuals of the species name Canis lupis and Canis rujus found naturally on the continent of North America.

PREDATORS include individuals of any species of bird or mammal that regularly capture or consume other vertebrate species.

WILDLIFE includes all species of the animal kingdom (persisting for all or part of their life cycles on ecosystems of the United States, its coastal waters, or adjacent is-lands) which are covered by the provisions

PUBLIC LANDS means any lands belong ing to the United States of America on which regulations regarding taking of wildlife covered by this Act are or may become less restrictive than those herein provided.

SPECIES includes any subspecies of wildlife covered by this Act and any other group of wildlife covered by this Act of the same species or smaller taxa in common spacial arrangement that interbreed when mature.

PERSON means an individual, corporation, partnership, trust, association, or any other private entity, or any officer, employee, agent, department or instrumentality of the Federal Government, of any State or political subdivision thereof, or of any foreign gov-

ernment.

TAKE means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct for purposes of sport, obtaining food or the collection of bounties on any wolf, predator, or other form of wildlife covered by this Act, excluding taking for subsistence purposes

SCAVENGERS include individuals of any species of bird or mammal that naturally feed upon the remains of dead vertebrate

species.

An ECOSYSTEM is the basic ecological unit including the living organisms, the nonliving environment, and the interactions between individual organisms, between specles, and between organisms and the envi-

A SECRETARY is the head of a federal agency having land management responsibilities, including the Secretary of the Interior, the Secretary of Agriculture, the Secretary of Defense, the head of the Tennessee

Valley Authority, and others.

Sec. 3. Proposed actions by any person involving the taking of any wolves or other predators or scavengers naturally occurring on public lands of the United States may be carried out (unless prohibited by other statute or regulations) even though the taking can be reasonably expected to have significant impacts on the specific wildlife covered by this Act, other species of wildlife covered by this Act, or the ecosystems of which the wildlife is a part, if proposals for such actions:

(a) are submitted to the Secretary having primary jurisdiction over the public land on which the taking will occur at least 120 days prior to the date such taking is to com-

mence; and

(b) are described by notice in the Federal Register, allowing at least 60 days for public

comment; and

(c) will, if carried out, maintain that specles at a level consistent with its role in the ecosystem in which taking is to occur, protecting and maintaining the indispensible relationship between predator and prey species and the ecosystem, and be in overall public interest;

(d) are approved in writing by the Secretary after consideration of public comment and consultation with the President's Council on Environmental Quality and with the Director of the U.S. Fish and Wildlife Service before any taking is carried out.

Sec. 4. The Secretary shall enforce the provisions of this Act and shall, in consultation with the President's Council on Environmental Quality, promulgate such regulations as he deems necessary and appropriate to carry out the provisions, including enforcement, of this Act;

Provided that all mammals or birds shot

or captured contrary to the provisions of this section, or of any regulation issued hereunder, and all guns, aircraft, and other equipment used to aid in the shooting, attempting to shoot, capturing, or harassing of any mammal or bird in violation of this section or of any regulation issued hereunder shall be subject to forfeiture to the United States:

Provided further that the Secretary or head of any Federal agency who has issued a lease, license, permit, or other agreement to any person who is convicted of a violation of this Act or of any regulation issued hereunder may immediately cancel each such license, permit, or other agreement. The United States shall not be liable for the payment of any compensation, reimbursement, or damages in connection with the cancellation of any lease, license, permit or other agreement pursuant to this section.

SEC. 5. Nothing herein shall be construed in any way to amend or otherwise alter the requirements of the National Environmental Policy Act of 1969, the Marine Mammal Protection Act of 1972, or the Endangered Specles Act of 1973, as amended.

SEC. 6. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

ADDITIONAL COSPONSORS

S. 2

At the request of Mr. MUSKIE, the Senator from Delaware (Mr. Biden) was added as a cosponsor of S. 2, to require authorizations of new budget authority for Government programs at least every 5 years.

At the request of Mr. Domenici, the Senator from Arizona (Mr. DECONCINI), the Senator from Texas (Mr. TOWER), and the Senator from Idaho (Mr. Mc-CLURE) were added as cosponsors of S. 21, a bill to amend the OSHA to provide additional consultation and education services to employers.

S. 49

At the request of Mr. Mathias, the Senator from Pennsylvania (Mr. HEINZ) was added as a cosponsor of S. 49, a bill to establish a Small Business Administrative Review Court.

S. 196

At his own request, the Senator from Idaho (Mr. McClure) was added as a cosponsor of S. 196, to amend the Internal Revenue Code of 1954.

S. 297

At the request of Mr. Packwood, the Senator from Indiana (Mr. Bayh) was added as a cosponsor of S. 297, relating to imported meat and dairy products.

S. 394

At his own request, the Senator from Texas (Mr. Tower) was added as a cosponsor of S. 394, to provide a comprehensive bridge replacement program.

S. 530

At the request of Mr. Hansen, the Senator from Delaware (Mr. Roth) was added as a cosponsor of S. 530, the Consumer Communications Reform Act of 1977.

8. 664

At the request of Mr. BROOKE, the Senator from Georgia (Mr. Nunn) was added as a cosponsor of S. 664, the Young Families' Housing Act.

S. 708

At the request of Mr. CLARK, the Senator from Oklahoma (Mr. BARTLETT) was added as a cosponsor of S. 708, a bill to amend title XVIII of the Social Security Act to provide payment for rural health clinic services.

S. 1240

At the request of Mr. ALLEN (for Mr. DOLE), the Senator from North Dakota (Mr. Young) was added as a cosponsor of S. 1240, relating to national marketing quota for wheat for the marketing year beginning June 1, 1978.

S.J. RES. 29

At the request of Mr. BURDICK, the Senator from Idaho (Mr. McClure), the Senator from Utah (Mr. HATCH), and the Senator from North Carolina (Mr. HELMS) were added as cosponsors of S.J. Res. 29, to designate National Family Week.

SENATE RESOLUTION 138-SUBMIS-SION OF A RESOLUTION RELAT-ING TO "FAIR HOUSING MONTH"

(Referred to the Committee on the Judiciary.)

Mr. MATHIAS (for himself, Mr. ABOUREZK, Mr. ANDERSON, Mr. BROOKE, Mr. Case, Mr. Heinz, Mr. Humphrey, Mr. JAVITS, Mr. McGovern, Mr. PROXMIRE, Mr. RIEGLE, Mr. STAFFORD, Mr. STEVENS, Mr. Weicker, Mr. Bayh, Mr. Bellmon, Mr. Haskell, Mr. Inouye, Mr. Metzen-BAUM, Mr. MOYNIHAN, Mr. PELL, Mr. NELson, Mr. Stone, Mr. DeConcini, and Mr. WILLIAMS) submitted the following resolution:

S. RES. 138

Whereas it is the policy of the United States to guarantee to every citizen the right to fair housing; and

Whereas this right and the responsibilities attendant on it are set forth in the National fair housing law, title VIII of the 1968 Civil Rights Act; and

Whereas since 1968, the month of April has been set aside each year for commemoration of the fair housing law: Now, therefore,

be it

Resolved, That the Senate recognizes the month of April as Fair Housing Month and that it hereby rededicates itself to the promulgation and practice of the letter and spirit of the fair housing law so that fair housing will become a right that can be realized by every American.

PAIR HOUSING MONTH

Mr. MATHIAS. Mr. President, the month of April marks the ninth anniversary of the enactment of the Fair Housing Law known as title VIII of the Civil Rights Act of 1968.

Title VIII directly prohibits discrimination in the sale or rental of housing because of race, color, religion, national origin, or sex. It further requires Federal agencies "to administer their programs and activities . . . in a manner affirmatively to further the purpose of this title."

Over 80 percent of the Nation's housing is covered by the fair housing law, while the remainder is covered by the Civil Rights Act of 1866 with respect to racial discrimination.

Title VIII of the Civil Rights Act of 1968 prohibits the following acts if based on race, color, religion, national origin,

or sex:

First, refusing to sell or rent to, or deal or negotiate with any person;

Second, discriminating by advertising that housing is available to persons of a certain race, color, religion, national origin, or sex;

Third, discriminating in terms or conditions for buying or renting housing;

Fourth, denying or requiring different terms or conditions for home loans by commercial lenders such as banks, savings and loan associations, and insurance companies;

Fifth, denying that housing is available for inspection, sale, or rent when

it really is available.

Sixth, denying to any person the use of any real estate services, such as brokers, organizations, multiple listing services, or other facilities relating to the selling or renting of housing;

Seventh, "blockbusting" for profit by persuading owners to sell or rent housing by telling them that minority groups are moving into the neighborhood.

Title VIII covers single family housing owned by a private individual who uses discriminatory advertising in its sale or rental or who uses a broker to sell or rent his home. It applies to multifamily housing of five or more units and to multifamily units of four or less if the owner does not reside in any of the units.

The remedies for the aggrieved person, however, place a substantial burden on the individual to fight his way through a HUD complaint and conciliation process and, or, Federal court litigation. Only where a pattern of discrimination can be shown, can the Attorney General file suit in Federal court.

Thus, the individual complainant must bear the financial and time burden of protracted Federal court litigation. To ease this burden and expedite the settlement of legitimate complaints, I, along with Senator Glenn, have introduced a bill, S. 571, which would authorize HUD to enter Federal suits for individual relief on behalf of individual complainants. I believe this legislation would provide HUD with some enforcement "teeth" in housing discrimination cases while assuring that acts of discrimination are redressed in a timely manner, and equally important, deterred.

Last year, the Department of Housing and Urban Development reported some notable progress in reducing its fair housing complaint backlog. During fiscal year 1976 HUD processed 4,807 title VIII complaints and substantially reduced both its backlog and processing time. At the end of the fiscal year, there were 758 cases pending with 57 of them over 150 days old.

Presently HUD has substantial investigatory, subpena, and hearing powers but no authority to issue cease and desist orders. It, therefore, has no power

to maintain the status quo of a property in question while it attempts to resolve the complaint through conciliation.

I think the time has come for HUD to take an aggressive lead in the area of fair housing and equal opportunity through enactment of S. 571.

Responsibility for implementing title VIII is delegated to the HUD regional offices. Each regional office has an assistant regional administrator for equal opportunity who have staffs for compliance, field support, and evaluation. A little over half of this staff's time is spent on enforcement of title VIII and practically all that effort relates to processing of complaints.

The HUD Secretary is further directed by this title to conduct studies relating to discriminatory housing practices, provide technical assistance to groups seeking to prevent discrimination, cooperate with industry, Government, and others to develop and implement voluntary compliance programs, and to develop an affirmative marketing policy and program.

Many of these things have been done by HUD and we have now reached the point where the additional authority to

enter Federal suits is needed.

There is a new twist to the fair housing scene this year with the recent Arlington Heights Supreme Court decision. By a vote of 5 to 3, the Supreme Court ruled on January 11 that the village of Arlington Heights, Ill., refusal to zone a tract of land for low-income, multifamily housing was not racially motivated and thus did not violate the equal protection clause of the 14th amendment to the Constitution.

The Court did, however, remand the case back to the lower court for arguments on whether the refusal to rezone violated the Fair Housing Act of 1968. By remanding the case, the Court is implicitly recognizing that the Fair Housing Act's standard of what constitutes proof of racial discrimination may be less stringent than the 14th amendment.

Persons concerned with fair housing will continue to watch this case closely for its long-term implications for the cause of civil rights and equal opportu-

nity.

Mr. President, the resolution I am submitting today, recognizes the month of April as fair housing month and calls upon the Nation to be mindful of the goals expressed in the Civil Rights Act of 1968.

We must continue to be vigilant about fair housing so that our Nation's institutions are no longer complacent about this issue, but instead are affirmative leaders in providing fair housing and equal opportunity.

AMENDMENTS SUBMITTED FOR PRINTING

DEPARTMENT OF ENERGY—S. 826
AMENDMENT NO. 186

(Ordered to be printed and referred to the Committee on Governmental Affairs.)

Mr. KENNEDY (for himself, Mr. Metzenbaum, Mr. Abourezk, Mr. Bayh, Mr. DURKIN, Mr. McIntyre, Mr. Metcalf, Mr. Nelson, and Mr. Riegle) submitted an amendment intended to be proposed by them jointly to the bill (S. 826) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes.

Mr. KENNEDY. Mr. President, our Nation is at a crossroads in determining how we will deal with what is now the No. 1 concern of most of our citizens: How we will be able to fuel our home heating furnaces, our means of transportation, our places of business and industry, and our economy generally. In short, we have for the past few years been mired in the midst of an energy crisis. President Carter and the 95th Congress are determined to do something about it.

The paths we have before us are both rocky and the road not always clear. One involves continuation and expansion of Government regulation in every aspect of energy production, transportation, distribution, financing, retailing, and even use. The other involves loosening wherever possible the bonds of bureaucratic regulatory apparatuses in favor of more flexible and responsive regulation by the marketplace—characterized by informed consumers obtaining products from competitive producers.

No one can deny the importance of energy to the national economy. Nor also can the concentration of power in the hands of a few major vertically and horizontally integrated multinational corporations be underestimated. It seems to me that injecting competitive goals and mechanisms into our national policymaking and regulatory machinery cannot be left to the occasional congressional pronouncement or Antitrust Division pleading. Rather, we must give force and direction on a daily, ever-present basis to our often-reiterated declarations that our basic economic policy lies in reliance on the forces of free competition.

That is why today I am joining with eight cosponsors in introducing an amendment to the President's proposed Energy Reorganization Act (S. 826) to create an Office of Assistant Secretary for Competition and Consumer Affairs within the new Department of Energy. The Assistant Secretary would be nested with both responsibility and authority to promote and protect competition in energy industry activities and to insure that the best interests of the American consuming public are not ignored in governmental regulatory and policymaking processes.

Congress has frequently stated and restated our national policy to promote free and open competition in the marketplace of our country. This policy was given its basic formulation over 70 years ago in the Sherman Act, which the Supreme Court has described as a "charter of freedom" with "a generality and adaptability comparable to that found to be desirable in constitutional provisions." One recent case has held it to be fundamental policy binding on all officials of the Government.

In energy matters, particularly, Congress has in recent years emphasized and reemphasized the "priority objective" to "restore and foster competition in the energy industries."

The Atomic Energy Amendments of 1967, the Emergency Petroleum Allocation Act, the Trans-Alaskan Pipeline Act, the Energy Policy and Conservation Act, the Defense Production Act Amendments, the Deepwater Ports Act, all make strong reference to a national policy of promoting competition. It is, however, fair to say that these statements of policy have suffered the usual fate of general exhortations and have had little impact upon our energy policy.

The problem, to a large extent, has been that no one in particular has been responsible for energy competition policy. The forces dedicated to the enforcement of competition have been few and

scattered.

Now, with the creation of this new Department, we have an opportunity to remedy this problem, without new substantive legislation, by merely collecting in one office responsibility for giving effective administrative voice to our frequent, but unheeded, legislative exhortations regarding antitrust policy.

The form of this new Department makes this an exceptionally important matter. S. 826 centralizes in one vast organization a host of regulatory responsibilities over all aspects of energy supply and pricing. Years of history teach, however, that agencies with regulatory responsibility quickly and surely develop an institutional hostility to competition and free market solutions which remove or reduce the bureaucrat's ability to exercise omnipresent control over activities of the private sector. Given the immediacy, importance, and scope of energy control, there is inevitably an overwhelming temptation for a Government official to rely on planning, organization, and slide-rule regulation, rather than the more responsive and uncontrolled forces of competition.

The process is not a new one—over two decades ago Prof. Louis Schwartz described regulators with telling accuracy:

Often they will be men who find congenial the routine security of office and the reliable deference of the small group of important businessmen and counsel who regularly appear before them. They will naturally be responsive to plans for making business life more orderly and secure through integration and price regulation. Unplanned and ruthless commercial rivalry will be distasteful to them. On the other hand, small victories over those whom they regulate will suffice to maintain their self-esteem, while large issues can be postponed or avoided.

The Assistant Secretary for Competition and Consumer Affairs would be in a position to argue forcefully for the role of competition in relation to the new Energy Department's actions. This would effectively supplement, but not duplicate, the functions of the Antitrust Division of the Department of Justice. While that Division can supply antitrust advice to other agencies, it is rarely in a position where it can do so effectively—most especially in energy matters. Even where, as in the Deepwater Ports Act, statute explicitly requires that the Antitrust Di-

vision be consulted, the recent Loop and Seadock licensing decisions by the Secretary of Transportation reveal the need to supplement Antitrust's advice by internal policymaking machinery. There Attorney General Levi delivered an opinion apparently detailing the anticompetitive aspects of these joint ventures in energy transportation. The Attorney General's involvement in this matter, however, began after the basic decision had already been made. The Justice Department was not involved in the decision that the deepwater ports had to be constructed, owned and operated by integrated oil companies. The Attorney General was left with the role of recommending measures to mitigate the consequences of this decision. And not only did the Secretary depart from General Levi's recommendations, but classified his opinion as confidential-despite Justice assurances that it was not.

The problem is not with the quality of antitrust advice rendered by the Department of Justice, though the Antitrust Division is considered to have foresworn any aggressive pursuit of competitive goals in energy matters generally. The problem is that Justice is an outsider: an advocate with no client; a representative with no consistency. It is rarely admitted to the internal policymaking process, and then usually after the critical decisions have been made. The traditional role of the division as advocate for competition policy in administrative proceedings should be continued, but it has clearly proved inadequate in the

Under my amendment, the new Assistant Secretary for Consumer Affairs would be empowered to put competitive considerations up front-and from the inside. Antitrust review would be internalized in the agency's operations, not brought in as an afterthought. It would be part of the on-going inside decisional process, not a sudden confrontation from outside the Department. And, from his seat within the Department of Energy, the Assistant Secretary for Competition would be in a position to enlist the aid of the antitrust agencies, both the Justice Department and the Federal Trade Commission, when those agencies' broad enforcement powers are required to achieve the free enterprise competition which is our national objective.

If we are to make the fostering of competition a daily reality as well as a policy objective, then the institutional framework for decisionmaking must be changed. This is especially important in dealing with the energy industries and in particular the petroleum industry. This industry has a singularly successful record of manipulating Government institutions for anticompetitive purposes. John O'Leary, the new Federal Energy Administrator, has most accurately summarized the history of the process for the Antitrust Subcommittee:

... the oil industry maintains a formidable level of political activity. It understandably uses its economic and political strength to advance its own interests and those interests do not always coincide with those of the public at large.

... the oil industry has an extremely long tradition of seeking the development, par-

ticularly at the raw material end of the business, of institutions that essentially eliminate price competition.

The first application of NRA, back in the 1930's the subsequent passage of the Connelly Hot Oil Act, and the wave of State conservation statutes, particularly those relating to proration of production to market demand, are early examples of this tradition. Later, when imports threatened the market price stability created by prorationing, the petroleum industry was able to mount and sustain an effort that extended, through Federal action, the prorationing concept to imports. Thus, I think it is clear that for reasons that may be perfectly valid for the oil industry, that the industry used its political strength to create, by statute, a result that other industries only could have approximated by collusive action.

The Assistant Secretary for Competition should have three basic functions. First, he or she should be involved in the development of all aspects of energy policy which affect competition. And, as the principal officer in charge of competition, the Assistant Secretary should have the responsibility of continually monitoring the effects of such policies on the welfare of the consuming public. To perform this function, the Assistant Secretary must have access to all phases of the decisionmaking process in the department and the ability to get recommendations before the Secretary.

Second, the Assistant Secretary should be responsible for setting standards and procedures which will insure that grants. licenses, and contracts issued by the Department have a procompetitive effect. For example, such things as the research grants given by ERDA have the potential of shaping the structure of the energy industry for many decades in the future. He should be responsible for promulgating rules to insure that such grants not lead to or aggravate economic concentrations. At the same time he must insure that the technology developed by such subsidized research not become the basis of such concentration.

The Assistant Secretary should also perform a similar function regarding energy related activities of other departments. He should have the responsibility of intervening in proceedings involving energy transportation, such as the licensing of deepwater ports or tanker constructions. He should be a party in the proceedings to license nuclear reactors and should supplement the role now played by the Antitrust Division in reviewing the competitive implications of reactor licensing.

Third, the Assistant Secretary should be responsible for participating on behalf of consumer interest or promoting and funding direct consumer participation in formal proceedings. The Assistant Secretary's function should be to protect the interest of the consuming public and to insure that energy regulation interferes with competition no more than is necessary.

more than is necessary.

It is not clear under S. 826 how the decisions on crude oil and natural gas pricing are to be made. Whatever procedure is finally adopted, it is essential that there be no one official in the Department with full responsibility to intervene to protect the competitive system and the interest of the consuming

public. Ancillary to this responsibility, the Assistant Secretary should also have the ability to encourage and, where appropriate, finance direct public involvement in such proceedings

Finally, but not least, the Assistant Secretary for Competition should be authorized to investigate and required to report on the state of competition both within the field of energy as a whole, and within each of the energy industries.

The creation of the office would do a great deal to bring the rhetoric about competition, both from the Congress and the Executive, closer to reality. Obviously this measure by itself will not insure competition in the energy industries, nor will it save us from repeating past errors. It can, however, insure that competitive considerations have a hearing in the formulation of our energy policy. Had this been consistently done in the past, we might well have been spared some of the worst aspects of our present energy dilemma.

TAX SIMPLIFICATION AND REDUC-

AMENDMENT NO. 187

(Ordered to be printed and to lie on the table.)

Mr. PACKWOOD. Mr. President, I am today submitting an amendment to delete the rebate from the Tax Reduction and Simplification Act of 1977. The rebate—a "Pump Now, Pay Later" proposal—is ill-suited to the economy in 1977. I think the American people know that approval of the rebate constitutes economic and legislative irresponsibility.

Approval of the rebate would be economic irresponsibility because the rebate is the wrong economic stimulus at the wrong time. It would provide a jolt to the economy when we do not need it, and when we may not be able to withstand its effects. The rebate provided for in this bill will not create permanent jobs. According to the Congressional Budget Office, most rebate-induced hiring is undone after 1 or 2 years, and even these short-term jobs cost \$32,000 in Federal revenue each. It will not stimulate the economy through increased consumer spending. Rather, according to a recent Harris survey, a substantial majority of Americans will simply put the rebate in the bank or use it to pay off old debts. Furthermore, according to Chase Econometrics, it would be twice as inflationary as a permanent tax cut. It will not provide the kind of steady stimulus found in other alternatives such as a permanent tax cut.

No one said it better than President John F. Kennedy, who, in his 1963 State of the Union address, advocated a permanent tax cut:

No doubt a temporary tax cut could provide a spur to the economy—but a long-run problem compels a long-run solution.

Approval of the rebate would be legislative irresponsibility because the Congress has a higher obligation than to be a mere rubber stamp for Presidential initiatives. I do not know how many times I have heard Members of Congress say,

I know a tax rebate is bad economic policy, but I feel that I have to give the President the benefit of the doubt on this one.

I say that if the rebate is bad on the merits, the Senate should say "no," in clear, unmistakeable terms, Presidential honeymoon or no Presidential honeymoon.

Mr. President, I ask unanimous consent that my amendment be printed at this point in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT No. 187

On page 3, beginning with line 11, strike out all through page 26, line 2.

On page 26, line 3, strike "Sec. 114" and insert "Sec. 101".

AMENDMENT NO. 188

(Ordered to be printed and to lie on the table.)

Mr. DOMENICI. Mr. President, I am sending to the desk an amendment to H.R. 3477, the so-called economic stimulus measure. This amendment is identical to S. 1014 which I introduced on March 17, 1977.

My amendment would create a \$250 tax credit or a \$1,000 tax deduction for individuals who maintain within their homes a dependent aged 65 or older. The objective of this amendment is to help us meet the critical shortage of decent housing for our older citizens.

NOTICES OF HEARINGS

NOMINATIONS BEFORE THE COMMITTEE ON THE

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Tuesday, April 19, 1977, at 10 a.m., in room 2228 Dirksen Senate Office Building, on the following nominations:

William M. Hoeveler, of Florida, to be U.S. district judge for the southern district of Florida, vice Peter T. Fay, elevated.

Howell W. Melton, of Florida, to be U.S. district judge for the middle district of Florida, vice Gerald B. Tjoflat, elevated.

Any persons desiring to offer testimony in regard to these nominations shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

SPECIAL COMMITTEE ON AGING HEARINGS

Mr. CHURCH. Mr. President, I wish to announce that the Senate Committee on Aging will conduct hearings on "The Effectiveness of Food Stamps for Older Americans" on April 18 and 19 at 1 p.m., in room 322, Russell Senate Office Building

The committee will hear testimony from elderly food stamp participants, representatives from national senior citizen organizations, the administration, and the Food Research and Action Center. Senator Melcher will chair the hearings for the committee.

COMMITTEE ON RULES AND ADMINISTRATION

Mr. CANNON. Mr. President, the Committee on Rules and Administration has scheduled hearings for May 4 and 5, 1977. on first, S. 1072, to establish a universal voter registration program, second, S. 926, to provide for public financing of Senate primary and general elections, and third, S. 15, S. 105, S. 962, S. 966, and proposals by President Carter and the Federal Election Commission and others to amend the Federal Election Campaign Act of 1971. The hearings will be held in room 301, Russell Senate Office Building, beginning at 10 a.m. The hearings may be continued to subsequent dates, should additional time be required.

Any persons wishing to submit written statements for inclusion in the hearing record should send them to the Committee on Rules and Administration, attention Edwin K. Hall, room 310, Russell Senate Office Building, Washington, D.C. 20510 (telephone: 202-224-5647).

COMMITTEE ON RULES AND ADMINISTRATION

Mr. CANNON. Mr. President, I wish to announce that the Committee on Rules and Administration has scheduled hearings for May 2 and 3, 1977, on resolutions authorizing Senate committees' funds for inquiries and investigations for the period July 1, 1977, through February 28, 1978.

These hearings will be held in room 301, Russell Senate Office Building, beginning each day at 10 a.m. Staff directors desiring information on scheduling their chairmen to testify on such resolutions, please contact Peggy Parrish, Assistant Chief Clerk, extension 4–6352.

NOMINATIONS

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Tuesday, April 19, 1977, at 10 a.m., in room 2228 Dirksen Senate Office Building, on the following nomination:

Leonel J. Castillo, of Texas, to be Commissioner of Immigration and Naturalization Service, vice Leonard F. Chap-

man, Jr., resigning.

Any persons desiring to offer testimony in regard to this nomination shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full

Judiciary Committee.

ADDITIONAL STATEMENTS

HOW STAFF UNDERMINE THE NATION'S LEADERS, THE PUBLIC'S INTEREST, AND NATIONAL SECURITY

Mr. HATCH. Mr. President, this week's issue of U.S. News & World Report carried a special report on the increasing power wielded by congressional staff. This growing power is no doubt real, and we all have occasion to feel it. But the growing power of staff to affect both politicians' and the public's interests is

not unique to the Congress. The Congress and its problems are often singled out for special attention as if they were unique. However, the same problem of irresponsible staff power afflicts the Ex-

ecutive as well.

For example, the April 5 editorial in the Wall Street Journal explains how President Carter's and Secretary Vance's posture in the SALT negotiations with the Russians has been undercut by their own aides. The editorial refers to the newsstories quoting aides and experts in Secretary Vance's traveling party on the return plane from Moscow criticizing their superiors for miscalculating and misjudging the Soviet mood and for failing to offer the Kremlin more concessions. It was all enough to prompt the Journal to ask, and I quote from the editorial, "Who was it on Mr. Vance's plane who came back from Moscow arguing the Russian case?"

This is a good example of how staff power makes itself felt, in this case through the press, and how it undermines the negotiating posture of the President and his Cabinet Secretary and also the Nation's security by causing the news media to respond to Soviet intransigence with accusations of alleged American miscalculation. With executive branch aides and their contacts in the media placing the blame for the breakdown in the arms negotiations on the United States, the field is cleared for the advancement of the Russian's interests.

The Russians already have the upper hand in the negotiations. They have learned over the decades how to play on our news media and competing political interests, and how to take advantage of open institutions. They are also under less pressure for an agreement than President Carter is. We certainly do not need executive branch staff arguing the Russian's case and putting our President in an even worse box than he is already in.

In view of the pitiful negotiating posture that staff and media have constructed for our Nation's elected leader, U.S. Senators certainly should not support further cuts in President Carter's already weakened defense budget. One cannot imagine any greater political idiocy at this time than for Senators to support further cuts in an already weakened defense budget. If we respond to Soviet intransigence by blaming ourselves and further cutting our defense budget, our President will re-enter the SALT negotiations with not just one hand tied behind him, but with both hands tied behind him and a gag in his mouth as well.

Mr. President, I ask unanimous consent for the editorial to be printed in the

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MISCALCULATION

"Miscalculation" seems to be the spreading code word for putting the blame for the breakdown of the strategic arms talks on the Americans instead of the Russians. President Carter and Secretary of State Cyrus Vance are being asked to affirm or deny that they

"miscalculated" in framing the offer the Kremlin so crudely rejected.

Mr. Carter and Mr. Vance may have mis-

calculated in choosing their staff, since the "miscalculation" code word got started on Secretary Vance's airplane coming back from Moscow. Stories quoting "aides" and "experts" in the traveling party said that the Americans had misjudged the Soviet mood, repeated the Soviet objections to the American proposal, and suggested that instead Mr. Carter should have offered the Kremlin the concessions former Secretary of State Kissinger was stopped, by a rebellion within the U.S. government, from giving them a year

Who was it on Mr. Vance's plane who came back from Moscow arguing the Russian case? The question does not seem to have escaped Mr. Carter's people, since press spokesman Jody Powell specifically denied the stories, saving they were "inaccurate accounts based

on a misinformed source.'

The stories are also, though, an accurate reflection of the proclivity of a U.S. bureaucracy to respond to Soviet intransigence by negotiate with itself. For some starting to reason which has always been mysterious to us, arms negotiators have trouble entertaining the possibility that the Soviets are not interested in an even-handed deal but in advantages for themselves. If you start with the assumption of Soviet good faith, you can always figure an agreement is merely a matter of giving a little more here and asking a little less there.

If on the other hand you are trying to find out whether the Soviets are interested in an even-handed deal you do what Mr. Carter did-offer them one and stick to it. If they don't think the deal is truly even-handed they can always counter-offer. But instead they rejected it outright, and are now waiting to see if the U.S. comes back with a better one. They calculate that they can win the negotiations because they are under less pressure for an agreement than Mr. Carter is.

They may be right, unless Mr. Carter gets a good grip on both his staff and his courage. For the "miscalculation" stories show again the kind of logic that has been so prevalent on the American side of the negotiations: If the Russians rebuff our offers, there must be something wrong with our offers. Perish the thought that there is something wrong with the Russians.

THE BATTLE AGAINST INFLATION

Mr. HUMPHREY. Mr. President, the Congress and the country are still faced with the problem of high unemployment and a sluggish recovery coupled with a persistent inflation. What can be done about it? Walter Heller, Chairman of the Council of Economic Advisers under Presidents Kennedy and Johnson and currently a regents' professor of economics at the University of Minnesota, has just taken an insightful look at the problem and proposes a number of specific measures the present Congress and administration can take.

Dr. Heller is careful to point out that the continued inflation does not result from too much overall demand. Unemployment is still at a 7.3-percent rate and capacity utilization rates remain low. Dr. Heller notes that the leading public and private models of the economy show that at least 80 percent and possibly as much as 88 percent of any fiscal stimulus will result in growth in real GNP. In other words, prudent fiscal and monetary policies could bring us 4 to 7 percentage points growth in GNP while adding only 1 percentage point to the current rate of inflation.

With still ample reserves of unused resource, restrictive monetary or fiscal policies will simply not bring inflation under control. As Dr. Heller points out, we need a whole range of specific policies designed to contain the wage-price spiral, anticipate bottlenecks, guard against rapid increases in raw material prices, increase competition, and foster more rapid growth in productivity.

The entire list of suggestions made by Dr. Heller commands our consideration. Mr. President, I ask unanimous consent that the full text of Dr. Heller's article, "The Battle Against Inflation," which appeared in the April 6, 1977 edition of the Wall Street Journal, be printed in

the RECORD

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BATTLE AGAINST INFLATION (By Walter W. Heller)

President Carter, the Congress and the country are about to consider a renewed campaign against inflation. This calls for both a hard look at the battle-worthiness of the traditional monetary-fiscal weapons of demand management and a new look at the less orthodox weapons aimed at the costpush forces, supply constraints and structural factors that make up the hard core of inflation.

What comes through with distressing clarity at the outset is that the steep price we are paying in unemployment and wasted capacity is buying us little or no progress

in unwinding the price-wage spiral.

During the past 24 months, unemployment has averaged 8% of the labor force (closer to 10% if one adjusts for discouraged workers and the part-time unemployed). Operating rates in manufacturing have ranged between 70% and 80% of capacity. Yet, leaving out the erratic factors of food and fuel, one finds basic inflation orbiting in a 51/3% to 61/2 % range, with no discernible trend up or down during the past two years. Thanks to falling food prices, the Consumer Price Index seemed to be breaking out on the low side of that range in 1976, but this illusion has now been dispelled.

Wage and salary advances show a similarly stubborn pattern. Average hourly compensation rose at a 7.8% rate during 1975 and an 8.2% rate during 1976 (including an 8.4% rate in the fourth quarter).

Clearly, the harsh "discipline" of high unemployment and weak markets has done little to moderate wage and price advances in this period. Because 1977 inflation is at bottom a cost-push phenomenon-no exdemand or critical bottlenecks are in sight, and winter's freeze and drought are largely broken-the failure of weak product and labor markets to unwind the wage-price spiral sends a pregnant message to policymakers. Restraining aggregate demand by a Spartan monetary and fiscal diet might eventually bring inflation to bay, but it would be a painfully slow and bitterly costly process.

CUTS BOTH WAYS

The foregoing record transmits another and more immediate message as well. The sluggish wage-price response cuts both ways. Just as inflationary salvation won't be found in running the economy way below par, so perdition does not lie in modestly stepping up the pace of expansion.

It is a safe bet that the price-wage spiral won't speed up appreciably if real GNP advances at a 5% or 6% rate this year instead of chugging along at the 4% growth rate of the past 12 months. The most respected economic models, both governmental and private, tell us that at present utilization rates in the economy, at least four-fifths—some go as high as seven-eighths—of any given fiscal or monetary stimulus will express itself as higher real GNP and only one-fifth as inflation. That means trading off one point of added inflation for four to seven points of extra GNP.

Yet in the present state of jangled nerves in the financial markets, every uptick in the inflation rate—however clearly traceable to bad weather or cost-push pressures—seems to trigger new fears and criticisms of expansionary policies and specifically, the Carter stimulus package. It seems ironic that the business and financial community, partly owing to a misreading of the inflation signs, should be directing its critical fire at the very moves that would generate stronger markets for their goods and services, higher operating rates, and consequent lower unit costs and stronger incentives for capacity expansion.

But misdirected or not, the state of nerves is an economic fact of life. It is contributing to malaise in the stock market, to a "wait-and-see" attitude on business capital spending and to delays in enacting Mr. Carter's modest proposals for fiscal stimulus.

And more fundamentally, the fact of today's 6%-plus inflation and the fear of accelerating it as we take up economic slack remain an important barrier to policies for bringing aggregate demand and business activity up to the full potential of the U.S.

Well-modulated demand management through fiscal-monetary policies remains a necessary condition for non-inflationary expansion. But it is by no means sufficient.

To remove the inflationary roadblock to full employment also requires direct action to forestall supply shortages and bottlenecks, to promote competition and reduce cost pressures, to overcome structural unemployment and improve productivity, and most urgently, to de-escalate the wage-price spiral. We need to take anti-inflation steps like these, as Mr. Arthur Okun artfully puts it, "to make the world safe for prosperity."

"to make the world safe for prosperity."

Among the measures that Mr. Carter might well consider for the longer pull are the following:

Buffer stocks: To protect both consumers and industry from the 1973-74 type of shortages and resulting price explosions—and to limit the power of foreign commodity cartels—our economic stabilization policy should include a careful build-up and management of buffer stocks of oil, food, primary metals and other strategic raw materials.

metals and other strategic raw materials.

Bottlenecks: To spot bottlenecks and shortages in the making, an expert staff should monitor such key industries as aluminum, steel, paper and chemicals. Measures ranging from modification of import regulations and defense procurement schedules to accelerated amortization might be drawn on to help break impending bottlenecks.

Energy: It will be vital to manage the energy program so as to (1) neutralize as much of the inflationary impact of necessary tax and price increases as possible through innovative measures to deploy energy tax revenues in cost-reducing ways (see "Tax policy" below) and (2) retard the rise in energy costs over the longer run by inhibiting wasteful use and stimulating production.

Structural unemployment: Converting the structural or hard-core unemployed—broadly defined as those who can't get decent jobs even in a high-unemployment economy—into

productive contributors to society can help reconcile high unemployment and low inflation. Public policy needs to equip the disadvantaged with training and experience through a large-scale and sustained program of publicly assisted private-sector jobs.

Productivity stimulus: Apart from upgrading of the human agents of production, we need to step up the investments in plant and equipment, technology, research and development that are needed to expand capacity, improve efficiency, and cut costs.

prove efficiency, and cut costs.

Tax policy: When further opportunities arise to cut taxes, they should be used to buttress anti-inflation objectives. Examples: "buy out" state and local taxes that enter directly into the Consumer Price Index, cut the employe payroll tax as part of a bargain or compact to de-escalate wage claims.

Moving to measures that can arbitrarily be classified as having a shorter fuse—and are prime candidates for inclusion in Mr. Carter's immediate anti-inflation program—one can catalog the following:

Stimulate competition: Intensify antitrust activities and the dismantling of regulations that throttle competition and prop up costs and prices. Reduce trade barriers.

Government self-monitoring: Step up efforts by a strengthened Council on Wage and Price Stability (COWPS) to assess the inflationary impact of government programs and regulations. COWPS has recently weighed in against selected protectionist measures, overly burdensome regulations and farm price supports.

The use of government leverage: As a purchaser, for example, government should reexamine cost-plus contracting. As a source of grants to state and local governments, it should call on them for cost-reducing actions. As a subsidizer of medical and health care services, it can call for cost controls and price restraint.

Price-wage monitoring: Instead of pronouncing its benedictions or maledictions on major wage and price decisions after the fact, COWPS should be visible and audible during the decision-making process. Pointing out the inflationary and non-inflationary alternatives in wage negotiations and pending price decisions could have a healthy effect without any coercion.

This brings us, finally, to the prickly instrument of wage-price restraint. When all is said and done, unless Mr. Carter can deescalate that self-propelling price-wage spiral—and its sidekick, the wage-wage, spiral—his near-term anti-inflaiton program will come to little.

BATTLE-SCARRED TERRAIN

This is much ploughed and battle-scarred terrain. In the early skirmishes, Mr. Carter has retreated from pre-notification to "advance discussion" of major wage-price decisions, from jaw-boning to "little chats," and from guideposts or guidelines to "guiding principles."

What can he do with what's left? Probably more than meets the eye. Among other things he can (1) assert the government's presence in wage and price matters. (2) set a convincing example of government self-discipline in all matters inflationary, (3) ask big business and big labor to follow suit and "reason together" with them to develop guiding principles that will ease basic inflation down from, say, 6% to 4% and spell out the need for restraint on profit margins and a gradual move from 8% hourly earning boosts to around 6%, (4) use tax inducements, as indicated above, to lubricate this proces and help develop a social compact with business and labor.

But will it work? On one hand, one should not underestimate the power of persuasion, especially if it is underscored by government self-policing and self-restraint, if it is backed

up by heads-up staff work, and if it is put into a logically air-tight framework of goals and guiding principles.

At the same time, if it is too gingerly and gentle, it will not carry conviction. If it treads on eggshells, the eggs will hatch, and the inflationary chickens will eventually come home to roost.

If that happens, the Carter administration might well be thrown back on the old-time religion of slow growth, high unemployment and economic slack as the anti-dote for inflation. In turn, a lot of cherished goals—jobs for the disadvantaged, vigorous capacity expansion, a balanced budget, and health and welfare reform—would go down the drain. Mr. Carter's—and the country's—stake in a successful broad-gauged anti-inflation program is high indeed.

HUMAN RESOURCES CENTER

Mr. JAVITS. Mr. President, I commend to the attention of my colleagues Human Resources Center, of Nassau County, one of New Yorks best examples of model innovation. The center is busy evaluating, training, and employing physically disabled people in business and industry throughout the county.

Founded in 1952 by internationally known rehabilitation pioneer Dr. Henry Viscardi, Jr., who has been an adviser to every President since Franklin Roosevelt, the center today consists of three major coordinated units: Human Resources Research and Program Development Institute, with its many demonstration employment projects involving the participation of bankinsurance, and manufacturing; Abilities, Inc., the center's original work facility which serves as the model for 51 similar versions throughout the world; and the Human Resources School, chartered by the Board of Regents of the State of New York, which provides tuition-free, fully accredited education to some 230 severely disabled students from infancy through senior high.

Recently, several House and Senate professional staff members visited the center. I am advised by the minority counsel to the Human Resources Committee that the staff site visit concluded that the center's broad spectrum of programs could well serve as a national model for severely disabled persons' job training and placement, academic and vocational education, independent living, research, and information dissemination.

I ask unanimous consent that a report on the Human Resources Center 1976 programs and activities be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HUMAN RESOURCES CENTER PROGRAMS AND ACTIVITIES, 1976

INTRODUCTION

This is a report on Human Resources Center's activities during 1976. Success during the past year in efforts to provide the disabled with access to economic, educational, and social opportunities reflect the belief of dedicated individuals, organizations, corporations, and foundations who have supported the Center.

The Center now offers comprehensive

programs for severely disabled individuals from infancy through adulthood. New programs focus increased attention on facilitating the transition from the school environment to the world of work, both for the vocationally directed high school graduate, and the disabled college student seeking postgraduate employment.

The Center's participation in the White House Conference on Handicapped Individuals and the Industry-Labor Council has resulted in increased concentration on programs designed to disseminate information and project models to communities

throughout the nation.

The progress reports that follow are iljustrative of future directions the Center is taking. Several of those described are pilot projects now reaching stages where they can be disseminated to other communities; others are just beginning, and underscore an increased sensitivity to the Center's national leadership role in the special education and vocational rehabilitation of America's handicapped.

THE WHITE HOUSE CONFERENCE ON HANDICAPPED INDIVIDUALS

On November 28, 1975, President Gerald R. Ford announced the appointment of Dr. Henry Viscardi, Jr., Founder and President of Human Resources Center as Chairman of the White House Conference on Handicapped Individuals.

The mission of the White House Conference on Handicapped Individuals encom-

passes three goals:

To provide a national assessment of problems and potentials of individuals with mental or physical handicaps;

To generate a national awareness of these

problems and potentials:

To make recommendations to the President and Congress which, if implemented, will enable individuals with handicaps to live their lives independently, with dignity, and with full participation in community life to the greatest degree possible.

The Industry-Labor Council

On September 16, 1976, John R. Opel, President of IBM Corporation, George Meany, President of AFL-CIO, and Dr. Henry Viscardi, Jr., Chairman of the White House Conference on Handicapped Individuals, convened the first meeting of the Industry-Labor Council. Mr. Opel and Mr. Meany are Co-Chairmen of this body.

The Industry-Labor Council will participate fully in activities leading to a formal report to the May 1977 White House Conference, and ultimately submit recommendations to the President and Congress. In addition, the Council will design and disseminate guidelines to both labor and industry for the formation of national policies on the training and employment of the

handicapped.

The first of four national meetings of the Industry-Labor Council took place in Chicago on November 18, 1976. The remaining meetings will be held in San Francisco, Atlanta, and New York. This last will take place at Human Resources Center in March of 1977.

AFFIRMATIVE ACTION

In April, 1976 the U.S. Department of Labor issued Affirmative Action for the Handicapped regulations based on the Rehabilitation Act of 1973. These regulations require most federal contractors to implement affirmative action plans to insure the recruitment, promotion, and accommodation of the disabled in industry. In anticipation of this, the Center conducted a two-day conference in March of this year to help guide industry toward successful implementation of affirmative action plans. Over 50 corporations and agencies attended, including AT&T, Bankers Trust, Chesebrough-Pond's, European-American Bank, Exxon, General Electric, Gulf Oil,

LILCO, IBM, Metropolitan Life, NBC, Purolator, Western Union, and many others. In addition to this, the Center's staff made field

visits to 44 companies.

A special Consulting Service for Employment of the Handicapped has been developed by Human Resources Center for companies that want to meet the federal requirements. It includes a series of programs which endeavor to promote a more cooperative and fruitful interaction between business and rehabilitation.

PROJECTS WITH INDUSTRY

This is one of our most important programs in that it best illustrates Human Resources Center's thrust in the field of employment of the severely disabled. Established with the cooperation of the U.S.D. of Health, Education, and Welfare, this project was designed to provide employment opportunities for the severely handicapped with special emphasis on helping them to secure jobs with future advance-ment opportunities.

Projects with industry has evolved two major areas of expertise. The first involves the development of sophisticated methods in evaluation, counseling, training, and placement of disabled individuals. The evolution of comprehensive programs of com-munication with industry to help prepare employers to accept disabled workers com-

prises the second area.

In 1976, an Advisory Council consisting of representatives from various industries was established to maintain communication between the project and employers. The Advisory Council provides valuable information on employment market trends. It aids the project staff in conducting conferences and workshops to educate the business community on Affirmative Action and rehabilitation techniques. The Council is also instrumental in involving new companies in the project.

HUMAN RESOURCES SCHOOL

Human Resources School offers tuitionfree education to over 230 severely disabled children. Chartered by the Board of Regents of the State of New York, it provides a full academic curriculum and extra-curriculum program to previously homebound children from pre-kindergarten through high school level, as well as a summer camp.

Among the members of the Human Resources School Class of 1976 were two youngsters who entered the School in 1962, the

year of its founding.

The Class of 1976 distinguished itself in many ways. Two of our seniors were awarded New York State Regents Scholarships based on their performance on a statewide examination. Three seniors were inducted into the National Honor Society in recognition of their academic achievement. Graduates are attending Princeton, New York Polytechnic Institute, St. John's, State University of New

York at Farmingdale, and other institutions. Among the 73% of our graduates who are now attending college, career goals include Data Processing, Medicine, Engineering, Psychology, and Business Administration. Most of those not attending college have entered career preparation programs conducted at the Center to prepare them for entry into

the world of work.

The faculty and research staff of Human Resources School has completed a three-year study of Health Education for Physically Handicapped Children. This project, undertaken in cooperation with the U.S. Depart-ment of Health, Education and Welfare has resulted in the publication of several curriculum guides to be distributed to school districts throughout the nation.

We are currently developing several new

innovations in special education:

Independent Living and Home Management Program, to be conducted in two new facilities, will encompass all areas of personal self-sufficiency. This program will be manifest on all grade levels from pre-school through senior high, culminating in an actual independent living experience.

We are also undertaking a major effort in

Industrial Arts Education for the disabled

We have completed construction of the Junior High School Pavilion. This new fa-cility is designed to integrate all phases of funior high education in one comprehensive multi-learning environment.

WORK ORIENTATION PROGRAM FOR SEVERELY DISABLED COLLEGE STUDENTS

The Work Orientation Program provides disabled college students with actual work experience related to their fields of study. The program is valuable in bridging the gap in the transition from student to employee, and in providing the work experience and contacts needed by the disabled student in order to obtain gainful employment upon

During the first year of the program (1973–1974), 20 students were placed. This figure increased to 50 in 1974–75, and to 75 in 1975–

Below is a listing of just a few of the placements made through the College Student Program between September 1, 1975 and June 30, 1976.

Three students, including a graduate student from Albany OVR, were placed in the Department of Commerce in Washington,

Two students, one majoring in chemistry and the other in engineering, were assigned to Brookhaven National Laboratories in Suffolk County.

One graduate stduent from Albany Law School is doing legal research for FDIC in New York City.

Two students are working as teacher's aides in Nassau County for Operation Outreach.

PREVOCATIONAL EVALUATION

This program, initiated in Fall 1975, provides a prevocational diagnostic evaluation for severely disabled individuals referred to us by the New York State Office of Vocational Rehabilitation (OVR), students of Human Resources School, and other agencies.

Utilizing three highly sophisticated systems of evaluation designed to simulate actual on-the-job skills and physical requirements, the program assesses the disabled individual's capacity to learn specific work tasks related to certain occupations, and measures vocational aptitudes.

The program exposes the disabled to work and job samples in skill areas like small engine repair, gauges, meters, paramedical professions, drafting, heating and air con-

ditioning, among others.

Once competency and vocational interest are determined, the individual and his counselor set up an individualized training plan that will eventually lead to successful job placement

The program is also designed to provide private business and industry with a means of evaluating their disabled employees for possible upward mobility potential, as well as to evaluate those employees, who were recently disabled, prior to returning to work.

PRESIDENT'S MESSAGE

Human Resources Center is on the brink of realizing a dream that I have cherished for many years. Ever since I founded the Center in 1952, it has been my hope that we would someday become a national resource for ideas and information on the employ-ment of the handicapped—that we could reach out to communities and agencies throughout this nation and effect positive change in the lives of America's disabled.

We have now taken the first step toward realizing this dream. Our newest effort, Programmatic Research on Employment Preparation for the Handicapped (PREP), has received the approval and support of the U.S. Department of Health, Education, and Welfare. PREP will be the most comprehensive analysis ever undertaken of career preparation. It will study the potentials of career education at the earliest age levels, including pre-school. Every facet of processes that eventually lead to what we call "job readiness" will be researched, and new programs to meet all needs will be developed.

Eventually, PREP will encompass training programs for professionals in rehabilitation and special education, the packaging of multi-media learning modules in career preparation, nationally circulated publications and monographs, and a data bank to serve industry, schools, and individual communities.

The past year has been a most dramatic one for the Center. Our involvement in the White House Conference on Handicapped Individuals and the Industry-Labor Council has greatly broadened the horizon of our responsibilities. The future, as we enter the next quarter-century of activity, promises to offer even greater challenges. I am confident that with the continued support of all of those who have stood by us, we continue to bring dignity and independence to America's disabled.

A NEW ERA FOR "THE ACTION AGENCY"

Mr. CRANSTON. Mr. President, last month Sam Brown and Mary King were confirmed by this body and sworn in as the new Director and Deputy Director, respectively, of the ACTION Agency.

During their nomination hearings before the Senate Human Resources Committee, Sam Brown and Mary King discussed their views with respect to the future of the ACTION Agency, and emphasized their commitment to strengthening the individual programs which are the life blood of the Agency—VISTA, the Peace Corps, the university year for ACTION program, UYA, and the older American volunteer programs, foster parents, senior companions, and the retired senior volunteer program, RSVP.

The newly established Subcommittee on Child and Human Development of the Human Resources Committee will be responsible for directing the Senate's monitoring of the ACTION Agency's implementation of the Domestic Volunteer Service Act of 1973, as amended—the statute providing legislative authority for the domestic volunteer programs of the ACTION Agency. As the chairman of the new subcommittee which is the successor to the Human Resources Subcommittee of the predecessor Committee on Labor and Public Welfare, I look forward to continuing my efforts in this area and to working with Sam Brown and Mary King in pursuing the goals of these fine programs under their new, exciting, and productive leadership.

Mr. President, for the benefit of my colleagues, I ask unanimous consent to have printed in the RECORD the statements made by Sam Brown and Mary King at the hearings on their nominations before the Human Resources Committee.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF SAM BROWN

Mr. Chairman, Members of the Senate Human Resources Committee, while the immediate question before this Committee is "why Sam Brown?", I'd like to use these few opening remarks to talk about a prior question—"why ACTION?", or more particularly for the purposes of the Committee, why VISTA, Retired Senior Volunteer Program, Foster Grandparent and other domestic programs of the agency? It is a question I have thought about a geat deal since I came under consideration for this position.

The answer is not "because they are there."
Too many institutions continue to function for that reason. I believe we have an obligation—certainly I do as one who has been asked to head the agency—to satisfy ourselves that there continue to be compelling answers to that question, and ones that make sense in today's terms, and not merely in terms of the country as it existed when the programs were created.

In thinking about that question over the past several weeks, I have reached the firm conviction that the domestic programs of ACTION are not luxuries, nor can our country afford to do without them.

We need VISTA as much today, if not more, than when it was created twelve years ago.

We need VISTA for several reasons. We need it because there are millions of people in this country who are struggling each day to keep their heads above water. It should not be forgotten that the mission for which VISTA was created was to work against poverty and powerlessness. But we have a different, and I think better, understanding of those problems today than we did when the program was created.

We know that poverty and powerlessness will not be overcome by pitting black against white, young against old, Anglo against Hispanic. We know that those divisions only serve to keep things the way they are and that the real issue is economic justice for all people who have not shared in this country's success.

We know that poverty and powerlessness do not stop at some official government dividing line. It is not just those with incomes under \$5,000 or \$6,000 a year for whom America has not worked well. There are millions of Americans above those lines as well who aren't making it, who feel trapped, and who have come to the conclusion that their government is at best indifferent, and at worst a willing conspirator in their troubles.

And we now know that we cannot impose solutions from above. We know that we cannot tell people what is best for them, but that we can help them develop the tools—individual ones and collective ones—to compete more fairly for the distribution of our nation's economic and political rewards.

That sharper focus has a number of very practical implications for an organization like ACTION. It means programs that put volunteers to work helping people make it on their own—giving them support with the overwhelming daily burdens that the rest of us can buy our way out of. Like child care, so that parents can work and children can learn. Transportation for older people, so that they can get to the doctor, or simply get out of their homes. Programs for kids that give them something more to do than just hang around. In general, programs that give people more power and control over their day-to-day lives.

It also means programs that help people to build their own communities and neighborhoods. It means programs that help them to initiate and influence the decisions that determine whether and how their communities and neighborhoods live or die. Programs that help them define their own problems, set their own goals and deal effectively with the huge economic and political institutions that often unilaterally shape their lives. If

ACTION is to maintain its domestic purpose, its agenda must be set by the local communities and neighborhoods it serves.

Our better understanding of the nature of these problems also means that we must expand the base from which volunteers are drawn. Upper-middle-class college students are a source of great idealism and energy for our country. But they are not the only Americans who are idealistic.

There are millions of young people from working neighborhoods, in their late teens and early twenties, who have dropped out of school, can't find a decent job, and want to get involved. ACTION can be their vehicle.

And it is essential that ACTION be seen as an effective vehicle for blacks, Hispanics and Native Americans to serve their own communities.

VISTA and the other domestic programs of ACTION are as important to the people who serve as they are to the people who are served.

I have spent a good part of the past ten years doing the kinds of work I have just described. I know from that experience the great satisfaction that comes from helping someone else to live a little more freely. There is no faster way to grow than by getting involved with others who haven't shared your opportunities.

I do not believe that the people of this country have lost their idealism or their appetite for the hard work of building a better future for our country. There is a great reserve of human energy in this country. But it cannot be conscripted. People will not serve for the sake of serving. They will not respond to their government's call beause their government is calling. They will not believe they can make a difference unless they really can make a difference.

ACTION will spring to life again when our people start to feel good about their government again. I feel confident about that happening now. But if ACTION is to stay afloat, even in a rising tide, it must first clean up its own problems.

The agency has been badly pummelled in recent years. It has been politicized. It has been bureaucratized. It has seen its purpose obscured. It is a tribute to the resiliency of the idea, to the commitment of the Congress, and to the many of those who continued to work in the agency, that it ever survived.

work in the agency, that it ever survived.

The first task of a new director is to attract to the leadership of the agency and to its programs people who are firmly committed to those programs and who share the idealism and energy of those who will serve as volunteers.

The new leadership must restore the identity of the individual programs that make up ACTION. I have never met a person who volunteered to work for ACTION. People join VISTA and the Retired Senior Volunteer Program and Foster Grandparents. Each of those programs must have an identity of its own and leadership of its own.

own and leadership of its own.

We must restore the local perspective to the agency. ACTION is one agency in Washington that should think of the nation, not in terms of the nation, but in terms of the communities and neighborhoods where people live. It should be looking for many small answers, and not a few big ones.

We must operate the agency so that its resources are spent, not on bureaucracy in Washington, but in the cities and towns and rural areas where the volunteers are working. ACTION should be an agency that is not afraid to experiment, to try new ideas. At the same time, we must assure that its resources are spent effectively and not squandered. As one who has served for the past two years as Treasurer of the state of Colorado, I know those objectives can be met.

rado, I know those objectives can be met.

We are entering an upbeat time again
for our country. We have gone through a
period of great national unhappiness. We

were agonized over a war that did not make sense. We were depressed by the realization that our leaders would betray their public trust. But now we have an opportunity to collect ourselves, to regain our balance, to start working again on our real problems, and to start thinking about our future.

I believe ACTION has an important role to play in that new beginning. If I am confirmed by this body, I look forward with great enthusiasm to the challenge and the oppor-

STATEMENT OF MARY E. KING

Mr. Chairman, members of the committee: Much of my life has been spent working for civil rights, an end to poverty, betterment of public health and equal rights for women. I feel a deep empathy with people who want and work for responsible social

The separate programs of ACTION were born out of the strong traditions of idealism and collective voluntary endeavor that created America. In the first decade of their existence, the Peace Corps and VISTA were a source of substantial material help to many thousands; of hope and inspiration to millions. Volunteers at home and abroad worked long and hard to help alleviate the twin burdens of poverty and powerlessness.

Now there is hope for a new climate of restoration and positive action. Inspiration is replacing negation in our country. As the principal federal vehicle for Americans who want to get involved to help solve their own problems, ACTION can and should capitalize

on this feeling of renewal.

Every government agency likes to call itself a people's agency, but ACTION precisely fits this description. Through such programs as RSVP and Foster Grandparents, it directly delivers services to people who need them most. As such, ACTION is not a bureaucracy of elitists trying to impose solutions from above but the federal agency uniquely centered on the conviction that, given the proper support, people can best solve their own problems. An agency such as ACTION, in the pursuit of its larger goals, must care about people helping themselves. It must foster and support innovative, responsive efforts by those who want to gain greater control over their individual and collective lives.

A revitalized ACTION agency can do much to help restore the validity and integrity of self-help and hard work, both here and

As you may know, the President has also appointed me as Special Adviser on Women. All of ACTION's concerns have a direct link here. For instance, the principal activities of Peace Corps volunteers are in agriculture, health and education. Worldwide, women are the chief producers and preparers of food, and dispensers of primary health care. Their lack of education puts a burden on all society. The Peace Corps can substantially upgrade the status of women because its voluneers are in intimate daily contact with their lives and problems. Domestically, VISTA volunteers can have a similar impact

Volunteers have made a significant dif-ference in the past, whatever their programs, wherever they have served. But what of the future? If we are to be effective, if we are to use our financial and human resources wisely and productively, we must have programs that reflect the needs of local communities and creative plans that respond to their problems and their hopes.

We must also broaden the volunteer base to include and involve those who may now feel left out of our complex society: the elderly, the unemployed teenager, the for-cibly retired, displaced homemakers, the very poor and the illiterate.

In my estimation, the major question we face as a society is what kind of people are

we? When we are at peace; when we have relative domestic tranquillity; even after our basic values have withstood severe testing and have survived? The programs of ACTION provide some of the answers to these ques-

Volunteer activism is one of our richest heritages. I hope to see the agency become one catalyst for redefining our sense of purpose and for helping renew our national priorities. Perhaps in the future, successful ACTION programs may serve as models for a people dedicated to volunteer service at all levels of our national life.

I hope that I, too, working with you and Sam Brown, can help regenerate that unique spirit of voluntary action upon which Amer-

ica was founded.

HOW TO SAVE ISRAEL IN SPITE OF HERSELF

Mr. BELLMON. Mr. President, the current visit to this country by President Anwar Sadat of Egypt coupled with the recent visit by Prime Minister Rabin of Israel clearly points out the vital role the United States must undertake in working out a lasting peace in the Middle East. It is rare in history for the counsel and support of one government to be so eagerly sought by two separate nations which have historically been at odds. Both Israel and Egypt are now obviously eager for settlement and equally eager for the United States to act as mediator.

As a member of the Senate delegation which recently visited both these countries, I join with others in urging President Carter to act before the opportunity for peace passes by. At no other time since the creation of the modern State of Israel have all the elements in the Middle East been so favorable for negotiation of a peace acceptable to all the involved countries.

The economies of both Israel and Egypt demand a lasting peace and neither country can afford another outbreak of hostilities. The leadership of the involved nations is strong, enlightened, and moderate and any future changes are likely to be for the worse. The tensions, while still high, are considerably lessened and the opportunity for peace with respect is excellent.

George Ball, the distinguished former Under Secretary of State, has written eloquently on this subject many times. His most recent article appeared in the Washington Post on Sunday, April 3. Secretary Ball's analysis of the current situation is excellent. I ask unanimous consent that a copy of his article, "How To Save Israel in Spite of Herself" be printed in full in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BELLMON. Mr. President. the purpose of my remarks is to urge the Carter administration to move with a high sense of urgency toward settlement of the differences between Israel and the Arab world which have led to four wars in the Middle East since 1948. There is no other international question of such urgency. Neither the current breakdown of the SALT talks nor any other matter should be allowed to deter the Carter administration from the responsibility of taking a vigorous initiative toward arriving at a permanent peaceful settlement of the age-old controversies which have caused such heartache and hardship to all our friends in the Middle East in the years past.

EXHIBIT I

[From the Washington Post, Apr. 3, 1977] HOW TO SAVE ISRAEL IN SPITE OF HERSELF (By George W. Ball)

Most Americans approach the problems of the Middle East with a pro-Israeli bias-and rightly so. The desire of a dispersed people for a homeland cannot help but enlist the sympathy even of those with no Jewish roots; nor can any sensitive man or woman fail to be moved by the countless tales of valor and self-sacrifice in the years both preceding and following the creation of Israel. Set against the grim background of the Holocaust, the story of Israel is a continuing chronicle of grit and enterprise.

Not only must Americans admire Israel; there can be no doubt that we have an interest in, and special responsibility for, that valiant nation. So the question is no longer whether the United States should contribute to assuring Israel's survival and prosperity, but rather how we Americans can best fulfill our responsibilities to Israel, to ourselves and to other nations whose well-being could be endangered by further conflict.

By expending substantial effort and political capital, we can probably overcome the technical impediments to a reconvened Geneva Conference, principally the question of representation for the Palestine Liberation Organization. Thus, by sometime next fall, Arabs and Israelis will presumably sit down around a green baize table or tables.

Yet, unless we are prepared to act more incisively than in the past, that conference will be the prelude to disaster. Neither side has altered its formal positions in any significant way. The Arab nations still demand that Israel withdraw from all territoy occupied since the 1967 war, while refusing unequivocal assurances of full recognition of Israel. Israeli leaders, on their part, insist that their security requires the retention of substantial areas of their post-1967 terri-

The critical significance of this stalemate cannot be overemphasized; a breakdown of the conference would set in motion ominous forces, resulting, first of all, in the radicalization of the Arab front-line states. In Egypt, President Sadat has staked his politifuture on the belief that the United States holds the key to peace and is prepared to turn it. In Syria, President Assad's policles of moderation will be critically undermined if Geneva fails.

And even Saudi Arabia, though currently the most effective force for Arab reasonableness, will, in the event of renewed warfare, be compelled by the dynamics of Arab politics to impose an oil embargo. Indeed, if the Geneva Conference disintegrates, it may even feel forced to use its oil weapon before hostilities begin.

So we dare not regard the projected Geneva Conference as merely another episode in the long-playing Middle East movie serial. If it ends with a whimper, it will be followed by a bang. The leaders of the front-line Arab states will concentrate on building fighting forces to attack Israel as soon as they can approach military parity. Faced with that prospect, the beleaguered Israelis may well

However it begins, another Arab-Israeli war will be far more destructive than any in the past. Because both sides now possess sur--to-surface missiles, cities and civilian populations will almost certainly be targets, while the prospect for superpower involvement will be much greater than in earlier conflicts.

Yet, although the relatively impotent governments in the key Arab countries and in Israel can never by themselves devise a compromise solution, the conventional wisdom still rejects any suggestion that the United States should lay out proposed terms of a settlement. Instead—we are told—the parties must be left to find their way by palaver to some common meeting ground near the center of a no man's land studded with land mines of hatred, religion, vested interests and rigid doctrines of military necessity, in bland disregard of the fact that the conditions essential to an effective negotiation do not exist.

First, there is no unanimous desire for peace on either side. Although weakened by events in Lebanon, the Rejection Front—which totally rejects the concept of Israel's right to exist—remains an influence in Arab politics, while in Israel some politicians still wish to avoid any negotiation in the wistful hope that Israel can hang on permanently to the territories seized in 1967.

the territories seized in 1967.

Second, neither the Israelis nor their Arab neighbors believe that their side can gain as much as the other side by a major concession. Lacking even a minuscule quantum of mutual trust, each side views its own concessions in the narrow focus of the other's gains.

Third, the governments on both sides are politically too insecure to be able to offer the concessions requisite to a solution.

Finally—and most important—the positions of the parties are so far apart that they can never, by themselves, find their way to a compromise in the context of a total settlement.

For her own security, Israel can accept nothing less than an unequivocal Arab commitment to peace and full recognition, together with adequate safeguards; yet, in view of the primacy of the issue in Arab politics, leaders of the key Arab nations can give no such commitment without the assurance of an Israeli withdrawal from the territories taken in 1967.

WITHDRAWAL FOR RECOGNITION

Thus, to bring about a settlement, the missing preconditions to negotiation must either be provided or rendered unnecessaryand this can be accomplished only by an assertive United States diplomacy. This means that our government must advise the more moderate Arab states-Saudi Arabia, Syria, Egypt and Jordan—that it will use its leverage in the search for peace but not unless those states make clear their acceptance of Israel's sovereignty. At the same time, Israel must be made to understand that a continuance of the present stalemate is more dangerous than the concessions required for peace. Finally, America must play the indispensable role of relieving the political leaders on both sides of the need to make politically unpalatable decisions by enabling them to yield with cries of outrage under relentless outside pressure.

I am not proposing at all that the United States lay down arbitrary terms of peace. Rather, we must insist that both sides carry out the United Nations Security Council Resolution 242 of 1967 (affirmed in 1973 by Resolution 338), which so far neither side has been willing to do.

To make progress possible, we must translate the principles embodied in that resolution into a comprehensive plan of settlement. That plan should establish as a firm precondition that Israel's neighbors explicitly recognize her as a Jewish sovereign state and that they commit themselves unequivocally to respect freedom of navigation in the waterways of the area for Israeli ships as well as cargoes, permit free movement of peoples and trade and take other specified measures to assure full political, economic and cul-

tural intercourse. They must accept arrangements through leasehold or otherwise to provide Israel control over access to the Gulf of Aqaba by the maintenance of an adequate garrison at Sharm el Sheikh, accept the demilitarization of the Golan Heights and agree to the injection of neutral forces into that area and into other appropriate buffer zones under conditions where they cannot be withdrawn without agreement on both sides. To mitigate Israeli apprehensions of a West Bank Palestinian state, the front-line Arab states should commit themselves to discourage acts of violence or terrorism against Israel. Some formal link of Palestine to Jordan, as recently proposed by President Sadat, might go far to assure a responsible govern-

The principal powers supporting the proposal—the United States, Great Britain, France and, one may hope, the Soviet Union—would guarantee the inviolability of the boundaries as finally determined. In addition, we should seek agreement with the other guaranteeing powers to limit the flow of arms to both sides.

What chance does the United States have of persuading the Arab leaders to accept such commitments? There is accumulating evidence that Yasser Arafat, and such elements of the PLO as he can control, are moving toward the acceptance of a partitioned Palestine and, as the price for the return of the West Bank, would agree to recognize the sovereignty of Israel within her pre-1967 borders.

Moreover, the current leaders of Saudi Arabia, as well as of Syria and Egypt, desperately need a settlement to escape radicalization and the increase of Soviet influence in the area, as well as the high cost of maintaining Arab military might in an environment of hostility. Since the Saudis will be the principal source of financing for a Palestinian state, they should be able to exercise considerable discipline over whatever regime administers that state and to restrict the development of its military capability.

PRESSING THE ISRAELIS

But if we are to persuade the Arabs to accept these commitments, we must insist categorically that Israel withdraw from the territories occupied in 1967-subject to the negotiation of minor border rectifications. We must preserve the principle that there can be no territorial aggrandizement by force, as President Eisenhower made clear in 1956. Faced, in the aftermath of the Suez affair, with the Israeli refusal to withdraw from the Sinai territories in defiance of the U.N. Security Council resolution of Feb. 16, 1957, he responded with clarity and promptness. If the Israeli government did not comply, the United States would not merely suspend governmental assistance, but would also eliminate essential tax credits and take other administrative action to restrict the flow of cash gifts and bond purchases from American private citizens.

That Israel today is far more dependent on United States help than in 1956 is shown by the fact that her gross national product is only slightly larger than her budget. Last year, our public sector aid alone amounted to \$2.34 billion, which means more than \$600 for every man, woman and child in Israel. A similar amount is in view for the current fiscal year, so that our contribution to a country of 3.2 million people will again be a very high percentage of our total foreign aid expenditures. Rarely before have so many done so much for so few. Yet the aid should not be begrudged if it works for the longrange interest of the Israeli people.

Thus, the national decision Americans must make is not whether we should try to "impose" an unpalatable peace on the Israeli people, but, rather, how much longer we should continue to assist Israel to maintain policies that impede progress toward peace,

with all the dangers war holds not only for Israel but for the United States and other countries. Put another way, how much longer should we go on subsidizing a stalemate that is manifestly dangerous for all concerned?

The unhappy dilemma of Israel is that, so long as she refuses to relinquish the territorial gains from her 1967 conquest and thus prevents possible progress toward peace, she must continue as a ward of the United States. Already economically overstretched, Israel could not maintain anything like her present level of military capability without the continued infusion of something approaching \$2 billion a year from the American treasury, to say nothing of the cash amounts provided by the generosity of the American Jewish community under American laws and regulations that facilitate such contributions. Even with that huge subsidy, it is doubtful she can long continue as a garrison state. With 36 percent of her GNP committed to defense—equivalent to a U.S. defense budget of \$560 bililon-with inflation running at 35 percent, with the interest rate on bank loans ranging between 25 and 35 percent, and with very nearly the world's highest tax rates, her economy slowed to an annual real growth rate of only 1 percent a year in 1975 and 3 percent last year, while in 1976 her balance of trade deficit amounted to more than \$3 billion.

Beleaguered Israel is no longer the land of bright promise it was a few years ago; last year not only did her emigration exceed immigration but, in spite of strenuous efforts to encourage new immigrants, 60 percent of the Jews permitted to leave the Soviet Union for Israel chose not to go there but moved by way of Vienna to such Western countries as the United States, Canada and France.

Despite these foreboding developments, however, many still passionately contend that America should not undertake to turn Resolution 242 into a full-fledged plan of settlement, since only the Israelis are competent to decide what they need for their own security and we have no right to interpose our own judgment. Yet that assumes that the Arab-Israeli conflict involves the interests of only the direct participants, whereas, if a war with sophisticated weapons should crupt in the Middle East, the dangers for America and for world peace and prosperity would be appalling.

Let us suppose that Israel's arms should prevail and an Israeli column were moving on Damascus. Would the Soviet Union once again accept the humiliation involved in the defeat of its clients and again write off the expensive armaments it has poured into the area? Or would it feel compelled to drop a paratroop division or two into Syria? In its present mood, would the United States respond by force? Merely posing that question would tear our country apart—reawakening latent prejudices and creating bitter divisions.

Or, as a possible alternative, assume that Arab arms were triumphant and Israel was in imminent danger of invasion. Would the United States use its military might on Israel's behalf? Imagine the searing debate that issue would provoke! Nor can one ignore the possibility that, threatened with destruction, Israel might use, or at least threaten to use, nuclear weapons.

Even if none of these fearsome developments occurred, war would still mean catastrophic losses for the non-Communist nations. Not only would the dynamics of Arab politics require the oil-producing states to impose another oil embargo, but this time it would almost certainly be more destructive than the last. Nothing could more tragically undermine the solidarity of the West than an embargo applied in a consciously discriminating fashion.

FEARS AND NEEDS

It is hardly surprising that many Israelis believe they cannot, under any circumstances, trust their Arab neighbors, who, as see it, are committed to Israel's destruction. Thus, one can well understand their fear that a West Bank Palestinian state would menace Israeli security. Yet, that is a circular argument. Irredentism for the Palestinians is a compelling abstraction not dissimilar to the Jewish desire for a national home. So long as there is no part of old Palestine which Palestinians can call their own and to which they can, in principle, return, so long, in other words, as they are denied the possibility of building their own nation in that part of old Palestine represented by the West Bank and the Gaza Strip, resentment, terrorism and excessive rhetoric are inevitable.

Unhappily, Israel's relations with the Arab world are so distorted by history and hardship and the deep emotional commitment of her people to what is, at the same time, both a nation and a spiritual concept as to disable many Israelis and their American supporters from anything approaching objectivity. As a pro-Israeli friend replied when I recently mentioned the apparent inability of the Jerusalem government to face the hard realities of its own situation. "Don't you think they are entitled to their paranoia?"

It was not a flippant comment; instead, it reflected the fatalistic acceptance of a possibly grim evolution of events. When the historic agonies of the Jewish people and their understandable yearning for a national home are viewed against the background of the Holocaust, can one wonder at the fierce tenacity with which they seek to maintain, and even to enlarge, their Israeli homeland, and the suspicion with which they regard their Arab neighbors who, they fear, threaten that very concept?

Yet, no matter how much we may sympathize with what my friend calls Israeli "paranoia," how far dare we let it determine American policy? How far, in other words, should we go in continuing to subsidize a policy responsive to Israeli compulsions which does not accord with the best interests—as we see it—either of Israel or the United States, but is a threat to world peace?

The fact we must reluctantly acknowledge is that the national interest of the United States and of Israel cannot, in the nature of things, be precisely congruent; there will necessarily be situations in which our policies must diverge from those of the Israeli government if our country is to be true to itself. Israel is a power with only regional interests, and the very intensity of her long struggle to survive has produced an excessive preoccupation with her own quite limited range of concerns—or, in other words, has forced her to view the world in short time spans and with severely limited horizons.

America's view of the world and her responsibility for world developments are of a wholly different order. We must appraise the evolution of the Arab-Israeli dispute in a world setting, taking account not merely of what certain policies might do for, or to. Israel in the short run, but also of what consequences they might hold for other countries and for the peace and well-being of the world as a whole.

SOVIET SUPPORT?

I have suggested that, prior to the reconvening of the Geneva Conference, we should seek quietly to obtain the agreement of our Western allies, France and Great Britain, as well as of the Soviet Union, to support a carefully developed settlement plan.

Although the Soviets cannot by themselves bring about a solution, they can probably frustrate any settlement. Yet, even though the Kremlin voted for Resolutions 242 and 338 and the proposed plan

would merely put flesh on the bare skeleton provided by those resolutions, would the Soviet Union go along with an American proposal to bring peace to the Middle East?

Today there is reason to believe that as an alternative to the maintenance of tension and turbulence—entailing irksome expenditures for arming the Arab countries as well as the danger of a superpower confrontation—the Soviet Union would elect to support—or, at least, not to sabotage—a peace proposal that accorded with Resolution 242, especially if it were given some recognition for its peacekeeping role. This is, at least, a reasonable hypothesis given credence by recent Soviet statements, and, although some may regard it with skepticism, it has not recently been tested.

To be sure, America once tried to make peace by expanding the principles of Resolution 242 in the so-called Rogers Plan. But those proposals could not have been floated at a less auspicious moment. In April 1969, Nasser had launched his War of Attrition; by October, Israel was heavily bombing Egyptian artillery positions, Egyptian casualties had reached high levels, her army's morale had fallen disastrously and over 1 million civilians had been evacuated from the Canal cities. Thus, when Secretary of State William P. Rogers launched his plan, the Israeli government was rapidly escalating the air war, feeling in strong position to impose its will and in no mood to bargain. The Egyptians, on the other hand, were smarting at their deteriorating military position and quite unwilling to negotiate when their power and prestige were at such a low ebb.

That was eight years ago. Today the Arabs have largely regained their self-respect in the light of their military achievements during the early days of the October 1973 war. Developments in Lebanon have reduced the authortly of extreme Palestinian elements within the PLO. For the moment, there are responsible leaders in all the key Arab capitals, while Saudi Arabia, the central treasury for Araby, seems determined to press toward peace, although—at least for negotiating purposes—it may try to hold to Sadat's definition of peace as "a state of peace" excluding for this generation diplomatic relations and trade.

But without a settlement, these favorable conditions will not long prevail, for time is not working on the side of either Israel or peace. That the balance of strength will ultimately shift to the Arabs seems almost in-evitable, not merely because there are 100 million Arabs opposed to 2.9 million Jewish Israelis, but because Arab financial resources and economic power have immeasurably increased since 1969 and are still expanding. Thus, because of the "logic of numbers," as well as the intolerable economic burden of maintaining a garrison state, Israel will, absent a settlement, almost certainly lose ground, despite the fact that, for the moment-but for the moment only-she holds military superiority due to the inflow of sophisticated United States weapons.

SAVING ISRAEL FROM HERSELF

Thus, the time is ripe for the United States to take a strong hand to save Israel from herself and, in the process, try to prevent a tragic war that could endanger the economies of the major non-Communist powers, separate the United States from its allies, precipitate a divisive domestic debate and pose a serious danger of a clash with the Soviet Union.

Up to this point, President Carter has not yet fully revealed his Middle East strategy, and the time is probably not yet ripe for him to do so. But he has, by publicly suggesting some of the elements of a final settlement, clearly departed from the more passive line rigorously pursued by the Ford administra-

tion. What is now to be hoped is that, as a probable reconvening of the Geneva Conference approaches, he will develop those views into a full-fledged solution that takes into account the security interests and other legitimate claims of both sides, then seek the agreement of the French, British and Russians—those permanent members of the Security Council that originally approved Resolution 242—to unveil the terms of a settlement the major powers would collectively support.

To carry through such an initiative, President Carter must be prepared to overcome formidable political opposition and to act with the same incisiveness President Eisenhower displayed in 1957. That will not be easy, for in the years since then Israeli supporters have greatly increased their political power in Washington.

Yet such a line of action would be responsible leadership by a great nation, while anything less would be highly dangerous.

YOUTH EMPLOYMENT AND TRAINING ACT

Mr. HUMPHREY, Mr. President, I am very pleased to join Senator Nelson and Senator Javits as a cosponsor of the administration's Youth Employment and Training Act of 1977. This is a very timely piece of legislation that has been developed through the cooperation of the administration with those of us in the Senate who have worked actively on youth employment legislation. This mutual understanding and cooperation has given us a bill that can be enacted swiftly, so that we can provide our Nation's young people with the jobs, training, and counseling that they need and deserve. I want to commend President Carter and Labor Secretary Ray Marshall for the role they have played in this and the support they have shown for the young people of this country.

Now, more than ever, the youth of our Nation need help. All across the country, unemployment has dealt a devastating blow to the hopes and aspirations of our young people.

In March, the unemployment rate among teenagers 16 to 19 years old was 18.8 percent, compared to 5.1 percent among adults 25 years old and over. Among black teenagers, the unemployment rate was 40.1 percent and, in many of our central cities, disadvantaged youths experience an unemployment rate that exceeds 60 percent.

There are 3.4 million young Americans under the age of 25 who want to work today, who are knocking on doors that remain closed to them. Ready, willing, and able to work, they have no jobs.

This is a national tragedy and unconscionable waste of one of our Nation's most valuable resources. Almost every teenager and young adult I have met wants desperately to work and to be accepted as a productive and useful member of our society. They want jobs, they want to be productive, they want to earn their way, they want to be given a fighting chance.

Unemployment cheats them out of all this. Joblessness tells our young people that there is no productive role for them. It tells them that they will have to wait—often for years—before we will admit them to adulthood, years before they

can earn their own income and become contributors to our national economic

Joblessness denies them the opportunity to develop the basic work skills and work habits needed for employment

while they are adults.

In addition, youth unemployment is a major source of crime. In 1973, the last year for which we have comprehensive figures, 55 percent of all those arrested for crimes were under the age of 25, 75 percent of arrests for serious crime involved youths under the age of 25. Youth made up 60 percent of those ar-rested for rape, 75 percent of those arrested for arson and robbery, and 85 percent of those arrested for vandalism, burglary and auto theft.

Most often, these crimes are committed by young people who have nothing valuable or productive to do and who have been totally alienated from the mainstream of our society and our economy. Young people who do not have productive jobs turn to the "shadow economy" of the dark streets and the back alleys in order to get by. They get into trouble. They destroy their own lives, and become a lethal social cancer. There is no way that we can reduce or eliminate crime in this country until we solve the problem of youth unemployment.

The most direct and rapid way of alleviating youth unemployment through specially targeted youth employment programs. Economic recovery alone

will not be sufficient.

Too many young people live in decaying central cities or in rural areas where there are just no jobs to be had by youths or adults.

Many youth have failed in, or been failed by, our educational institutions, and have no marketable job skills and

no way of obtaining skills.

The decline in small business, and the use by employers of artificial educational or experience requirements for jobs, also have worked to eliminate youth jobs.

Even if new employment opportunities open up as the economy improves, these structural problems will continue to plague our youth and deny them the jobs and work they need and deserve.

Only by creating useful and productive jobs that are specifically targeted at unemployed youth can we break the vicious cycle that denies jobs to young people because they are inexperienced or

have poor skills.

On January 11, I introduced a bill that would provide young people across this Nation with the programs they need to break that vicious cycle-S. 170, the Comprehensive Youth Employment Act of 1977. Senator Javits coauthored that bill, and a number of my colleagues cosponsored it. Congressman Paul Simon, Democrat of Illinois, introduced it in the House (H.R. 1731) with more than 60 cosponsors.

The Comprehensive Youth Employ ment Act contains a number of special youth employment and training programs, including a youth community service program, a youth opportunity in private enterprise program, a work experience for in-school youths program,

an occupational information and career counseling program, a National Conservation Corps, and an expansion of the Job Corps.

I am very pleased that many of the programs in the Comprehensive Youth Employment Act have been adopted in the administration's bill. Although the administrative procedures are different, the goals and the purposes of many of the administration's proposals are totally consistent with those of the Comprehensive Youth Employment Act, including the National Young Adult Conservation Corps provision, the youth com-munity initiatives program, and the youth employment and training programs contained in part C of the administration's bill. The administration, of course, had a tight schedule for developing these proposals, and they are, in my view, not perfect. They will be improved in hearings and markup before the Human Resources Committee. But the bill takes the first giant step toward providing our young people with the help they need with the job market.

Overall, I am very pleased with this bill, but I do have the same concern as that expressed by Senator Javits. That fact that the administration's bill focuses entirely on the job market needs of youths who are out of work and out of school ignores the job needs of millions of youths who are still in school and making job and career plans. These young people need work experience and job information as part of their educations, if we want to prevent them from becoming future unemployed dropouts in need of more costly programs. An inschool program should be part of our overall package of employment and training programs for youths, and I will join in cosponsoring Senator JAVITS amendment to correct this deficiency.

FARMERS DONATE LAND ON NEW RIVER IN NORTH CAROLINA

Mr. HELMS. Mr. President, on September 11, 1976, the President signed into law H.R. 13372, making 26.5 miles of the New River in North Carolina part of the National Wild and Scenic Rivers System.

On two occasions. Mr. President, the Senate approved legislation introduced by me to preserve this, the oldest river in our hemisphere, from threatened impoundment. The first time around, my bill died in the committee in the House of Representatives when it became ensnarled in a nonrelated controversy. The second try was successful. Because so many Senators participated in efforts to save the ancient homes and farmsteads of this beautiful river valley, I wanted to advise them that the people of the New River Valley are, themselves, freely giving parts of their own lands through easements and outright gift to help preserve their homeland in its present natural condition.

Mr. President, the Winston-Salem Journal of March 26, 1977 details the generosity of these small farmers. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered printed in the RECORD as follows:

LAND DONATED FOR STATE PARK ON NEW RIVER

(By Lenox Rawlings)

RALEIGH.—The state has received gifts of property easements and land that total nearly 58 acres along the New River in Ashe County.

The 10 gifts, which make up almost six miles of frontage along the river, represent about 12 percent of the frontage planned for a state park on the river.

The state intends to acquire, through purchases and donations, land and easements along a 26.5-mile stretch of the river in Ashe and Alleghany counties. That part of the river has been included in the National Wild and Scenic Rivers System.

Howard N. Lee, secretary of Natural and Economic Resources, said yesterday that about \$26,000 in the current budget has been set aside for buying the first major access point on the river and other properties.

"Negotiations for that acquisition have already begun," Lee said.

The state is in the process of obtaining two more gifts, including a substantial tract

Rep. P. C. Collins, D-Alleghany, and some other residents in his county have indicated a willingness to donate other properties.

The donations announced yesterday included one land gift and nine easements. Under a conservation easement, which can be bought or donated, the land owner agrees to maintain his property in essentially its present condition.

The land gift announced yesterday totals 8.81 acres in Ashe County near the Alleghany County line. The land was donated by Sidney B. Gambill, Myrtle R. Gambill, Brice Gambill and Thelma W. Gambill.

Easement gifts were donated by: Russell B. Bard and the late Virginia D.

Bard, 9.35 acres.

The late Joseph W. Davis, 1.98 acres.

Clarence C. Absher and Jessie L. Absher, 4.19 acres.

Sidney B. Gambill, Myrtle Gambill, A. D. Gambill and Carmon Gambill, 4.72 acres. Paul H. Bare and Hazel P. Bare, 2.96 acres.

George Hoff, Muriel Hoff, Archie Strauss, Nita Strauss, Elliott Pearlman, Joan Pearlman, Frank Weiner and Shelly Weiner, 7.87

Elmer Poe and Doris Poe, 3.65 acres.

Elmer Poe, Doris Poe, Paul Poe and Paulette Poe, 3.32 acres.

Lee said his department has received approval from the U.S. Bureau of Outdoor Recreation for grants matching the dollar value of the 10 gifts.

Final appraisals of their value has not yet been made, he said.

Lee also said Gov. James B. Hunt Jr. is studying a proposal to increase the amount of acreage the state may obtain. The limit is now 400 acres.

The department's projected spending for acquisitions along the river in the next two fiscal years has not been determined, Lee said. Another source indicated that the total may reach \$200,000, which is the amount sought by the National Committee for the New River.

Lee quoted from the annual report of Appalachian Power Co., which was denied the right to build a twin-dam hydroelectric power project on the river when the river was included in the National Wild and Scenic Rivers System: "Thus the Blue Ridge matter is ended."

Lee paraphrased another segment of the annual report that said the company thinks it has been deprived of a valuable property and will seek compensation through the U.S. Court of Claims.

THE RURAL HEALTH CLINIC BILL

Mr. CLARK. Mr. President, the Rural Development Subcommittee of the Committee on Agriculture, Nutrition, and Forestry held hearings on March 29 on S. 708, a bill Senator Patrick Leahy and I introduced which would provide reimbursement under medicare for care provided by nurse practitioners and physicians' assistants in rural clinics.

Senators Leahy, Bumpers, Bellmon, and Dole joined me at the hearing and made very perceptive and useful comments on the problems facing rural States in obtaining health care.

We were pleased to receive written testimony from hundreds of people and groups around the country—doctors, clinic directors, health care providers, and users of the clinics; local officials, State health departments, medical schools, and universities; and organizations involved in health care. In addition we received excellent testimony from some of my Senate colleagues, Members of the House of Representatives, and Governors who have an interest in this bill, which I would like to share with other Members of this body.

Both the oral and written testimony which the subcommittee received pointed out the need for legislation to help medicare beneficiaries in rural areas obtain access to adequate medical care. S. 708 should help provide medical care for these people, as well as provide enough support for rural clinics to remain viable.

The 46 Senators who cosponsored the bill agree that S. 708 is one way to begin to alleviate the doctor shortage in small towns and rural areas.

Mr. President, I ask unanimous consent to print the following statements in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR WENDELL R. ANDERSON

Mr. Chairman, I am very pleased to have the opportunity to submit testimony to the Subcommittee concerning Medicare reimbursement for rural health clinic services. As a cosponsor of S. 708, I hope to work with you and the members of the Subcommittee in developing and refining legislation to meet the health needs of medically underserved rural populations.

Since over one third of Minnesota's population, or close to 1,300,000 people, is concentrated in rural areas, providing rural health care services is critically important in our State. Studies indicate that there are disproportionately high numbers of elderly people residing in rural locations who can benefit greatly from services provided by physicians assistants and nurse practitioners in rural health care clinics. Under the present Medicare law, coverage for health services provided by physicians assistants and nurse practitioners is prohibted unless a physician is present. In Minnesota where there are 297 rural towns with no doctor at all, and 62 such communities with only one physician, this prohibition can seriously limit sources of basic health care for rural Minnesotans.

In addition to the important medical services provided by rural health clinics, there is a continuing need for screening, preventive and referral services in these areas. One way of meeting these needs is through mobile health units such as the one in Polk County, Minnesota, which averages about 4,000 rural

patient visits per year. Some of the services that can be provided by these units are blood pressure checks, health and nutritional counseling, glaucoma screening, hemoglobin screening and diabetic testing.

Such services can be made available to people in remote rural areas who may have limited access even to the rural clinics we've been discussing today. Through such programs, basic health education and screening so essential to maintaining good health can be provided to rural Americans who might not otherwise have use of them. I would be pleased to work with you and the members of the Subcommittee to explore ways of providing coverage for these and other preventive programs, perhaps by establishing a mechanism through which they can become affiliated with rural health clinics.

In conclusion, I would like to commend you and the Subcommittee members for your leadership in increasing the availability of health services to rural Americans, and will look forward to working with you in this effort.

STATEMENT BY SENATOR HOWARD W. CANNON CONCERNING S. 708

Mr. Chairman: Thank you for this opportunity to present my views on S. 708, which would amend Title XVIII of the Social Security Act to provide payment for rural health clinic services.

As a co-sponsor of S. 708, it is a pleasure to provide some of my perspectives on what this legislation will mean to the patients of rural Nevada who are eligible to receive Medicare. I would also like to express my gratitude to Nevada health officials for their cooperation and assistance in the preparation of this analysis of the needs of my state's rural residents. I would like to particularly thank Dr. William M. Edwards, Chief of the Bureau of Community Health Services, Nevada State Division of Health and Dr. Wilford W. Beck, Director of Clinical Services, Rural Clinics, Nevada State Department of Human Resources.

The basis for this legislation is the state of the present Medicare program which disallows reimbursement for care provided by primary health clinics which happen to be located in less populous areas and do not have a full-time doctor on the premises. The reason for this situation is that many rural communities simply cannot afford to support a full-time physician, but they can support nurse practitioners and physician's assistants. The Social Security Act does not recognize this economic reality of our rural areas and penalizes rural citizens by excluding them from Medicare coverage.

This result has been an unconscionable discrimination between urban dwellers and rural dwellers in the delivery of Medicare benefits. This situation must be rectified and S. 108 will accomplish that goal.

The vast stretches of rural land in the beautiful state of Nevada encompass 96,000 square miles in which 112,000 Nevadans live. While those fifteen rural counties support approximately 19 percent of the total state population, rural residents only have 5.6 percent of the licensed physicians of the state.

Some individuals must drive up to 240 miles to reach the nearest, organized outpatient department offering medical care. Consequently, most rural Nevadans do not seek physician level primary health care services; they wait until an illness occurs before going to a doctor.

According to recent statistics, Nevada's population of senior citizens is increasing at the most rapid rate in the United States. However, the number of primary care physicians is barely holding even in Nevada's 15 rural counties. We must make better use of our physician extenders if we intend to meet the health care needs of the elderly. Removing the Medicare reimbursement restriction

would certainly aid in better utilization of health care providers in a more efficient health program.

For the past three years, the Orvis School of Nursing at the University of Nevada, Reno has conducted a program to prepare tered nurses as Rural Nurse Practitioners. Unfortunately, very few of these nurses are currently involved in an organized primary health care program. The existing federal regulations requiring the presence of an onsite physician for reimbursement for services is a definite hindrance to organizing primary health care programs in Nevada. This legislation would provide the incentive to establish rural health clinics, making health care in Nevada more cost-efficient, sensible, and accessible. Moreover, it is nonsense to be producing qualified rural nurses for Nevada and then having no place for them to go to serve the people of Nevada.

Because of the rigidity of the present Medicare system and despite assurance of quality care from a licensed, certified registered nurse practitioner, last fall a clinic in Wells, Nevada had to disassociate itself from its parent institution, Elko General Hospital, 50 miles to the east. The clinic has since degenerated. Such results are patently unreasonable and undermine what should be a national commitment to keeping our people healthy and well.

Dr. Edwards, head of Nevada's Community Health Services, agrees with the idea that nurse practitioners should work in collaboration with licensed physicians, but disputes the notion that a physician need be watching over at all times. We can assure the people of Nevada that nurse practitioners can provide certain high quality health care services without direct physician supervision. The safeguards built into S. 708 will ensure that rural health services are maintained at a high quality.

I would also like to bring to the attention

I would also like to bring to the attention of the subcommittee another aspect of rural health care that is seemingly ignored in this legislation. That is the matter of mental health services.

Although Part A hospital coverage under Medicare will allow care in a psychiatric hospital and Part B medical insurance grants limited coverage for outpatient treatment of mental illness, it is not clear under this rural health bill as to whether rural mental health clinics are also covered. If they are not, they should be.

Rural mental health clinics, such as the seven located in Nevada, experience much the same problem that physical health care providers have in terms of low-income families. Many families in rural areas lack the financial resources to obtain adequate health and mental health care. This problem is most acute for the elderly on fixed incomes.

Until recently, the National Institute of Mental Health (NIMH) had given rural Nevada poverty area designation. As a consequence, the mental health program as well as other health care efforts, were able to obtain a more favorable match of federal funds and thus provide a greater amount of service. Changes in the NIMH formula for poverty areas has resulted in the loss of the poverty designation for rural Nevada, although its people are no better off financially.

Legislation enabling rural citizens to use Medicare to benefit their total health picture is very appropriate. Oftentimes, one's physical health is dependent on one's mental health as well.

While the proposed amendment to the Social Security Act, S. 708, focuses more on physical health care, I strongly endorse inclusion of a mental health service provision.

Professional staff employed by rural mental health clinics in Nevada include Psychologists, Psychiatrists, Psychiatric Social Workers, Psychiatric Nurses, and Mental Health Technicians. A psychiatrist travels to each of the centers on a regular basis to provide services as required. The State of Nevada minimum qualifications for eligibility for the professional staff positions are as follows:

Psychiatrist.-Board certification or written confirmation that applicant possesses the necessary qualifications to be admitted to the certification examination of the American Board of Psychiatry & Neurology.

Psychiatric Nurse.-Graduation from an approved school of nursing and one year of professional experience. Must be registered as a professional nurse in the State of Ne-

Psychologist.—A masters or doctoral degree in psychology from an accredited college or university, or satisfactory completion of the course requirements for the doctoral degree, plus experience in a psychological service

capacity.

Psychiatric Social Worker.—A master's degree from an approved school of social work and two years of casework experience, or a bachelors degree and four years of casework experience.

Clinic Director.—A masters degree and two years of clinical and community mental health practice.

Any or all of these professionals, with or without additional requisites, are equivalents in terms of mental health care to the physician extenders in physical health care. The medical care that these mental health specialists could perform include inpatient care for emotional problems, partial/transitional care, and emergency mental health care.

The matter of coverage for rural mental health clinics deserves the careful attention of this committee. Provision under Medicare for meeting the mental health needs of persons living in the Hinterlands should be of the same availability as that which is already offered in the Metropolis.

In closing, I would like to compliment the committee for its efforts to correct shortcomings in the Medicare programs as affect rural health care. Passage of S. 708 is of vital concern to the rural citizens of Nevada and the millions of Americans who are interested in better health care delivery.

STATEMENT OF SENATOR MIKE GRAVEL FOR HEARING ON RURAL HEALTH CLINICS REIM-BURSEMENT, S. 708

I want to commend the initiatives of Senator Clark and Senator Leahy in introducing legislation to extend Medicare reimbursement to rural health clinics. The staff have done an exemplary job of drawing upon the experience of special interest groups and persons in the health field in developing this long-overdue legislation.

In Alaska the extension of Medicare re-

imbursement to rural health clinics will be significant. In an effort to address the dif-ficulties imposed by distance, geography and weather, Alaskans have relied extensively on rural health clinics and physician extenders to provide consistent quality health care.

The passage of the Indian Health Care Improvement Act last year opened new vistas to the Indian and Alaska Native popula-tions by allowing the Indian Health Service to be reimbursed for services provided to Medicare and Medicaid eligibles. Admittedly, the Medicare population among the Alaska Natives is not large. But it will increase, and the opportunity to receive reimbursement will enhance the financial viability of the rural health clinics in Alaska. In addition, the role of 3rd party reimbursement will improve the ability of Native Alaskans to manage the clinics independent of Federal control as provided in the Indian Self-Determination Act.

There are, however, several minor recommendations I would like to present to the Committee for its consideration. Although they would not substantively alter the bill, I think they would clarify terms and im-

prove the future applicability of the legis-

The term "rural health clinic" includes the qualification that "only a facility which is not located in an urbanized area (as defined by the Bureau of the Census) where the supply of medical services is not sufficient to meet the needs of individuals residing therein (including such rural areas as are designated by the Secretary as areas having medically underserved populations under section 1302 (7) of the Public Health Service Act, and clinics that receive a majority of their patients from rural medically underserved areas)" will qualify for reimbursement. While this language is broad and would include most of the Indian Health Service or tribal clinics, some would not be clearly eligible. Confusion over eligibility could cause unnecessary problems both for governmental agencies and intermediaries. To avoid this problem I recommend that all ambulatory facilities, either owned or leased by the Indian Health Service, i.e. health clinics, health stations, mobile clinics, school health centers, or similar and Alaska Native programs be specifically included as eligible. This would not abrogate satisfaction of the other rural health clinic definitional requirements.

One of the definitional requirements for reimbursement as a rural health clinic pro-viding services to Medicare recipients is arrangements for utilization review. The term 'utilization review" has traditionally defined the monitoring of hospital in-patient services. I question the applicability of this term

to ambulatory programs.

In an ambulatory rural health clinic quality control involves medical audit, not utilization review as it has come to be known. It is desirable to monitor the medication prescriptions, the laboratory tests, and in a multidisciplinary ambulatory facility, the activities of allied personnel, i.e. social workers, nutritionists, lab technicians, and physician extenders. Therefore, I think it would clarify the intent of the review if a more applicable term were used to indicate a medical audit or peer review.

The term "physician extender" as defined in the bill is a practitioner certified by the National Commission on Certification of Physician's Assistants or the American Nursing Association. I understand that the issue of adequate criteria for certification of physician extenders is still evolving.

Although the above organizations provide sound guidelines for certification, I would suggest that it would be preferable to allow the Secretary greater discretion. Undoubtedly, he would refer to the criteria established the two designated organizations, but he might also wish to include individuals certified as qualified physician extenders by the Civil Service Commission or accept State certification when it documents equivalent competency with national standards. By granting the Secretary discretion in certification the possibility of a more restrictive standard being adopted by the organizations would not pose any problem to the stability of the program.

STATEMENT OF SENATOR GARY HART ON S. 708

Mr. Chairman, having cosponsored S. 708, would again like to indicate my earnest support for this measure, which will increase the access to primary health care services for rural medicare beneficiaries. This is a very necessary piece of legislation, and I hope that the Finance Committee members will also act as immediately as their busy schedule allows.

S. 708 addresses a sizeable problem. Over 35 million Americans live in areas that are medically "underserved," that is, areas in which health status and physician supply are low. More than half of those areas are rural. Health care needs in rural areas vary significantly from urban centers. For some examples of this, let's look at the following characteristics of rural or remote areas.

When compared with their urban counterparts, a larger proportion of rural citizens have acute or chronic illnesses. This is largely due to the high concentration of poor and elderly people in rural areas. These are individuals who typically have extensive health care needs.

Rural areas suffer from serious geographic maldistribution of health personnel and facilities. Certainly, quality health care requires the availability of a wide variety of health care personnel and the resources to support them.

Additionally, because almost half of this country's poor live in rural communities, many rural residents are not able to afford the services they need. It is this problem of inability to pay for health care services and the problem of maldistribution of personnel that are the focus of our efforts here today.

The lack of physicians in rural areas can be attributed to a number of factors, including professional isolation, overwork, lack of continuing education, and inadequate support systems. Additionally, rural practices often make poor use of a physician's time. These problems have combined to make the country doctor a thing of the past.

Coincident with the disappearance of the country doctor, however, has been the development of a new form of health care delivery, the "primary health care" clinic. This term is used to describe the common elements of those health care provider groups that meet the basic needs of a given community. Primary health care programs employ many non-traditional approaches, but they are essentially organized substitutes for the country doctor. They provide individuals with diagnosis and treatment of routine health problems, and arrange for specialist care where necessary.

Because of the shortage of physicians in rural areas, these clinics are often staffed by a new kind of health professional known as a physician extender. Physician extenders include physicians' assistants, nurse clinicians, nurse midwives, nurse practitioners, family health associates and others of similar title who have been specifically trained in diagnosis and treatment for primary and emer-

gency medical care.

While rural citizens have come to rely on these clinics, many of the services provided by the centers are not eligible for reimbursement under Medicare. Part B of Title XVIII of the Social Security Act, which essentially addresses the payment of doctors' bills and coverage of a variety of related services, is biased against the physicial ex-tender. While physicians practicing in primary care clinics are reimbursed by Medicare for their own services, physician extenders are not. Services provided by extenders are reimbursed by Medicare only when a physician gives direct supervision of these services.

This policy effectively excludes primary care clinics from Medicare reimbursement. And, as a result, Medicare beneficiaries in rural areas are denied the benefit of the clinics. The bill being discussed here today will help correct this debilitating problem by permitting Medicare reimbursement of qual-

ified physician extenders.

One final point. Over the years, the federal support for medical manpower development has been heavily oriented toward improving geographic and specialty distribution. Unfortunately, these efforts have achieved relatively little success. Doctors who go to rural areas rarely remain as an integral part of the community. The physician extender offers one of the most economical and possibly one of the most effective techniques for providing health care in remote areas.

The time has come for the development of the extender role, and to include primary health care clinics in the Medicare system. Such steps will greatly increase the financial access of the elderly to much needed health care services.

STATEMENT BY SENATOR DANIEL K. INOUYE ON LEGISLATION TO PERMIT MEDICARE REIM-BURSEMENT TO RURAL HEALTH CLINICS FOR PRIMARY HEALTH SERVICES

Mr. Chairman, members of the Rural Development Subcommittee, I greatly appreciate the opportunity to present testimony on this proposal to provide Medicare reimbursement for rural clinic services.

I believe that there is an urgent need for legislation of this kind. Statistics show that there is a large discrepancy between Medicare expenditures for rural and urban areas. Medicare reimbursements are lowest for non-metropolitan counties with reimbursements per person averaging \$33.33 for metropolitan areas and only \$23.36 for nonmetropolitan counties.

Though there are various reasons for this difference, undoubtedly a major one is simply lack of health care services in many of

our rural regions.

This legislation would help to improve that situation by providing for payment under Medicare for services of health care providers other than physicians. Unless some change is made, the current inequity between Medicare expenditures for urban and rural citizens can only increase.

We are all deeply troubled by the continuing escalation in health care costs. Yet many rural and other citizens find that health care services are virtually unavailable to them at

any price.

I commend the chairman and the subcommittee for your recognition of the need for action on this issue. I have been concerned for some time about the restriction on reimbursements in the Social Security law which inhibits the full use of well qualified health care personnel and the development and expansion of health care services that are so badly needed.

I believe, however, that this restriction should be removed not only for rural clinics, but for other kinds of health services and in urban as well as rural areas. However, S. 708

is a big a step forward.

I would also object to the provision which makes reimbursement for nurses practitioner services contingent on physician "supervision." I think this is an unnecessary restriction that would curtail the benefit of the legislation. I believe that nursing services should be reimbursable and that physician supervision should not be required for payment. In fact, I have introduced legislation for that purpose. S. 104 would provide for the inclusion of the services of registered nurses under Medicare and Medicaid and would eliminate the requirement that such services be under the supervision of a physician.

The nursing profession has been rapidly broadening its traditional role. There are many clinics run by nurses both in rural and inner city areas of the country. Experience has shown that up to 80 and even 90 percent of the patients can be effectively managed by nurse practitioners. Many states already have amended their nurse practice acts to accommodate the nurse practitioner role.

And, as is recognized in S. 708, the American Nurses' Association has established a program to certify nurse practitioners. The response to that certification program has been impressive. It was begun only last year, and more than 1,000 nurses already have entered the certification process.

Fuller utilization of these practitioners

could greatly expand the availability of pri-

mary health care. It is ironic that our present system and reimbursement methods obstruct rather than foster the expansion of health care services.

I believe that making this change also would contribute to the containment of health care costs. In many cases services now performed by a nurse practitioner, are reimbursable once they are recommended by and/or provided under the supervision of a physician. It seems logical that there would be a reduction in present costs, because of elimination of the physicians' fees which, in most cases, are paid only for supporting the claims for payment. A recent study conducted at the Veterans Administration outpatient clinic in Los Angeles, showed that using nurse practitioners in adult ambulatory care facilities could increase the quality and volume of care at a cost considerably lower than for care provided by physicians.2 The study also showed a high degree of acceptance of the nurse practitioner by the patients and by the physicians who were involved in the project.

I strongly support changes in Medicare reimbursement policies which this legislation advocates. However, insofar as it relates to nurse practitioners, I would recommend that it be amended to identify nurse practitioners separately from the "physician extender" and to remove the requirement for physician supervision for the services of nurse

practitioners.

The nurse would, of course, work in collaboration with physicians, consulting and referring patients as appropriate. This is what actually happens now. To make this change would only be recognizing what exists.

Again, I thank you for the opportunity to testify before the committee. I stand ready to work with you in any way that I can to bring about changes in Medicare reimbursement policies which will contribute to better health care for all the people in the country.

TESTIMONY OF SENATOR THOMAS J. MCINTYRE

Mr. Chairman, thank you for the opportunity to testify before you today on this most important issue.

Let me first say that I am proud to be associated with S. 708 as a cosponsor, and I applaud these efforts by my distinguished colleagues Senator Clark and Senator Leahy to improve health service to rural areas. I have always been committed to providing quality health care for every individual in every region of our country. Unfortunately, under the present reimbursement regulations, many rural Americans are being discriminated against by the very programs designed to bring them quality care.

There are more than 15 million Americans who live in rural areas which are designated as medically underserved. This is compounded by the fact that the country doctor is on the wane as the great majority of medical students are being lured to the more lucrative surroundings of urban America.

In New Hampshire, as in many other areas of the country, the rural health clinic is an invaluable source in dealing with the shortage of physicians. These clinics, staffed primarily with physician extenders, provide health services to many areas which are unable to support a full time physician. Without a proper method of reimbursement for extender services, the rural health clinic could well be placed in jeopardy at a time when the residents of these communities are becoming more and more dependent on their services.

One of the greatest injustices of the pres-

ent reimbursement procedure is the additional hardship it places on our rural elderly. The elderly comprise a large proportion of the rural population and many of these individuals have no reimbursable primary health care services within easy reach of their homes. These people find themselves paying for Medicare Part B benefits only to turn around and be billed for the services performed by a physicians extender at the health clinic. This places an additional burden on those individuals who are most in need of these services and least able to afford them.

Mr. Chairman, if we are seriously attempting to build a health care system to provide quality care for every person, maximum use must be taken of the skills and training of the physician extender and the services performed by the rural health clinic. With the escalating cost of health care in the past few years, alternative measures must be examined and utilized. It is unnecessary to require the attendance of a physician for minor medical procedures when these services can be competently performed by trained physician extenders. I also believe that the emphasis which the extender places on preventive care can provide an effective means by which we can ultimately control costs.

I have received a number of letters from my constituents in New Hampshire and from concerned individuals throughout the country urging my support for this legislation. These individuals have reiterated the potential effect this legislation would have in providing quality health care for so many rural

Americans.

I am hopeful that Congress will act quickly and responsibly to end the present discriminatory reimbursement policy which affects thousands of communities throughout the country.

STATEMENT OF CONGRESSMAN JAMES T. BROYHILL

Mr. Chairman, I want to thank you and the members of the Senate Rural Development Subcommittee for the opportunity to speak in behalf of legislation to ensure that physician extenders can be reimbursed under Medicare for their services. As you may be aware, I have worked for the past several years in the House to make certain the implementation of such legislation, and I am glad that my colleagues in the Sneate are now examining this issue.

Our government has been committed to training physician extenders for the past 10 years. Since that time, we have spent over \$70 million in the training of physician assistants and nurse practitioners. And, President Carter has requested \$9 million to carry on the work already started in these programs. However, when our elderly or disabled citizens seek the services of those physician extenders, they cannot receive reimbursement from the government under Medicare unless the physician was actually present at the clinic or facility where the services were performed.

In many cases, citizens are really paying twice for these services. Once, when they make their monthly payment for the optional Part B Medicare coverage, and again when they must reimburse the provider for services performed by trained professionals who have been recognized by the local community, the medical community, and the state and federal governments. This does not even include their tax dollars which have gone toward the training of the extenders.

North Carolina has been vitally involved in developing programs to train and utilize physician extenders. Through the Office of Rural Health Services, the state aided local communities in establishing primary care clinics, to be staffed by physician assistants and nurse practitioners. However, under state law the financial commitment to these

² The Nurse Practitioner in an Adult Outpatient Clinic, DHEW publication (HRA) 76-29. January 1976.

clinics was for only three years, and funding has begun to run out in many clinics. The life of these, as well as dozens of other privately- and federally-funded extender clinics, such as those established by the Appalachian Regional Commission, may very well hang in the balance of this legislation.

The Congress has become increasingly aware of the need to deliver adequate health care to all segments of our population, but we are faced with the critical problem of the geographic maldistribution of physicians. This maldistribution has been especially notable in the rural and inner city areas. In the State of North Carolina during 1974, it has been estimated, 67 out of 100 counties possessed less than one primary care physician under age 60 for each 4,000 in population

As you may be aware, I have introduced legislation in the House of Representatives which would provide that the services of physician extenders be reimbursable under Medicare. I am proud to say that, as of this date, 45 other members have joined with me

in cosponsoring this legislation.

My approach calls for reimbursement under existing mechanisms, rather than creating a new system of payment in Medicare reimbursement. And, it ensures that all legally-recognized extenders will be covered, whether they work directly for a physician or for a clinic, in an urban or a rural setting. To be reimbursable, a physician extender must be accredited by a federally-recognized accrediting body, and also be recognized by the state in which he or she practices. This will guarantee a quality control in that we can ensure extenders are qualified to practice and are working within the guidelines

My bill calls for a simple amendment to Medicare law, creating no new level of bureaucracy and no confusion in administration. The federal government will not be injected into the day-to-day management and

operation of rural clinics.

set by the respective states.

The chronic problems of access and cost of medical services for our elderly and disabled can best be solved through the increased use of extender-staffed clinics. Study after study has shown that—not only does health service improve with the use of these clinics, but total medical costs, including Medicare costs, actually decrease. I am sure my colleagues are aware of the studies carried out by Dr. John W. Runyan, Jr., reported in the Journal of the American Medical Association (JAMA January 20, 1975) and by Karen Gordon of Yale University School of Public Health and Gertrude Isaacs of the Frontier Nursing Service in Heyden, Kentucky, which support this conclusion.

With the use of physician extenders, doctors are freed to perform more complex and time-consuming services. Extenders can perform to their fullest capacity. The patient, the physician, and the extender all benefit. These benefits, I believe, are being proven at this very time in clinics throughout the

country.

Part B of Medicare was enacted before the use of physician extenders became widespread. It was not possible to foresee extender reimbursement as a necessity until physician extender services became firmly rooted in our health care delivery system. I feel it is important that we selze this opportunity to establish our government's policy with regard to health care in general and physician extender services in specific. We will move one glant step closer toward our goal of adequate health care for all Americans with the enactment of legislation to reimburse physician extenders under Medicare.

STATEMENT OF HON. RAY BLANTON, GOVERNOR OF TENNESSEE

Primary care centers in over 30 counties in rural Tennessee utilize physician extenders with physician back-up services in order to provide primary medical care in areas where severe physician shortages exist. The legislation before your Committee would recognize the medical skills of the physician extenders and allow for much needed reimbursement for their services whether or not the physician is on the premises.

Although studies have indicated the costeffectiveness of extender-staffed primary care clinics in rural areas unable to obtain and/or support physicians, these clinics are penalized by inequitable reimbursement practices that make self-sustaining clinic operations difficult. In Tennessee, we have funded through the Appalachian Regional Commission 19 of these physician extender-staffed clinics. The first of these clinics to reach the five-year ARC funding limitation is in Clairfield. We now know that this clinic will not be able to continue services when federal funding ceases unless reimbursement policies and legislation are changed. Medicare reimbursement to physician extenders will not solve all financial problems of these clinics. The citizens served are often on fixed incomes or underemployed. However, reimbursement on a cost-of-services basis would significantly contribute to the support of extenders. It would also allow the elderly take full advantage of the services currently offered in or near their home communities.

Difficulties of access to medical care in Appalachian Tennessee are compounded by multiple problems of isolation, poverty and inadequate transportation, as well as by the lack of available physicians and dentists. Forty-three of the Tennessee Appalachian counties are or recently have been on the HEW medically underserved area list. While Tennessee is addressing as a high state priority the training and retention of family practice physicians, the immediate need for medical care in much of rural Tennessee is being met by physician extenders. These extenders practice using protocols jointly developed with their supervising physicians and have physician guidance available to them at all times. The increasingly important role of these extenders in educating rural residents in preventive aspects of health care is an added benefit provided by the clinics' staff. Senior citizens on fixed incomes need the full range of preventive, maintenance and primary medical care provided by the physician extenders; yet they are reluctant to utilize these services when medicare, usually their primary means payment, cannot be utilized as payment for physician extenders service.

I personally instructed my ARC staff to work in coordination with other state ARC staff members to coordinate the development of a resolution concerning medicare reimbursement of physician extenders. I cosponsored this resolution which was passed by the ARC on June 8, 1976. Our resolution is based on experience obtained in more than 87 primary care centers staffed by physician extenders and supported by ARC (19 of these in Tennessee). We have found primary care services provided by these extenders to be of commendable quality. We have also found that services provided in this manner help to prevent cost escalation for health care services provided to medicare beneficiaries.

We support reimbursement for physician extender services only when the extender is acting under written standing orders agreed upon by a fully licensed physician and when such physician assumes full legal and ethical responsibility as to the propriety and quality of the services rendered. We further maintain that reimbursement should be provided on the basis of the services rendered whether rendered by physicians or physician extenders and that the reimbursement should be made on a cost of services basis and paid to the clinic or sponsoring organization.

The primary reason for original funding

of these primary care clinics by the ARC was to extend the availability of physician supervised medical services to rural citizens who otherwise would not be able to obtain adequate health care. Unless reimbursement under medicare can allow coverage for services provided by physician extenders, this goal cannot be realized. We appreciate your interest and concern regarding the problems of financing rural health care.

Appalachian Regional Commission Resolution No. 407, a Resolution Concerning Medicare Reimbursement of Physician Extenders

Whereas, the 1972 Amendments to the Social Security Act, P.L. 92-603 directed the Secretary of the Department of Health, Education and Welfare to examine the quality, cost and range of health care that can be appropriately delivered by non-physician providers, and to determine the constraints that should be imposed in order to permit Medicare reimbursement for services provided by such persons: and

Whereas, in Senate Report 94–278 accompanying the 1975 Amendments to the Appalachian Regional Development Act, the Public Works Committee of the Senate noted, as a serious problem, that present Medicare regulations do not recognize or permit reimbursement for primary health care services provided by a nurse practitioner or other physician extender, unless a physician is physically present; and urged consideration of this problem by the Senate Finance Committee and the appropriate Committee of the House; and

Whereas, the Appalachian Regional Commission, together with the Tennessee State Health Department, the North Carolina Office of Rural Health Services, the Kentucky Health Resources Development Institute, the Frontier Nursing Service, the West Virginia Regional Medical Programs, the Tennessee Valley Authority, the United Mine Workers Health and Retirement Funds, the Southern Labor Union, and the Vanderbilt Center for Health Services, among others, have found by trial and careful testing, that physician extenders do provide appropriate primary health care, especially to persons in medically underserved areas, who otherwise would have limited ability to exercise their entitlement to Medicare services; and

Whereas, physician extenders are physician assistants, nurse practitioners, nurse clinicians, or other trained practitioners, who have successfully completed a program of study approved by the National Board of Medical Examiners, or who are licensed or otherwise recognized by a State as qualified to provide primary health care services in the State in which such services are rendered; and

Whereas, the Commission and other sponsoring agencies above mentioned have also found the services provided by these physician extenders, who function in organized systems of care (whether or not performing in the office of, or at a place at which a physician is physically present), to be of commendable quality; and

Whereas, the above-mentioned agencies have also found that services provided in this manner help to prevent escalation of health care costs for Medicare beneficiaries; and

Whereas, Section 102(a) (3) of the Appalachian Regional Development Act authorizes the Commission to review Federal, State and local public and private programs, and where appropriate, recommend modifications to increase their effectiveness in the Region;

Now, therefore, be it resolved, that:
The Appalachian Regional Commission recommends that Title XVIII of the Social Security Act, Part B Supplemental Medical Insurance (42 USC 1305), and all such other medical entitlement programs be amended to permit:

(1) Reimbursement for primary health care services provided by physician extend-ers, as defined above, when the following safeguards are met:

(a) The physician extender is functioning

in an organized system of care;

(b) The physician extender is acting under written standing orders agreed upon by a duly licensed physician (whether or not such services are performed in the office of, or at a place at which such physician is physically present at the time of the specific service); and

(c) The physician providing the written orders assumes full legal and ethical responsibility as to the necessity, propriety and

quality thereof;

(2) Such reimbursement be provided at a rate commensurate with the service provided rather than according to the provider of care; and

(3) Such reimbursement be made to the clinic or sponsoring organization.

PAY RAISES AND ETHICS

Mr. PERCY. Mr. President, last December, when the Commission on Executive, Legislative, and Judicial Salaries made its recommendations for pay raises for officials of the Federal Government, it coupled its pay recommendations with a strong call for a new code of public conduct for those officials, specifically including financial disclosure.

The pay raises have now been implemented and I supported them, including pay raises for Members of Congress. I believe that they were justified. I would have voted for them if there had been a vote. The salary raises recommended by President Ford and endorsed by President Carter were based on the fact that the Federal officials receiving pay increases had a pay increase of only 5 percent in the last 8 years, during which time the cost of living went up 60 per-

I understand the anger about the pay raises felt by many Americans, including a good number of my constituents who expressed themselves directly to me, but I do not think this anger is wellfounded.

Many also believe that Congress ducked the issue of whether or not to accept the pay raise by allowing it to go into effect without a vote, instead of voting on it directly and I do agree that Congress should vote on its pay raises.

To respond to this concern, I voted on March 30 for an amendment to the unemployment compensation bill to require that in the future each House of Congress shall specifically and separately vote on salary recommendations for Members of Congress, other officials of the legislative branch, Federal judges and executive branch officials. This amendment passed both the House and Senate. In the future, each Member of Congress will specifically be recorded on how he or she voted on pay raises recommended by the Commission on Executive, Legislative, and Judicial Salaries.

On March 10, I voted for S. 964, a bill to deny the annual comparability increase this October to various officials of the Government, including Members of Congress, who received pay increases in February. The bill passed in the Senate 93 to 1.

As for the Commission's recommendation for a code of ethics for Government employees to accompany the pay increases, the Senate has now taken final action to establish a long overdue code of ethics for itself. This follows by a few weeks adoption of a code of ethics by the House of Representatives. The next step will be consideration of legislation to make a code of ethics uniformly applicable to all three branches of Gov-

I am pleased that the chairman of the Governmental Affairs Committee, Senator Ribicoff, plans to proceed with such legislation in the next few weeks, with the intention of reporting such legislation to the Senate no later than May 15.

I supported the Senate ethics code resolution and voted for it on April 1, when it passed the Senate by a vote of 86 to 9. Although I feel that parts of the code are imprecise and in some cases unnecessary, I believe overall that the resolution provides a standard of conduct that can and should be followed by all Senators and those Senate employees covered by the resolution.

As passed by the Senate, all Senators and Senate employees whose annual salary is over \$25,000 shall file annual financial disclosure statements reporting all sources of income and all assets and debts. These reports shall be made public and copies will be made available upon request to any individual.

A Senator's financial report will be subject to an audit by the General Accounting Office at least once every 6 years and 5 percent of the Senate employees will have their statements audited at

random each year.

Senators, Senate employees and their spouses and dependents are prohibited from accepting any gifts aggregating more than \$100 in a year from any person, organization or corporation having a direct interest in legislation, unless the Ethics Committee grants a waiver. The prohibitions on gifts do not apply to gifts from relatives, or to gifts of less than \$35 or personal hospitality. Gifts shall include payments, food, services, entertainment, transportation, or anything of value.

No Senator or senior Senate employee shall receive outside earned income exceeding 15 percent of his or her salary. For Senators, this sets an effective outside earned income ceiling of \$8.625.

No Senator or Senate employee shall engage in outside business or professional activities in conflict with his or her official duties. Senate employees shall receive permission from their supervisors before engaging in any outside activity. Senators or in some cases Senate staff who leave the Senate employ shall not lobby in the Senate for 1 year after leaving the Senate.

No political contribution shall be converted to the personal use of a Member. No Senator while still in office, shall engage in foreign travel at public expense after a successor is chosen either because of defeat in an election or retirement.

Mass mailings are prohibited for 60 days before an election by Senators seeking reelection. I voted on the Senate floor to extend this imitation to 180 days before a general election, but that amendment was defeated.

The new Senate Ethics Committee is empowered to investigate allegations against Senators and employees and to recommend appropriate sanctions where warranted, including dismissal from the Senate.

I believe these and other provisions of the ethics code will shed the light of public scrutiny on the finances of Senators and Senate employees so the public and the press can make their own judgment as to whether or not a Senator or Senate employee has a conflict of interest. Further, the specific sanctions on gifts from individuals with a direct interest in legislation should insure that Members of the Senate and Senate employees will not be swayed by favors, monetary or otherwise, from people with a vested interest in legislation.

During the course of the debate on the ethics code, I offered six amendments to the legislation, five of which were accepted and one which was withdrawn upon the assurances of the managers of the bill that my concern was already covered by the ethics code.

The amendments that I offered which

were accepted were as follows:

First. To prohibit discrimination in Senate employment on the basis of age. The original ethics resolution which was reported from the Ethics Committee prohibited discrimination in Senate employment on a number of grounds, but did not include the basis of age. I was pleased when this amendment was accepted.

Second. I offered an amendment to require that confidential financial information, including tax returns, be treated confidentially. The resolution does not require that tax returns, for example, be made public, but that tax returns can be examined during the course of an investigation by the Ethics Committee. I believe that some information in tax returns, such as charities contributed to. should be confidential.

Third. I also offered an amendment requesting that the Appropriations Committee study the adequacy of Senate office allowances. The new recordkeeping requirements of this ethics code might result in additional expenses for each office. The Senate Appropriations Committee will study the need for additional resources by Senators to meet the requirements of the ethics code.

Fourth. I offered an amendment which was also accepted which would allow the netting out of gifts exchanged between a Senator or Senate employee and an outside party. The resolution, as it was written, prohibits gifts from individuals with a direct interest in legislation of more than \$100 in a calendar year and requires that gifts of over a certain amount from other individuals be reported. However, families often exchange gifts of greater value. My amendment states that the value of a gift given to someone on the outside could be subtracted from the value of the gift given to the Senator or Senate employee before determining whether or not the prohibited threshold was crossed or a report must be made.

Fifth. The ethics resolution as originally written, in addition to financial disclosure and a limit on earned income of 15 percent of one's salary, also flatly prohibited Senators and Senate employees from engaging in certain lines of work. Some outside pursuits mentioned in the bill included the work of a lawyer, doctor, or consultant. However, there was no overall definition of what occupations an employee or Senator could or could not pursue. I felt that the financial disclosure provisions and the limit on earned income were sufficient and that there was no practical way to flatly prohibit outside activities in certain selected areas. For example, the bill as originally written would have prohibited a lawyer on the Senate staff from writing a will for a friend on a weekend and accepting any fee for this. However, he could bartend over the course of the weekend for \$200. My amendment eliminated the flat prohibition on certain activities but did retain the financial disclosure provisions and the limit on outside earned income. I felt that financial disclosure would allow the public to decide whether or not the public servant had a conflict of interest. This amendment was also accepted by the Senate. This amendment, as accepted by the Senate, allows such professions to be practiced to the degree of the 15-percent limit on outside earned income and only during nonoffice hours.

Sixth. The last amendment I offered was designed to limit the amount of time a Member of the Senate or a Senate employee might spend on acquiring "unearned" income. I was reassured by the managers of the bill that any excessive amount of time spent on investments would be a violation of the code because it would interfere with the official performance of one's duties. With that assurance, I withdrew the amendment.

There were a few other amendments that came up during the course of the debate that I would like to comment on. On the last day of debate, Senator BAKER offered an amendment that would have put a "sunset" provision in the resolution, providing that the resolution would expire in 3 years unless renewed by the Congress. I voted for this provision believing that because of the scope of the code of ethics, it would be wise to review the code in 3 years and evaluate its effectiveness. If the code needed to be strengthened at that time, then we could do so. If there were certain provisions that were too burdensome or were not serving the purposes for which they were intended, such provisions could be modified. Of course, provisions of the code could be amended at any time, but I would have preferred a guaranteed review of all the provisions of the code at a specific time. The Baker amendment failed, but I plan to recommend appropriate changes to the code as its implementation takes full effect and we are able to see whether it is accomplishing its intended purpose.

Senator Muskie also offered two amendments that generated a great deal of controversy. The first amendment would have extended the 15-percent limit on earned income to unearned income. This would have included a limit on the

amount of money a Senator or Senate employee could earn from interest on savings accounts or dividends on stocks. I voted against this amendment as I felt that such income was in no way a conflict of interest with one's Senate duties, but rather was a return on investments and earnings made before Senate service. My only concern was that time spent on managing personal investments not conflict with Senate duties. Therefore, I offered the amendment described earlier.

Senator Muskie then offered an amendment, which I voted for, which would have removed the 15-percent limitation on all sources of income. I voted for this amendment because I felt that the ethics code discriminated against Senators who have only outside earned income. I believe that financial disclosure was sufficient and a specific limit on earned income, so long as it did not interfere with the conscientious performance of a Senator's duties, was not needed.

The ethics code is now in operation as far as the Senate is concerned. Certain provisions will phase in over the next year or so but a large part of the code is already effective. I intend to support the letter and spirit of the code and do my best to help assure that the ethics code succeeds.

HEARINGS ON PUBLIC LAW 480

Mr. HUMPHREY. Mr. President, I wish to share with this body some of the statements presented by witnesses testifying on the Public Law 480 program on April 4, 1977, before the Senate Subcommittee on Foreign Agricultural Policy, on which I serve as chairman.

The lead-off witness at the first day's hearing was Mr. Howard Hjort, director of agricultural economics, at the Department of Agriculture. He was followed by Kathleen S. Bittermann, who serves as coordinator of the Office of Food for Peace with AID.

This hearing was designed to develop in greater detail the issues which our committee faces in reaching decisions on extending the Public Law 480 program. I was particularly impressed by the issues raised and the candor with which both of these administration witnesses were prepared to face the need to tie our food assistance more closely to our developmental goals. At the same time, it was clearly indicated that our food assistance does and should further the goals of developing future markets for our agricultural products while at the same time supporting our U.S. foreign policy objectives.

The witnesses dealt with a number of major issues, such as the link between food aid and food reserves, and the emphasis on providing our food assistance to the most needy countries by maintaining the 75–25 allocation of our food aid. This formula will be in some need of adjustment in light of the worldwide inflation.

The testimony also dealt with the relationship between the title II and title I programs and whether it would be desirable to change the existing ratio between the two programs.

We also dealt to some extent with my

bill, S. 1169, in terms of how we can encourage the reprograming of local currencies through a new title III to encourage increased agricultural production and rural development in the food deficit countries.

Mr. President, I ask unanimous consent that the statements of Dr. Hjort and Ms. Bittermann, as well as my own remarks, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the Record, as follows:

STATEMENT OF SENATOR HUBERT H. HUMPHREY

It is a pleasure for me to welcome you to these hearings on the future of our food assistance program. Senator Clark and I felt it would be useful to hold these two days of oversight hearings on the Food for Peace Program in order to examine past problems and future prospects before we make our decisions on extending the program for another five years.

When I introduced S. 1169 on March 29 to extend and improve the program, I said

"Every activity requires periodic review. The successes of Public Law 480 are no reason why continued imagination cannot yield ways to further strengthen and improve this program. And occasionally time or circumstance uncovers certain deficiencies in our food for peace activities."

You will recall the concern and attention given to the program during the food crisis of 1974. The 1974 food shortages brought about a new awareness throughout the world of the longer term food needs of less developed countries and resulted in a heightened awareness of the crucial need to expand agricultural production in those countries.

We have increasingly become aware of the relationship between this program and food production in the developing countries.

But with the recent easing in the worldwide food supplies, public and Congressional attention to the size, operation and direction of the program seems to have declined, although there have been some challenging articles on the program and continuing studies by Congressional staffs.

If public concern has diminished, the problem of sufficient food supplies and nutrition in less developed countries and the role of food aid in helping to ensure adequate supplies has not gone away. Recent reports by the staff of the World Bank and the International Food Policy Research Institute are projecting enormous grain import needs for the less developed countries by 1985 of 75 to 100 million metric tons in grain imports, compared with around 35 million tons for the same countries in 1974. However, there seems to be little disagreement among food experts that the world is capable of producing enough grain to fill these projected needs. We are not facing the Malthusian specter of being physically unable to feed ourselves

What we may well be facing if the projections are correct, is a distributional problem for less developed countries in 10 years time. How are the less developed countries going to pay for their imports, and how can food supplies be moved to the areas of need?

How much domestic investment, critical for development, will have to be foregone if this food deficit continues to grow? What will happen to the growth rate in these countries? What are the implications if we have poor weather and even larger grain imports are needed than those projected in recent studies? How does our food aid program fit into finding a solution to these problems?

While the primary program emphasis today is on humanitarian goals, our food assistance also serves foreign assistance and market development goals. We need to recall that the program was developed largely to help dispose of our food surpluses. These purposes are still part of the program, and we have growing food supplies today—particularly wheat and rice.

In introducing S. 1169, I suggested:

"Of course no transaction under Public Law 480 is entirely for market development, foreign policy or humanitarian purposes. There is or should be some element of each in every activity conducted under this act."

The second day's hearings will examine our foreign policy objectives and market development as they impact on the PL 480 program. While it is difficult to relate these different objectives, they need to be raised and particularly in relation to the future of U.S. food aid.

Of course, we realize that food aid programs can only be a part of developed countries' efforts to help less developed countries rerease their agricultural production and growth. The magnitude of the potential food problems of less developed countries emphasizes the need to have well integrated and designed aid programs to deal with the the food problems of poor countries.

These hearings will focus only on food aid, a part—but an important part—of U.S. development assistance. We want to look at our Food for Peace program today in the context of these potential long-run problems for less developed countries. We have an important stake in how these countries deal with their food and development problems.

We have a fine group of witnesses with broad experience in the agricultural and development fields generally and with the food aid program in particular. We have with us today Howard Hjort, director of agricultural economics at the Department of Agriculture, to lead off.

STATEMENT BY HOWARD HJORT

The Administration has proposed a fouryear continuation of the food aid program. Over its lifespan the P.L. 480 program has maintained and stimulated U.S. farm exports and in general has had positive effects for the recipient countries. It has: helped meet emergency and other food import requirements; generated local currencies to finance economic development and agricultural self-help projects; raised nutritional levels, particularly of the youngest population groups; and contributed to political stability and furthering U.S. foreign policy interests.

The President has decided that a detailed study of the food aid program is due. We want to determine more clearly the extent to which we are achieving the various objectives and to identify more explicitly what emphasis we should place on each of the objectives. A thorough review should help us plan and administer an even-handed program that is consistent from year to year in meeting the needs of recipient countries. We want to avoid the variability that has occurred in recent years. For example, shipments of major grains under P.L. 480 declined from 7.6 million metric tons in FY 1972 to a low of 2.3 million tons in FY 1974 and then increased to 3.7 in FY 1975.

[Amounts in millions]

	Wheat, rice, and coarse grains		Tabl
Fiscal year	Metric tons	Dollars	Total (dollars)
1972 1973 1974 1975 1976	7. 6 5. 5 2. 3 3. 7 3. 3	567. 8 551. 7 547. 9 735. 9 538. 9	1, 058 954 867 1, 101 907

The United States has been and remains the world's major donor of food aid, mainly through P.L. 480. However, as food aid has increased from Canada, Japan and several European countries since 1968, the U.S. share of developed donors' disbursements of food aid dropped from over 90 percent during 1960-68 to a low of 48 percent in 1974 and up to 59 percent in 1975.

U.S. shipments of agricultural commodities under specified Government-financed programs (mainly P.L. 480 and small amounts under Mutual Security/AID programs) totaled \$28.5 billion during fiscal 1955 through September 1976. This amounted to about 40 percent of all U.S. economic aid. During 1970-75, the food aid share of U.S. economic aid declined to about 26 percent.

There have been many changes made in the P.L. 480 program since its inception in 1954. P.L. 480 was created in 1954 primarily as a temporary measure to bypass foreign exchange shortages of foreign nations and to dispose of U.S. surpluses. The Food for Peace Act of 1966 shifted the primary emphasis to encouraging agricultural and overall economic development abroad. combating hunger and malnutrition, promoting commercial markets for U.S. products and supporting U.S. foreign policy objectives.

The International Development and Food Assistance Act of 1975 amended P.L. 480 and placed additional stress on the contribution of food ald to economic development with particular encouragement for local food production in recipient countries. A major provision to this end is the authorization that up to 15 percent of the total value of Title I, P.L. 480 agreements can be "granted back" to recipient countries for approved projects for agricultural development, rural development, and population planning. Further emphasis was given to the poorest countries by the requirement that at least 75 percent of all Title I food tonnage be made available to countries with annual per capita GNP's of \$300 or less.

Agricultural development is a complex, slow process, requiring many years of difficult adjustments before satisfactory production gains can occur. During the development period, many countries experience serious food shortages and have limited foreign exchange reserves. These countries need assistance to meet shortfalls in production, reduce extreme internal price fluctuations detrimental to growth and help to avoid uneconomic short-term measures to meet deficits. At least part of this assistance can be provided in the form of food aid.

We have made several proposals for improving the effectiveness of the program in meeting its objectives. These are in the Administration Farm Bill that Secretary Bergland discussed with the Congress last month. A major substantive proposal deals with the requirement that at least 75 percent of Title I commodities be allocated to countries with a per capita GNP of \$300 or less. We have proposed an amendment to provide that the poverty criterion be the level established for the World Bank's International Development Association (IDA) credits.

The World Bank updates its IDA poverty criterion periodically. This is being increased from a per capita GNP of \$375 to \$520 (in 1975 U.S. dollars) to account for inflation between 1973 and 1976.

Other proposals are covered in the answers to your questions or are procedural in nature and I will not repeat them here.

The remainder of my statement is addressed to the specific questions you submitted to me.

1. A number of recently published studies have projected large grain import needs for less developed countries by 1985—grain import on the order of 75 to 85 million metric

tons compared with approximately 34 million metric tons in 1974. Has USDA done any studies of its own on this topic? Does USDA have any evaluation of the implications for less developed country income and growth of these potentially large grain import needs? What should the purpose of the U.S. Food for Peace program be in 1985 in the light of these projections? Should we begin thinking about revising the program in any substantial ways?

A number of studies have appeared recently on the world food situation, and more specifically the food situation in the less developed countries (LDC's). USDA analyses have appeared in several regular departmental publications including the World Agricultural Situation, World Economic Conditions, etc. A special USDA report—The World Food Situation and Prospects to 1985—appeared in 1974; two subsequent studies—Alternative Futures in the World Grain-Oilseed-Livestock Economies and an updated World Food Situation—are scheduled for

publication later this year.

Despite the different approaches and objectives of recent studies, there appears to be a general consensus that the grain import gap-i.e., the difference between total consumption and indigenous productionin the LDC's is likely to increase. Actual estimates of the LDC's 1985 grain import requirements range from somewhat above the present 30 million ton level to around 100 million tons. This wide range in estimates of 1985 grain import gaps is due largely to variations in rates of income, population and productivity growth. USDA assumptions of 2.7 percent population, 3 percent per capita income, and 2.7-3.0 percent productivity growth rates imply a likely gap of 50 to 70 million tons. Measuring the size of the LDC's import requirements, however, is not equivalent to measuring LDC food aid needs.

The implications of these "grain gap" projections for economic growth in the LDC's, and for U.S. food aid are mixed. While much of the LDC's projected demand growth is tied directly to population increases, a large part of increased import demand is linked to growth in income. This income induced growth in import demand is most apparent in the higher income countries of North Africa, the Middle East, and parts of East Asia. Up to %'s of the LDC's grain imports are expected to be concentrated in these more affluent countries with limited agricultural capacities.

The increase in grain imports of these countries can be seen as a measure of both population growth and increased welfare. U.S. food aid to these countries could best be geared to meeting development goals. Only on occasions of marked production shortfall or natural catastrophe would famine relief be called for.

In many of the poorer Asian and African developing countries, slower rates of overall economic growth limit their ability to import while lagging growth in food pro-duction increases their need for foreign food. Sizeable imports are likely to be limited to years of significant production shortfall. The cost of even limited commercial purchases, however, are likely to slow economic growth considerably. Given the size of the calorie gap in most of these poorest countries and their large populations, U.S. food aid to this second group of countries could best used to meet hunger and malnutrition needs arising from production shortfalls or nat-ural catastrophes and secondarily to promote overall development. A U.S. commitment to improving nutrition would require development assistance aimed at speeding up growth in indigeneous agricultural and non-agricultural production.

The implications for the size of the U.S.

P.L. 480 programs depend on broader national and international grain reserve questions, and on the degree of U.S. committo improve diets in the developing countries. Adequate national or international stocks could minimize both the cost and the size of future U.S. food aid shipments. A U.S. goal of significantly improving nutrilevels in the developing countries, would expand the size of U.S. P.L. 480 program sharply. Effective use of food aid as a development tool would also be likely to expand the size of the U.S. program.

2. In using food aid in the future for economic development purposes, where should our program emphasis be—in expanding the Title II nutrition intervention purposes and food for work activities; or can we make a greater contribution to economic development in less developed countries by expanding the larger Title I program of government to government transfers? What changes could be usefully made in the administration of the Title I program or in the P.L. 480 legislation generally to improve further its effectiveness as a development tool?

Title I may be superior to Title II in terms of its effect on overall economic development. Title II may be superior in terms of its effect on overall social developments. The benefits from Title I sales come from its immediate impact on the recipient country's budget. The local currencies generated the sale of P.L. 480 commodities enable the recipient government to expend more resources in a non-inflationary manner on various development projects. Each Title I sales agreement details the "self-help" projects which should be promoted by the recipient government. Other benefits from Title I sales include the diversion of vital foreign exchange to imports of other essential goods, since the agricultural commodities received under P.L. 480 can be repaid over a 20-40 year period. Stockbuilding and the addition of P.L. 480 agricultural commodities to supplement domestic supplies on the market also reduce inflationary pressure and help keep consumer prices lower or more stable.

The effectiveness of Title I could be improved by multi-year programming, giving the "self-help" projects a stronger role, allowing more administrative flexibility to target food aid to where it is most needed, using "grantback" provision of forgiving the new a part of the repayment obligation to recipients that use the generated currencies for approved development projects, and co-ordinating P.L. 480 activities with overall

U.S. development assistance.

Title II can play an important role in helping to develop countries by improving the well-being of the most vulnerable groups. Title II is considered to have the greatest potential in improving the diets and health of preschool children (most critical years of a child's development are before five) and expectant mothers and supporting self-help development and community projects in rural areas (development of roads, schools, housing, health centers, flood control, irrigation, reforestation, etc.). Title II donations accounted for about 22 percent of all P.L. 480 exports through fiscal year 1976.

It is likely that Title II programs could be increased in various areas. The Administration is proposing that the annual maximum allocation for Title II be increased from \$600 million to \$750 million. This level would be adequate, in our opinion, to meet requirements up to 1.5 million metric tons. particularly with the authority to carry over the prior year's unused funds. However, due difficulties of distributing much amounts of donations, it is unlikely that Title II could be increased anywhere near the extent of Title I without significant im-provements in administrative procedures and distribution facilities in recipient countries. Thus, primary emphasis may still have to be placed on Title I, but the degree of priority given to the two types of programs could vary from place to place.

3. How much of a problem is the price and agricultural production depressing impact of Title I commodities in major re-cipients? What can be done to reduce or

eliminate this problem?

Since the mid-1960's, there have been few studies on the impact of P.L. 480 on agricultural production and prices in recipient countries. In some cases, food aid along with economic, political and social pressures within developing countries may have caused some disincentive effects on agriculture and government postponement of measures to promote development. However, generally measures have been taken by the United States and recipient governments to mitigate any disincentive effects of food aid. internal factors such as price and credit policies have generally been far more powerful in influencing developing coun-tries' programs than the availability of food

Most recipient governments have maintained strict controls over food grain imports and the internal distribution and pricing of imported and domestically-produced grains. For example, some govern-ments sold lower-priced grain imports at the higher level of domestic prices and used the markups to help defray marketing and other agricultural costs. Other governments that subsidized imported grains to low-income consumers may have had little direct effect on producer prices. Before food aid began, it was the policy of many governments to restrain consumer price increases. Thus without P.L. 480, government price and marketing controls might have intensified to prevent severe price increases. Food aid in most cases can be distributed in such a way as to avoid a disincentive effect on domestic agriculture. Also the positive income and development effects would probably in-crease the demand for food in the longer-

Several amendments to P.L. 480 encourage countries to promote their own agriculture and reduce population growth as a condition for receiving Title I commodities. Some major self-help measures specified in the law are improvement of storage and distribution facilities, development of small family agriculture and increasing food supplies to the poor. The 1975 law also encourages countries to use local currency proceeds for programs of rural development, nutrition, population planning and farmer-to-farmer activities. Generally, the United States has programmed Title I commodities to meet a country's needs after its domestic shortages have been estimated, thus reducing disincentive effects.

Since the world food crisis in the early seventies many countries have given greater priority to agricultural development. As long as recipients and the United States continue to emphasize that major efforts to promote development must come from within the developing countries themselves, and food aid carefully programmed, it should be possible to avoid disincentive effects.

4. How can we avoid wastage of food aid even disruption of recipient country prices, trade and production when food aid is used to dispose of U.S. agricultural surpluses?

To minimize wastage, the quantity and timing of food aid shipments must reflect need and handling capacity within the recipient country. To help answer the key questions of how much and when, an acurate assessment of the recipient country's food situation should be made with regard to the specific need for concessional food aid, including the capacity of the country to handle food imports. This should be done with a minimum of political influences either

from within the United States from pressure groups or from the recipient country government eager for the revenues that result from the sale of concessional food imports. assessment should consider the special circumstances of each individual country including contingency plans for emergency needs and reduced levels of production.

Limited storage and management capabilities, the difficulty of quick movement of food stocks, and the unstable nature of the food supply are characteristic of many of the countries that receive food aid. To overcome these problems as they relate to the supply of food aid imports requires a judicious scheduling of all arrivals. Considerable time is required for delivery of a P.L. 480 food shipment. After an agreement is negotiated and a purchase order issued, six to eight months may pass before food arrives at the local market where it is needed. If the U.S. is to make its food aid programs more responsive and timely, we need to make continuing efforts to shorten the time involved. The coordination and cooperation of all donor countries with the appropriate agencies in the recipient country government is essential. Overall coordination of a country's food program and food aid might be accomplished by the establishment of a coordinating agenwithin the government of the recipient country

Within the recipient country, storage and handling facilities should be improved to provide sufficient capacity to handle the requirements of government food distribution programs such as ration, procurement, pric-ing policies, and emergency reserves. Stock management training is necessary for personnel to properly handle food stocks and distribution programs. Pest control, bulk handling, inventory control, and equipment maintenance would be topics of importance. The physical improvemets can be accomplished by building new storage facilities and/or rehabilitating old facilities. U.S. AID technical assistance could be directed toward the above programs. Revenues from the sale of P.L. 480 concessional food could be allocated to finance these efforts to decrease wastage. Additionally needed stock protection chemicals and equipment could be programmed at the appropriate levels for each P.L. 480 agreement. This would guarantee the adequacy of pest control supplies when and where they are needed.

To reduce waste, the quantity programmed for P.L. 480 should reflect a scheduling of arrivals to meet the recipient country need, handling capacity, proposed aid levels from the other donor countries, and commercial imports. Each P.L. 480 agreement should be flexible enough to allow quantity and timing adjustments should they become necessary due to stock buildup, production shortfalls, or emergency conditions within the recipient country.

5. After nearly 20 years of providing an average of nearly 13 million tons of food aid annually, in 1973 and 1974, the U.S. cut its food aid program sharply due largely to food shortages and high food prices. These cuts came precisely when less developed countries needed the food aid the most. Is there any way we can avoid in the future having to cut back food aid when recipient countries need it most?

The 1974 World Food Conference recommended that donors adopt the concept of "forward planning" or multiannual commitments of grain aid. As of February 1977, Can-ada was the only major food aid donor to formally make multiannual commitments of

bilateral grain aid. Advantages to multiyear allocations of aid are that it could provide greater continuity in the flow of aid to countries whose needs are fairly regular and avoid the disrupting effects of wide fluctuations in grain prices. A disadvantage could be that foreseeable changes in donor supply and demand levels would make it difficult to meet the donor's advance aid commitment. This problem could be alleviated by creation of an international coordinated system of national reserve stocks. We will continue in negotiations with other nations to establish some sort of an international food security system. Meanwhile, we have recommended that we begin with a food grain reserve program in the United States. The Department is also looking closely at Senator Humphrey's proposal for a small government owned reserve to insure meeting food aid commitments.

Assurance of adequate food aid supplies over a long period will require that principal food aid donors work more closely in coordinating their food aid programs and sharing responsibilities for providing assistance.

Making global assessments and projections of food production and needs, as required annually by the 1975 amendments to P.L. 480, should also help in planning for future adequate supplies of aid commodities. The requirement in 1975 legislation of a minimum tonnage level for Title II programs was another attempt to solve this problem, though the 1.3 million ton minimum is only a small part of U.S. total food aid.

However, at present the USDA is required to meet the "availability criteria" before programing for food aid shipments so domestic food supply and domestic and commercial export demand conditions determine the levels available for food aid. We have proposed that the criteria for determining availability of commodities be amended to provide the Secretary specific authority for making commodities available in times of limited supplies so as to meet disaster needs and multi-year commitments to foreign nations for humanitarian food needs.

6. What past successes and future prospects do you see in using food aid to develop markets abroad for U.S. agricultural exports?

To the extent that food aid exports have helped promote economic development, they have also helped develop commercial markets abroad. As developing countries have increased their growth and improved their foreign exchange position, they have tended to increase their commercial purchases from the United States and reduce or terminate their need for food aid.

U.S. agricultural exports have increased to most principal developing country recipients of food aid. Commercial sales of farm products to developing countries totaled over \$5.8 billion in fiscal 1976. This represented about 28 percent of total U.S. commercial sales and 85 percent of all U.S. farm exports to developing countries, compared with 16 percent of the total and 40 percent to developing countries a decade earlier.

For example, the Republic of China (Taiwan) and Brazil graduated from being principal Title I recipients in the mid-1960's to being the 11th and 13th major commercial market for U.S. farm exports in fiscal 1976. U.S. commercial sales also increased considerably to several current major P.L. 480 recipients, such as the Republic of Korea, India, Indonesia, Israel, and Egypt. In fiscal 1976, India was the 8th largest commercial market for U.S. farm products—up from 18th place in 1974. Since fiscal 1972, Korea has been one of the 10 leading commercial customers for U.S. farm products.

Food aid should be considered as a means of breaking the food barrier to economic progress. Relief feeding in an emergency is a prerequisite to economic development, but workers must have sufficient food for sustained effort on development projects. Food aid can prevent debilitating diseases that reduce worker productivity. In those cases where production in the developing countries is not likely to respond fast enough, food aid has a unique place in an integrated program to accelerate economic growth. The P.L. 480 program is more than simply a food

transfer on easy terms. It is also a transfer of resources, in that the agricultural commodities sent out under P.L. 480 can be sold by the recipient government and the local currencies generated then used for economic development projects. As the economies of the recipient countries develop they outgrow the reliance on food aid.

STATEMENT BY KATHLEEN S. BITTERMANN

Mr. Chairman and Members of the Committee, I am pleased to appear before you to-day to discuss U.S. food aid and its relationship to economic development.

As you no doubt are aware, U.S. food aid under Public Law 480 began in 1954. Title I of the Act authorizes sales of U.S. agricultural commodities on long term concessional loan terms to friendly countries. Title II authorizes donations of food for disaster relief and for other feeding activities such as maternal child welfare, food-for-work and school lunch.

Since 1974, the United States has provided each year between 50 and 60 percent of the annual goal of 10 million tons of food set by the World Food Conference. For FY 1977 the level of U.S. food aid will be about 6 million tons and for FY 1978 we are projecting 6.3 million tons. Of this amount, approximately 75 percent will be under Title I and the balance under Title II.

Although P.L. 480 is a multi-purpose statute that includes trade expansion, development of markets and other foreign policy concerns among its objectives, the program has provided strong support to U.S. economic development objectives.

First, a strong link to economic development is the improved nutrition which both the Title I and II programs provide. Ironically, this factor is often overlooked, as food aid and nutrition activities are more often associated with humanitarian rather than development objectives. It is clear, however, that an adequate level of nutrition is essential to development. Conversely, malnutrition increases susceptibility to debilitating disease and serious malnutrition has direct debilitating consequences, especially for the young. Both effects have negative consequences for development.

Second, food sales under Title I provide resource transfers which enable scarce foreign exchange holdings to be channeled into development efforts.

Third, Title I assistance provides a backup resource which can encourage developing countries to undertake new policies aimed at increasing food production which might otherwise be risky without an assured supply of food.

Fourth, proceeds generated from the sale of Title I commodities may be used by developing nations to finance programs of agricultural production, rural development, nutritional improvement and population planning.

Finally, under the donation program (Title II) food provided as part payment of wages in public works programs helps construct and expand infrastructural facilities such as rural roads, wells, irrigation, etc. that are a vital part of programs designed to increase agricultural production.

On balance over the years P.L. 480 programs have had a strong positive impact on development. This is not to say, however, that there are no aspects of the P.L. 480 program which conflict with or hinder the realization of development goals. For example:

U.S. crop cycles and/or commodity availabilities do not always mesh well with the import needs of developing countries.

Uncertainties as to supply availability can limit the integration of P.L. 480 programs with other development efforts.

Effective use of local currencies requires a degree of involvement by the U.S. in budgets and expenditures that may be regarded by some countries as unwarranted interference in internal affairs.

Large long-term food aid may create dependence and foster disincentives to local agricultural production efforts.

These are factors which can but do not have to inhibit development.

Developing governments' policies regarding food imports, pricing incentives, agricultural production, etc. are fundamental to the effective use of P.L. 480 programs as a positive development tool. In the cases of Japan, Taiwan and Korea large scale imports of P.L. 480 commodities were complementary to successful efforts to increasing agricultural productivity. The record in Pakistan and India has been mixed but by no means negative. Although in many instances the United States has limited ability to influence other governments' policies in the area of food production, we must make every effort to insure that food aid programs work in tandem with our dollar assistance activities and with the development efforts of recipients themselves.

Looking to the future, in our judgment, a continued food aid program will be essential. While estimates vary somewhat depending upon such assumptions as population growth, levels of inputs, etc. most experts agree that the grain deficits in LDC's will grow significantly, perhaps as much as three or four fold by 1985, unless appropriate food production and population measures are taken. The ultimate solution to this problem will be to increase food production in the LDC's. Food aid will be crucial as part of a development strategy which seeks a better balance between food production and population growth. In this context food aid would initially help bridge the food gap and over the long term will help provide a degree of certainty in food supply which is essential to a strategy of development.

While the need for a continued food aid program is clear, the development impact of the program can be further strengthened. In order to accomplish this the President has directed that a study be undertaken within the Executive Branch to determine ways in which the development link can be improved.

Some initial steps have been taken in the recent past:

Interagency approval of a new system designed to integrate Title I programs with other development assistance was obtained.

A new program concept was devised whereby a "core" quantity of commodities would be offered to countries on a priority basis when a significant link could be demonstrated between food aid and development objectives.

Instructions were sent to the field on the use of the "loan forgiveness" authority contained in Section 106(b) (2) of P.L. 480. This provision permits the reduction of dollar indebtedness under P.L. 480 Title I in the equivalent amount of local currency that is effectively "used" in support of agricultural development, rural development, nutritional activities or family planning.

A.I.D. revised its policies on the use of local currency generations under Title I in order to permit where appropriate a more collaborative style of programming the use of the currencies.

Based on the minimum tonnage established for Title II a longer range planning effort with U.S. voluntary organizations and recipient governments has been permitted. We are also attempting to integrate Title II activities more closely with ongoing A.I.D. projects—particularly those which relate to nutrition, population and agricultural development.

In the near future we will be looking at such questions as:

How the P.L. 480 program can be more effectively linked to A.I.D. efforts to concentrate upon the small farmer and landless laborer.

How the nutritional impact of both Title I and Title II can be improved.

Whether the Food for Peace program can be targeted to reach poor people not now covered by either Title I or Title II.

What the relative size and concentration of Title I and Title II programs should be.

How P.L. 480 programs can relate to the development of a worldwide grain reserve system.

The terms under which Title I food assist-

ance is provided.

In summary, we believe that the Food for Peace program has made a strong contribution to development in the past and with strengthening can make even a greater contribution in the future.

THE ROLE OF INSULATION IN OUR OVERALL ENERGY POLICY

Mr. MATHIAS, Mr. President, as the American people finally begin to confront the reality of our energy situation, it is clear that each and every person is going to have to make sacrifices: that everyone will have to reevaluate his or her lifestyle, and that, where necessary, higher energy costs will have to be accepted. But there is one area where it has been consistently shown that great amounts of energy can be saved at a minimal cost: That is in the appropriate use of insulation.

"Retrofitting" homes and commercial properties holds the promise of being one of our most effective conservation tools. Moreover, the necessary technology already is available, on line, and in operation, Millions of dollars in excess energy consumption can be saved through this relatively simple and comparatively cheap method of conservation

In the forefront of the effort to establish standards for the expected demand in this area is the Insulation Contractors Association of California. They have recognized the key role that industry representatives can play in educating the public about the needs of insulation and about potential pitfalls. They have highlighted the need for qualified installers to insure safe installation in conformity with various State and local codes. They have brought to the attention of those in Government the necessity for increased production of basic insulation materials. And, to their credit, they have emphasized the need for standards for products to provide maximum consumer protection.

This group has made important recommendations to the President of the United States and his energy staff which I think warrant consideration by my colleagues, and I ask unanimous consent that those recommendations be printed in the RECORD at this point.

There being no objection, the recommendations ordered to be printed in the RECORD, as follows:

RECOMMENDATIONS BY THE INSULATION CON-TRACTORS ASSOCIATION WITH REGARD TO A PROPOSED NATIONAL RETROFIT PROGRAM

That current creative and effective marketing programs by utilities and manufacturers be encouraged and continued because of their obvious success in moving the public voluntarily to reinsulate their homes

2. That rigid standards be established for insulation products manufactured, sold or otherwise distributed in order to provide maximum consumer protection. This would help to remove from the marketplace both contractors and manufacturers who do not meet appropriate requirements.

3. That high priority for energy be given to those manufacturers who are either expanding present facilities or building new facilities to manufacture products to meet requirements of the projected program.

4. That the Federal Government provide its good offices for guidance and counsel in working with the combined insulation industry to develop incentives that will be equitable for all consumers.

5. That the Federal Government turn its focus to assisting the industry in developing enforceable codes of performance standards to provide maximum consumer protection.

That the Federal Government, utilities, contractors and manufacturers coordinate efforts to insure that those in lesser economic situations are adequately served.

7. That all parties to this important effort cooperate to develop effective job-training programs to provide skilled personnel in an orderly fashion related to annual growth

8. That a key ingredient of this massive undertaking be the immediate establishment of an emergency task force made up of all elements of the insulation industry to recommend such actions as would implement the above proposals. This task force should be charged with a specific mandate and a specific deadline for presentation of its recom-

Mr. MATHIAS. Recently, Joseph J. Honick, executive director of the Insulation Contractors Association of California, testified before the California Public Utilities Commission. His remarks, I think, demonstrate the degree to which this group has been leading a major effort to assist the American people in coping with the growing energy dilemma. I ask unanimous consent that his testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

PREPARED TESTIMONY OF JOSEPH J. HONICK

I am Joseph J. Honick, Executive Director of the Insulation Contractors Association, an organization representing contractors throughout the State of California, offices at 15910 Ventura Boulevard, Encino, California. With me is Mr. Anthony Di Angelo, of Redwood City, President of the Association's Northern California Chapter and a Director of the State Association.

For the information of the Commission. our Association became a State entity in the summer of 1976 and was formally incorporated in the fall of the same year. It is, however, the amalgamation of representative chapters in Northern and Southern California of much longer standing. We are pleased to note also that other chapters have been organized in the San Diego area and now in the Fresno-Bakersfield area.

According to the best information available to us, our members perform in excess of 80% of the residential insulation contracting business for both new construction and retrofit in the State.

The goals of the Association include both the advancement of our industry and the development of programs that will insure the consumer of quality performance standards and ethical sales methods.

We are here today as a very interested party to comment in constructive fashion regard to the Commission's Order #86983, amending Case #10032, which proposed specific alternative approaches by to reinsulate all appropriate residential units in the State.

We wish to compliment the Commission for its determined efforts to achieve maximum energy conservation. By the time, it is no longer necessary to document the critical situation that has led to this juncture. It is, however, vital that whatever approach is taken be measured against the total impact it may have in the longer run.

Before moving to specifics regarding the proposals before you, we would like to comment that one of the greatest deterrents to voluntary massive residential retrofit has been the overly-publicized suggestions that someone will do the job for free or through some other subsidized means. Not only has this pervasive publicity tended to distort an orderly free market accommodation of public need, but it has in many areas slowed down what had been accomplishing the Commission's . . . and indeed the generally expressed goal: rapid and certain energy conservation through simple and cost-effec-

In consumer newsletters, for example, grandiose statements have been printed like this one from the Moneyletter of March 1977, datelined Washington, D.C.:

"Knock, knock: It's your gas company come to insulate your house, free." "It sounds far-fetched, but if yours is one of the 34 million U.S. houses heated with gas, your utility may offer to not only insulate your house, but also to install an automatic thermostat and improve your furnace efficiency-at no direct cost to you.

The article concludes by noting that the stumbling block may be the guy down the street who's just insulated his house and can't understand why he should pay for his neighbor's. The sensitive retort from the plan's proposer, Dr. William G. Rosenberg, is that "the guy should realize that it's cheaper for him to buy the gas his neighbor saves, at the current price, than for his gas comto have to buy costlier gas from Algeria."

Moneyletter is only one example of many such publications and their impact is multibecause the sensationalism of their statements is wonderful filler and feature material for radio, television and the general press who communicate daily to a public grown confused by what is and what is not valid in the energy crisis dialogue.

Because of such publicity, the Commission was requested by the staff on March 7, 1977, to issue an order that would inform consumers who reinsulated as of February 15, 1977, that they would share in any ultimate incentives, bonuses or other benefits developed at some future time. Reason: so many consumers had begun to postpone voluntary reinsulation because they had read or heard of some potential benefit that had only obliquely promised and based on only the most subjunctive statements.

This would seem to set the scene for our presentation today.

The proposals before us today would have the utilities either absorb all of the costs of a massive retrofit program, or absorb a significant portion with the customer paying the balance as a surcharge for service.

We oppose both of these measures and will try to present what we believe to be a constructive alternative.

The first approach—that a utility cover the entire cost of the program flies in the face of a free market which already is doing much to meet the requirements called for by the Commission. Such an approach can only be inequitable because of the financial demands on the entire rate base. It would penalize the foresighted and reward the procrastinator. It would penalize the family that bought a new home already insulated under new prescriptive standards. It would certainly burden those of lesser economic means who are even now hard-pressed to meet ordinary living costs.

Finally, it would create unwarranted constraints upon orderly distribution methods in the marketplace.

As to the utility absorbing a significant portion and the customer paying the balance as a surcharge, we are merely confronted with a reasonable facsimile of the first proposal with only a variation on the theme. Beyond this, the expressed desire to

achieve substantially complete retrofitting of all residential units within a five to seven year period would appear to be unrealistic in light of current supply circumstances.

Heavy demand for product to meet new residential construction standards will not abate. Thus, requiring that the program be completed within a five to seven year time frame may well exacerbate the supply situation and force prices upward to manufacturers, utilities, contractors and ultimately consumers that could be intolerable.

Yet, there is a very positive point over-looked in the total dialogue of energy conservation in California. The fact is that, to a substantial degree, the industry ... including manufacturers, utilities and contractors ... already has been meeting the goals desired by the Commission, and indeed most public bodies who understand the effectiveness of insulation.

While it is certainly difficult to settle on any one set of statistics, we do have some legitimate measure of what is taking place and could logically develop over the next several years, without disruption to the orderly and careful expansion of the indus-

try and the marketplace.

For example, figures reported for the Pacific Gas & Electric Company service area indicate that about 58,000 owner-occupied residences were insulated during 1975, 100,-000 in 1976, and it is anticipated that around 150,000 will be retrofitted in 1977. Though we probably cannot extend that kind of progression indefinitely, we can confidently expect that the momentum will be sustained so that, over seven years, it would be possible to retrofit at least 600,000 units just in the PG&E service area.

In the Southern California Gas Company service area, it is our understanding that the utility projects 90,000 units will be retrofitted in 1977, a substantial increase over the previous year. Assuming even a modest 20% annual growth rate, this could provide retrofit for about 1.1 million units over seven years.

Combined with the conservative projections mentioned for the PG&E area, we would already move to the desired goals, but without the inequities that would be created under the proposals before us today.

Admittedly, growth rates in the marketplace are not symmetrical. Nor can we guarantee that these projections will be sus-tained. But, then, neither can anyone guarantee any projections. We must work with what we have and what we know by experience. Given this, we can say with confidence that the greater proportion of need will be handled without the all-encompassing ap-proaches we are reviewing today.

What, then, must we all do together to insure that the goals are met with the minimum impact on the free market?

Respectfully, we suggest the following for your consideration:

1. That current creative and effective marketing programs by utilities and manufacbe encouraged and continued because of their obvious success in moving the public voluntarily to reinsulate their homes.

2. That the Commission provide its good offices for guidance and counsel in working with the combined insulation industry to develop incentives that will be equitable for all consumers.

3. That the Commission and other public bodies turn focus to assisting the industry in developing enforceable codes of performance standards to provide maximum consumer protection.

4. That the Commission, utilities, contractors and manufacturers coordinate efforts to insure that those in lesser economic situations are adequately served.

5. That all parties to this important effort cooperate to develop effective job-training programs to provide skilled personnel in an orderly fashion related to annual growth.

I am pleased to report that an informal survey of members of the Insulation Contractors Association indicates an already present capability for substantial expansion based on product availability and providing a stable and orderly approach is taken in this great endeavor. As key participants in overall energy conservation, and as the final focal point in the insulation process, the members of ICA are ready to do their parts. We all have a tremendous opportunity to carry out a positive program. We also have an exacting responsibility to avoid distortion of something that is already working effec-

There is little question that what the State of California does will set the pattern for much of the Nation. We therefore urge the Commission not to adopt the proposals set forth in the amendment to Case No. 10032 and to lend its substantial wisdom, credentials and counsel to each segment of the insulation industry to improve the present system and provide such incentives that will be clearly and broadly equitable to all consumers.

In this way only will we be able to look back at the conclusion of the program and see not just a successful effort, but one that will have laid the foundation for public confidence in all such programs intended to preserve our precious national energy resources.

WHY ATTACK ON INTELLIGENCE AGENCIES?

Mr. ALLEN. Mr. President, Mr. Ernest I. Harrison, of Birmingham, Ala., has contacted me to express his concern that serious damage may be done to the intelligence agencies of the Federal Government if attacks on those agencies continue unabated. Mr. Harrison has writ-ten a letter to the editor which was published in the Birmingham News which sets forth in greater detail his views on this subject. I ask unanimous consent that his letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

VOICE OF THE PEOPLE-WHY ATTACK ON IN-TELLIGENCE AGENCIES?

I hope this article can be printed as it represents about thirty-five years of careful thought, twenty-five of which were spent working for our nation's intelligence community in Washington, D.C.

The question raised here for your analysis is whether the Washington Post is in effect, an arm of the Soviet Union's propaganda machine or simply the mechanism of a group

of irresponsible liberals.

We cannot state that they are in the pay of our enemies or that the USSR has control of the publisher or influence over the editorial staff. We can state, however, that the activities of the Post have injured the reputation of the United States government,

its business community and its citizens.

The destruction or weakening of the Federal Bureau of Investigation and the Central Intelligence Agency has been for many years the prime objective of the Soviet propaganda and courier-espionage apparatus. The Washington Post with its powerful television and

radio satellites located in the Washington area, focused directly on our nation's leaders, have done more to accomplish these objectives than our admitted enemy.

The recent attack on the CIA, alleging payments to the King of Jordan as well as the heads of other friendly nations will-true or false-do much to cripple our intelligence gathering and to disrupt our friendly relations with the nations implicated. Most thinking Americans would admit that payment for valuable intelligence is a worthwhile program, but the implication that these leaders were converting these funds to their personal use can cause great damage to the reputation of these men and lay groundwork for a take-over by opposition factions—possibly Communist controlled.

The reports on the immediate reaction from President Carter appeared to say, "We do not know anything about it but we plan to stop CIA payments to these foreign lead-

ers."

If true, this was not a well thought out response but represented all two clearly the hysteria generated among our nation's leaders by a communications medium which has all too strong an influence on all branches of government.

POLICY RECOMMENDATIONS ON ENERGY CONSERVATION

Mr. PERCY. Mr. President, I recently wrote to President Carter to give him my views on items to be included in the conservation component of his forthcoming April 20 energy message. In order to share those ideas with my colleagues, I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD,

as follows:

WASHINGTON, D.C., April 5, 1977. President JIMMY CARTER, The White House, Washington, D.C.

DEAR MR. PRESIDENT: The Alliance to Save Energy was officially launched last Friday when we held the founding meeting of the Board of Directors. The support that Hubert Humphrey and I have received has been extraordinary and due in no small measure to you and Jim Schlesinger's early and active endorsement of the Alliance and its goals.

For that we are deeply grateful to you. At the meeting on Friday, Jim Schlesinger outlined the importance of conservation to the nation, and Henry Kissinger described what he intended to do as Chairman of

ASE's Advisory Board.

I have been very pleased to learn that your April 20 energy message will make conservation the cornerstone of our national energy policy. As you know, I have urged a much stronger role for conservation than it has had in the past.

You have asked for ideas for consideration in your forthcoming energy policy statement. I am pleased to submit my own views on one aspect, namely conservation energy. They would no doubt be concurred in by many members of the Alliance but they have not yet been submitted to the Board for their consideration. Therefore, I speak here as an individual and not as Chairman of the Alliance to Save Energy.

1. GENERAL

Support the gradual reduction of production subsidies such as the oil depletion allowance and loan guarantees which undermine conservation by making energy cost less than its true value.

Create an Energy Extension Service to

facilitate implementation of energy conservation measures at the State and local level. Support comprehensive public education programs with a conservation message, including programs specifically directed at schools

Strengthen the enforcement of current energy conservation laws, including the Energy Policy and Conservation Act and the Energy Conservation and Production Act.

Intensify Government energy conservation

R D & D programs.

Support an effective effort to reduce all Federal, State and local Government energy

Study the effects of a refundable deposit on bottles and cans to encourage reuse.

Encourage Government to adopt stiff energy efficiency criteria as part of their procurement policies.

2. BUILDINGS

Expedite development of a building efficiency performance standard by HUD, and make this standard both mandatory and stronger.

Provide tax credits for insulation and other

energy-saving equipment.

Enlarge the program of direct grants to pay for insulating houses of low-income families. Support local efforts to improve residen-

Support local efforts to improve residential building codes to improve energy efficiency.

Urge utilities to insulate homes and to recover costs through monthly utility billings.

3. APPLIANCES

Support stringent appliance efficiency standards, and both mandate and strengthen the standards now on the books.

Support energy efficiency labelling for all major consumer appliances.

4. INDUSTRY

Encourage, through loans or loan guarantee programs if necessary, the use of waste heat and process steam to generate electricity.

Make the existing voluntary industrial

program mandatory.

Support programs to stimulate energy efficiency in industrial production (e.g. target setting, loans for energy improvements, tax credits, energy audits of individual companies, provision of information to small companies.)

5. UTILITIES

Require states and local utilities to redesign electricity rates to encourage conservation. For example, time-of-day pricing which makes peak-load power more costly.

Support policies and programs to improve the efficiency of electrical generation such as thermal storage, peak load policy and other load management techniques.

6. TRANSPORTATION

Gradually increase the Federal gasoline tax each year and combine this with a rebate program to low-income groups.

Enforce and strengthen EPCA fuel efficiency standards, i.e., raise the 1985 average fuel efficiency target of 27.5 mpg.

Penalize those States which do not enforce 55 mph by withholding highway funds.

Impose a Federal parking tax on all government employees using government property for parking

erty for parking.

Develop a system of excise taxes which places a special charge on the purchase of a car with poor fuel economy and provides a rebate to the buyer of a more fuel efficient

Encourage programs to increase load factors on transportation modes with excess capacity (e.g. car pools, public transportation).

Abolish the Highway Trust Fund, and create a unified transportation fund.

Place priority for Government funding on energy efficient public transport (e.g. rail, bus) rather than on less energy efficient modes (e.g. air travel, highway construction).

Support Government funding of both advanced auto engines and electric vehicles.

7. GOVERNMENT ORGANIZATION Support the creation of an Under Sec-

retary for Conservation within DOE.
Support the designation of an Assistant
Secretary in DOC, HUD, DOT, GSA and DOD
to be responsible for conservation in these

Î hope you will find these suggestions helpful. If your staff would like to discuss them with me, I will be here until Thursday when I leave on a personal trip abroad. Chris Palmer (224-1462) of my staff will be available to cooperate and work with them in any way that would be helpful.

Thank you again for your help and support in launching the Alliance to Save Energy.

Warmest personal regards,
CHARLES H. PERCY,
U.S. Senator.

REFUGEE RESETTLEMENT IN THE UNITED STATES

Mr. KENNEDY. Mr. President, yesterday representatives of the American Council of Voluntary Agencies in New York testified before the Appropriations Subcommittee on Foreign Operations regarding the resettlement of refugees in the United States. The council's statement, which I fully support, recommends that any funds appropriated, to assist the voluntary agencies in resettling refugees, equally benefit all refugees, regardless of race, religion, or nationality. As council's statement suggests, this simple humanitarian guideline has not been reflected in our national policy toward the reception of refugees, and a remedy is long past due.

I commend the council for its excellent statement, and hope that Congress and the administration will support any needed legislative remedies to bring a greater measure of equity in our treatment of the homeless who came to our

shores.

Mr. President, I ask unanimous consent that the full text of the council's statement be printed in the Record.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF JOHN E. MCCARTHY

I am John E. McCarthy, Chairman of the Committee on Migration and Refugee Affairs of the American Council of Voluntary Agencies for Foreign Service, Inc. I also serve as Director of Migration and Refugee Services of the United States Catholic Conference, which is a member agency of the Committee.

I am delighted with the opportunity of appearing before you today on behalf of the voluntary agencies of the United States who are engaged in the movement and resettlement of refugees, escapees, and displaced persons from all parts of the world.

Mr. Chairman, the American Council of Voluntary Agencies for Foreign Service is an association of 44 organizations in this country which serve as the channel for American voluntary response to need overseas, including disaster aid, social development, and refugee assistance.

On various occasions representatives of the American Council have had the privilege of appearing before this Committee to express convictions and make suggestions on a wide range of their humanitarian concerns. Today my colleagues and I appear before you in reference to one segment of that concern, the movement of refugees eligible for resettlement in this country.

These voluntary agencies, several of which are represented here today, are:

American Council for Nationalities Service;

American Fund for Czechoslovak Refugees; Church World Service:

Hebrew Immigrant Aid Society; International Rescue Committee;

Lutheran Immigration and Refugee Service:

Migration and Refugee Services, United States Catholic Conference;

Tolstoy Foundation.

They have been engaged for nearly the past half century in assisting with the sponsorship and resettlement of over a million persons. This unique cooperative humanitarian endeavor between the United States Government and its volunteer citizen component is a model of effective and efficient action on behalf of persons who are displaced, without regard to their race, religion, or national origin.

We have been somewhat concerned, Mr. Chairman, over recent testimony before this Committee and other Committees of Congress about the true role, endeavors, and concerns the voluntary agencies who are engaged in this specific effort. It must be kept in mind in the forefront that our endeavors relate largely to the care and processing of refugees overseas destined to be resettled in the United States and other countries of the world. When refugees arrive in the United States, the voluntary agencies assume responsibility for securing housing, employment, education, and orientation activities to assist in making them productive members of their new communities.

Of prime evidence of the effectiveness of this cooperative endeavor are resettlement programs carried on on behalf of those who have fled Southeast Asia. It was possible, through the effective use of this voluntary structure, to find housing, employment, and job opportunities for something in excess of 100,000 people within a period of approximately eight months. It must be well remembered that in this endeavor we were dealing with refugees whose mores, culture, and language had no parallel in the resettlement communities.

It was therefore necessary for the voluntary agencies to carry out ongoing programs to assure that everything possible is being done to provide these new arrivals with every opportunity to become involved and constructive members of the cities and towns where they are now establishing their new lives.

Fortunately, the voluntary agencies, through their churches, synagogues, and civilian components were able to call on the resources of tens of thousands of volunteers to make these programs and others like them as effective as possible. There is no question but that it costs money to provide these resettlement opportunities, and the expenditures on each case differs.

With the present-day spiraling costs, the expenditures run from hundreds to thousands of dollars for the resettlement of each refugee. I will be delighted to provide the Committee with some examples of these expenditures.

In the past, the large part of the total cost of the resettlement endeavor was borne by the voluntary agency supporting such service in the United States. Unfortunately, however, with the recent massive refugee movement, the voluntary agencies are looking to Government structures for some minimal fiscal assistance in these joint humanitarian endeavors. There is no question but that in the very lifeblood of our nation the word "humanitarian" stands out. However, the fact remains that the movement and resettlement of refugees is also a foreign policy concern. In a recent statement before the House Judiciary Committee, a State Department representative attested:

". . there are solid foreign policy reasons why we should involve ourselves substantially and regularly in resolving refugee problems . . U.S. humanitarian assistance for refugees . . . serves as a glowing exam-

ple of the purposes and processes of the free democracy with we are, and of the free society which makes such assistance possible.

"The flight of refugees into countries of first asylum places economic and political burdens upon such countries...and, as often happens when large numbers of refugees are involved, the economic burden alone is severely oppressive and this tends to threaten the stability of the host country. The political factors...frequently lead to controversy and problems for the asylum countries, especially with respect to the governments of the countries from which the refugees have fled. Our efforts coupled with the broader efforts of the International Community... contribute to the political as well as the economic stability of countries of first asylum.

"Mr. Chairman, refugee problems can be and frequently are a threat to peace. Refugee problems if left unattended can quickly bring human deterioration fostering local frictions, ferment, political tension and even terrorism. On the other hand, the provision of timely refugee assistance can lead to . . . the reduction of tensions, the solution of broader issues and the preservation of peace itself."

We have discussed the matter of limited funding assistance with the appropriate offices of the Department of State. Following is a portion of a letter just received relating

to this request:

"As you know, the subject of further assistance to the Voluntary Agencies in the form of reception and placement grants has arisen on several recent occasions during our congressional budget hearings for FY supplements and for FY 1978 budget. In this context, we have testified that the Department was precluded from including requests for funds for such grants because of Departmental budget ceilings. During recent years, reception and placement grants have been paid to the Voluntary Agencies only for Soviet and Indochinese refugees from special appropriations. We have also repeatedly testified that we recognize the need of the Voluntary Agencies for such grants and that we agree in principle that they should receive them; however, we have strongly opined that as and when funds are made available for this purpose, the grants should be paid to the Voluntary Agencies for all USRP eligible refugees being resettled in the United States, not merely those from the Soviet Union as has been the case for the past several years."

In light of the above, Mr. Chairman, we have no recourse but to review the matter further with your Committee. Our Churches, Synagogues and voluntary agencies do respond, and will continue to respond, to this refugee need. Unfortunately, with rising costs and other commitments, a total funding is now not available from our voluntary structures to completely provide the resources necessary to carry on resettlement activities in the manner we believe is most advisable to our nation and local communities.

We do, therefore, need some overall support or grant for all the refugees resettled in the United States by the voluntary agencies without regard to race, religion, or nationality of those being resettled. Your Committee has forthrightly brought up the matter of what appears to be differences in expenditures on behalf of refugees from various areas of the world. We all join you in these concerns but, unfortunately, it has never been possible for us through our work, discussion and cooperative endeavors with the administrative structures of our Government, to have any viable (across the board) program worked out. Because of this, it is necessary for interested parties (or the Department of State itself) to appear before your Committee requesting grants or supplements for individual groups or refugees. This unorganized and often emotional approach to the matter of humanitarian and foreign

policy concerns could be eliminated if the State Department budget could be so arranged to provide for a modest grant to assist with resettlement of those refugees whom our Government officials deem admissible to this country under our immigration and nationality laws.

At this time a minimum figure would be \$400, which is much below the average cost of resettling a refugee. Without such support the voluntary agencies would be compelled to eliminate some services which are essential to get refugees on the road to self-support. Our common objective is to make them self-supporting, contributing members of our society. A small investment of Federal funds at the start would pay rich dividends for both the refugees and the United States.

As the Congress considers the appropriations for the Department of State for Fiscal Year 1978, the resettlement agencies urgently recommend that you consider the possibility of resettlement grants for all refugees eligible for movement to the United States. We understand that some funds in this direction have been earmarked at Congressional initiative for the present fiscal year, and we strongly applaud this step. We now express our strong conviction that there is desperate need to broaden this policy to all refugees resettled in this country.

resettled in this country.

This has been further eloquently attested to by Senator Kennedy of Massachusetts, who stated on the floor of the Senate on April 1, 1977 during the discussion of the

supplemental appropriation bill:

"Mr. President, on another matter, I would like to commend the action of the Appropriations Committee, and the leadership of the Chairman of its Foreign Operations Subcommittee, Senator Inouye, in supporting the supplemental requests for the migration and refugee assistance account. I believe the action of the committee was both wise and timely in full funding these requests.

"At a time when our country is making a fresh beginning under President Carter in support of our Nation's traditional concern for human rights and humanitarian affairs, I believe it is important that we act in support of these efforts. The response of the committee in providing increased financial support to the migration and refugee assistance account is further evidence to all that the United States is taking seriously its concern for the horseless and the needless.

for the homeless and the needy.

"I also want to commend the committee for its action in eliminating the narrow focus of the funding for refugees—for broadening the scope of the migration and refugee assistance account beyond refugees only from the Soviet Union and Eastern Europe. The elimination of this narrow wording is a step in the right direction—toward treating all refugees entering the United States equally."

Mr. Chairman, the resettlement agencies deeply appreciate the opportunity to bring our concerns to you and your distinguished Committee. We shall be delighted to answer any questions you may have or provide any additional documentation that would be helpful to the Committee.

BRIDGE REPLACEMENT AND REHA-BILITATION ACT OF 1977

Mr. TOWER. Mr. President, I want to thank my colleagues, Senator Randolph and Senator Culver, for their foresight in introducing, S. 394, the Bridge Replacement and Rehabilitation Act of 1977, which will significantly enhance this Nation's efforts to upgrade and maintain the vital bridge links in our transportation system.

Particularly in rural areas, bridges across the Nation have fallen into disrepair on an unanticipated scale. Ac-

cording to information recently made available to this body, the cost of repairing or replacing existing bridges in the United States today exceeds \$10 billion.

The capital for such repair and replacement is far beyond the capability of the Highway Trust Fund, from which most bridge replacement moneys, now come. Unless we provide the essential additional capital to reverse the present trend, the condition of bridges on and off the Federal aid system is likely to deteriorate beyond our ability ever to catch up.

I believe the bill which Senators Ran-DOLPH and CULVER have introduced will have a positive impact on the current situation if enacted. I know that in my own State of Texas, the work which would be brought about under this bill is vitally needed.

Accordingly, I am pleased to cosponsor S. 394, and would urge the Senate to give this legislation its most serious attention.

ACTIVITIES OF THE JOINT ECO-NOMIC COMMITTEE

Mr. HATCH. Mr. President, a very interesting editorial appeared in today's Wall Street Journal, which I draw to your attention because of what it says about the activities of one of my committees, the Joint Economic Committee.

The editorial, entitled "The Grocery Trust!" points out fatal weaknesses in a JEC study which tried to convince us that supermarket chains are gouging American consumers and engaging in monopoly pricing tactics. By quoting some prices and market shares of various supermarkets in various cities some years ago, the authors of the study found that some prices are higher in cities where concentration exists. Ignoring the fact that costs and taxes were also higher in the same cities, the authors of the study cooked up a \$662 million figure for the amount they allege we are being overcharged.

The Wall Street Journal editorial rightly points out that other factors are at work in high supermarket prices; taxes, rent, labor, shipping and construction costs in some cities are so high that marginal stores have been forced out of business and the remaining efficient ones still have to charge enough

to cover their costs.

All this being said and done, my only comment is that it is a pity this exercise had to take place at all. The committee members who supported the conclusions of this report—as well as the report's authors—are surely grasping at straws, trying to promote a conspiracy theory of economics that ignores market pressures, differential costs, relative tax burdens, and the fact that if you do not make a profit you do not stay in business. They would have come up with something more substantial if they had even settled for straws.

In fact, on reading this editorial, I commissioned my staff to do an exhaustive study on the price of straws in the District of Columbia metropolitan area. What they came up with would, I believe, be extremely interesting to all of my esteemed colleagues in the Senate.

My staff concluded, first, that there is no price collusion among the larger grocery trusts that sell drinking straws. Comparative shopping at Safeway, Georgetown, the A. & P., 48th and Yuma Streets NW., and Giant, yielded price spreads for a box of 50 straws from 39 cents—A. & P.—to 27 cents—Giant. Surely this illustrates that even the major trusts cannot get together on straws.

But surprisingly, my staff also found that the little stores were not price disadvantaged. The North Hampton Shopping Mall branch of Pantry Pride matched Giant penny for penny—50 straws for 27 cents. And, Cook's Supermarket—Cherry Hill Road, Bethesda branch—even undercut that by 2 cents—surely a courageous act in this day of grocery trusts and multinational corporations.

Now, I realize that the analogy is not entirely accurate. The expression "grasping at straws" refers to wheat, barley or oat straw, the kind of stuff you find on farms. They do not raise drinking straws on farms—but then again, you do not find cow manure at supermarkets.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

THE GROCERY TRUST!

Five economists of the University of Wisconsin, whose names we will not mention out of sympathy for their families and friends, have come to the astounding conclusion that the big grocery chains have a "monopoly over charges" in many U.S. cities, and customers are being gouged to the tune of \$662 million a year. The economic quintet divulged this dynamite news to the Joint Economic Committee of Congress last week, obviously with the fervent hope that some trustbusting will be done.

What they did, you see, was to study prices, profits and market shares of 17 food chains in 32 metropolitan areas. They found some very neat correlations. Prices varied as much as 14 percent, city to city. And in those cities where prices were highest, the biggest four firms had the greatest market shares, which surely must mean that there is less competition in these areas than where prices are lower and markets are fractured. Doesn't

There is one little tricky problem with this astonishing theory, however. Profits. They are no higher where prices are being dictated by the monopolists than where the free market is keeping them down via competition. But the Wisconsin economists will not let this point stand in the way of an otherwise perfectly good theory. Consumers, they say, are paying the bill for "inefficiencies and excessive costs that so frequently are the handmaidens of shared monopoly situations."

Now, all the Wisconsin Five have to show is that these inefficient monopolies that somehow fail to benefit from their shared power are keeping efficient supermarkets from invading their turf. If consumers are being overcharged \$662 million, that is precisely the amount that efficient supermarkets could carve up with consumers, say \$331 million for the grocers in higher profits and \$331 million for consumers in lower prices. Why is this bonanza being spurned?

Our own theory of why grocery prices are higher in some cities than in others probably would not appeal to many members of the Joint Economic Committee. Senator Proxmire of Wisconsin and Representative Reuss of Wisconsin, both JEO members, have been complaining about grocery monopolies for two years.

Grocery prices are higher in City A than in City B because the tax burden and public debt is higher in City A than in City B. All the costs of doing business are higher in City A, not only the wages of the checkers and boxboys, but also the costs of rent, construction, shipping and utilities, all of which absorb current taxes. Capital costs are also higher because investors see the public debt looming as future taxes. Because of this, unemployment is probably higher in City A than in City B, and the pilferage rate is probably higher, too. Food chains have higher market shares in City A than in City B because, as relative tax burdens have widened, marginal supermarkets have either folded or spurned entry into the market.

The reason the folks on the Joint Economic Committee do not like this theory is that they are the kind of politicians who don't like to talk about the ill effects of taxation. They are the same sort who have arranged things so that direct taxes are excluded from the consumer price index. This leaves them freer to tax all the citizens for the purpose of handing out funds and favors to some of the citizens likely to vote for you know who.

Sorry Senator Proxmire. Sorry Mr. Reuss. Sorry Wisconsin Five. We know you desperately need an economic theory other than ours to explain grocery prices. But this Giant Inefficient Grocery Trust Theory is pretty weak stuff. We don't know what you paid for it, but we'll almost bet we know where you can get better ones for a 14-percent discount.

SCHLESINGER COMMENTS ON ENERGY PROGRAM

Mr. PERCY. Mr. President, James Schlesinger, chief energy adviser to President Carter, was interviewed last Sunday, April 3, 1977, on the ABC News radio and television program "Issues and Answers." The subject of the interview was the forthcoming energy program of the Carter administration.

Mr. President, I ask unanimous consent to have the text of this timely and informative interview printed in the

There being no objection, the text was ordered to be printed in the RECORD, as follows:

ISSUES AND ANSWERS

Guest: James Schlesinger, Chief Energy Adviser to The President.

Interviewed by: Bob Clark, Issues and Answers chief correspondent, and Sam Donaldson, ABC News White House correspondent.

Mr. CLARK. We have heard a lot of talk in recent weeks about the sacrifices the President is going to ask the American people to make as he lays his energy program before Congress. Is his program really going to be as tough as we have been given to expect? Is it going to force Americans to change their lifestyles?

Mr. Schlesinger. It will be tough but in a sense it will not force a change in our lifestyles. We will go on living in suburban communities for the most part and driving automobiles but there will be well-insulated homes, fuel efficient, and the automobiles will be fuel efficient.

Mr. Clark. We want to talk to you more later about automobiles, but there is some concern in the oil and auto industries and in financial circles that a really tough energy program could offset the President's efforts to stimulate the economy and even

trigger a new recession. Is there reason to be concerned about this danger?

Mr. Schlesinger. Of course, in the abstract that is a possibility, but we are very mindful of that possibility and the program that will be put together will be balanced in terms of price increases offset by price decreases elsewhere so as to maintain a reasonably stable cost of living and aggregate demands will be held in such a way that we should not have any tendency towards recession.

Mr. Donaldson. Dr. Schlesinger, is it pretty well set there is going to be some effort made to make it difficult for Americans to buy big gas-guzzling automobiles and some effort made to induce them to buy a similar, more efficient automobile.

Mr. Schlesinger. We already have that effort under way. As you know, Congress has mandated that by 1980 the average car entering the fleet should go in in about 20 miles per gallon and in 1985 cars entering the fleet should average 27.4 miles per gallon. We may have some measures to reinforce the legislation already on the books.

Mr. Donaldson. Well, it is widely reported you are considering a large tax on these cars that use a lot of gasoline.

Mr. Schlesinger. That certainly is under consideration.

Mr. Donaldson. If I may just follow this up, a lot of people in the automobile industry are horrified, and they say that such a government effort to change the buying habits of Americans so quickly would put people out of work in Detroit. Not to put too fine a point on it, the chairman of General Motors said this was one of the most simplistic, irresponsible and short-sighted ideas ever conceived.

Mr. Schlesinger. Well, I guess what is good for General Motors is still not necessarily what is good for the United States.

Mr. Donaldson. You think there was just self-interest in a statement like that?

Mr. Schlesinger. Well, I think it requires some adjustment to a new type of condition in which the world just is generally running out of oil and gas, and that is going to require us to make these kinds of adjustments. It is uncomfortable both for the consumers, and it may be somewhat uncomfortable for the producers. But through appropriate measures, we will be able to keep Americans in automobiles, but they must be fuel-efficient automobiles.

Mr. CLARK. You talk about appropriate measures in your personal view is the best way to reduce gasoline consumption by raising the price of gasoline and the tax on gasoline or by putting a stiffer tax on new cars, the big gas guzzlers.

Mr. Schlesinger. I don't think one can draw a clear line of distinction with regard to the measures. We are going to need a mix of measures.

I indicated the legislation already on the books—and we will have to consider both of those kinds of techniques in order to see which is the most effective package, but I think the main point is to challenge the American people with regard to the very high use of gasoline at the present time.

Mr. Clark. You say we are going to need a mix of measures. Doesn't that strongly imply there will be both an increase in gasoline taxes and stiffer taxes on new cars?

Mr. Schlesinger. Well, I wouldn't draw a final conclusion on that. You are welcome, of course, to draw that inference.

Mr. Donaldson. You are saying the President hasn't made any decision?

Mr. Schlesinger. No. we have not reached a final decision on certain aspects of the program.

Mr. Donaldson. Because the President did promise, I think, there wouldn't be any stiff gasoline tax, at least in the range of twentyfive cents; that hasn't changed?

Mr. CLARK. Some of the experts say you are simply not going to get people to stop wasting gasoline unless you make gasoline too expensive to waste. Can you give us your general philosophy on that and on the other side of that argument that if you raise the tax on gasoline too high and let the price of gasoline stay high, you put an unfair burden on the working person?

Mr. SCHLESINGER. Well, let me take the latter part of it first. Obviously we are going to face higher prices in energy. Right now, prices are far below the replacement costs

of energy. Oil and gas notably.

Over the longer haul, prices must go up, but they should go up in a way that preserves equity among income groups and avoids the kinds of macro-economic effects, unemployment, unstable prices, rising prices, that you referred to earlier.

Whatever we do in this area will be designed in such a way as to avoid undue burden on particular economic groups and particularly the lower income groups. Mr. Donaldson. You imply if the price

of gasoline rises somehow there will be some factor which will enable the poor to absorb that cost. Can you give us some idea

of how that might be done?

Mr. Schlesinger. Well, I don't want to deal with particular components of the marketbasket such as gasoline. What we intend to do is to preserve the real standard of living of individuals and particularly of the lower income groups. They will face higher prices in some areas, but they will all be offset by lower prices or lower taxes elsewhere.

Mr. Donaldson. If I might just pursue it, you mean if they face higher prices for gasoline they might face lower prices for heating their home or for electricity. Is that

what you are saying?
Mr. Schlesinger. Not necessarily in the energy sector. One can adjust other taxes downward, for example, and preserve the overall consumer price index through that means.

Mr. Donaldson. What other taxes?

Mr. Schlesinger. One could adjust payroll taxes or sales taxes as the case may be.
Mr. Clark. Certainly the federal govern-

ment has no control over sales taxes. Are you seriously talking about a reduction in Social Security taxes for instance?

Mr. Schlesinger. No, I was just giving an illustration of the kinds of adjustments in taxes. We are considering a whole range of alternatives, including such tax adjust-ments, in order to offset the penalty on lower income groups in particular of the major adjustments in price relationships that must come over a period-

Mr. Donaldson. An income-tax rebate or particular credit for a low income group?

Mr. Schlesinger. That sort of thing, yes. Mr. Clark. And, Dr. Schlesinger, there have been some scare stories recently, as you know I am sure, about a possible critical shortage of electrical power later this year in some parts of the country. Is the situation really that serious in your view?

Mr. SCHLESINGER. The conditions in the West are quite marginal. The Northeast and California in particular, and that is due to the drought. Much of the power out there is hydro power and with the drought that means that they are going to have severe problems in keeping up the flow of power during the summer months. I think they may be able to make it but the condition

is rather touchy.

Mr. Clark. And public utilities companies complained to Congress again this about the high cost of converting week plants from natural gas or oil to coal; they say they are going to have to have more government aid and higher rates. Are they

going to get them?

Mr. Schlesinger. I think that there may be some mechanisms to permit that transition from oil and gas to coal in terms of adjustments in the tax laws. The rates, of course, will be determined by the Public Service Commissions of the various states and I presume that those commissions will give appropriate rates so that the costs are covered.

Mr. CLARK. Doesn't this also mean then that the American family using electricity can expect to pay in one way or another for the conversion of electric power plants to

Mr. SCHLESINGER. The cost of the conversion may not be taken up by the direct consumer, but obviously somebody will have to pay those costs and to facilitate conversion from oil to coal will require some resources. That may be taken care of by general tax

measures or the equivalent.

Mr. Donaldson. I would like to go back to the price of gasoline. Do we really know at what point we would significantly cause people to stop buying gasoline and save a lot? Is it at 80 cents? Is it a \$1? What is the elasticity of the demand figure that you are

Mr. Schlesinger. The elasticity of demand for gasoline is very low. The chief impact, I think, is the impact on consideration as to the next automobile, whether and when and

what type of engine efficiency.

Once again, that is a mechanism to reinforce the choice of automobiles. But the increase in the price of gasoline in relatively small ranges does not have that much effect on driving habits.

Mr. Donaldson. And you are talking about

relatively small ranges then.

Mr. Schlesinger. We have been considering what you would regard as relatively small ranges.

Mr. CLARK. Do you have a goal in mind for reducing American dependence on foreign oil-and I believe this past winter we are now getting about 50 percent of our oil from foreign sources?

Mr. Schlesinger. We would like to reduce it so we are down in the one-third range, and that will take a considerable period of time. Right now we are importing ten million barrels a day and we are using about 19 million barrels a day. We would expect some

growth in demand.

We would expect to save considerable amounts of oil, perhaps as much as a million, a million and a half barrels a day, in the transportation market by 1985. We will save a million and a half barrels a day approximately through better insulation of homes and public buildings and factories finally we hope to achieve about four million barrels a day switched to coal and that might get us down into the range of 15 million. 16 million barrels a day. But we are not going to achieve energy independence in the sense that we are going to do without imports.

Mr. CLARK. We are going to take a short break here and be back in a moment with more issues and answers. (Announcements)

Mr. Donaldson. You just said a moment go that the goal might be to reduce our dependence on foreign oil to about a third of our total usage. Yet once upon a time, after that Arab embargo government was saying that we had to reduce it completely or else we would be held hostage-another possible embargo.

What has changed? Do we no longer fear that or are you simply confessing we can't

do anything about it?

Mr. Schlesinger, Well, I think it would be very hard to go all the way and it is unnecessary. What we want to do is to eliminate our vulnerabilities and we can do that by reducing the level of imports and by having a storage plan that would permit us to ride

out any interruption. About half perhaps of our annual imports. And through these means we can take advantage of readily available foreign oil but not be so independent on that foreign oil that we are vulnerable. We are the great stabilizing power of the West and it is necessary for us to be beyond pressure.

Mr. Donaldson. What percentage of that one-third, by the way, would be Arab oil?
Mr. Schlesinger. Oh, I would say approxi-

mately a third of that would be oil from the Middle East.

Mr. Donaldson. So you think if you achieved the goal you have just described, then another embargo would not seriously cause us to have to think about war or some other countermeasure?

Mr. Schlesinger. That would be the intent; we would not want to be vulnerable we would not want to be pressured into taking action simply because of shortage of

supply.

Mr. Clark. Do you have a goal in mind for the total use of energy in this country which is still rather surprising because of-despite all the dire warnings of recent years, is still increasing? How much would you like to at least reduce the amount of increase in energy consumption?

Mr. Schlesinger. Well, the rate of increase has been running approximately four percent, which means that our energy use doubles every 17 years. We would like to reduce it to two percent or less than would mean that we would double every forty years. That is a very significant change.

Mr. CLARK. Former President Nixon had a plan in mind to make us totally energy-de-

pendent by 1980-

Mr. SCHLESINGER. That is slippage.

Mr. CLARK. That was too optimistic. But we did go through a couple of years up until the last year or so, when there was an actual reduction in the total amount of energy consumed. Since we do consume twice as much energy as even the more affluent nations of the world, why can't we reduce overall energy consumption?

Mr. Schlesinger. The reason that we have had the reduction in energy use in recent years is because of the recession in the United States. There is some short-term relationship between use of energy and the level of national income, the level of jobs.

We do not want our conservation plan, which will be the keystone of the President's energy message, to constrain jobs. We want jobs to increase; we want productivity to increase, and that is not the means to conserve. But we can squeeze out the waste to which you referred. We are using 30 percent more energy today than we need to maintain roughly the standard of living. We have this great advantage that we have been so wasteful in the past, that we have the opportunity over the next decade of squeezing out that waste.

Mr. Donaldson. When President Ford proposed a pretty tough energy program from the standpoint of conservation, Congress just wouldn't pass it. What makes you think that Congress is any more likely to pass the one

that President Carter presents?

Mr. Schlesinger. The Congress passed a number of tough conservation measures. The Ford Administration's philosophy on these matters was quite different from that of the Congress and I think that there will be agreement between the Congress and the Carter Administration that now we must be serious about energy conservation. We are running out of oil and gas; unless we begin to conserve now, we will run flat out of it in 20 or 25 years. By the early 1990s, the world oil production will be on the downward slope and we must make that adjustment now, slowly, or we will make it more painfully at a later point.

Mr. Donaldson. But it is the means, of course. We have just talked earlier about Detroit's view of the possibility of a large tax on large cars that consume a lot of gasoline. Mr. Dingell from Michigan has already said he has some reservations about that. How are you going to get something like that through?

Mr. Schlesinger. I think that there will always be some element of the plan that the President presents that will be objected to for regional interests or sectional interests or economic interests.

Mr. Donaldson. Well, these are jobs, Dr. Schlesinger. These are jobs in Detroit.

Mr. Schlesinger. Now, you understand that the guidepost for the plan will be a long-run increase in productivity. Conservation program means jobs. It means more work in the building trades for example. Just to provide appropriate insulation in our homes and factories. There will be adjustments. There is no major alteration in the economy that can occur without having some adjustments.

Mr. Clark. But aren't you bound to have at least a temporary loss of jobs in the auto industry, and probably a fairly substantial loss if you pressure the industry into moving from building big cars to small cars? Statistics this last year or two have shown the American people simply will not buy small cars unless they are forced to or won't buy them in large numbers.

Mr. Schlesinger. No. I believe that the automobile industry can flourish by making fuel-efficient clean automobiles. There is nothing about the automobile that suggests that it can only be profitable if it lacks those characteristics.

Mr. Clark. But there are things that suggest it has to be a large automobile in order to reach a mass sales market.

Mr. Schlesinger. I think that the American public now recognizes that we must have fuel-efficient cars and that implies that the characteristics of the automobile market are indeed going to change. It is quite possible, it seems to me, to persuade people that they do not have 350 horsepower under the hood. Of course, the advertising has all been in terms of "our car has greater power under the hood than our rival's car" and that tends to stimulate an interest in fuel-efficient cars, but that has to change. Unless the automobile industry faces a future in which there will be no gasoline supplies and no market for automobiles at all.

Mr. Donaldson. Are you going to be willing to compromise with Congress—

Mr. Schlesinger. Absolutely.

Mr. Donaldson. I say that because of the President's negotiating technique in some other areas. He seems to state publicly, as he said he will on this idea, the energy proposal, what he is going to do, and then, as he says, "hang tough."

Mr. Schlesinger. No. I think your reference there is to his position with respect to the Soylet Union.

Mr. Donaldson. Or the Corps of Engineers. Mr. Schlesinger. The President will make his proposals, the Congress will review them, but I think that in the energy area that we are going to need a national consensus that something must be done, that Congress and the President will come together and be supported by the state governments, by the municipalities, by labor unions and business, because no program on energy conservation can be mandated from Washington. It must be supported out there.

Mr. Donaldson. You are prepared to trade a little bit, give up this, and get that, if you can.

Mr. Schlesinger. In principle. I am not going to say what can be traded away, of course. We would like to have the whole program that the President suggests.

Mr. Donalbson, Let me ask one question:

Mr. Donaldson. Let me ask one question: Are you going to have this ready by April 20? Mr. Schlesinger. That is our intention. We are driving for that date. There is a little bit of a problem, of course, in that the Congress will go into recess shortly, and it will only come back a few days before the April 20 date.

Mr. Donaldson. Might the program slip a little bit?

Mr. Schlesinger That is not our intention at this time, but I would not make any firm commitments on that.

Mr. Clark. You mentioned that the President is "hanging tough" with the Soviet Union, so it emboldens me to ask a question in an area other than energy. As Secretary of Defense, you were involved with arms control. As head of the CIA, you had to appraise Russian motives. Do you have a theory as to why the Russians reacted so angrily to President Carter's arms control plan?

Mr. Schlesinger. Well, I was not surprised that the Soviets indeed did turn down those proposals. They have proceeded over the years in a way in which, if they rejected certain proposals that the Americans became more accommodating, and I think that they overshot very clearly in this case.

Mr. Clark. Did we make a tactical mistake in laying too tough an arms control program before the Russians at this staye?

Mr. Schlesinger. Not in my judgment.
Mr. Clark. Or in pressing too hard on human rights?

Mr. Schlesinger. Not in my judgment.

Mr. CLARK. Why?

Mr. Schlesinger. The human rights question is one which reflects American values, and the President is quite right, that a foreign policy, particularly in a democracy, must reflect broadly accepted values for people that he represents.

Mr. Donaldson. What would be your guess, then, that the Russians, in May when Mr. Gromyko and Mr. Vance meet in Geneva, will come back and say, "We have studied your proposal; there may be some things we accept", or do you think the present Vladivostok agreement will simply expire in October with nothing new—I mean the SALT I?

Mr. Schlesinger. I am not sufficiently involved in those negotiations to offer a com-

Mr. Donaldson. We want to get in one quick question about nuclear power. You were a very strong advocate of nuclear power. Mr. Schlesinger. I don't recall that.

Mr. DONALDSON. As head of the AEC, were

Mr. Schlesinger. I said at that time that I much preferred to have the country sitting on a vast pool of natural gas but, unfortunately, we were not that lucky.

Mr. Donaldson. There is confusion in the public utility industry as to whether the Carter Administration is going to encourage or discourage the building of more nuclear power plants. Can you enlighten us on that?

Mr. Schlesinger. We have to get off oil and gas, and that means that utilities will have a choice of coal or nuclear. We have no alternative but to make use of both. We will separate the light water reactor from the plutonium economy and separate it from such issues as the reprocessing and the breeder, and in that way, I think, much of the opposition to the present generation of nuclear reactors will fade.

Mr. Clark. I am sorry we are out of time. Thank you very much for being with us on Issues and Answers.

NOTICE OF THE DETERMINATION AND WAIVER UNDER RULE XLIII BY THE SENATE COMMITTEE ON ETHICS

Mr. STEVENSON. Mr. President, it is required by paragraph 4 of rule XLIII that I place in the Congressional Record this notice of an employee who proposes to participate in a program, the principal objective of which is educational, sponsored by a foreign government or a foreign education or charitable organization involving travel to a foreign country paid for by that foreign government or organization.

On application of Mr. Allen W. Neece, Jr., legislative counsel to the Select Committee on Small Business, the Select Committee on Ethics, on April 7, 1977, finds, on the basis of facts stated in his letter to the committee of April 6, 1977, that his participation in an educational conference in Sydney and Melbourne, Australia, is in the interest of the Senate and the United States.

The itinerary involves air flight on April 13 for Toronto, leaving Toronto on April 14 for Sydney, leaving Sydney on or about April 19 for Melbourne, and returning to Washington, D.C., on April 22.

The committee stated in replying to Mr. Necce's letter that the committee's letter is "without any precedential value, because rule XLIII only recently was adopted and the committee has had no opportunity to study all its implications."

WELFARE

Mr. HATCH. Mr. President, social welfare payments, public assistance, and other relief reflect a heritage going back to Elizabethan England and to some extent to ancient Rome. Most of the specific programs being used in our country find their roots in the activities of an individual or group advocating the cause of some neglected or unfortunate aspect of society and seeking publicly financed relief for its miseries. These causes, at various stages of our country's history, were typically undertaken first on the private, then the local, then the State, then the national level, thus crating an administrative nightmare which is still reflected today. Political and administrative overlapping has greatly complicated the struture of public assistance and our social welfare programs.

Public assistance programs have become so widespread in our society that there now exists an overlapping of administrative responsibilities at each governmental level. At the Federal level, for example, many of the agencies under HEW's umbrella continue to operate independently, and other major administrations, including DOL, Department of Agriculture, and DOD oversee significant welfare programs. It is little wonder that in a system this complex a concerted effort has succeeded in discovering the means of consolidating welfare programs to insure that those truly in need, and only those individuals, are afforded help.

I know within the near future that the Congress and the administration are committed to restructuring our welfare system to accomplish the purposes for which our welfare policies were first created. In the consideration of various proposals to streamline our welfare system I hope that we do not make the mistake of overlooking those valuable State and local run programs which have made an inroad in their areas in reducing the welfare rolls and providing former wel-

fare recipients with the dignity of holding a job.

One such program which I have read about is an operation in Milwaukee which requires able-bodied welfare applicants to take specially created city or county jobs instead of collecting relief checks. This program has received praise from many as a human alternative to welfare and I agree with their views. While the program, which is paid for out of Milwaukee County property-tax revenues, only affords about 600 individuals jobs at any one time at \$2 an hour for a 32hour week, many in the program are far happier to be drawing their relatively small paychecks rather than accepting relief.

I think the vast majority of all Americans who accept some form of welfare would reject that way of life if an adequate job was available for them. Most people want a hand-up and not a handout. I think it is the obligation of the leaders of our society to provide the opportunities for this step up into the mainstream of this society.

The Milwaukee experience clarifies and attempts to work out the income relationship between jobs and welfare support programs. There are other questions that should be asked in this area prior to a reformulation of our policy. These questions include:

What could be done to provide better manpower services to welfare recipients?

What work incentives could be built into income support systems such as welfare?

What work tests should be used, who is employable, and could one work test be used for all manpower programs?

Can the unemployment insurance program be recriented to provide manpower serivces for recipients needing such services?

What are the manpower and employment implications of a negative income tax approach to basic income support?

For the information of my colleagues I ask unanimous consent that the article in the April 4, 1977, edition of U.S. News & World Report entitled "In Milwaukee: If You Don't Work, You Don't Eat," be printed now in the RECORD. The article clearly sets out the rationale for the program and its operations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN MILWAUKEE: "IF YOU DON'T WORK,
YOU DON'T EAT"

MILWAUKEE.—While officials in Washington dream up multibillion-dollar schemes for tackling unemployment, a far more modest program here is putting jobless people to work.

The locally run venture, paid for out of Milwaukee County property-tax revenues, requires able-bodied welfare applicants to take specially created city or county jobs instead

of collecting relief checks.

The idea dates back to the depression years of the 1930s when the county first adopted a local work-relief system. But William O'Donnell, Milwaukee County's chief executive, says the concept goes back a lot further—to the days of Capt. John Smith and the first American colonists who were told, "If you don't work, you don't eat."

"We aren't handing out cash to every Tom, Dick and Harry who walks in and demands it," O'Donnel declares. "When some people find out they have to work, they either don't show up for the job or they quit after a short time. It weeds out the welfare rolls."

FEW SKILLS NEEDED

People in the Pay for Work Program work principally at such places as the courthouse, the sheriff's department, the city street department and a Veterans Administration hospital. They pick up trash, dish up food, shovel snow, answer the telephone and do other tasks to aid permanent employes.

Some 60 individuals who can't hold regular jobs because of handicaps work in a special sheltered shop putting together toys for day-care centers, making silk-screen draperies for county offices and mending

overalls worn in prisons.

The whole program gets praise from some as a humane alternative to welfare. Others, particularly labor-union officials, contend it is creating a pool of "slave laborers" who are not getting the help they need in meeting personal problems.

The current budget for the program is about 2.3 million dollars. About 600 individuals hold jobs at any one time, but since there is considerable turnover, as many as 2,400 may be put to work during the year. That is almost half of all the people who apply for general welfare assistance in the county in a year's time. A typical job candidate is under age 30 and single. About half the applicants are white, half nonwhite. A great many are recent widows with no previous work experience or job training.

An individual assigned to a job draws \$2 an hour for a 32-hour week. Take-home pay averages about \$175 a month after the county has deducted taxes and Social Security and the worker has paid for transportation and other job-connected expenses.

THE "NO-SHOWS"

Only half of those assigned to the work program show up for an orientation session, says Kenneth E. Deal, the director. Another half of those who get orientation never report for work. Most who get jobs leave after three months; only a small number remain on jobs for the full year they are permitted to work.

The county is prevented by law from firing someone for not showing up for work. However, it can withhold pay and assign the individual immediately to another job. Then the dropout must wait two weeks for the first paycheck.

For the various government agencies involved and a few private employers, the work

program means free labor.

Jerome Melloch, personnel manager at the VA hospital, says he has taken on 75 Pay for Work people because he gets much-needed extra help without cost to his budget. However, he adds, these employes must be given special attention. Often he puts up with problems—alcoholism, emotional handicaps, physicial disabilities—that would lead him to fire a regular worker.

Some private businesses hire people off the program for permanent jobs. Richard Sem, vice president of Wisconsin Industrial Police, a security organization, has two former Pay for Work individuals on his payroll. "They try harder than some other employes because they have a lot to prove and a lot to lose," he comments.

One man Sem hired had been told as a child that he was retarded. "The man has turned out to be dependable, hardworking and entirely capable," says Sem. "Frankly, I don't believe he was retarded at all—he just had never been given a chance to prove himself."

Many in the program are far happier to be drawing the relatively small paychecks rather than accepting relief. Janet Halboth, 23, is one of these. She is assigned to the central supply department of the VA hospital—running errands, answering the phone, putting through orders.

"I was going bananas sitting at home," says Halboth. "I was recently divorced and found myself frustrated trying to find a permanent job. I'd reached the point where I just couldn't go on with the job search."

Others are grateful for their pay, but find their jobs unsatisfactory. For example, Cynthia Rowe, a mother with a 4-year-old son, gets \$212 a month for working in a hospital, setting up trays for surgery. She lives with her mother, sharing a bedroom with the child because she can't afford her own apartment.

"A two-bedroom apartment would cost me \$225 a month, plus electricity, heat, phone, transportation and babysitting," says Rowe. "The program isn't a solution to my problems at all."

Members of the American Federation of State, County and Municipal Employes in Milwaukee County also see serious drawbacks.

DISPLACED PERSONS

Joe Robison, director of the union local, says 550 members have had their full-time jobs terminated by the county this year. They have been replaced by 60 Pay for Work people in county offices. The union members had been making a median salary of \$5.51 an hour, and had full hospitalization and a retirement plan. "It's going to be very difficult for those people to find work," Robison declares. "Many of them may end up applying for welfare."

Despite criticisms by labor-union officials, the Milwaukee system has won the approval of at least one prominent political figure.

Senator William Proxmire (Dem.), of Wisconsin says: "The Milwaukee County work requirement for those on general relief should be applied Statewide and nationwide. If Milwaukee County can find the work—and they do, with a little imagination—every other county in the country should be able to do likewise."

CITIZEN PARTICIPATION

Mr. MATHIAS. Mr. President, I was pleased to learn yesterday that President Carter has announced his administration's support for S. 270, the Public Participation in Federal Agency Proceedings Act of 1977. This bill, which Senator Kennedy and I introduced in January, is designed to facilitate increased citizen participation in agency proceedings and in court actions for review of agency decisions, and to promote agency responsiveness to the needs and concerns of the public.

Senate hearings on this legislation were completed in February, and the Judiciary Committee will be considering it shortly after the Easter recess. In this connection, I thought that Members of the Senate and their staffs would be interested in the remarks of Senator Kennedy last week before the House Judiciary Subcommittee on Administrative Law and Government Organization.

This subcommittee, under the chairmanship of Congressman Danielson of California, is conducting hearings on H.R. 3361, the companion bill to S. 270. The bill is sponsored in the House by Congressmen Rodino and Koch, together with nearly 100 cosponsors.

Mr. President, I ask unanimous consent that the testimony of Senator Kennedy be printed in the Record.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR EDWARD M. KENNEDY
I want to thank Chairman Rodino for his

leadership in the House—together with Congressman Koch—in sponsoring this legislation.

I would also like to thank you, Mr. Chairman, and the members of this subcommittee, for moving as rapidly as you have toward consideration of this bill. I am told the bill has nearly a hundred co-sponsors already, and that two of them—Congresswoman Jordan and Congressman Mazzoli—are members of this subcommittee.

Last year the Judiciary Committees of both Houses of Congress spent a good deal of time on legislation to increase citizen access to the courts by authorizing awards of attorneys' fees to successful plaintiffs in suits brought under a number of Federal civil rights statutes. That bill as passed also authorized fee awards to defendants in certain kinds of tax cases. In addition, we enacted the Hart-Scott-Rodino Antitrust Improvements Act, which among other things provided for recovery of fees in private injunctive actions brought under section 16 of the Clayton Act. The efforts of Chairman Rodino and Congressmen Flowers, Kastenmeier, and Drinan were crucial to the passage of all of these significant statutes.

These bills consumed an enormous amount of time and energy. They were the subject of no less than three full-fledged Senate filibusters in the closing months of the 94th Congress. It is therefore obvious that none of us should expect to have an easy time in pressing Congress to enact additional bills to assure full citizen representation on other areas of government where it is so desperately needed. With these difficulties in mind, I am especially pleased to see that both the House and Senate Committees are moving so quickly on this legislation in the present Congress. There is a developing consensus that the problem of inadequate citizen representation in federal agency proceedings is the next issue which we must face.

Chairman Rodino has stated well what this legislation does and why it is so badly needed. And the subcommittee will be hearing shortly from a number of other witnesses who can explain to you—based on their own extensive experience—why the bill will strengthen and improve the federal regula-

tory process.

My own exposure to the need to bring the public more fully into the federal decision-making process spans the past eight year period in which I chaired the Senate Subcommittee on Administrative Practice and Procedure. My first act as chairman in 1969 was to send a questionnaire to government officials and to persons who deal with the agencies. I wanted to find out how responsive agencies were to public concerns and needs. I also wanted to know which agencies were actively trying to encourage public participation in their proceedings.

participation in their proceedings.

The results of that survey, and the hearings which followed over the next few years, were very disheartening. In one agency after another, we saw how little attention was being paid to promoting and responding to direct public involvement in administrative decisionmaking. The agencies all seemed to regard public participation as an annoyance to be tolerated, rather than as a resource to be cultivated. The public likewise voiced frustrations and even anger at the cavalier attitude federal bureaucrats often displayed toward the concerns they expressed.

While there have been some scattered improvements in some agencies over the past eight years—particularly the appointment of public counsels and the recent establishment of some direct financial assistance programs—the level of citizen involvement is nowhere near what it should be.

I think it is clear, Mr. Chairman, that in our Nation's third century we can not ask or expect the American people to tolerate a system of government in which decisions over their lives are made by isolated bureaucrats through dimly understood processes in which most citizens can play no part. "Regulatory reform" is one of the slogans of a new order. People are demanding—and Congress and the President are starting to give them—financial disclosure laws, lobbying reform, conflict-of-interest rules, deregulation of certain segments of the economy, and "Government in the Sunshine."

But the ideals of "open government" or "equal access to justice" will never be fully realized unless we find a way to infuse the ongoing concerns of citizens into the daily functioning of our government. We have learned over a long period of time that agencies simply cannot fulfill their fundamental purpose of regulating in the public interest unless they insure that the public itself has a direct and meaningful voice in agency proceedings.

Over a decade ago the federal courts began to take steps to insure that people affected by agency decisions could participate in the proceedings in which those decisions were made. But few citizens have been able to take advantage of this, since the costs of participation are so high. Merely increasing access to the agencies is not enough. Citizens must be given more direct support to enable them to participate effectively in governmental processes.

Many citizens have demonstrated that they can contribute significantly to agency proceedings. They can bring to official attention information and viewpoints that agency staffs either can not or do not provide. In many cases their contributions have substantially affected to outcome of agency decisions. But it is hardly fair to continue to require in effect that a few individuals or

require, in effect, that a few individuals or groups should have to bear the full costs of prompting agency actions from which all of us benefit.

Despite the contributions which citizens have proven they can make to agency proceedings, most of them have to forego participating in important proceedings because of the sizable costs involved.

Let me give you some examples:

In West Virginia, an environmental action group tried to be heard when a power company proposed to locate what the group felt was an unneeded electrical plant in their area. They were able to scrape together some funds to put their views before the Federal Power Commission, after an environmental impact statement had been filed. But, even though they were going to be affected by the Commission's decision as directly as the power company itself, the group ran out of money before the FPC even began hearings.

Here in Washington, there is a group of experts on food and nutrition issues which has organized consumers, published materials, and has been well-equipped to provide the Food and Drug Administration with enlightened, scientific views on food issues. But over a year ago this group had to give up filing petitions before the FDA because it could no longer afford the costs.

An environmental action group in Michigan, which testified at our hearings last year, had to abandon its efforts to force the Atomic Energy Commission to adopt stricter procedures for the distribution of highly radio-active plutonium to private industry. The agency kept the group tied up in litigation for almost 7 years, bouncing the issue back and forth between the courts and the agency, until finally the group ran out of money and had to give up. In seven years of fighting, they never even got the agency to reach the substantive issues in the proceedings. And now we hear that the Carter Administration is considering delaying commercial use of plutonium fuel because of the potential dangers involved.

A Virginia group tried to fight siting of a

power plant which they felt would have disastrous environmental consequences. They raised all of the \$55,000 it cost to convince their state public untility commission that they were right, but they had no money left when the utility brought the matter to the Federal Power Commission.

Only a single citizen's group asked to participate in hearings on liquor labeling—in opposition to over a hundred industry participants—which the Bureau of Alcohol, Tobacco, and Firearms announced a couple of years ago. The Bureau later cropped its proposal to require informational labeling of liquor because it found "insufficient consumer interest" in the subject.

Even the success stories are discouraging. A year ago the FDA finally banned the use of Red Dye Number 2 in food products. The agency's action was due in large measure to the efforts of the Health Research Group, which had been involved in the FDA proceedings from the beginning. Even though it did participate, the group did not have the funds to present testimony from its own experts. It was forced instead to limit its participation to cross-examination of industry expert witnesses. Had they been able to build their own case—the public's case—in that proceeding, one more cancer-causing substance might have been removed from the market three years earlier.

To my mind, Mr. Chairman, there is little doubt that these are the kinds of issues, information, and veiwpoints which agencies must have a chance to consider before they can attempt to formulate regulations which are in the best interests of the American public. Many agency officials are of the same opinion. Several agencies have already begun their own programs to aid citizen participation in their proceedings. They are doing so because they feel that they cannot wait any longer for Congress to establish a uniform, Government-wide program. In announcing rulemaking proceedings to frame regulations for implementing these programs, these agencies made several important comments which Congress would do well to heed.

According to the Department of Transportation's National Highway Traffic Safety Administration, it is "difficult for some consumer, environmental, and other groups of citizens that are either widely dispersed or poorly financed to bear the cost of participating in Federal regulatory proceedings. By contrast, better financed and organized groups, frequently representative of the regulated industry, are often able to participate vigorously and effectively."

The Consumer Product Safety Commission went even further: "In order for public participation to be meaningful, it must be of sufficient technical competence and presented in such a way that the Commission can rely on it to properly balance the input of the regulated industry. Although the Commission has throughout its existence consistently encouraged public participation in all of its activities, the high cost of meaningful participation in regulatory proceedings often excludes such participation."

And the Environmental Protection Agency

And the Environmental Protection Agency stressed why agencies find public participation to be of such great value. It noted a general consensus that citizen representatives do have significant technical abilities, and that they have made substantial contributions to better agency decisions. According to the EPA: "They have often provided facts and arguments relevant to the statutory purpose that would not otherwise have been urged on the agency and which the agency might not have uncovered or fully appreciated on its own."

I do not think that any of us could make a stronger case for H.R. 3361 than these agencies themselves, by their actions and their statements, have already made. We now know that public participation programs can work. We know that these programs can expose agencies to information and viewpoints that would not otherwise be available to them.

The program at the Federal Trade Commission, according to Chairman Collier's testimony before our subcommittee in February, has worked better than anyone imagined it would. Indeed, agency staff members, as well as citizen representatives who have participated in FTC proceedings with Magnuson-Moss funds, agree that the program is a success. There is no reason why this basic authority should not be extended to other proceedings and other agencies.

This legislation embodies neither a radical nor a novel approach to promoting a greater citizen participation in agency proceedings. Not only have we had the experience at the Federal Trade Commission and the examples of the other agencies which have initiated programs of their own, but last Fall Congress expressly authorized the EPA to provide financial compensation to public participants in proceedings conducted under the Toxic Substances Control Act.

Mr. Chairman, the bill that is now before you reflects the concerns of numerous interests which have been involved in this issue for many years. It is the product of our Senate hearings last year and this year, and the suggestions we have received from business and citizen groups, and from judges and agency officials themselves. It is modest, well-focused, and tightly drafted, as legislation establishing any new Federal program must be. In this regard, let me stress the following:

First, the bill will not cause additional delays in agency proceedings. This is one of the greatest myths surrounding this bill and it should be laid to rest. Studies have shown that citizen intervention is an insignificant factor in overall regulatory delay, even in nuclear plant construction proceedings. Indeed, a number of experts-including several Federal judges-have said that public participation may actually speed up a proceeding. It means that more complete records will be made in an agency proceeding, insuring that all interested persons have an opportunity to be heard. There will be less likelihood of reversal of the agency's action in the courts for procedural unfairness. It also means a greater likelihood of public acceptance for agency decisions in which citizens can participate.

Furthermore, the bill provides that agencies may withdraw awards from public participants who delay or obstruct proceedings.

Second, the reimbursement program established by H.R. 3361 is experimental. The authorization will expire after three years, and Congress will have a chance at that time to evaluate the program's effectiveness and to make needed changes. In addition, the bill requires agencies and the courts to make detailed annual reports to Congress on the number and amounts of awards that are sought and made, so that we will have a solid record on which to base any decisions as to

Third, the bill has only limited application to adjudicatory proceedings. The Senate Judiciary Committee last year took the position that since most adjudications involve disputes solely among private parties which have no significant public impact, no purpose would be served by promoting greater public participation in these proceedings. The types of adjudications which are included—health, safety, civil rights, environmental concerns, and consumer pocketbook issues—have traditionally been the focus of broad public interest. Agencies should be permitted to fund participation in such adjudications, where the agencies conclude it is appropriate.

Fourth, the authority the bill provides is largely discretionary with the agencies, according to the criteria which are set forth as guides to the exercise of that discretion.

It does not require agencies to provide funds for all those who may wish to participate.

for all those who may wish to participate.

And Fifth, these kinds of programs are both consistent with and complementary to the proposed Consumer Protection Agency. We should remember that the new agency, when established, will only be able to address "consumer" concerns. It will not reach the wider range of citizen interests in the environment, public safety, minority rights, and other issues in which diverse segments of the public also need to be represented. Furthermore, the new agency will not always be able to protect the interests of consumers in all situations. This is especially true in proceedings which may affect only small numbers of consumers, for example, in communities located far from Washington, or where there are differing views on what the consumer position in a given proceeding should be.

To sum up, Mr. Chairman, I believe that H.R. 3361 is long overdue. Congress has for decades been delegating to Federal agencies decisions on difficult technical and administrative matters. It has given the agencies authority to hire their own legal and technical experts to assist them in resolving the complex problems which confront them on a daily basis. But Congress has not given the agencies adequate authority to reach out the kind of information which would enable them better to understand the impact of their actions on the very people whose interests must be their primary concern. If agencies are truly to be able to act in the public's interests, we can no longer deny the public an effective voice in agency proceedings.

When we began our Senate hearings on this legislation over a year ago, we facedin addition to skepticism and resistance on the part of some agencies-a decided lack of enthusiasm on the part of the Ford Administration, despite positive and helpful testimony by Assistant Attorney General Rex Lee. Now we have a new Congress and a new Administration, both determined to direct the machinery of the Federal Govern-ment to serving the needs of its citizens. We also have a new Attorney General whoat his confirmation hearings expressed an enlightened understanding of the importance of effective public representation in agency proceedings. Attorney General Bell also said he believes that attorneys' fees awards in public interest litigation is in the national interest, and that steps must be taken to insure that these kinds of lawsuits continue to be brought.

And now we have a President who is clearly committed to the ideals this legislation embraces. President Carter's campaign stressed his commitment to openness in government. He has often stated his intention to insure that the views of citizens are listened to before decisions on major policy issues are made.

Yet both Congress and the President want to do even more to promote responsive government. We want to see fundamental changes on the part of government officials towards citizens whose interests they are responsible for protecting. We want to ensure that government once again becomes the servant of its people, and to enable all Americans to feel that they have a real voice in how they are governed.

I firmly believe that enactment of H.R. 3361 will enable our government to restore meaning to the words "equal access to justice," and will rededicate the federal administrative process to the ideals of fundamental fairness which form the bedrock of our democratic tradition.

MOSCOW'S NEXT TARGET IN AFRICA

Mr. MORGAN. Mr. President, there has been much debate in this chamber

and throughout the Nation regarding Communist intervention and troop movements within the African nations.

There was a full-page article recently reprinted in the Washington Post from the London Sunday Telegram which addressed the Soviet and Cuban strategy in Africa, focusing on what the author calls the ultimate target: South Africa.

I believe that the American people should know about the political and military realities existing in Africa today, and the roles which our country is playing, and not playing, in that critical area of the world.

I therefore ask unanimous consent that the article, entitled "Moscow's Next Target in Africa," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Moscow's Next Target in Africa: Paying the Price for Angola

(By Robert Moss)

Can the West learn from Angola's tragedy, or are we condemned to relive the experience? What the Russians learned from Angola is that war by proxy pays off. They will be strongly tempted to use the same technique in other places—and almost certainly in the assault on Rhodesia and South-West Africa.

The Cubans are Moscow's all-purpose mercenaries, but they are not the only proxy soldiers who are being deployed in the widening war for southern Africa.

The Nigerians are said to be heavily involved in Angola. Western intelligence sources report that Nigerian troops were present at battalion strength when the MPLA and the Cubans pushed south last/year. According to UNITA sources in Paris, the Nigerian strength has since been reinforced

UNITA sources claim to have tapes of radio intercepts showing that at least 5,000 Nigerian troops have been deployed in Angola. They are operating as far south as Mocamedes, and are also based in Lobito, Luanda and the eastern diamond mining town of Henrique de Carvalho. UNITA claims to have intercepted radio communications in English (the common language between the Nigerians the Cubans and the MPLA), in the Ibo, Hausa and Yoruba dialects, and in a form of pidgin Creole that could indicate the presence of forces from Sierra Leone as well.

An intriguing sidelight is that UNITA also claims that a British shipping line played a key role in ferrying Nigerian troops and military supplies to Angola. Nigeria, rich in oil and boasting an army of some 210,000 men, can clearly afford to be more than rhetorical in its backing for the guerrilla movements of southern Africa.

The Tanzanians have also moved into the region. President Nyerere has put 1,400 of his troops into northern Mozambique to help the FRELIMO Government to suppress the major revolt of the Makonde tribes led by Lazaro Kavandame. Mozambique's army is largely recruited from the warlike Makonde.

Yet another African army is reported to have sent units south: Somali troops are said to be quietly moving into Mozambique. Rhodesian guerrillas in Maputo have bragged to Portuguese correspondents that Somali tanks will be used in future operations against Ian Smith's forces. The story may not be as bizarre as it sounds. Somalia, like Cuba is a Soviet satellite whose armed forces and intelligence services operate under the direct supervision of Russian officers. though the Somali army is small (some 25,-000 men), it is well-endowed with Soviet armour and has performed well in border skirmishes with the Ethiopians. The Somalis have 200 Soviet-made T-34 tanks and about 50 T-54s.

The black expeditionary forces' task may be to free the Cubans for a future offensive against Rhodesia, South-West Africa-or Zaire, which is also a prime target for the Russians. But the Cubans in Angola still have their hands full in coping with the continuing guerrilla war, and the total number there has probably been increased since the end of the South African campaign; some estimates range as high as 22,000.

There are more than 1,000 Cuban advisers and "technicians" in Mozambique, nominally assigned to the Senna sugar plantations or to the port of Beira. Many are believed to be military instructors for the ZIPA guerrillas from Rhodesia and the FRELIMO forces.

In Somalia, at least 600 Cuban instructors are attached to the Somali army and the pro-Somali guerrillas from Diibouti-the Frenchcontrolled port on the Red Sea that is expected to become independent later this year. The Cubans are also active in Equatorial Guinea, where President Macias has established one of the bloodiest dictatorships in black Africa. Some 200 Cuban instructors train his paramilitary forces and his personal bodyguard. There are another 300 Cuban advisers in Sékou Touré's Guinea.

In Sierra Leone, Cubans are training an internal security unit, and Cuban "technicians" have also been sent to the strategi-cally-placed former Portuguese possessions in West Africa: Guine-Bissau, the Verde Islands, and Sao Tome e Principe.

The Cubans are particularly well-entrenched in Congo-Brazzaville, the main staging-point in their invasion of Angola. They maintain at least 400 men at the Pointe Noire docks and the Maya Maya air base, and there are reports that reinforcements have recently been moved in from Angola in preparation for an attempt to put renewed pressure on Zaire's President Mobutu, whose supply routes to the Atlantic are now endangered. In Tanzania there are at least 150 advisers and "technicians," some of them attached to the Tanzanian People's Defence

All in all, it is not a bad effort for a Caribbean sugar-cane republic of eight million people. Of course, someone else is picking up the tabs. The Russians have not only been subsidising the Cuban economy to the tune of more than \$1 million a day; they invested over \$500 million in the Angolan campaign, and are believed to have supplied weaponry and equipment to Angola worth more than \$350 million in the year since the South Africans pulled out.

But Cuba's role as a Soviet proxy is even more striking if you take account of the Cuban presence in the Caribbean (where Castro's men are training Jamaican police) and in the Middle East (where 150 Cuban instructors are training international terrorists in Iraqi camps), not to mention the Cubans' efforts to take control of the nonaligned countries' news pool and the role of the Cuban intelligence service, the DGI, in orchestrating the activities of Latin American exile groups and transnational terrorists in Western Europe. Is it possible to imagine an anti-Communist country of the same size acting on the same scale today?

The strategic effect of the loss of Angola is summed up by two statements that oddly coincide: one from the Soviet paper Izvestia, in a major article last August: the other from South Africa's Prime Minister, Mr. Vorster, in his New Year's message. Izvestia said that "revolutionary events have seized southern Africa-the last strong bulwark of colonialism and racism-and the speed of the spread of the flame attests to the huge supplies of 'explosive material' accumulating there." Mr. Vorster, in simple but chilling words, showed that the message had not been lost on him: "The storm has not struck yet. We are only experiencing the whirlwind that goes before it."

Were the effects of the Cuban victory foreseen by the men who sat down in the American Senate on December 17, 1975, to debate whether or not they should vote to cut off all United States support to the anti-Soviet movements in Angola? With a few honourable exceptions, it seemed that the Senators were talking about another war. Senator after Senator recalled the anguish of Vietnam, the peril of getting sucked into another quagmire, the hopelessness of trying to shape events in a far-off place of which Americans knew nothing.

CONTINUING FIGHT AGAINST MARXISTS

Hubert Humphrey caught the prevailing mood: The "United States better start taking care of things it knows how to take care of. We know so little of Africa, the 800 and some tribes that make up Africa . . . I say it is like a different world.'

Senator McGovern jumped up to argue that it made no difference which of the black movements won anyway. Senator Tunney thought the rival Angolan movements were only nominally pro-Soviet or pro-American. At heart, all of them were "basically pro-Angolan, Socialist and highly nationalistic." Most of the Senators who spoke that day found it difficult to believe that the Russians would be able to establish a secure foothold in Angola, and some suggested that Angola could prove to be Russia's Vietnam.

It was not a wholly absurd idea. To this day, three anti-Soviet guerrilla movements continuing the struggle in Angola: UNITA in the south and centre of the country, the FNLA in the north, and the secessionists of FLEC in the Cabinda enclave. Unlike Left-wing revolutionaries other countries who fly off to university sinecures or their Swiss bank accounts after suffering defeat on their home ground, Jonas Savimbi is carrying on the battle deep inside Angola.

He has claimed that UNITA has 22,000 armed supporters, although Western intelligence sources believe that the figure is probably no more than 6,000. It is virtually impossible to get reliable information on the guerrillas' military capacities, but one index of UNITA's ability to harrass the regime is the fact that no train has been able to cover the whole length of the Benguela railway—from the Zambian border to the coast—since the beginning of the war. UNITA's political base is still largely intact, and the MPLA has had little success in building up support among the Ovimbundu people's traditional UNITA sympathisers.

This means that it might well be possible for UNITA and the other anti-Soviet groups to inflict a serious humiliation on the Cubans and the MPLA-if they could count on effective outside support. But no Western Power is disposed to play the part of arrourer and adviser to UNITA in the way that the Russians and the Chinese played it for the Vietcong.

Now that the MPLA regime has been admitted to the United Nations, backing

UNITA has become diplomatically trickyalthough some Western governments are more strait-laced than others. The French were ahead of the stampede to recognize the MPLA back in February, 1976 (much to the annoyance of their EEC partners, who had expected to be consulted) but this did not inhibit them from remaining deeply involved

with UNITA and the FNLA.

SOUTH AFRICANS MAINTAIN CONTACTS

Zambia's President Kaunda has come under intense pressure from his "frontline" colleagues to sever all links with UNITA, and finally had to ask Jorge Sangumba, UNITA's chief foreign spokesman, to leave his customary haunt, the Intercontinental Hotel in Lusaka. Jorge now gives his patronage to the Intercontinental Hotel in Kinshasa.

The South Africans maintain contact with the anti-Soviet movements, and there is large colony of white Angolan refugees. But they are inhibited by their desire not to provide a pretext for a Communist-backed invasion of South-West Africa.

Ironically, if any outside power is ready to "forward policy" in Angola, it could still prove to be China. The Chinese have backed both the FNLA and UNITA in the past. Many UNITA leaders, including Savimbi's number two, Miguel Nzau Puna, have received training in China. Puna complained to me when I last saw him about the rigours of the Chinese training schedule (which continued into the night with political indoctrination sessions). The Chinese cut off support to UNITA at the end of 1975. when hard evidence of South Africa's in-volvement seeped out.

But the Chinese are angry that they have lost nearly every point to the Russians in the contest for power in black Africadespite the fact that they have spent considerably more in economic aid. So renewed contact with UNITA is a possibility, if a remote one.

With or without outside backing, UNITA's proven survival capacity worries the Russians. The Soviet ambassador in Luanda, Boris Vorobyev, is said to have been in-structed to press the MPLA to do a deal with UNITA. President Neto and the Cubans are reluctant, but the biggest stumblingblock is that neither Savimbi nor any other of the top-ranking UNITA leaders has been ready to accept the idea of a deal with the MPLAwhich, in current circumstances, would amount at best to a conditional surrender. KGB agents have therefore been trying to sound out UNITA representatives abroad to discover whether it is possible to create a rift between Savimbi and lower-level cadres, so far without notable success.

Angola today cannot be objectively described as an independent country. Control of its armed forces, its secret police, its economy, its civil administration and its educational system is in the hands of Russians, Cubans and East Europeans, and the MPLA itself is being remoulded into an orthodox Communist party. The Cuban garrisons are the basic guarantees that the régime will not only survive but toe the line.

The Cubans have divided Angola into six military regions, with garrisons in the major towns. Five major mopping-up operations have been launched against the anti-Communist forces since the South Africans withdrew, but despite the savagery with which the Cubans and the MPLA have dealt with the civil population large swathes of Angola are still contested zones.

The continued flight of refugees over the 1,200-mile border of South-West Africa is an eloquent comment on the way the people of southern Angola regard their masters. Some 10,000 have been absorbed into South-West Africa.

conservative intelligence estimate has 3,700 Cuban troops currently in the centralwestern region, embracing Lobito, Huambo (formerly Nova Lisboa) and Bie (formerly Silva Porto); 2,000 in each of the northern, eastern and southern regions; and 3,000 in the Cabinda enclave, where some of the flercest fighting is taking place. There are at least 1,500 Cuban troops in Luanda.

This gives a total of about 14,000 of whom

6,000 are infantry. The Cuban forces include an armoured regiment with 120 T-54 and T-34 tanks and 1,900 men, an armoured car regiment with 70 Soviet-made BRDM vehicles and 1,600 men, an anti-aircraft battalion and five regiments equipped with multi-barrelled rocket-launchers.

The Cubans are also the key element in the new Angola air force. They pilot all of the MPLA's Soviet-supplied planes, which include a dozen MiG-21s, 10 MiG-17s, helicopters, and Antanov-2 light transport planes. They also pilot some of the scores of light aircraft that were bequeathed by the Portuguese forces. Cubans command the air bases throughout Angola, and are supervising the construction of new air bases at Huambo, Mocamedes and Cabo Lindo and the extension of existing air fields. This could be the prejude to a Soviet attempt to use Angola as the base for a major offensive against South-West Africa.

But Cuba's involvement is not restricted to troops. The Cuban ambassador in Luanda is Oscar Oramas, one of the architects of Cuba's invasion, a senior figure in the Cuban Communist party, an old Africa hand (who was formerly ambassador in Conakry) and, most important of all, a key operative of the Cuban intelligence service, or DGI, a satellite of the KGB directly supervised by a KGB general and his Soviet staff. The new Angolan intelligence service, the DISA, is directly controlled by the DGI.

CUBANS TRAINING UNION LEADERS

Similarly, Cuban advisers have assumed key positions throughout the civil service, and notably in the Interior Ministry, the Education Ministry, and in the supervision "political of the MPLA's programme of mobilisation," which is supposed to drum up support for a "mass Marxist-Leninist party." The Cubans are training Angolan trade union leaders, and the syllabus on offer at the Lazaro Pena trade union college in Marianao includes Marxist philosophy and Cuban history. The Cubans are strongly represented on President Neto's staff, and he is said to have entrusted his personal security to them. They share control of the Finance Ministry and the Bank of Angola with the Russians. The recent measures to establish a new Angolan currency, the kwanza, set an example to any other Government that might wish to wipe out its middle class at a stroke. Angolan families are allowed (on a one-forone basis) to exchange the old Portuguese Angolan escudos for kwanzas, but only up to the limit of 20,000 kwanzas. Anyone who has more than that stashed away has to accept that his savings have been turned into worthless paper.

Last July, Angola became the first African country to join the Soviet-controlled Council of Mutual Economic Assistance (CEMA). Since Neto's visit to Moscow in October, the trickle of East European technicians, agricultural scientists and managers has become a flood.

Between them, the Cubans and the Russians, now decide who can enter and leave Angola, what civil liberties (if any) individuals and organisations will be allowed, what the country will export and import, and how much money will be printed. On the coffee plantations, Cuban supervisors are said to operate a system of forced labour: workers are shifted from one place to another, or from one job to another, without notice or appeal.

These are examples of what "satellisation" means. But foreign troops and advisers can be shown the door.

The Russians remember what happened in Egypt in 1972, when Sadat turned against them, just as the Cubans remember the eviction of their mission from Brazzaville in 1968, before Marien Ngouabi seized power. So an effort is being made in Angola, as in Mozambique, to transform the ruling movement into an orthodox Communist party.

Soviet writers have described in detail how this effort should proceed. The classical text is a book entitled "Political Parties of Africa," published in Moscow in 1970. Its main editor is Vassily Solodovnikov, now Soviet Ambassador in Lusaka.

Solodovnikov accepts that it is unrealistic to expect to create a Communist society in Africa overnight. It will be necessary to begin by working though "revolutionary democratic parties," like the movements that came to power in Guinea, Congo and Tanzania, and like the MPLA in Angola. These movements may start out as a mish-mash of nationalism, Marxism and tribalism, but they includes activists "who are inspired by the ideas of scientific Socialism"—in plain words, Communists.

Solodovnikov's thesis is working out in Angola. During his visit to Moscow last October, Agostinho Neto signed a 20-year friendship treaty with Russia that provided for regular exchanges between the MPLA and the Soviet Communist party. Soon after his return, the MPLA announced that Angola was to be described officially as a "Marxist-Leninist republic."

It is perhaps a toss-up whether the MPLA in Angola or FRELIMO in Mozambique has gone further towards achieving Sovietisation. The MPLA does not seem, as yet, to have matched FRELIMO's regulations that dictate the maximum thickness of the soles (and the heels) of shoes, according to the age and

sex of the wearer.

Both President Podgorny and Leonid Brezhnev are expected to visit Africa this year. Their main ports of call will be Maputo and (probably) Dar-es-Salaam. The message could be that the West is on the retreat and that Russia is becoming the dominant power in Africa. Their strength is that they are acting according to a global strategy—while Western leaders are not.

The ring of naval and air facilities that the Russians have acquired around the African coast, and the deep-water harbours where they now have the opportunity to create new naval bases, include Luanda and four excellent ports in Mozambique: Maputo, Beira, Nacala and Porto Amelia. Somalia, Congo and all of what used to be Portuguese Africa now have Governments that can be called Marxist, and Soviet-bloc military advisers, troops and intelligence officers are present throughout most of the continent.

THREAT TO CAPE ROUTE

A leading Soviet Africanist, E. Tarabrin, predicts that the West's dependence on African raw materials will increase rapidly over the rest of the decade, and that imports of chromites (from Rhodesia and South Africa) will double. Soviet experts also stress that much of Africa's mineral wealth lies in the southern half. The gold, diamonds, platinum, copper and other industrial metals are rich stakes to play for.

Geography is just as important as natural resources. If the Cape route—which carries about 70 per cent of the strategic materials required by NATO countries—could be denied to the West, the world could be cut in half vertically by the closing of the Suez Canal as well. There is no alternative to the Cape route, not just because the Suez Canal can be closed overnight and Western Europe is so dependent on Middle Eastern oil, but because technology has bypassed the Canal; the supertankers cannot get through it.

The Communist invasion of Angola was a step toward the fulfilment of Russia's grand design: the domination of the whole of Southern Africa.

By giving up in Angola, the Western Powers threw away a unique opportunity to hold the line against Soviet expansion in southern Africa. Why unique? Because in Angola, the reality of the Soviet threat was not obscured by racial sentiment—at any rate, not until Marxist propagandists set about trying to turn the South Africans into the villains of the piece.

The war in Angola was not a war of black men versus white men. It was a war between rival black guerrilla movements and their foreign helpers. It presented a clear-cut choice between a pro-Soviet group that promised to turn Angola into a MarxistLeninist republic and its pro-Western opponents who promised democratic elections and guarantees for private investors.

Learning from Angola, the Russians are determined to ensure that if they can engineer the removal of the white Government in Salisbury, there will not be a subsequent battle for the spoils between pro-Soviet and anti-Soviet blacks, which might again divide black Africa. How can they ensure that? The spade-work has already been done. The bulk of the black guerrilla forces have been united by the Nkomo-Mugabe alliance, under the umbrella of the Patriotic Front.

The five neighbouring African Governments—which were at logger-heads during the Angolan war—have been persuaded to give their support to Nkomo and Mugabe. Britain and America say they will refuse to accept any settlement that is rejected by these two, even though they patently cannot claim to speak for the majority of black Rhodesians and the only hope of a civilised solution in Rhodesia lies in an agreement between Ian Smith and more representative black leaders such as Bishop Muzorewa.

But the most important thing to grasp about the Soviet design for southern Africa is that it is essentially negative; it has been accurately described, in an admirable paper from the Institute for the Study of Conflict as "a strategy of denial"—denial, that is, of raw material and communications.

The Soviet calculation—which seems to be paying off so far—is that the assault on southern Africa will be tolerated, if not aided and abetted, by the West, so long as it is carried out in the name of "majority rule". The fact that for most of black Africa, "majority rule" means one-party dictatorship or primitive despotism is conveniently ignored.

THE WEST'S LOST CHANCE

But what is still less excusable is the neglect by Western politicians of one of the abiding lessons of Angola: that if "majority rule" means government with the consent of the people, then it can only survive in Africa if it is defended against Communist aggression.

Now Britain and America say that they will not accept a settlement worked out between blacks and whites inside Rhodesia—or, for that matter, South-West Africa. The Marxist guerrilla leaders must be included; it seems that it does not matter over-much to either Western Government if the whites have any say.

If Angola is any guide—and I am convinced that it is—this is a prescription for another Marxist dictatorship, imposed by force of arms, which would provide the base for black guerrillas and Soviet proxy troops to attack the ultimate target: South Africa.

EXEMPTION OF CERTAIN AGRICUL-TURAL AIRCRAFT FROM THE AIR-CRAFT USE TAX

Mr. McCLURE. Mr. President, today I am cosponsoring S. 196, a bill to exempt certain agricultural aircraft from the aircraft use tax. Since enactment of the Airport/Airways Development Act of 1970, agricultural aircraft owners have had to pay a yearly tax of 2 cents per pound on agricultural aircraft and 7 cents per gallon on aviation fuel.

The revenue collected is placed into the airport-airways trust fund—a trust fund which currently has a surplus of \$2 billion—for the development, research, and improvement of public airports. However, the agricultural aviation industry makes little use of the public airport/airways system. Most agricultural aviators use private, not public, airways.

A study conducted by the Department of Transportation demonstrated that the agricultural aircraft use of the Federal system amounted to less than one-half of 1 percent. Yet the agricultural aviation industry pays 4 percent of the taxes paid on fuel for the entire aviation industry

Mr. President, the agricultural aviation industry—an industry which performs an invaluable service of treating, seeding, and fertilizing more than 250,-000,000 acres per year—is not compensated in any way for paying this aircraft use tax. Consequently, the tax is passed on to the farmer in the form of higher costs for his services. This discriminatory tax should be readily addressed, and I urge the swift passage of this legislation

NEED FOR CAUTION IN USING TAX INCENTIVES FOR ENERGY CON-SERVATION

Mr. KENNEDY. Mr. President, one of the major issues in connection with the Carter administration's forthcoming energy package is the question of the inclusion of tax incentives as a device for achieving national goals such as energy conservation and the development of new or alternative energy sources.

I have reservations about this approach, primarily because such tax incentives are essentially untried and have received so little serious scrutiny in the past by Congress and the administration with respect to basic economic questions like the efficiency and cost-benefit ratio of such incentives. In deciding how to spend scarce Federal dollars to achieve our important energy goals, both Congress and the administration have an obligation to insure that the approach we take is sound and economically justified.

In the coming weeks, Congress will have the opportunity, working with the administration, to develop an effective energy program that will serve the Nation well in the years ahead. Tax incentives may have an appropriate role to play in the energy program, but they must first survive the same close scrutiny that Congress routinely gives to direct spending programs of the Federal Government.

Mr. President, in a letter today to the President's energy adviser, Dr. James R. Schlesinger, I have expressed some of these concerns and urged the administration to proceed with caution in embracing tax expenditures as part of the energy package. I ask unanimous consent that my letter and also pertinent material may be printed in the Record.

There being no objection, the following letters and proposals were ordered to be printed in the Record, as follows:

APRIL 7, 1977.

Hon. James R. Schlesinger,
Assistant to the President, The White House,
Washington, D.C.

DEAR DR. SCHLESINGER: I am writing to express my concern over reports that the President's energy package, due April 20, may contain recommendations for various energy related tax incentives. My concern arises both from my commitment to a rational and effective energy policy for the country, and my

interest in reform of the Federal income tax system.

In assessing proposals for the use of tax incentives in the energy package—such as tax credits for home and business insulation, for solar enery, or for the cost of conversion from oil to coal—I hope that you will direct your attention to the basic questions that must be answered satisfactorily before the nation embarks on the route of these or other new tax expenditures.

When the federal government decides to adopt a financial incentive program, it always has the choice of financing the program in two ways—either directly, through the authorization-appropriation process, or indirectly through the tax system.

Too often in the past, Congresses and Administrations have given uncritical acceptance to unproved tax expenditures, regardless of the relative inefficiency—or even the outright waste—of many such tax incentives. But things are changing, partly in response to heavy budget pressures that demand better value from the expenditure of federal dollars, and partly in response to more vigorous analysis by Congress, the Treasury and other experts of the efficiency of tax incentives.

If serious consideration is being given to tax measures in addition to, or in lieu of, direct outlay programs in the energy package, I urge you to give the same close scrutiny to such tax expenditures as you would give to direct spending programs. Among the questions that must be answered are the following:

Is a tax expenditure at least as efficient as, or more efficient than, a direct expenditure in achieving the federal goal? Will the nation derive at least a dollar of benefit for every Federal dollar expended?

What alternative forms of federal subsidy should be considered, such as direct grants, loans, loan guarantees, or interest subsidies? Could such programs be structured more efficiently, or targeted more directly to meet the need?

If a tax incentive program is adopted, is it designed so that its benefits are distributed equitably among income groups? If tax credits are used, are they made refundable, so that the federal tax subsidy will be available to those who do not otherwise incur tax liability?

I urge that, before tax incentives are embraced as part of the Administration's response to the energy challenge, an effort should be made to provide responsible answers to the above questions, so that Congress can be assured that the benefits outweigh the costs, and that any tax incentives proposed are the best means of providing financial assistance.

For your information, I am enclosing two recent studies questioning the use of tax credits in the energy area. The studies were prepared for me and a group of other Senators interested in such issues as part of the Senate debate on tax reform last year. These studies indicate that the tax credits proposed at that time for home insulation costs and solar energy costs flunked all or almost all of the tests suggested in the above questions. Although the Senate voted to approve some of the tax incentive proposals last year, the provisions were dropped in the conference with the House and remain quite controverstal.

As you will see from the paper on the tax credit for home insulation, for example, one of the more disturbing criticisms of the credit is its waste and inefficiency. According to the enclosed paper, it may cost the Treasury over \$42 to save a \$12 barrel of oil. In large measure, such tax benefits are not incentives at all, but windfalls to taxpayers for activities they would undertake in any event.

Recently, raising similar concerns, I wrote

to Secretary of HEW Califano to obtain his department's views on pending proposals in Congress to provide tax credits for college tuition expenses. In his reply, Secretary Califano raised a number of serious objections to such a tax credit, and termed it a "radical departure" from federal education policy. I am also enclosing copies of my exchange of correspondence with Secretary Califano.

If adequate studies have not yet been undertaken of proposals for energy tax incentives, I would hope that recommendation of such proposals by the Administration would be deferred until the Executive Branch is satisfied that such tax incentives actually represent a wise response to our energy problems and are more than just a shot in the dark toward the goal we all share of encouraging energy conservation.

As a related matter, I am sure you are aware that tax simplification is one of the major themes in the comprehensive reform effort now being undertaken by the Administration and by Congress. The introduction of energy related tax incentives into the Internal Revenue Code is, of course, directly contrary to the goal of tax simplification. New tax incentives will necessarily be complex, and will involve additional lines and schedules on the already complex tax forms. I would hope that before such complications are added in the form of tax incentives for energy, Treasury officials and others involved in preparing the Administration's tax reform proposals will be closely consulted, so that tax reform efforts will not be hindered by the energy proposals.

I appreciate your consideration of these concerns, and I look forward to working with you to develop the most effective and equitable energy program that we can produce for the nation

Sincerely,

EDWARD M. KENNEDY, Chairman, Subcommittee on Energy, Joint Economic Committee.

FEDERAL TAX REFORM FOR 1976 (By Stanley S. Surrey, Paul R. McDaniel, and Joseph Puhman)

THE TAX CREDIT FOR HOME INSULATION

The proposal for a tax credit for insulation of a home may appear attractive at first glance, but on analysis it turns out to be seriously defective. The proposal is Inefficient, because to save one barrel of

Inefficient, because to save one barrel of oil (worth about \$12) will cost the Treasury \$42.35:

Inequitable, because the well-off homeowner will get far greater benefits than a lower-income homeowner;

Complex, because the tax return and the audit process will be further complicated; and

Expensive, because the Treasury will lose nearly \$288 million per year as a result of the credit, with no corresponding public benefit.

The House-passed conservation and conversion bill (H.R. 6860) provided for an individual income tax credit for home insulation equal to 30 percent of insulation expenditures up to \$500. Thus, the maximum credit is \$150. The Senate Finance Committee tentatively decided in 1975 to provide a similar credit, but under the committee proposal the credit would have been refundable, and the maximum amount of expenditures would not have been reduced on account of expenditures by a prior owner. In contrast, the House bill provided a non-refundable credit and the \$500 maximum would have been reduced by prior owners' insulation expenditures.

expenditures.

The idea of an insulation tax credit was born out of the energy crisis and concern

Footnotes at end of article.

for energy conservation. Conservation is important, of course, but so are other considerations, such as the need to keep the federal deficit under control. Fiscal responsibility demands that we ask whether the insulation tax credit is the best means of encouraging energy conservation. The insulation tax credit must be examined like any other tax expenditure to see whether it is an equitable, efficient way to save oil and other fuels.

The insulation credit is inefficient. The insulation credit is premised on the belief that people will buy more insulation if the federal government makes it cheaper by grant-ing a tax credit of 30 percent to purchasers. How much more insulation will be purchased depends on what economists call the elasticity of demand.2 Usually, when the elasticity of demand is unknown, as is the case here, economists feel that it is safest to presume that the elasticity of demand is -1.0. This means that a 30 percent decrease in prices will result in a 30 percent increase in purchases. In order to be generous, however, the Treasury in analyzing this credit has presumed an elasticity of demand of 2.0, that is, a 30 percent reduction in cost will result in a 60 percent increase in insulation. Even with this generous presumption, the 30 percent credit will only save 6.38 million barrels of oil per year (see Table 13).3 U.S. oil consumption is running about 20 million barrels a day; hence a saving of 6.38 million barrels of oil a year (see footnote h to Table 13) is very small indeed—an eight-hour supply of oil at a cost of almost \$300

TABLE 13.- ESTIMATED ANNUAL HOME INSULATION ACTIONS, COSTS, AND INCREMENTAL THERMAL SAVINGS 1

200		(thousands)	Btu/year per unit (millions)	Total Btu/year (trillions)
200	130	250	35.0	
75 30 70 50 100	130 188 450 70 100 22	250 960 - 5,770 400 770 85	1. 0 2. 2 15. 0 10. 0 5. 0	1
	70 50 100	70 70	70 70 400 50 100 770 100 22 85	70 70 400 15.0 50 100 770 10.0 100 22 85 5.0

1 The elasticity of demand for retrofit materials is —2—that is, a 30 percent reduction in cost (the size of the credit, without allowance for nontaxable homeowners and the delay in credit recoupment) will result in a 60 percent increase in thermal retrofits.

2 The ceiling insulation base-level activity rate (in absence of credit) is 400,000 homes per year (this is consistent with the FEA estimate of 1974 activity, and with pre-1974 industry estimates, given the sharp increase in fuel prices).

3 The base-level storm-door and window installation activity is taken to be twice the number of homes that insulate ceilings.

4 The clock thermostat and weatherstripping base levels are as conjectured by FEA.

5 The "other" insulation activity level is the same as for ceilings.

The other insulation activity level is the same as for ceilings.
 Less than ½ trillion.
 Maximum annual credit: 0.30×\$960,000,000 equals \$288,000,000 (this ignores the possibility that the cost to taxpayer may exceed \$500).
 This is equivalent to 6,380,000 barrels of oil a year, because the energy content of oil is 5,-800,000 British thermal units (Btu) per barrel.

Source: Office of Tax Analysis, Treasury Department.

The Treasury Department has shown that the Federal Energy Agency incorrectly estimated that a 15 percent credit for home in-sulation would reduce home-heating fuel consumption by the equivalent of 95,000 barrels of oil a day. The FEA attributes to the credit all of the fuel conservation caused by all the insulation while the credit is in effect. The FEA does not attempt to figure out how much additional insulation will be installed as a result of the credit, and how much fuel this additional insulation will conserve. The FEA analysis makes about as much sense as saying that a depositor caused his bank to make a million-dollar loan because he put a \$500 deposit into the bank. The FEA also based its estimate on the total possible production of insulation, rather than on the likely amount of purchases. But total possible production does not necessarily equal total output, let alone total sales.

Under the Treasury's assumptions about elasticity of demand for insulation, the revenue loss is \$288 million per year. Simple division shows that every barrel of oil saved by the insulation tax credit will cost the Treasury \$42.35. This "price" would make even the international oil cartel blush. The federal government could buy and distribute free almost four times as much oil through direct expenditures as it will save through an insulation credit.

The insulation credit is also inefficient because it rewards those who would install insulation anyway. To encourage more people to use insulation, the credit pays for 30 percent of the new purchasers' costs. But it does the same for homeowners who would have installed insulation even if there was no credit. In their case, the 30 percent credit is simply wasted. It is impossible to measure with precision how many people fall in this category, but the increased price for oil has increased the incentive to install insulation, so the number of people who already plan to install insulation is bound to be large.

The insulation credit is inequitable. Although tax credits are generally more equitable than deductions,4 many homeowners who are not well off are not going to be able to

spend \$500 on insulation. Even if they know they would get \$150 back from the federal government, they would still be \$350 out of pocket. As a result, only those able to afford the full \$500 of insulation expenses will get the full advantage of the credit. Lower income homeowners will get few benefits, even if the credit is refundable. Thus, those who most need help to insulate their homes will get the least aid—and those who don't need aid will get the most.

What has just been said assumes that the worst inequities of the insulation credit will be removed by making it refundable. If not refundable, those homeowners below income tax exemption levels would receive no benefit from a credit against tax, since there would be no tax against which to apply the credit. But there is no assurance that Congress will adopt a credit with a refundable feature. Even though the Senate might pass a refundable insulation tax credit, it is likely that the refundable aspects of the credit will be dropped in the conference, because of oblections from the House conferees. That would make the credit an even more unfair piece of legislation.

The insulation credit is complex. Besides being inefficient and inequitable, the tax credit for insulation will add more complexity to the individual income tax return and to the audit process. The Commissioner of the Internal Revenue Service apologized to taxpayers for sending them such a complicated tax return form this year. If this insulation credit provision is adopted, the tax reutrn will become even more complex.

In addition, many taxpayers will be unaware of this provision before getting their return form. As a result, they will not keep the necessary records that the Internal Revenue Service will demand for substantiating credit claims. If the credit is reduced because of insulation expenditures by the prior owner of the house, the record-keeping process will even more difficult. Since the credit saves little oil, the added complexity is not worth the trouble it will inflict on taxpayers and the added audit costs to the Internal Revenue

The insulation credit should not be enacted. The Senate should reject any proposal for a home insulation credit. Increased oil prices have already made clear to consumers

that they should start insulating their houses. If they can save money on their fuel bill by insulating their homes, the market mechanism provides a strong incentive to insulate. In fact, it has been estimated that average home insulation costs are recovered in about three years, through the resulting reduction in heating and cooling costs, by those who install their own insulation.5 There therefore, no need for government subsidies in the form of tax expenditures

The credit is grossly inefficient. It will cost the federal government \$42.35 in tax revenue to save one \$12.00 barrel of oil. Even imported oil is a better buy than this credit. Moreover, the insulation credit is inequitable because it is more likely to be used to its full extent by the well-off homeowner than by those who really need help to insulate their homes. The credit will also make it more difficult to administer the revenue

THE SOLAR ENERGY TAX CREDIT FOR HOMEOWNERS

The proposed solar energy tax credit for homeowners is inadvisable. This is so for several reasons: (1) the technological problems blocking solar energy development cannot be solved by tax credits for purchasers of home equipment; (2) solar energy heating is much more expensive than alternative sources of energy, (3) the well-off individual will gain the greatest benefits from the credit; (4) tax returns, and the audit process, will be further complicated by the credit; and (5) the credit will cost as much as \$30 million a year by 1980, and could become a fiscal time bomb thereafter.

The basis for these and the following statements is the House-passed energy conservation and conversion bill (H.R. 6860), which provides a credit against income tax liability to individuals who install solar energy equipment in their homes. The credit is allowable for 25 percent of the first \$8,000 of solar energy equipment expenditures, up to a maximum allowable credit of \$2,000. The Finance Committee tentatively decided in 1975 to provide a refundable income tax credit for solar energy equipment amounting to 40 percent of the first \$1,000 of expenditures, plus 25 percent of the next \$6,400, for a maximum credit of \$2,000.

The solar energy credit is ineffective. Solar

Footnotes at end of article.

energy today is not an economical source of energy in most parts of the United States. The technological problems involved in recovering solar energy at reasonable cost have not been solved. If the government is to get involved in the effort to develop solar energy, it should do so through direct appropriations that can be focused on a search for answers to the technological problems that now block the recovery and use of solar energy.

Granting tax credits for the installation of home solar energy equipment is not an effective way to spur a research and development effort under government auspices. Most of the benefit of the credit will be wasted on individuals who are fortunate enough to live in areas with a large number of sunny days each year, and who already find the use of solar energy to be practical. They will get a government tax subsidy for doing what they would have done anyway. Meanwhile, the research and development programs that are needed to make solar energy practical in the rest of the United States will not be undertaken, or will not be adequately funded.

The way to develop solar energy is to concentrate on the technical problems that actually block its use. The proposed tax credit is ineffective because it falls to do so.

The solar energy credit is inefficient. Use of solar energy is a worthy goal, but it should be pursued in an efficient manner. Before the invention of small electric motors and the incandescent lamp, it would have made little sense to grant government incentives to encourage people to put electricity into their homes. The parallel statement on solar energy is equally copent today.

ergy is equally cogent today.

The Treasury Department has examined the cost effectiveness of various heating systems and has found solar energy to be the least efficient of (see Table 14). Among other things, solar energy requires installation of an alternative heating system for use as a backup, when the sun does not shine.

TABLE 14.—COST OF HEATING AN 1,850-SQ FT HOUSE OVER A 20-YEAR PERIOD 1

	Homeowner's marginal tax rate				
Type of heating system	20 percent	50 percent			
Solar	\$12, 907 5, 440 4, 968 3, 659 2, 582	\$12, 068 5, 363 4, 906 3, 546 2, 525			

¹ Present value of installation and operating costs assuming (1) investor's after-tax rate of return is 10 percent, and (2) 80 percent of cost is financed by an 8-percent loan, the interest on which is deductible,

Source: Office of Tax Analysis, Treasury Department.

For a homeowner in a 20 percent marginal tax bracket, the total costs over a 20-year period of heating an average home are shown by the Treasury study to be \$12,907 for a solar system, \$3,659 for an oil system, and \$2,582 for a gas system. Thus, the solar system is from three and a half to five times as expensive as alternative systems. Since the benefits of each system are similar, one can say that the solar system is one-fifth as cost-effective as gas heat and less than 30 percent as cost-effective as oil heat.

Assuming a solar system with an electric baseboard backup system, a 20 percent marginal tax bracket homeowner would need a 69 percent credit to make solar heat competitive with oil, and a 77 percent credit to make it competitive with gas. If a credit were allowed only on the solar system (and not on the backup system as well), the corresponding figure jumps to 83 percent for a 20-percent bracket taxpayer considering gas heat as an alternative. The need for such absurdly high tax credits shows clearly the costly, inefficient character of a solar heating system. There is no justification for

federal tax subsidies for costly, inefficient systems.

The solar energy credit is inequitable. To take full advantage of the proposed solar energy credit, a homeowner must spend at least \$8,000 under the House bill. It is true that a taxpayer with sufficient tax is eligible to get \$2,000 of this cost back from the government, but who except the well-off homeowner can generally afford to spend so much money for solar equipment? The credit clearly becomes a subsidy to the well-off homeowner who is likely to install the equipment even without the credit. The benefit of the credit will be confined to a small group of homeowners in the upper brackets, and hence it will be government assistance upside down.

The solar energy credit is complex. Taxpayers are having more difficulties every year filling out the tax return form, and the Internal Revenue Service is having greater difficulty auditing returns. Enactment of the solar energy credit will require yet another line on the tax return, even if the credit is claimed by only a few individuals, causing confusion for most taxpayers. Tax returns need to be simplified, not made more complex.

The solar energy credit is expensive. The staff of the Joint Committee on Internal Revenue Taxation estimates that the revenue loss from the House-passed solar energy credit will be small (under \$5 million) in the first three years. The cost will be minor because the credit will be almost totally ineffective. But, by 1980, the revenue cost is expected to climb to \$30 million a year because more people will buy solar energy equipment as the technical problems of solar energy are solved. From then on the revenue losses from the solar energy credit could be-come very large. Thus the credit, which fails to spur energy research now when we face difficult technological problems, constitutes fiscal time bomb set to go off as soon as those problems are solved and government help is no longer needed.7

The solar energy credit should be rejected. By failing to concentrate on the problems that demand a solution if the sun is ever to become a practical source of energy, the solar energy credit wastes government funds. The credit is inefficient, because it spurs a form of heating that is currently much more expensive than any other form. The credit is inequitable because it will benefit only homeowners who can afford to buy solar

energy equipment.

If energy conservation and development measures are needed, they should be funded through direct appropriations. As the Manhattan Project and the Apollo Program demonstrate, projects funded through direct appropriations show results, and outlays are cut when the project has achieved its objective. In contrast, programs funded through the tax system to go on and on, and there is never any review of the results, or any end to the costs. The proposed credit for solar energy equipment should be rejected.

FOOTNOTES

¹The legislative history of the insulation credit confirms this point. A majority of the Ways and Means Committee voted in favor of the credit in committee, but after additional time for serious reflection, a majority of the committee opposed the credit on the floor of the House.

² If elasticity of demand is high, a small decrease in prices will result in a large increase in purchases. If the elasticity of demand is low, a large change in prices will have little effect on purchases.

³ Plausible Estimates of the Home Insulation Credit Revenue Cost and Implicit Conservation Savings, Office of Tax Analysis, U.S. Department of the Treasury, April 30, 1975.

Deductions, because they are subtracted from adjusted gross income, are worth more

to those in the top brackets than to those in lower brackets. A \$100 deduction is worth \$70 to a person in the highest tax bracket, while it is worthless to a person who uses the standard deduction, as do most lower income individuals. A tax credit of 30 percent. on the other hand, is worth the same amount to all taxpayers no matter what tax bracket they are in, but only as long as they do pay taxes. Hence, those homeowners whose come is below exemption levels would not benefit even from a tax credit. However, if the tax credit is refundable, it will also help those who are too poor to pay taxes. Thus on equity grounds, a refundable tax credit is more equitable than the House's non-refundable credit. Both are to be preferred to a tax deduction. But even if a credit approach is used, the proposal remains grossly ineffi-

"Solar Heating," Office of Tax Analysis, U.S. Department of the Treasury, April 8,

1976.

Technically, of course, the House bill scheduled the credit to expire in 1981. However, Congress has regularly renewed similar credits, despite expiration dates. The problem is that any tax benefit creates a constituency automatically, which then fights to prevent the termination of the tax benefit. There is no reason to think that a solar energy credit would be any different.

THE SECRETARY OF HEALTH,

EDUCATION, AND WELFARE,

Washington, D.C., March 31, 1977.

Hon. Edward M. Kennedy,

U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: I am writing in response to your request for an analysis of proposals for the use of tuition tax credits to provide aid to families with college age students.

There is no question but that college costs are rising and that many families must make hard choices to finance a college education. Reduction in the family's standard of living or increased borrowing is often necessary to meet educational expenses. However, there are many combinations of grant and loan programs which would deal with that problem better and more fairly than a program of tuition tax credits, by distributing assistance according to the severity of the particular family's problem. For example, a highly paid professional sending his child to a low-tuition community college would get as large a benefit under some proposals as a blue collar worker sending his child to an expensive private college with no other aid. family with income so low that it pays no tax would receive no aid at all. The lution" proposed by such legislation by proposed by such legislation badly matches the problem.

This, of course, implies an answer to your question regarding whether such a program would target Federal funds to those, who need assistance. Such grants would have little relationship to need because almost all students, even those attending low-tuition public institutions, incur sufficient tuition charges and other expenses to be eligible for the maximum credit. A reduction in the allowable credit would occur only where the student received grant or scholarship assistance, and, since today most grants and scholarships are awarded on the basis of need, such a reduction would almost always result from receipt of a need-based grant or scholarship.

A direct, targeted grant program in which

both family ability to pay and costs of attendance determine the amount of the student's grant is a desirable way of equalizing educational opportunities, and is highly complementary to loan programs. However, for many of the upper-middle income families which would likely benefit from a grant program such as the tax credit proposal, I suspect a loan program would be preferable. What they need most is to spread college costs over an extended number of years, as is currently done under the Guaranteed Student Loan program. I think most of these families, when faced with large college costs in a particular year, would prefer a \$2,500 long term 7 percent loan to a \$250 to \$500 grant. Where the issue is not ability to pay, but convenience, I believe the loan alternative becomes the more desirable.

The distribution of benefits under a grant program patterned after some proposals would appear to be inequitable among income groups. Benefits would be largely the same, despite differences not only in college costs, but also in income. We estimate that at least 60 percent of tax credit benefits would probably go to families with incomes of \$18,000 or more—which are considerably better off than the national average. Further, only 30 percent of the benefits would go to families sending children to private colleges, although they have almost 60 percent of the financial need of all families likely to benefit from the credit.

You ask whether the proposed program would be consistent with policies underlying present direct Federal expenditures for education. It would be a radical departure. Two factors presently determine the amount of aid a student receives from Office of Education programs: the family's ability to pay, and the cost of the chosen college. When ability to pay is subtracted from cost, we have need, and in this sense all the Office of Education programs are need based. Perhaps, as some argue, different ways of determining need should be considered, or assignment of responsibility for meeting need among different programs could be improved. I cannot, however, imagine endorsing a student grant program which would completely discard need as a relevant factor in the manner of some tuition credit proposals.

Sincerely, JOSEPH A. CALIFANO, Jr.

U.S. SENATE,
Washington, D.C., March 8, 1977.
Hon. Joseph A. Califano, Jr.,

Secretary, Department of Health, Education, and Welfare, Washington, D.C.

Dear Secretary Califano: I am writing to request your Department's analysis of the proposed tuition tax credit for education expenses. As you know, this proposal was passed by the Senate last year in its consideration of the Tax Reform Act of 1976. Although the provision was dropped by the Senate-House Conference Committee, there is a continuing interest in the proposal, and it may well be offered as a rider on the Senate floor to the Administration's tax bill.

I believe that it is important for the proposed tax credit to be analyzed as a Federal education program. I would therefore appreciate receiving your comments on the measure, viewing it as a Federal program to provide financial assistance for education. It would be helpful if your analysis could recast the proposed tax credit as a direct federal grant program, equivalent to the tax expenditure, and then address such questions as:

Is there an overall need for the program?
Are the federal funds targeted to the persons that need federal assistance?

Is the form of the program—direct grants—more desirable than other forms of aid, such as loans?

Is the distribution of the benefits equitable among income groups?

Would the proposed program be consistent with the policies underlying the benefits provided by existing direct federal expenditures for education?

In sum, I would like your view as to whether the Department would support the education program contained in the proposed tax credit if it had been proposed as a direct program to be administered by HEW.

Unfortunately, there is some urgency to the proposal, since it may be offered as a rider to the tax bill coming soon to the Senate floor.

With best wishes, and I look forward to hearing from you.

Sincerely,

EDWARD M. KENNEDY.

ABANDONED SCHOOLS—A NATIONWIDE PROBLEM

Mr. HEINZ. Mr. President, recently I introduced legislation designed to help communities that are burdened with the growing problems of abandoned school buildings.

S. 792 and S. 793 are companion bills similar to the Surplus School Conservation Act I introduced during the last Congress. Since proposing this concept, I have received numerous phone calls, letters, and newspaper clips from all over the country supporting this proposal and demonstrating the extent that this problem exists in other States. I am convinced that surplus schools is a community problem faced by every State in this country.

Mr. President, I would like to share with my colleagues examples of some of the comments I received since first introducing the Surplus School Conservation Act. I ask unanimous consent that the following material be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From Education Daily, May 11, 1976]

Don't Just Close a School, Recycle It,
Heinz Says

When a school district closes a school building it runs into a lot of maintenance and public relations problems, and the best solution is to get the building open again under new sponsorship, says Pennsylvania Congressman John Helnz III.

Concerned about 144 schools closed in Pennsylvania last year and an estimated 120 scheduled to be added to the list before the end of the current school year, Heinz has introduced two bills that would give some Federal help with the recycling idea. One, called the "Surplus School Conservation Act of 1976" (H.R. 13575), would authorize the Department of Housing and Urban Development to make grants on a limited and competitive basis to communities that want to convert unused school buildings for "efficient, alternate" uses in the fields of educational and social services. That could include things like resource centers, libraries, health centers, county offices, housing for the elderly, college classrooms, or more administrative space. Heinz points out.

trative space, Heinz points out.

His other proposal, the "Surplus School Conversion Act" (H.R. 13561), takes a different tack by offering tax incentives to private industry to purchase school buildings and turn them into private enterprises. Heinz has a list of towns that have sold school buildings to private developers for museums, hospitals, apartments, commercial offices,

and hotels. Claremont, California, even turned an old school into a shopping center. Light industry and warehouses might be interested too, Heinz points out. His tax break for the purchasers would take the form of an amendment to the Internal Revenue Code to speed up amortization, meaning the buyer could write the building off for tax purposes in 15 years instead of 30, for example.

The private-enterprise route has an advantage for the community in that school property goes back on the tax list, Heinz says, and that's better than "mothballing" an unused building. "Boarding up windows preserves neither the building nor the real estate values of its neighborhood. . The best way to protect property is to fill it with people."

Heinz notes closed schools are a "psychological thorn in parents' sides." They look at the empty building and say, "Why can't our children go there?" and that's bad public relations for the school district and everyone else, he points out.

[From Spectator, National Association of Elementary School Principals, August 1976]

NEW LIFE FOR OLD SCHOOLS?

"The best way to protect property is to fill it with people," says Representative John Heinz III (R-Pa.), who has recently introduced into Congress two bills that are designed to "recycle" surplus schools. Empty schools are not only a maintenance headache for the school district, Heinz says, but they are bad PR as well. His proposed legislation would help get unused buildings open again under new sponsorship.

H.R. 12947, the Surplus Schools Conservation Act of 1976, would authorize the Department of Housing and Urban Development to make limited grants to communities that want to renovate unused school buildings for "efficient alternate" uses in the fields of educational and social services. Heinz has in mind such facilities as libraries, community colleges, housing for the elderly, health clinics, and the like.

H.R. 12948, the Surplus Schools Conversion Act, would provide tax incentives for commercial purchase of school buildings by accelerating the depreciation write-off to fifteen years instead of the usual thirty. This option has the advantage of putting school property back on the tax list, and a number of towns have already sold their empty schools to private developers for shops, museums, apartments, and commercial office space.

If declining enrollments are forcing your district to close a building or two and you think they ought to be put to good use, write your congressman and let him know that you support H.R. 12947 and 12948. (As of this writing, both bills were still in committee, and hearings had not yet been scheduled.)

[From the Long Island Press, Mar. 3, 1977] UNWANTED SCHOOLS: ABANDONED BUILDINGS HARD TO SELL

Boarded up, battered and unguarded school buildings dot the city, awaiting rare buyers.

Of the 65 buildings given up by the Board of Education in the last two years, the Board of Estimate has taken over no more than 24, and the city Municipal Services Administration has been able to auction off only four.

"If we had a booming business climate, I'm sure these schools could be used for a whole variety of purposes. But with the economic recession, it is difficult," said a spokesman for Municipal Services Administrator John T. Carroll.

Those most often interested in the surplus buildings—community oriented or nonprofit groups—tend to lack the purchase and maintenance funds, and even private developers think twice about the cost of demolition, he added.

Also, the budget-strapped city agency cannot afford extra security guards to protect the buildings after the school system formally surrenders them. The spokesman said the problem is being discussed with Hugh McLaren, the board's executive director of buildings

The city official cited P.S. 27 in College Point as one illustration. The three-floor 79-year-old building at 14-14 College Point Blvd. nearly went up for auction last March at an opening price of \$65,000. Queens Borough President Donald Manes wisked the structure off the block when surrounding residents demanded it be turned into a community

As of two weeks ago, a neighborhood committee was still searching for needed funds. Another meeting is set for Sunday. Estimates of the annual operating cost range from \$63,276 to \$372,000.

A \$200,000 price tag repelled bidders when the school system's old central kitchen in Long Island City went up for sale last November. The real estate department is barred from slashing prices for a variety of reasons, th spokesman said.

Of the 65 buildings shutdown citywide, only seven in Queens were affected. In addition to P.S. 27 and the kitchen are P.S. 3 at 108-55 69th Ave., Forest Hills: P.S. 1 at 21-01 46th Road, Long Island City; and school for the handicapped; J.H.S. 93 P.S. 110 at 174-10 125th in Jamaica. P.S. 187, at 61-26 Marathon Parkway in Little Neck, was converted to a school for the handicapped; J.H.S. 93 annex was transferred from District 26 headquarters and used as annex for severely crowded District 24.

The heaviest crunch came in 1975 when Mayor Beame and the Board of Estimate cut maintenance funds for 43 schools from the budget. Of those, only 37 were actually closed, according to board figures.

[From the Long Island Press, Mar. 3, 1977] FEAR ADDICT HAVENS IN SHUTTERED SCHOOLS

(By Howard Reiser)

There will not likely be any more closings of New York City public schools, unless the city can guarantee that a building about to be shut would subsequently be utilized in some manner.

During the past two years, some of the 30 or so schools ordered shut down have been used, says Deputy Schools Chancellor Bernard Gifford, but for all the wrong reasons. He complains they have been turned into hangouts by drug addicts and derelicts and have "eyesores" for people living in or become passing through the area.

Testifying yesterday before joint budget hearings conducted by the City Council and Board of Estimate, Gifford said he would recommend against closing any more schools unless "there is a guarantee that a user is available" once the school shuts its doors.

After participating in a compatible give and take with questioning legislators, Gifford told newsmen he expected his suggestions to be followed by Board of Education officials.

I have no reason to doubt that the board will listen to what I am saying," he said, "I've done my homework. I'm not saying that schools shouldn't close under any circumstances. I'm saving they shouldn't close if their future use is not known.'

In his testimony at City Hall Gifford agreed that a strong effort must be made to combat school crime and said he felt the \$40 million in cuts urged by Mayor Beame could be made without touching the teachers in the classrooms.

Under the current plans, 15 to 20 schools face closing by September. The position out-

or most, of the shutdowns.

While Gifford said more than once that there are "no villains here," he mentioned even more often that the decision to close schools came from the mayor's office, not from the Board of Education.

"We've been criticized for permitting schools to be vandalized," he said at one point. "But the policy was based on erroneous assumptions made by the mayor. The assumptions made two years ago-that the city could find alternative uses for the buildings don't appear to be valid."

A better solution to the city's fiscal woes as well as the under-utilization of the schools could be the closing of sections of a particular school rather than the entire facility, Gifford said. This will be among the formal recommendations he will make to the board. he said, noting that such a step would achieve some savings to the city and at the same time continue the operations of a neighborhood

With regard to the question of crime in the schools, Gifford says he's as familiar with the problems as anyone else could be.

'My 12-year-old son has been ripped off four times this year," he told the members of the board and city council. "He's often afraid to take any money to school."

Gifford hopes federal funds could be obtained by the city for the use of hiring school

"We want to cut down on the crime," Gifford said

[From the Report Compliance Issue, Advisory Council on Historic Preservation, April 1976]

RECENT LEGISLATIVE ACTION

RECYCLING UNUSED SCHOOL BUILDINGS

Two bills, H.R. 12627 and H.R. 12628, have been introduced by Representative H. John Heinz III (R.-Pa.) in response to the growing national problem of underutilization of existing school facilities. Throughout the United States, many elementary and secondary school buildings have been closed due to decreasing enrollment, shifts in population, consolidation of school district programs, and budget cutbacks resulting in the abandonment of buildings that are often recyclable by virtue of their structural soundness, central location, or potential for rehabilitation. Many of these school buildings are also valuable as historic resources. Therefore, although H.R. 12627 and H.R. 12628 do specifically mention historic school buildings, the potential applicability of the two bills is of importance to preservationists.

H.R. 12627, the Surplus School Conservation Act, would authorize the Secretary of Housing and Urban Development, to award grants to communities to pay up to eighty percent of the costs for renovating unused school buildings for other productive purposes. Funds can be used to help defray the expenses for preparing drawings and specifications, for remodeling, altering, and inspecting and supervising construction. H.R. 12628, the Surplus School Conversion Act, would amend the Internal Revenue Code to entitle the purchaser of an unused school building to a deduction with respect to the amortization of the property based on a period of 180 months (15 years), rather than the usual period of 360 months (30 years). The tax deduction will be applicable both to the cost of purchase of the school building and the cost of renovation.

H.R. 12627 has been referred to the House Committee on Banking, Currency, and Housing. H.R. 12628 has been referred to the House Committee on Ways and Means. No hearings

have been scheduled for either bill. (The Council is an independent unit of the Executive Branch of the Federal Government

lined by Gifford yesterday could prevent all, charged by the Act of October 15, 1966, to advise the President and Congress in the field of Historic Preservation.)

> [From the Decatur (Illinois) Review, Oct. 11, 1976]

OLD HIGH SCHOOL, ELDORADO MAY GET FEDERAL FACELIFT

Stephen Decatur High School and Eldorado School could get facelifts or new occupants under terms of two bills expected to be reintroduced to Congress.

The two bills, the Surplus School Conservation Act and the Surplus School Conversion Act, were introduced into the last session of Congress by U.S. Rep. H. John Heinz, R-Pa.

Under the proposals, communities or businesses could receive aid for renovating and converting abandoned schools into other uses.

Although Congress took no action on the proposals, a spokesman for Heinz said he exepcted the bills to be reintroduced in the next session.

One reason for the bills, he explained, is that as school enrollment declines, more and more districts are having to close down school buildings. And national trends show that enrollment will continue to decline over the next 10 years.

The Decatur School District closed the old high school in 1975 when students were moved into the new Stephen Decatur High School, 1 Educational Park.

Eldorado School also was closed in May, 1975, along with Excelsior South School, and both were replaced by Baum Elementary. Excelsior South was purchased by the Macon County Historical Society, which plans to convert the school into a children's musuem.

Heinz's spokesman said that under the proposed conservation act, communities could compete for Housing and Urban Development grants that would pay 80 per cent of

the cost of renovating vacant schools.

The schools could then be changed into community recreation centers, day care facilities, counseling centers or other uses of benefit to the community, he said.

The Surplus School Conversion proposal would encourage businesses and industry to purchase closed schools by helping with repayment plans and providing a tax break.

Businesses then could convert the schools into offices, new plants or other uses.

They're (abandoned schools) costing the tax payers money and they're not adding anything back," said Heinz's spokesman. "These bills would help to get empty schools back on the tax rolls."

All told, more than 100 schools in Illinois are either partially or fully closed, according to statistics from the Illinois Office of Education.

Other schools in the area that have been closed are Westervelt Elementary School in Westervelt and Taylor Springs Elementary School in Montgomery County.

All four schools are at least 35 years old. The Westervelt school was built in 1924, Taylor Springs and Stephen Decatur were built in 1911 and Eldorado was built in 1938.

> SOUTHWEST IOWA LEARNING RESOURCES CENTER Red Oak, Iowa, March 9, 1977.

Senator John Heinz, U.S. Senate.

Washington, D.C.

DEAR SENATOR HEINZ: You were "on target" last year when you introduced the idea of utilizing abandoned school buildings for vocational manpower training and adult education purposes. I understand you have now proposed S-792 that Federal grants would be available to local governments and counties for use with certain innovative projects. Several months ago I visited with

Congressman Ron Sarasen about this very idea and made some specific recommendafor converting abandoned buildings into becoming a Career Assess ment Education Center. We have been working on this concept here at the Southwest Iowa Learning Resources Center since 1970. We have created and produced packages which simulate jobs so that clients can begin to explore, in a meaningful way, career options. As we developed the program, word has passed around the country and already several hundred exploration installations are in operation. However, the complete picture must include the assessment and exploration. That's why your proposal makes so much sense because of the need for a facility exactly like a school building. Last month we also visited with Educational Facilities Laboratory in New York City to discuss the idea, and they were most enthusiastic.

I want to congratulate you on your initiative in attempting to solve two major problems at once. I would be happy to visit with you in Washington at any time to spell out the program and our efforts in more detail. Our Washington representative will be in touch with your office regarding an appropriate time and place for such a meeting.

Sincerely.

WILLIAM A. HORNER,
President.

BILLS WOULD AID SCHOOLS IN RECYCLING SPACE

Washington, D.C.—Federal legislation has been introduced to help with the recycling of our many unused school and public buildings. The "Surplus School Conservation Act of 1976" (H.R. 13575) would authorize grants to help communities convert school space into other useful community purposes. Another bill (H.R. 13561), "Surplus School Conversion Act," would provide tax incentives to private industry to return school space to the tax rolls.

A third federal bill "Public Buildings Cooperative Use Act" (H.R. 15134) would permit renting space in federal buildings for "cultural, educational or recreational activities". These bills underscore the fact that school buildings are flexible structures and also that education can be conducted in spaces designed for other purposes.

In 1975, New York City's borough of Manhattan had more than 250,000 square feet of space in underused schools. at the same time, four city agencies were paying over \$1 million annually to rent slightly less than 250,000 sq. ft. More than half of the rented space was used for: child care, recreation, counseling and social services.

Many communities are rediscovering the fact that school spaces can be shared; that surplus school spaces can be leased or rented to compatible tenants; and that schools and other agencies can jointly own and manage facilities which neither could afford separately.

School spaces are doubling as public libraries, university classrooms, recreation centers and bases for other public agencies. Schools are receiving income from rents, fees and leases for the use of parts of buildings and from program participants.

Some school buildings have been returned to the tax rolls and others have been converted to commercial or residential properties. New educational spaces are being created through partnership arrangements with other public agencies to spread costs, provide program integration, or to gain better use of physical and economic resources.

More than half of the states permit school buses to be used for nonschool purposes such as transporting elderly persons and for preschool and recreation programs. Wisconsin

laws authorize schools to provide meals from school kitchens to anyone over 60 years old, and even subsidizes them. Schools in other states—Massachusetts, Virginia, Washington, to name a few—are using their heavy investment in school kitchens to serve senior citizens while providing counseling, recreation and other social services. Many such patrons become school volunteers and provide necessary and desirable services without cost.

This concept, which consolidates human service delivery systems saves capital investments, land, and operating costs. It permits those services to be closer to the clients and, therefore, the services are more likely to be more responsive to the particular needs of those clients. It produces closer and better intergovernmental relationships since smaller units of the larger agencies must deal with each other on a more frequent basis and for more practical reasons. The common building goes under the heading of Community/Schools but the underlying framework is built upon "interagency programs".

Motivation for interagency programs generally lies in the need to reduce capital costs when new buildings are planned; or in the need to "find" space for new programs when new construction is out of the question; or in the need to find a partner to share space and underwrite a portion of the operating costs. Other motivations include program improvement and social purposes,

Lower Merion Township, Pa., included a public library in an elementary school, designed to serve both the community and the children. The township claims to have saved \$500,000 in addition to more than \$20,000

per year in operating costs.

Washington, D.C. found that enrollment projections were too high and fewer pupils would report to an elementary shool under construction. Panic? No, the extra space (second floor) was made available for a public branch library. Separate access by an outside elevator, some partition changes and restroom modifications cost \$163,000, but annual operating costs will be less for each agency.

A recent publication "Surplus School Space: Options & Opportunities" (Educational Facilities Laboratories, 850 Third Avenue, New York, N.Y. 10022, \$4.00) describes numerous reprogrammings of schools to other purposes. Another book released recently, "Community/Schools and Interagency Programs" (Pendell Publishing Co., Box 1666, Midland, Mich 48640, \$9.50) describes the process for developing interagency partnerships which permit more productive use of public buildings and encourages coordition of essential community services.

[From Chicagoland's Real Estate Advertiser, Sept. 17, 1976]

ABANDONED SCHOOL PROBLEM GROWS
(By Fred L. Bernheim)

When a viable community is forced to close its school, the repercussions go far beyond the minor inconvenience of a child's daily commuting time.

Parents who have invested a great deal of volunteer time into their school through work on committees and advisory groups lose the influence and acceptance they have achieved through this involvement, Teachers who have established themselves in one setting face the period of adjustment in a new setting if they are transferred—or the very real fear of job loss. Principals lose all or part of a supportive staff, a familiar parent group and a student body made up of siblings moving up through the grades.

moving up through the grades.

And perhaps most important, the com-

munity is left with an abandoned shell of a once-useful building, which at best symbolizes a sad loss and at worst becomes a target for vandals.

Recent legislation introduced in the U.S. House of Representatives proposes one answer to the problem of declining school enrollments and resultant abandoned school buildings. Sponsored by Cong. John Heinz of Pennsylvania, the two bills are the Surplus School Conservation Act of 1976 (H.R. 12947) and the Surplus School Conversion Act of 1976 (H.R. 12948).

The former provides grants, on a limited and competitive basis, to communities that wish to renovate unused school buildings for productive purposes. It would provide 80% of the estimated cost of renovation to a local agency to convert buildings for productive purposes, including senior citizen, day care or community centers; preschools; community colleges or vocational schools; walk-in centers for counseling; medical or dental facilities: or recreational centers.

H.R. 12948 encourages private industry to purchase these buildings for conversion to alternate revenue-producing purposes—when the communities no longer have use for them—by providing rapid amortization of the buildings.

Both bills are now in separate committees: H.R. 12947 in the Committee on Banking, Currency and Housing; and H.R. 12948 in the Committee on Ways and Means. If passed, they would be important tools for an increasing number of communities each year who must deal with changing demographics in their school systems.

The problem of too many schools for too few children has caused concern at all levels of government. When the first decline in national public school enrollment occurred in 1972, planners began watching for a downward trend. Their suspicions were confirmed as the figures dropped steadily in succeeding years.

The U.S. Office of Education predicts an enrollment decline of over four million during the next 10 years. As Cong. Heinz pointed out when introducing the two bills. "Shrinkage and how to cope with it have become as much a theme of the 1970's as growth was for the 1950's and 1960's."

The city of Chicago closed 16 schools or sections of schools at the end of the 1975-76 school year, and another 13 elementary schools did not reopen in suburban Cook County this year.

For many of these schools, rehabilitation would be possible and practical. For the past five years, my firm has been involved in a major rehabilitation program for the Chicago Board of Education. We are, at the present time, in various stages of rehabilitating some 14 public schools (\$6.5 million) most of which date back to the late 1800's and early 1900's. From this experience, we can verify the structural worthiness of these buildings.

The schools are being recycled as schools, utilizing today's materials in terms of wall finishes, flooring, lighting, heating, and contemporary furnishings. They could just as easily be recycled for a multitude of other uses: the point is that there is always use for existing structures if they are located in a viable community.

Rehabilitation compares favorably to construction in the area of cost, running 30-40% less than the investment in a similar new building. If the citizens of a community have taken pride in their school program, they will usually be gratified to see a people-serving program in its place, utilizing the same building.

Studies have shown that the most important element in a successful school closing is involvement of the community very early in the process. At the first announce-

ment of declining enrollment, the citizenry must be enlisted to help.

They should, along with the school board and the school's staff, review the facts, research possible solutions, and prioritize their alternatives if the decline continues. Public hearings are essential. Then, when it becomes clear that a decision regarding the future of the school must be made, the school board will have the support of the community people who have been involved in the planning process all along.

Cong. Heinz' bills offer a community a wise

Cong. Heinz' bills offer a community a wise alternative to consider in their planning process. However, at the present time, H.R. 12947 stipulates that the school building must be closed and not in use as of the date of application for the funds to renovate.

I would like to suggest that this bill be amended to allow a community to apply for the funds prior to the school closing, just after the decision to close is determined. In the interim period, the grant will be in process—with the hope that the money will be approved about the time that the school closes.

This way, a school board will be able to accompany its negative announcement of the school closing with a positive report of the plans for use of the building. The community will avoid the bad effects of a vacuum in the use of the building and the vandalism which

I encourage community leaders in educations, architecture and social services, and other interested citizens, to write to their elected officials about this important legislation. Federal money for the rehabilitation of abandoned school buildings can help a community turn the crisis of a school closing into a real opportunity for new kinds of services.

WARRANTY PROVISIONS OF THE MOBILE SOURCE EMISSION CON-TROL AMENDMENTS OF 1977

Mr. RIEGLE. Mr. President, as many Members know, Senator Griffin and I have introduced S. 919, the Mobile Source Emission Control Amendments of 1977. Among other things, the aim of our legislation is to establish what we believe is a sound schedule of automobile emission controls.

While our legislation seeks to provide the automobile industry with workable yet environmentally sound pollution standards, Members should also know it deals with several other aspects of the Clean Air Act which affect different segments of the automotive industry, namely, the aftermarket parts industry.

I recently inserted in the Record-April 5, pages 10519-10522—a comprehensive explanation of section 6 of our bill, which deals with warranties and motor vehicle parts certification. I refer my colleagues to that statement to clarify any questions they may have about this section of S. 919.

To further facilitate understanding of section 6, I am placing in the Record to-day a short section-by-section summary of our bill as well as answers to the questions which have been asked most often regarding S. 919 and the automotive aftermarket parts industry.

tive aftermarket parts industry.

Mr. President, I ask unanimous consent that this material be printed in the

There being no objection, the material was ordered to be printed in the RECORD, as follows:

QUESTION AND ANSWERS ON CLEAN AIR ACT WARRANTY LANGUAGE CONTAINED IN H.R. 4444/S. 919 "THE MOBILE SOURCE EMISSION CONTROL AMENDMENTS OF 1977" BY REPRE-SENTATIVES DINGELL AND BROYHILL AND SEN-ATORS RIEGLE AND GRIFFIN

Question: If we reduce the length of the performance warranty as specified in H.R. 4444/S. 919 how can Congress assure that the vehicle Manufacturers will continue to produce durable emission systems?

Vehicle manufacturers will still be required to produce a durable system in order to pass the 50,000 mile EPA certification test under the production warranty. We propose no change in length of the production warranty. We propose no change in length of the production warranty. Under the production warranty, the EPA not only certifies that the car's emission control system will last for 50,000 miles, but if a substantial number of systems fall during their onthe-road operation, the EPA can recall the entire lot for repair at the manufacturer's expense. Reduction of the performance warranty will not let the manufacturers off the hook regarding their requirement to produce a durable emissions system.

Question: Doesn't the performance warranty guarantee that the emissions system will perform for five years/50,000 miles?

No, it only attempts to define who will pay for repairs if the system does not perform. Question: Will consumers lose protection they now enjoy under the performance parameter?

No, consumers do not now have, nor have they ever had, any protection under the performance warranty. In fact, only the EPA, the industry and some concerned attorneys even know this warranty is planned. It has never been implemented because the EPA has not yet developed a correlatable "short test." If it is not significantly altered before it is implemented, consumers will react as they did to the seat belt interlock requirement when they are told that their cars must be repaired at the more expensive dealerships for their first five years of operation.

Question: How does the production warranty work?

If the EPA learns that five or more systems have malfunctioned due to defects in materials or workmanship (as opposed to improper maintenance), it will instigate an investigation which could lead to a recall of all of that model or engine type. This protects the consumer against shoddy workmanship or the possibility that the engines actually produced do not replicate the engine originally certified.

Question: Why doesn't Congress just insist that the Manufacturers accept parts and labor from anyone as satisfying the maintenance requirements of the performance warranty?

Because the vehicle manufacturer has a legitimate legal right to protect his contingent liability under the warranty by demanding that adequate replacement parts be used and that they be properly installed. While the issue was being fought out in the courts, consumers would protect their interests by following the maintenance instructions to the letter and the aftermarket would be crippled, perhaps fatally. In addition, it is likely the courts would sustain the manufacturers on this point. It is difficult to believe that the courts would hold that the vehicle manufacturer could be held liable for service work done outside the franchised dealership where a mechanic either put on the wrong part or put it on up-side-down.

Question: Why not just delegate the authority to correct this problem to the EPA?

Because the EPA has not shown any sensitivity to this threat and because it would just be ducking the issue on the part of

Congress. EPA thinks the problem can be corrected with a parts certification program. It can't.

Question: Won't a parts certification program completely solve the problems of the aftermath industry?

No. In fact, the House Small Business Committee found that the certification program itself was anti-competitive. Their objections: the great cost of even self-certifying will destroy many smaller manufacturers: the vehicle manufacturers could control certification to limit competition; there are expensive problems of due process; and it would require at least partial exemption for the industry from present antitrust laws. Industry has been working with the EPA since 1972 trying to develop a workable vol-untary parts certification program. The EPA effort to get a voluntary parts certification program off the ground has been hampered by EPA's proposal to include 430+ parts in its definition of the emission system.

Question: Section 9 of H.R. 4444/S. 919 defines an "emission control device or system" for both the production and performance warranties. Why?

In November, 1976, EPA issued a proposed rule which seeks to circumvent the will of Congress by using a "backdoor" approach through regulations under the production warranty which would in actuality make it into a performance warranty. EPA's intent is clearly expressed in its proposed production warranty regulations when it stated "(the production warranty) could potentially be applicable in some cases where no specific defect was identified; in essence becoming a type of performance warranty. (Federal Register, November 16, Page 50567). By carefully defining an "emission control device or system" the intended applications of the warranties by Congress are made clear.

Question: What evidence exists that the present 50,000 mile performance warranty has added to the cost of most cars, and has proved anticompetitive, and has induced business away from the independent dealer?

There can be no answer to this question until the 5 year, 50,000 mile performance warranty is implemented by the EPA. The fact is that there is no present 5 year, 50,000 mile performance warranty. The Act provides that when a feasible short test is developed, the EPA shall issue regulations mandating the performance warranty. Since this has not been done, there cannot be said to be any additional cost added to the vehicle that would be attributable to the performance warranty nor can any anti-competitive effects be measured by something that is not implemented.

We have heard from many different sources that the problems posed by the warranty have not occurred even though the warranty has been on the books for six years. The reason for this is too often overlooked. There can be no problem until the EPA implements the warranty, and this has not been done as at this date. Thus, there has been no effect on competition, nor can there be until the warranty is implemented, but ASIA submits that this in no way means that the problem is not there.

Question: It has been six years since the 50,000 mile performance warranty was written into law. What percentage of the aftermarket business do the non-original equipment dealers presently hold?

This question is closely intertwined with the previous question. The 5 year, 50,000 mile performance warranty has been a part of the Clean Air Act for six years but, and this is vitally important—it has not been in operation for a single day—because it has not been implemented by the EPA, there can be no valid comparisons of the respective shares of aftermarket business before such imple-

mentation. At the present time, without the performance warranty in effect, free market conditions have the aftermarket doing 75 to 80% of all the repair work in the nation. After implementation of the performance warranty, the consumer loses his freedom of choice and a government mandated monopoly replaces that free market. Immediate remedial legislative action to eliminate this monopolistic effect is vitally needed.

Question: Since the performance warranty has not yet been implemented by EPA, is it a "real" problem to the aftermarket and consumers?

Indeed, the problem hangs very "real" over the head of the independent automotive aftermarket waiting to strike once the EPA develops the short, feasible test required for implementation of the warranty. Make no mistake about it, once the warranty is implemented, the result will be disaster for the independents and monopoly over all parts and services by the vehicle manufacturers. The consumer will suffer tremendously both from substantially increased costs of his vehicle and what parts are used. The economic fact of life is that the vehicle manufacturer, once he is faced with the tremendous legal obligation of the performance warranty must include the cost of that obligation in the price of the vehicle and the consumer who must pay that price has no choice except to return to the vehicle manufacturer.

APPROPRIATIONS FOR THE MU-SEUM SERVICES ACT

Mr. BROOKE. Mr. President, one of the appropriations for fiscal year 1978 now being considered by the Interior Appropriations Subcommittee is that for the new Museum Services Institute, authorized only last year. This is an important act with an important constituency. There are over 5,000 museums in America. There are over 700 million visits paid to our Nation's museums each year. I take special pride because 300 of these museums are in Massachusetts, 24 in Boston alone. And although New England has only 5 percent of the Nation's population, it has 13 percent of its museums.

And yet, Mr. President, our museums are in precarious straits, forced to reduce their exhibitions and services at the very time public demand is escalating. President Carter, however, has requested an appropriation of only \$3 million out of an authorization of \$25 million. On April 6 I testified before the subcommittee requesting the total authorization of \$25 million. I would like to share with my colleagues my testimony detailing the need for that appropriation and ask unanimous consent that it be printed in the Record.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR EDWARD W. BROOKE

Mr. Chairman, I testify today in favor of the full authorization of \$25 million for the new Museum Services Act enacted last year. I am proud that I was one of the early cosponsors of this Act, for public support of our museums, great and small, is not only badly needed but richly deserved.

There are now more than 5,000 museums in our country. It is estimated that there are more than 700 million visits to museums each year. And the demand is rising in this current renaissance of the arts in America. New museums are springing up; in Texas alone, for example, 140 museums are either planned or under construction, often, as in other sections of the country, in areas never graced by a museum. And existing museums are trying to enlarge and expand services in order to meet growing public demand, not only for their traditional exhibits but also for more educational services for students and the population as a whole.

In addition, museums continue to extend their services and delights beyond the traditional museum goer to the community as a whole, with a new emphasis on the elderly, the inner city resident and schoolchildren. Where museums once interested primarily the rich, these institutions are increasingly assuming the central role in their communities that public libraries did in the late 19th century. The overwhelmingly massive attendance figures and the long, patient lines at the recent King Tutankhamum exhibit at the National Gallery here in Washington are vivid evidence of the growing interest our citizens feel for making the arts a part of their lives.

President Carter during the last Presidential campaign expressed the role of the arts well when he said, "Arts in America are not simply a luxury; they are a vital part of the fiber of American life and deserve strong support from the Federal government. If I am elected President, they will receive that support."

Heartened by this strong commitment, all of us who appreciate the vital role of museums in our national life were severely disappointed when the President requested only \$3 million for fiscal year 1978 out of an authorization of \$25 million for the new Museum Services Institute. This is a token, almost meaningless amount in view of the great and well documented need of museums all across the country. One survey alone has indicated that its museum sample recorded a need of approximately \$100 million.

Thus by any reasonable standard \$25 million authorized is a reasonable and justified figure.

When questioned about their needs, a broad and representative group of all kinds of museums in all locations replied that their first and overwhelming priority is for assistance in meeting their basic operating costs. Their second priority is conservation of their irreplaceable treasures. And their third priority is assistance with their exhibition costs and the expenses of educational programs.

Thus the assistance provided by the National Endowment for the Arts—grants for special projects and exhibitions only—is no longer adequate as museums struggle for funds simply to keep open and not raise admission costs beyond the means of too many of their present and hoped for constituents.

The present precarious and curtailed position of museums is not due to irresponsible management on their part. It stems first of all from the recent escalating attendance at museums. In 1939 attendance was approximately 50 million visits per year. In the mid-1950's there were over 100 million visits per year. By 1962, there were 200 million visits. And as I noted earlier museum attendance is now estimated at 700 million visits per year.

This growing demand for museum services raised costs as did spiralling inflation. The result of this dual pressure on museum budgets is shown by a 1976 survey by the Council on Foundations which reported that museum expenditures had risen 45 percent over the five-year survey period. In my own state of Massachusetts the operating expenses of five of our principal museums rose 36 percent from 1972 through 1976. The costs of energy

alone, a big budget item, quadrupled during this period.

Museums have made a sustained effort to cope with these greatly increased costs. Special exhibits have been cut. The development of new programs demanded by the public have been deferred. Days and hours during which museums are open to the public have been reduced, thus making it more difficult for working people to attend. Staff has been reduced. Needed salary increases have been drastically reduced or eliminated. Physical plant repairs have been postponed. Many museums, hithertofore free to the public, have been forced to institute admission charges. And many museums have been forced to substantially increase these charges. In my home state of Massachusetts five of the principal museums had to increase their admission charges by 25 percent between 1972 and 1976. However, despite these cost-cutting efforts the financial position of too many museums remain strained.

Despite the fact that their earned income is projected by the Council on Foundations have grown 40 percent over the past 5 years, reflecting the institution of and increase in admission charges, the earnings gap of museums will have grown 48 percent during that same period. Those legally required by law have balanced their budgets by limiting services and hours. For others, deficits ever an immediate crisis. For significantly, museum deficits rose drastically: an increase of 160 percent over the survey period of the past 5 years. To cite but two examples with which I am well acquainted: in large part due to its attendance increase from 528,000 to 820,000 in the past ten years, the Boston Museum of Science deficits now amount to \$500,000 to \$700,000 per year. And another world renowned museum, the Boston Museum of Fine Arts, is operating at a deficit of more than a half million dollars per vear.

Private philanthropy and endowments, until recently the mainstay of museums, can no longer subsidize museum programs and deficits alone. State and municipal aid is sporadic and therefore not able to reduce these deficits alone. And recorded increases in corporation, foundation, and individual gifts (90 percent of museums in a recent survey report gains in private memberships) are also inadequate to answer the needs of American museums without help from the Federal budget.

It was to cope with the needs of museums beyond that for special projects that the Museum Services Act was passed last year. This landmark act provides:

Assistance to aid museums in developing and maintaining competent staffs;

Assistance to provide education programs and conservation of art objects:

Assistance to help carry out specialized programs for such underserved segments of the public as inner city neighborhoods, rural areas and Indian reservations.

Assistance to develop and finance traveling exhibitions.

Assistance to the full range of museums, some of which like science and technology museums do not receive aid from the National Endowment on the Arts.

But foremost and most important, the Museum Services Act provides grants to all museums for operating expenses and ongoing programs, where the funds are most urgently needed. Thus if adequately funded, the Museum Services Act can be instrumental in answering the concerns and priorities of our museums.

And may I add that it will not only answer the concerns of those famous established giants whose names immediately come to mind, that 5 percent of museums with an-

nual budgets of \$1 million or more. It will also concern itself with those more modest, if often equally excellent, often new, often struggling museums which add so much to communities. For we must remember tnat almost half of our museums have annual budgets under \$50,000.

At this time when museums should be working to fulfill their full educational potential, they too often are struggling simply to maintain their present programs. At this time when museums should be available to all, they are being forced to raise admission charges. It is estimated that an admission charge of \$3 to \$4 would be necessary if museums were to support themselves from this source. Such a charge would price museums beyond the means of many, many families. We cannot make enjoyment of our museums an elitist recreation, a by-product of wealth. We must instead make it possible for those who would appreciate museums, who want the joy and fulfillment bring-of any and all incomes-to participate in American museum activities.

A recent poll indicated that 64 percent of adults in the United States would be willing to contribute \$5 over the amount of their taxes to the arts; 47 percent would contribute \$25 and 36 percent would be willing to contribute \$50 or more.

Thus the American people in overwhelming numbers acknowledge what a great difference the arts can make in their lives. It was in deference to this support and in recognition of the central role which museums play in the cultural life of our nation, that the Congress last year enacted the Museum Services Act. It is now time to fulfill the promise we made when we voted for that law. And despite the many demands on our federal budget, of which I as a member of the Appropriations Committee am also too well aware. I believe that a \$25 million appropriation for the Museum Services Institute is a wise and widely supported investment. The Federal government subsidizes many areas of our national life at far greater cost with far less benefit and far less justification. Mr Chairman. I ask for favorable consideration of the full authorization of \$25 million for the Museum Services Institute.

RESOURCE RECOVERY

Mr. CASE. Mr. President, one of our colleagues, the distinguished Senator from West Virginia, Mr. RANDOLPH, spoke at a Committee for Resource Recovery luncheon in my State of New Jersey earlier this week.

I believe Senator RANDOLPH's remarks will be of interest to my colleagues and, therefore, I ask that his speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR JENNINGS RANDOLPH

This meeting provides the opportunity for environmentalists, government and business to come together to better understand a mutual objective which they share and which serves the common good.

Malcolm Borg and his Bergen Record have our commendation for conceiving this conference. It is a real service to the community, the New Jersey Committee for Resource Recovery with its vision and energy, and the mayors and township officials who participate in the beginning of this interesting venture as they counsel to best benefit their constituents. The Hackensack Meadowlands Development Commission is especially to be commended for the forward-looking attitude and flexible approach of Bill McDowell, its executive director.

Gathered here are the elements necessary to solve one of the most onerous burdens of our urban society-the problem of disposing of our solid waste. We must do it in such a way that it stops the growth of dumps and at the same time provides energy which our country sorely needs. We must also return to useful life the raw materials which we must use in our producing system.

In the past six years the citizens of our Nation have become more aware, sensitive and committed to environmental protection. I believe the majority of our people today stand behind programs dedicated to clean air and clean water, because our efforts have shown that we can have a clean and healthy. as well as a productive society.

But clean air and water will not alone assure this country's solidarity into and beyond the next century. We continue to face complex problems arising from the interdependence of materials, energy and the environment that calls for a unified national materials and energy policy. As seen in the recent past, production of many essential materials has been hindered by lack of sufficient energy supplies. On the other hand, often when ample energy was available shortages in raw materials have delayed the production of industrial and consumer goods.

For many years, I have been advocating the development of a national energy policy consistent with a materials policy based on resource recovery. The passage of the 1970 Resource Recovery Act and the Resource Conservation and Recovery Act of 1976 has given us a national basis for the establishment of solid waste programs. To comple-ment this effort, the Carter Administration is strongly committed to the creation of a systematic national energy program and will submit its plan to the Congress on April 20.

The point is this—we must establish a different approach to our management of materials. Emphasis on production, use and disposal has led to a lack of high-quality raw resource, and huge quantities of waste materials requiring immediate attention.

The challenge of solid waste management has often been described as one of preventing an increasingly urban society from dis-appearing under its own garbage. With our country now 70 per cent urban, mere survival makes this a vital issue.

Perhaps equally important is the reality that we may be unable to sustain our society unless we extend the energy conservation ethic to other materials resources. We must eliminate the word "waste" and stress the word "conservation."

Solid wastes are the by-products of our society. Today every American generates about 1,300 pounds of garbage a year. Urban wastes amount to 230 million tons annually, creating a major problem for local governments. Nearly half of our cities, some 46.5 per cent, anticipate running out of current landfill capacity before 1978. Moreover, solid waste disposal is the third largest expenditure funded solely from local revenues. The national cost of urban waste management is expected to approach \$10 billion in a few years. Part of this expense can be recovered by a recycling process that channels raw materials back into our economy. A recent editorial indicated that a nationwide resource recovery program in 150 major metropolitan areas could save taxpayers approximately \$3.6 million daily in solid waste disposal costs.

The 4.4 billion tons of solid waste we gen erate annually can constitute a threat to public health that must be removed. Of equal importance is the need to recognize that these same solid wastes are a virtually untapped source of useful materials. For example, I recently introduced the Synthetic Fuels Act of 1977 which would provide Federal loan guarantees for commercial demonstration of energy recovery from solid waste and other new energy technologies such as coal gasification and liquification.

Waste materials recovery has historically been performed principally by the private sector and is subject to the limitations in market demand for reclaimed materials. Fluctuations in the demand levels and prices for reclaimed materials have been the primary factors constraining an expansion of resource recovery activities. According to a recent study, if the solid waste in our 150 metropolitan areas were reclaimed:

10,570 construction jobs of 10 years duration would be created, along with 25,700 permanent jobs:

\$1.5 billion in revenues would be realized

through the sale of recovered ferrous metal. aluminum, glass and paper; and

The equivalent of 123 barrels of crude oil a year would be generated by recovery plants in the form of heat.

To realize these benefits will require a commitment not just from industry, business and special interests, but from government. The Resource Conservation and Recovery Act of 1976 commits your Government by creating an Office of Solid Waste within the EPA to promote increased recovery and recycling of waste materials, improve management of hazardous wastes, provide assistance to State and local governments, and provide for increased research, development and demonstration of resources recovery technology and facilities.

Many months were required to develop this bill. There were times when I was frankly doubtful that a solid waste measure would be adopted in the 94th Congress. I appreciate the help provided by many groups and individuals. Their concern and cooperation greatly contributed to our ability to pass a well-reasoned bill and make it a realistic and workable law.

There were those persons who did not want Congress to write a new solid waste bill. Some of those individuals who adopted this attitude apparently felt that anything we do would be heavily weighted in favor of industry. The law that was enacted, however, proves again that balance can be achieved the legislative process to accommodate various viewpoints. It took time to reach the necessary consensus that brought this measure into reality. Our work is not completed, for much remains to be done to assure the correct implementation of the Resource Conservation and Recovery Act of 1976. So I urge you to join in the next round of our campaign to establish a realistic approach to solid waste management.

The Act is a major commitment of Federal assistance to State and local government efforts to meet these problems in a comprehensive and effective manner. This commitment is supported by authorizations of \$70 million for States and communities to plan and implement solid waste programs.

In developing this legislation we recognized that solid waste is a uniquely local problem and that programs should be developed and managed at the local government level.

This is not an area which lends itself to planning and operation from the Federal level. If solid waste management is to remain a local function, the Federal government must limit its involvement. Even had we desired to infuse large amounts of Federal money into local activities, it is doubtful that those funds would have been made available.

An important feature of the Act is the ban on open dumping which is to be fully implemented in five years. The Congress provided \$25 million to help money-short rural communities comply with this prohibition.

Concern with energy supplies has led us to look at solid wastes as a potential fuel source of great importance. The Environmental Protection Agency has identified about 50 major metropolitan areas where energy recovery from solid wastes that cannot be recycled seems feasible.

Of the 190 million tons of major metalspaper, glass, rubber and textiles—consumed annually in this country, only about onefourth is obtained from recovered resources. Virtually all of these come from industrial and manufacturing activities and less than one per cent of the potential is being recovered from available municipal wastes.

Resource recovery for most local authorities is a long-range prospect. Large scale waste processing plants are expected to be operating in approximately 25 metropolitan areas within the next decade. At that time, however, it is unlikely that no more than ten per cent of the expected 200 million tons of municipal refuse will be reclaimed.

A major impediment to accelerated resource recovery has been the difficulty in finding commercial markets for recycled materials. A major challenge is to promote the development of markets for resources recovered from municipal wastes.

I am gratified that the citizens meeting

today are meeting this challenge.

The growing mountains of garbage and the rapidly increasing costs of materials make it imperative that we use the new statute to further our national commitment to the wise utilization of our resources. At the present time, we recover far too little of the solid waste generated in this country. Obviously we must and can do better. The people and the institutions of northern New Jersey are setting a good example. By working together, we can solve our solid waste problems, and in doing so we shall build a better America.

DISCOURAGING WORD

Mr. McCLURE. Mr. President, the Washington Star, in its April 6, 1977, editorial titled "The Noise Makers" takes me to task for my concern over reported efforts of the administration to announce a sweeping change in the use of offroad vehicles on public lands. I do not know what the President plans to say in his environmental message, but the draft material being circulated by the Council of Environmental Quality has made many Westerners hopping mad over the possibility of a legitimate use being denied on the vast majority of our public lands. In Idaho, where two-thirds of the State is in Federal ownership, such a wholesale ban is an onerous as the Stamp Act was to those who fomented the "Boston Tea Party" early in our country's history. I do not relish the thought of more than 100,000 off road vehicles from Idaho, plus uncounted numbers from other public land States descending on Washington, D.C.
I suggest the Washington Star in-

vestigate the statistics which show that primitive and wilderness areas in Idaho and other Western States have hundreds of thousands of acres which are not open to motorized vehicles, but that are open to back packers for hiking solitude. I have tried to stress my support for responsible use of offroad vehicles as a wholesome family sport, and I disapprove of their improper use. After all, each of us disapprove of the misuse of autos, but none of us would want to ban them.

To suggest that snowmobiles smash tree seedlings indicates that the editorial writer ignores the fact that from 2 to 6 feet of snow covers these seedlings from the caressing tracks of snowmobiles. I appreciate the fact that the Star has recognized a western issue and brought it to the attention of its readers. I hope the facts can be put in proper order so that intelligent decisions can be reached.

I ask unanimous consent that the Washington Star editorial be printed in the RECORD, followed by a list of the fallacies appearing in the editorial.

There being no objection, the editorial and comments were ordered to be printed in the RECORD, as follows:

THE NOISE MAKERS

The snowmobilers, the motorbikers, the dune buggiers and the four-wheeled jeepers are screaming that their rights are being violated because President Carter plans to keep them from tearing up environmentally sensitive public lands.

Well, what about the rights of other citizens? Don't they have the right to expect that publicly owned property will not be abused—that seedlings won't be smashed by snowmobiles in the forests, that the fragile desert ecology isn't upset by motorcycles, that the grasses that protect beaches against erosion aren't destroyed by dune buggies?

Don't other citizens have a right to places where they might seek surcease from modern civilization's roar, where they might meditate free of the noise and stink of motor vehicles?

Sen. James McClure of Idaho says President Carter's proposal to prohibit use of off-road vehicles on public lands where they might endanger the environment a lack of understanding of the use of public lands in the Western United States smacks of Eastern establishment thinking." Not that we have anything against Westerners, but who gave them sole right to decide what's good for lands owned by all the taxpavers?

Furthermore, it's stretching things to suggest that Mr. Carter, a former peanut farmer from Georgia, is a member of the "Eastern establishment." We daresay that there are plenty of Westerners, Senator McClure's statement notwithstanding, who object to snowmobiles and motorbikes roaring up, down, in and over public lands.

Besides, President Carter does not intend to ban vehicles from all public lands, just environmentally sensitive portions.

Mr. Carter ought to stand his ground against the noisy crowd.

COMMENTS

Fallacy No. 1: Complaints are not against efforts to safeguard "environmentally sensitive public lands" but against blanket closures where no damage is occurring.

Fallacy No. 2: "Seedlings won't be smashed by snowmobiles in the forests."

All National Forests have in existence plans which safeguard such critical areas as reforestation zones, tree plantations and animal winter yarding areas. The Forest Service will verify that seedlings are not being "smashed"—even the Council on Environmental Quality has confirmed that they are aware of no significant adverse resource impact occurring on public lands caused by snowmobiles. CEQ is responsible for monitoring this issue, incidentally, under Executive Order 11644, issued in February, 1972.

Fallacy No. 3: All citizens have the right to nondestructive, high quality recreational experiences on public lands. Zoning has been accomplished on all Federal lands used by snowmobilers, 4 wheel drive vehicles and motorcycles to mitigate social conflicts.

Off road vehicle operations do not seek to ban other recreationists from public lands. nor do they expect to have anything close to complete usage of all public lands.

Fallacy No. 4: To my knowledge, President Carter has never taken a position on this matter; the proposal for eliminating snowmobiles and other motorized vehicles from public lands was developed by the Council on Environmental Quality.

I believe it is a valid point that those drafting the proposal are unfamiliar with the realities of western living—especially in states where 50 percent and more of the land is Federally owned.

The question is not whether westerners have the right to "decide what's good for lands owned by all taxpayers" but whether all prime recreational lands should be closed to an activity with no measurable environmental impact.

Fallacy No. 5: I did not defend uncontrolled ORV ir. my statement.

Fallacy No. 6: The CEQ proposal does not mention "environmentally sensitive por-tions" of public lands. It directs that land managing agencies "shall immediately close lands where ORV—presumedly any type of ORV use—"may cause" undue adverse effects on soil, vegetation, wildlife, wildlife habitat, historical and cultural resources.

Fallacy No. 7: President Carter has not announced his position on this proposal.

Fallacy No. 8: The Star editorial refuses to acknowledge facts given to the paper on April 4, 1977. It is clear from these materials that ORV users are protesting:
Language which would result in a blanket

closure of public lands to their sport;

A proposal which would adversely affect 7,000,000 Americans although no evidence exists that their sports are causing any measurable adverse impact;

A proposal which would void the results of participation by millions of Americans in a massive Forest Service planning process over a four year period which put into effect management plans for snowmobile operation: and

A decision-making process which prevented public participation

Fallacy No. 9: The editorial continues the erroneous lumping of all motorized recreational groups into a single category. They are radically different vehicles operated in very different ways. Responsible public land planning cannot be based on such a characterization.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. ROBERT C. BYRD. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

George J. Mitchell, of Maine, to be U.S. attorney for the district of Maine for the term of 4 years vice Peter Mills, term expired.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Thursday, April 14, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

(This concludes additional statements submitted today.)

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, it is obvious that the supplemental appropriation conference report will not be disposed of now until after Easter. It is equally obvious that the conference report on the public works employment measure will not be disposed of until after Easter. I had brought the Senate in today hopeful that perchance there might be an opportunity for the Senate to work its will finally on either or both of these conference reports, but that cannot be done now.

CORRECTIONS IN THE ENROLL-MENT OF H.R. 3365—HOUSE CON-CURRENT RESOLUTION 191

Mr. ROBERT C. BYRD. Mr. President, I believe there is a message at the desk, House Concurrent Resolution 191. I have cleared this with the other side of the aisle, with the distinguished minority leader.

I ask unanimous consent that the Chair lay before the Senate a message from the House on House Concurrent Resolution 191. This is for the purpose of correcting the enrollment of H.R. 3365, in which there are some errors.

The PRESIDING OFFICER laid before the Senate House Concurrent Resolution 191 to correct the enrollment of

Mr. ROBERT C. BYRD. I yield to the distinguished Senator from Pennsyl-

Mr. HEINZ. I thank the distinguished majority leader for yielding.

I have checked with our Members on the minority side, and I understand there is no objection to this resolution. I understand it makes a correction, a necessary one, and we have no objection.

The PRESIDING OFFICER. Without objection, the resolution will be considered and agreed to.

ORDER FOR ROUTINE MORNING BUSINESS ON MONDAY, APRIL 18, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Monday, April 18, after the two leaders or their designees have been recognized under the standing order, that there be a period for the transaction of routine morning business, without resolutions coming over under the rule, and that the period be limited to 30 minutes with statements therein limited to 10 minutes

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ALL COMMITTEES TO MEET

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees be allowed to meet all day on April 18, 1977; when the Senate returns from its nonlegislative period. This request has been cleared with the distinguished minority leader, Senator BAKER, who has no objection.

The PRESIDING OFFICER. Without objection it is so ordered.

ORDER FOR RECORD TO REMAIN OPEN UNTIL 5 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Record may be left open until 5 p.m. today for insertions in the Record by Senators of statements, bills, petitions, memorials, and resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

ARGUMENTS SUPPORTING CON-TINUING NEED FOR REBATE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to print in the RECORD a memorandum of arguments titled "Arguments Supporting the Continuing Need for the Rebate."

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

ARGUMENTS SUPPORTING THE CONTINUING NEED FOR THE REBATE

- 1. Rebate will help those most in need. It will provide added purchasing power for low and middle income persons. Over 60% will go to families earning less than \$15,000 and another 23% to those between \$15,000-\$20,000. A working family of four will get \$200. The program also covers senior citizens and working families who have no tax liability. For a family of four earning \$10,000 this will mean a 30% reduction in their tax liability. Combined with our proposal to increase the standard deduction, their tax liability would be reduced by 50%.
- 2. The economy still needs fiscal stimulus to maintain strong growth rate and keep unemployment moving down steadily over the rest of this year.
- (a) Recent pickup in economic activity partly reflects natural rebound from the depressing effects of the cold weather and business rebuilding inventories. These influences on the economy will be temporary.
- (b) To date the federal government has unexpectedly spent less and collected more than we anticipated, to the tune of about \$10 billion. This will certainly slow down the recovery unless we do something about it. The \$11 billion tax rebate is the only way we can offset this economic drag now. It is the only fair way to do so for the American taxpayer.
- 3. Continued growth and reduction in unemployment depends on strong consumer spending. In the absence of the rebate, consumer spending could weaken in 1977. Added fuel bills and rising food prices will siphon off some consumer purchasing power.
- 4. The rebate will work. It is a tested method for stimulating consumer spending.
- (a) About 60% of the 1975 rebate was spent. The proportion could be higher in 1977 because consumer confidence is stronger now.
- (b) The rebate will affect the economy quickly. The jobs and public works programs we have recommended will take some time to
- get underway.
 5. The rebate means 250,000 more jobs and \$15 billion in added GNP by the end of the

year. Without the rebate, we will lose these jobs and the added income.

- 6. The rebate preserves options for the future.
 - (a) For permanent tax reform.
- (b) For expansion of other needed programs.
- (c) For balanced budget by FY 1981.
 7. With present levels of high unemployment and idle capacity, rebate should not add significantly to inflationary pressures.
- 8. Without the rebate, too large a proportion of the tax reduction would be going to businesses and not enough to consumers.

THE BENEFITS OF FLOOD CONTROL

Mr. ROBERT C. BYRD. Mr. President, today I have received a telegram from the Corps of Engineers in Huntington, W. Va.. which reads as follows:

We wish to inform you of the operational effects of the R. D. Bailey Lake project dur-

ing the recent April 1977 flood.

Based upon elevation-damage data in our files without benefit of detailed field surveys, the R. D. Bailey project provided reductions in flooding along the Guyandot River ranging from 5½ to 9 feet. These reductions in flood elevations resulted in flood damage prevention of almost \$20,000,000 to roads, railroads, utilities and other structural improvements within the Guayandot River basin.

Mr. President, 20 years ago, when I was a Member of the House of Representatives, there was a very damaging flood that occurred along the Guyandot River in the area of Wayne, Logan, Chapmanville, and other communities in the southern part of West Virginia. As a Member of the House of Representatives, I took action at that time to stimulate engineering studies that might lead to the construction of a reservoir to protect the residents of that area from the recurring floods.

Senators Revercomb and Kilgore in the Senate at that time initiated the same efforts in this body.

same efforts in this body.

Over the 20 years that have passed since 1957, the people of the Logan County, Lincoln County, and adjacent areas have had visited upon them recurring damaging floods, sometimes with loss of life, and on all occasions with great destruction of property. During recent days there has been much flooding in that area.

The R. D. Bailey Lake project, which is the reservoir that has culminated from those efforts that began in both the House and the Senate 20 years ago, is just about complete. In recent days, there has been a good deal of talk about water projects in the various States. I take this occasion to point to the fact that here is one such water project which has benefited the people of those affected counties in southern West Virginia—Lincoln County, Mingo County, Logan County, and Wyoming County—time and time again.

Even prior to the ultimate completion of the project, it has been beneficial time and again in holding back some of the flood waters which would otherwise have visited disaster upon the homes and families of the coal mining people who live in those areas.

Mr. President, this shows the wisdom of trying to provide in time against the disastrous floods which seem to occur all too often, especially in recent years, in those narrow valleys and hollows in the coal mining regions of southern West Virginia. Logan County, McDowell County, Mingo County, and Wyoming County are among the greatest coal producing counties in the United States, and I am sure that our colleagues and the public have been reading about, and seeing on television, the terrible pictures and accounts of the recent flooding in Welch, W. Va., which is in McDowell County; in Williamson W. Va., in Mingo County; and in counties just across the river in Kentucky.

So, Mr. President, I think it is well that I lay into the Record this statement by the Army Engineers, which indicates that the work they have done and the work that Congress has done during the years, the appropriations that have been made by Congress, and the hearings and the work that have gone forward by the Public Works Committees of the two Houses in the past, are indeed going to repay—and have already repaid—many-fold to the taxpayers of the country and to the people in these energy producing regions the moneys that such reservoirs have cost.

This story can be repeated in other instances, I am sure, but especially in the light of the flood situation that is now existing in southern West Virginia, parts of Kentucky, Virginia, and other States. It is well to be reminded that these reservoirs—which do cost a great deal of money and which require many, many years in the design, planning, and construction thereof—in due time do return to the people benefits by way of lives saved and property and homes not destroyed.

SENATE ACHIEVEMENTS, 95TH CON-GRESS, JANUARY 4 TO APRIL 7, 1977

Mr. ROBERT C. BYRD. Mr. President, before adjourning in observance of Easter and the subsequent nonlegislative period, I would like to review, in part, the work the Senate has done during the first 3 months of the 95th Congress.

In this short period of time, the Senate acted on a number of significant pieces of legislation but, most importantly, the Senate faced up to two thorny issues which involved changes in the Rules of the Senate and which affect the ability of Senators to carry out their constitutional responsibilities. I refer, of course, to the reordering of committee jurisdictions and the adoption of a code of official conduct for Members, officials, and employees of the Senate.

One of the first items of business for this Congress was the resolution of the Temporary Select Committee To Study the Committee System recommending a more effective alinement of committee

jurisdictions.

The select committee, which was ably chaired by Senator Stevenson, worked assiduously to make its recommendations available prior to the mandated

deadline, and we are indebted to Senator Stevenson and members of his committee on both sides of the alse, and also to Senator Cannon and the members of the Rules Committee, for the thorough consideration that they gave this matter.

As adopted by the Senate in early February, this rationalization of committee jurisdictions has, to a considerable extent, clarified and equalized the legislative responsibilities of standing committees. By reducing the number of committee and subcommittee assignments that a Senator may hold, the legislative workload has been shared more equally, and the load borne by each Member has been spread among a larger number of Senators.

Further improvements will occur at the beginning of the next Congress when additional limitations on subcommittee chairmanships will go into effect.

Other changes important to efficient Senate scheduling were embodied in the committee reorganization resolution. A computerized committee scheduling system was utilized to help committees avoid scheduling conflicts. Rules were changed to allow all committees to meet during the first 2 hours of a Senate session without special leave.

In addition, the leadership has endeavored to leave mornings free for committee meetings. In fact, out of 52 days in session this year the Senate has met on only 16 occasions before noon.

The leadership has also been experimenting with a 4 p.m. convening hour on some days so that committees may meet virtually for a full day without interruption by rollcalls or other floor activity.

I have had meetings with the top staff directors of the various legislative committees, together with the staff of the Democratic Policy Committee, in the effort to expedite the flow of business and in the effort to work out procedures whereby scheduling conflicts among committees can be avoided as much as possible, thus allowing Senators who wish to attend their various committee assignments to do so in more instances than have otherwise heretofore been the case, when so often a Senator has attended a committee meeting, and the Senator finds it impossible to be in two places at once, and is unable to attend both committees. He attends one committee, he is absent from the other committee and, in many instances, this makes it impossible for some of the committees to assemble quorums without considerable delay.

So the effect of these changes appears to have improved the flow of legislation reported from committees.

The Senate, I am pleased to say, has encountered a fewer number of rollcall votes in this session thus far than was the case in 1976, 1975, 1974, or 1973. I think this is a healthy sign and I hope that it will continue throughout the session. I hope Senators will restrain themselves as much as possible and avoid demanding rollcalls whenever they can. This saves the Senate much time. Last year there were 700 rollcall votes, an alltime record, and too much of the Senate's time was consumed thereby.

Last Friday, the Senate adopted an official code of conduct that calls for full financial disclosure, a limit on outside earned income of 15 percent of a Member's salary, and additional safeguards against improprieties or seeming improprieties. As recommended by the temporary Special Committee on Official Conduct under the very able chairmanship of the distinguished Senator from Wisconsin (Mr. Nelson) with the great and courageous help of the distinguished Senator from South Carolina, who is the ranking minority member (Mr. THURMOND), and most ably assisted, may I say, by the distinguished senior Senator from Connecticut (Mr. RIBICOFF), and other Senators, these provisions, I think, should indicate to the American people that the Senate is at this time looking inwardly at itself. We are trying to perceive ourselves as others perceive us. And, following the exemplary work by the very able Senators on that committee, these provisions were diligently considered by all Members of the Senate as evidenced by the extensive floor debate.

We know that conduct is impossible to legislate. But I feel that the Senate has established a good code of conduct which will be helpful in avoiding the appearance of impropriety, dishonesty, or fraud.

Among other achievements already this year, Congress promptly enacted, at the President's request, an emergency national gas measure, authorizing him to make allocations to deregulate prices in emergency gas shortage situations.

We recently cleared, for his signature, legislation to reinstate the authority of the President to propose reorganization or consolidation of Federal agencies. Here, I compliment the distinguished senior Senator from Connecticut (Mr. Ribicoff) and the ranking member of the Committee on Governmental Affairs (Mr. Percy) on the excellent cooperation not only between the two, but also among the other members of the committee in expediting the handling of that legislation in committee and on the floor.

The Senate repealed provisions of the law which allowed the United States to import chrome from Rhodesia in violation of U.N. sanctions. I did not vote for that measure. Nevertheless, it is a measure which has been enacted by the Senate and I think it should be mentioned at this point.

The Senate has also sent to conference with the House of Representatives a measure authorizing additional funds for an expanded public works employment program. Earlier this week, Congress sent the President an act to extend the unemployment compensation program as a means of aiding those people who are unemployed because of the depressed economic situation.

We also cleared a measure to alleviate the effects of the severe drought in the Western States.

Upon the Senate's return on April 18, we will be considering the President's tax package

The status of proposals advanced by the President in his message to Congress is contained in a report prepared at my request by the staff of the Democratic Policy Committee, and at the conclusion of my remarks I shall ask unanimous consent that that report and the report on Senate legislative achievements, which contains the summaries of all the bills that the Senate has passed, be printed in the Record.

I call attention just now to the fact that the average attendance of the Senate has been good this year. It is 88.53 percent, which is better than last year, 1976. Last year's attendance up until Easter was 87.15 percent. It is not quite as good as that of a year before when the percentage was 91.72, but it is better than the year before, 1974, when the percentage was 88.24; it is better than 1973 when the percentage of attendance was 85.48.

Alluding again to the fact that I have endeavored to bring the Senate in before noon as seldom as possible, I should state that the Senate has convened before 12 noon this year only 16 times as against 32 times last year as of the Easter holiday, 20 times the year before, 28 times the year before that, and 19 times the year before that, to wit, 1973.

The Senate has convened 25 times this year at the hour of 12:15 p.m. or later, which I think cannot be equaled

by any previous session of the Senate within the years of my memory. The Senate has convened, in all, 36 sessions out of the 52 sessions this year at 12 noon or later.

There have been no Saturday sessions this year thus far. There was a Saturday session in 1975 and two Saturday sessions in 1973 by the time we had reached the Easter holiday.

The Senate has confirmed more nominations this year than in any year subsequent to and including 1973. The Senate has confirmed 22,607 nominations already this year. Last year by Easter, the figure was 14,461; the year before that, 8,372; the year before that, 10,443; and the year before that, 15,700.

In the matter of rollcall votes, as I say, we are already below that of previous years as of the Easter period.

As to the number of hours in session, the Senate has been in session—as of the close of business yesterday—241 hours, which is a figure that is less than any year with the exception of 1975 when as of Easter the Senate had been in session 225 hours and 34 minutes. But compared with last year, the Senate has been in session roughly 45 fewer hours this year than last year up to this time.

Mr. President, I ask unanimous consent to print in the Record a list of convening hours—through April 5, 1977, days in session, and convening times.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

CONVENING HOURS—THROUGH APRIL 5, 1977
DAYS IN SESSION—50

Convening times:

9:15 a.m., 1 day; 9:30 a.m., 2 days; 9:45 a.m., 2 days; 10:00 a.m., 4 days; 10:15 a.m., 1 day; 10:30 a.m., 2 days; 11:00 a.m., 4 days; 12:30 p.m., 3 days; 1:00 p.m., 7 days; 1:15 p.m., 1 day; 1:30 p.m., 1 day; 1:45 p.m., 1 day; 2:00 p.m., 7 days; 3:00 p.m., 2 days; 4:00 p.m., 2 days; 8:00 p.m., 1 day.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to print in the Record the table which shows the 5-year comparison of Senate legislative activity by the time the Easter recess had arrived, together with a memorandum showing the Senate legislative achievements and also an analysis of each of the various measures that have been passed to date during this session.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

5-YR COMPARISON OF SENATE LEGISLATIVE ACTIVITY, AS OF EASTER

	1973	1974	1975	1976	1977		1973	1974	1975	1976	1977

INDEX FOR SENATE LEGISLATIVE ACHIEVEMENTS
(Prepared by Senate Democratic Policy
Committee ROBERT C. BYRD, Chairman)

AGRICULTURE

Grain Inspection (S. 1051).

Land and Water Resource Conservation (S. 106).

Wheat Producers Assistance (S. 650).

APPROPRIATIONS

Fiscal 1977:

Continuing (H.J. Res. 351, P.L. 95-16).

Supplemental (H.R. 4877).

Urgent Disaster Supplemental (H.J. Res. 269, P.L. 95-13).

Urgent Power Supplemental (H.J. Res. 227, P.L. 95-3).

BUDGET

Rescissions:

Helium Purchases (H.R. 3347, P.L. 95-10). Second Budget Rescission (H.R. 3839, P.L. 95-15).

Resolutions:

Third Budget Resolution (S. Con. Res. 10).
CONGRESS

Congressional Campaign Committee Employees Retirement (S. 992).

Joint Committee on Atomic Energy Abolishment (S. 1153).

CRIME-JUDICIARY

U.S. District Court Terms (S. 662). ECONOMY-FINANCE

Interest Rates (Regulation Q)—Federal Credit Unions (H.R. 3365, P.L. 95-).

Securities and Exchange Commission Authorization (S. 1025, P.L. 95-).
Small Business Loan Ceilings (H.R. 2647,

P.L. 95-14).
White House Conference on Small Business (S. Res. 105).

EMPLOYMENT

Emergency Unemployment Compensation (H.R. 4800, P.L. 95-).

Public Works Employment (H.R. 11).

ENERGY

ERDA Loan Guarantee Program (S. 37). ERDA Authorization (S. 36). Natural Gas Emergency (S. 474, P.L. 95-2). Radiation Exposure (S. 266).

FISHERIES

Fishery Conservation Zone Transition (H.J. Res. 240, P.L. 95-6) (H.R. 3753, P.L. 95-8).

GENERAL GOVERNMENT

GAO Audit of IRS and ATF (S. 213). Kennedy Center Authorization (S. 521). Presidential Reorganization Authority (S. 626, P.L. 95-).

GOVERNMENT EMPLOYEES

Federal Salary Increases (S. 964). Secret Service Protection of Former Federal Officials (S.J. Res. 12, P.L. 95-1).

HOUSING

Supplemental Housing Authorizations (S. 1070).

INDIANS

American Indian Policy Review Commission (S.J. Res. 10, P.L. 95-5).

INTERNATIONAL

Abu Daoud (S. Res. 48).
Harp Seal Killings (H. Con. Res. 142).
Portugal Military Assistance (S. 489).
Rhodesian Chrome (H.R. 1746, P.L. 95–12).
Romanian Earthquake (S. Con. Res. 12).
Romanian Earthquake Authorization (H.R. 177, P.L. 95–).

Soviet Expulsion of George A. Krimsky (S. Res. 81).

Soviet Freedom of Emigration (S. Con. Res. 7).

Vietnam POW's and MIA's (S. Con. Res. 2) (S. Con. Res. 3).

MEMORIALS, TRIBUTES AND MEDALS

Alex Haley (S. Res. 112).

Francis R. Valeo (S. Res. 133).

Gerald R. Ford Building (S. 385). Jaycees International Conference (S. Res.

137). Marian Anderson Medal (H.J. Res. 132,

P.L. 95-9).
Philip A. Hart, Death of (S. Res. 15).

Philip A. Hart, Death of (S. Res. 15). President and Mrs. Ford (S. Res. 22). President Ford (S. Res. 38).

President-Elect Carter (S. Res. 23).

St. Patrick's Parish Anniversary (S. Res. 116).

Vice President Rockefeller (S. Res. 37). Wiliam O. Douglas (S. 776, P.L. 95-11).

NATURAL RESOURCES

Drought Emergency Authority (S. 925, P.L. 95-).

NOMINATIONS (ACTION BY ROLL CALL VOTE)

Griffin B. Bell to be Attorney General.

Joseph A. Califano, Jr. to be Secretary of
HEW.

Peter F. Flaherty to be Deputy Attorney General.

Ray Marshall to be Secretary of Labor.

Paul C. Warnke for Rank of Ambassador for SALT Negotiations and to be Director of the Arms Control and Disarmament Agency. Andrew J. Young to be U.S. Representa-

tive to U.N.

SENATE

Commission on the Operation of the Senate (S. Res. 93).

Committee Reorganization (S. Res. 4).
Deputy President Pro Tempore (S. Res. 17)
(S. Res. 27).

Senate Ethics Code (S. Res. 110) Special Committee on Official Conduct (S. Res. 36).

TAXATION

Sick Pay Exclusion H.R. 1828).

SENATE LEGISLATIVE ACHIEVEMENTS 95TH CONGRESS, 1ST SESSION

(Prepared by Senate Democratic Policy Committee, ROBERT C. BYRD, Chairman)

SENAIE ACTIVITY	
Days in session	52

Record votes	

Symbols: (VV)-Passed by Voice Vote; numbers in parentheses indicate number of record vote on passage, conference report, or reconsideration.

AGRICULTURE

Grain inspection: Amends the United States Grain Standards Act to facilitate and improve the implementation of the amendments made in 1976 (Public Law 94-582); establishes a temporary 12-member committee (representing farmers, consumers and all segments of the grain industry) to advise the Administrator of the Federal Grain Inspection Service (FGIS) on the implementation of the 1976 act, and provides for its termina-tion 18 months after the date of enactment; eliminates the requirement that grain merchandisers and elevator operators using grain inspection or weighing services maintain certain itemized types of records of their operations for a five-year period and requires them instead to keep only such records as the Administrator may prescribe for administration and enforcement; repeals, effective October 1, 1977, the authority for the charging of fees for Federal supervision of grain inspection and weighing and provides instead for funding of these activities through the regular appropriations process; makes several technical amendments; and prohibits effective May 1, 1977, subclassing of the hard red winter wheat on the basis of color, kernel content, or percentage of dark, hard and vitreous kernels. S. 1051—Passed Senate March 30, 1977. (88)

Land and water resources conservation: Establishes a mechanism for making longrange policy to encourage the wise and orderly development of the Nation's soil and water resources; requires the Secretary of Agriculture to (1) prepare an appraisal of the Nation's land, water and related resources and (2) develop a national land and water conservation program setting forth the direction for future soil and water conservation efforts on the Nation's private and non-Federal lands by December 31, 1979, and to update them each fifth year thereafter; re-quires that the appraisal and the program together with a detailed statement of policy intended to be used in framing budget requests for Soil Conservation Service activities be transmitted to Congress on the first day it convenes in 1980 and at each 5-year interval thereafter; requires that programs established by law be carried out in accordance with the statement of policy unless either House adopts a disapproval resolution within 90 days of receipt; provides that Congress may revise or modify the statement of policy, and that the revised or modified statement of policy shall be used in framing budget requests; requires, beginning with the fiscal 1982 budget, that requests sent by the President to Congress governing Soil Conservation Service activities express the extent to which the projected programs and policies meet the statement of policy approved by Congress; requires the President to set forth reasons for requesting Congress to approve a lesser program or policy where budget recommendations fail to meet the established policy; and requires the Secretary to submit to Congress beginning with fiscal 1982, an annual report evaluating the program's effectiveness. S. 106—Passed Senate March 23, 1977. (VV)

Wheat producers assistance: Provides temporary emergency assistance to wheat producers who planted prior to January 1, 1977, in order to prevent further increases in carryover stocks resulting from record U.S. wheat production and decreasing U.S. exports; requires the Secretary of Agriculture to carry out, through the Commodity Credit Corporation, a special wheat acreage grazing and hay program for the 1977 crop whereby a wheat producer who elects to participate may designate an acreage of cropland on his farm, of not to exceed 40 percent of the wheat acreage allotment, for grazing purposes or hay production only; requires that the producer designate the specific acreage on the farm to be so used; directs the Secretary to pay any participating producer an amount determined by multiplying the number of acres placed in the program times the projected yield established for the farm times \$1; makes the producer ineligible for any other payments or price supports, including deficiency payments and disaster payments under section 107 of the Agricultural Act of 1949, on that portion of the wheat allotment placed in the program; provides that such acreage shall be deemed to have been planted for harvest for the purposes of wheat acreage history; and authorizes the Secretary to issue the necessary regulations to carry out this act. S. 650—Passed Senate March 16, 1977. (60)

APPROPRIATIONS

Fiscal 1977-

Continuing: Extends the continuing resolution (Public Law 94-473) which expires on March 31, 1977, until April 30, 1977, to provide financing authority for the following programs traditionally funded under the Departments of Labor, and Health, Education, and Welfare Appropriations Acts: higher education; National Health Service Corps; home health services; emergency medical services; library resources; teacher corps; alcohol abuse and alcoholism prevention, treatment and rehabilitation; health professions educational assistance; D.C. medical and dental manpower; activities under title VI of the Comprehensive Employment and Training Act: vocational education: and National Institute of Education; and amends the resolution to provide such amounts as necessary for the calendar quarter ending March 31, 1977, for general revenue sharing payments to State and local governments. H.J. Res. 351-Public Law 95-16, approved April 1, 1977. (VV)

Supplemental: Makes \$32,880,485,710 in supplemental appropriations for fiscal year 1977. H.R. 4877-Passed House March 1977; passed Senate amended April 1, 1977; conference report filed. (98)

Urgent disaster supplemental: Makes urgent supplemental appropriations of \$200 million for fiscal year 1977 for disaster relief activities resulting from the severe weather conditions prevalent throughout the nation. H.J. Res. 269-Public Law 95-13, approved March 21, 1977. (VV)

Urgent power supplemental: Makes urgent power supplemental appropriations of \$6.4 million for fiscal year 1977 for the Department of the Interior, Southwestern Power Administration, for power purchases caused by critically low stream flow conditions in the area served by the Administration; and removes the restrictions in Public Laws 94-355 and 94-373 which limit the use of funds appropriated to ERDA subject to enactment of authorizing legislation to assure the continued funding of essential energy research, development and demonstration programs. H.J. Res. 227-Public Law 95-3, approved February 16, 1977. (VV)

BUDGET

Rescissions-

Helium purchases: Rescinds \$47.5 million in contract authority for helium purchases under Public Law 87-122 as recommended by the President in his message of September 22, 1976, for which purchase contracts were terminated by the Interior Department in 1973 and the contract authority therefore is no longer needed. H.R. 3347-Public Law 95-10, approved March 10, 1977. (VV)

Second budget rescission: Rescinds \$644,-050,000 of the \$941,278,000 in budget authority recommended by the President in his message of January 17, 1977, as follows: Department of Defense, Military—\$143.6 million in retired pay, \$452.6 million in Naval shipbuilding and conversion because of the decision not to procure the fourth nuclear powered aircraft carrier (CVN-71) or convert the nuclear powered cruiser USS Long Beach to the Aegis air defense weapons system, and \$145.35 million for Air Force procurement because of termination of the Advanced Logistics System (ALS); \$41.5 million in funds appropriated to the President for foreign military credit sales; and \$12 million for the Department of State contributions for international peacekeeping activities because of the lower budget levels established by the General Assembly; and disapproves \$277,228,000 as follows: Department of Commerce-\$525,000 for salaries and expenses of the U.S. Travel Service and \$1.5 million for operations, research and facilities of the National Oceanic and Atmospheric Administration to continue surveys, mission and cost analysis and initiation of design and engineering studies for OCEANLAB; and \$6,803,-000 for the Department of Transportation for retired pay for the Coast Guard. H.R. 3839—Public Law 95-15, approved March 25, 1977. (VV)

Resolution-

Third budget resolution: Revises the Second Budget Resolution (S. Con. Res. 139) for fiscal year 1977 setting the level of reve nues at \$347.7 billion, outlays at \$417.45 billion, deficit at \$69.75 billion, budget authority at \$472.9 billion and public debt at \$718.4 billion; contains an adequate funding level to permit enactment of up to \$13.8 billion in tax legislation stimulus as proposed by the administration and \$3.7 billion in increased outlays to produce jobs in areas of high unemployment; sets a level of budget authority at \$1.1 billion and outlays at \$760 million for EPA construction grants, railroad and highway construction and improvement in recreational facilities; sets the following levels of funding for the relief of individuals and families hard hit by the recession and the harsh winter: (1) 1.8 billion in budget authority and outlays for direct payments to recipients of social security, SSI, and railroad retirement, or any similar stimulus proposals, (2) \$508 million in budget authority and \$508 million in outlays to extend the Federal supplemental benefits program for the unemployed, and (3) \$200 million in budget authority and \$200 million in outlays for Federal assistance to low- and moderateincome families to help them meet fuel costs during the winter emergency; includes adequate levels of budget authority for housing to support increased reservations for a total of 360,000 dwelling units for low- and moderate-income families; and makes the following revisions to the totals for budget authority and outlays contained in the Second Budget Resolution to reflect savings which have been achieved and additional costs which have arisen under existing programs (in billions of dollars):

National Defense-BA: \$108.8 instead of \$112.1, O: \$100.1 instead of \$100.65; International Affairs—BA: \$7.9 instead of

\$8.9. O: \$6.8 instead of \$6.9:

General science, space, and technology— BA: \$4.5 instead of \$4.6, O: \$4.4 instead of \$4.5:

Natural resources, environment, and energy-BA: \$18.7 instead of \$18.2, O: \$17.2 instead of \$16.2;

Agriculture-BA: \$2.3 instead of \$2.1, O:

\$3.0 instead of \$2.2;

Commerce and transportation-BA: \$17.3 instead of \$17.2. O: \$16.0 instead of \$17.4; Community and regional development-BA: \$14.8 instead of \$9.55, O: \$10.55 instead

of \$9.05:

Education, training employment and social services-BA: \$30.4 instead of \$24.0, O: \$22.7 instead of \$22.2:

Health-BA: \$40.6 instead of \$40.5, O: \$39.3 instead of \$38.9;

Income Security-BA: \$170.9 instead of \$155.9, O: \$141.3 instead of \$137.2;

Veterans benefits and services—BA: \$18.9 instead of \$20.3, O: \$18.1 instead of \$19.5;

Law enforcement and justice-BA: \$3.5. O: \$3.6;

General Government-BA: \$3.5 instead of \$3.6, O: \$3.5;

Revenue sharing and general purpose fiscal assistance—BA: \$7.6, O: \$7.7;

Interest-BA: \$38 instead of \$39.6, O: \$38 instead of \$39.6:

Allowances-BA: \$0.8 instead of \$0.7, O: \$0.8:

Undistributed offsetting receipts—BA:
-\$15.6 instead of -\$16.8, O: -\$15.6 instead of -\$16.8.

S. Con. Res. 10-Action complete March 3, 1977. (38)

CRIME-JUDICIARY

U.S. district court terms: Amends section 104(a) (1), title 28, U.S.C., to provide for holding terms of the U.S. District Court for the Eastern Division of the Northern District of Mississippi at Aberdeen, Ackerman, and Corinth. S. 662-Passed Senate April 7, 1977. (VV)

CONGRESS

Congressional Campaign Committee employees retirement credit: Amends title V, U.S.C., to provide that a congressional employee may credit not to exceed 10 years of service as an employee of the Democratic Senatorial Campaign Committee, the Re-publican Senatorial Campaign Committee, the Democratic National Congressional Committee or the Republican National Congressional Campaign Committee for Civil Service Retirement purposes provided the required deposits for such service are made to the fund; and makes the provisions of this act applicable to an employee who retires on or after the date of enactment. S. 992-Passed Senate March 5, 1977. (VV)

Joint Committee on Atomic Energy abolishment: Abolishes the Joint Committee on Atomic Energy and provides for the disposition of its staff and the transfer of its statutory functions and authority to other congressional committees having jurisdiction over the development, utilization or application of atomic energy; establishes, until March 31, 1979, an Office of Classified National Security Information under the policy direction of the Majority and Minority Leaders and the administrative direction of the Secretary of the Senate which shall be responsible for safeguarding national security information and other restricted data; authorizes the office to classify and declassify information within the guidelines developed for restricted data by the responsible executive agencies and to establish a central repository in the Capitol for safeguarding such data; directs the Office, within 30 days of enactment, to furnish the Senate Armed Services, Energy, Environment and Foreign Relations Committees with a listing of all records, data, charts, and files to be transferred and to indicate which committee may

have jurisdiction; directs the chairmen of the committees involved to resolve any jurisdictional problems which may arise; makes necessary conforming amendments to certain laws which pertain to the Joint Committee on Atomic Energy; and provides that this act shall become effective on the tenth day after the date of enactment. S. 1153-Passed Senate March 31, 1977. (VV)

ECONOMY-FINANCE

rates (regulation Q)-Federal Interest credit unions: Extends from March 1, 1977, until December 15, 1977, existing authority (commonly known as Regulation Q) under the Interest Rate Control Act by which Federal financial regulatory agencies set interest rate ceilings on deposits in financial institutions under their respective jurisdictions; extends until August 31, 1977, the Treasury Department's authority to borrow funds from the Federal Reserve System;

Modernizes the powers of Federal credit unions under the Federal Credit Union Act in order that they may provide more con-temporary financial services to their members; considers demand deposit accounts of state chartered credit unions as member accounts, if they qualify pursuant to state law, thus making them eligible for Federal share insurance; establishes varying self-replenishing lines of credit to member borrowers: removes the distinction between secured and unsecured loans and raises the maximum loan maturities to 12 years (currently 5 years on unsecured loans and 10 years on secured loans); empowers the board of directors to establish their own loan maturity and collateral requirements; removes the \$2,500 maximum amount for unsecured loans; provides the necessary flexibility to meet members' needs in accordance with the applicant's creditworthiness and the credit union's soundness rather than arbitrary loan ceilings; permits real estate loans with maturities up to 30 years; and includes the following restrictions on such lending authority: (1) loans must be secured by a first lien, (2) loans must be for a one-to-four family dwelling, (3) the dwelling must be the principle residence of the borrower, and (4) the sales price must not exceed 150 percent of the median sales price of residential real property to be determined on a market area basis; allows loans with maturities of up to 15 years for the purchase of mobile homes used as the member's residence, or for the repair, alteration or improvement of a member's residence; permits Federally guaranteed or insured loans, such as the VA guaranteed mobile home loans, with maturities as specified in those statutes: increases the officials' borrowing limit on unsecured loans from \$2,500 plus pledged shares \$5,000 plus pledged shares and permits them to guarantee or endorse up to the same amounts without board approval; clarifies the existing provisions regarding the penalty for excess interest and the provision regarding loan amortization; ensures that a member may repay his or her loan prior to maturity with no penalty; authorizes loans to other credit unions and credit union organizations; and contains other provisions. H.R. 3365—Public Law 95-, approved, 1977. (VV)

Securities and Exchange Commission authorization: Amends the Securities Exchange Act of 1934 to increase the authorization for fiscal year 1977 from \$55 million to \$56.5 million. S. 1025—Public Law 95-, 1977. (VV) proved

Small business loan ceilings: Amends the Small Business Act to increase the fiscal year 1977 authorization ceilings for the following SBA financial assistance programs: Business Loan and Investment Fund from \$6 billion to \$7.4 billion, Economic Opportunity Loans from \$450 million to \$525 million, and Small Business Investment Company Program from

\$725 million to \$887.5 million; and amends the Small Business Investment Act of 1958 to increase the fiscal year 1977 ceiling on the Surety Bond Guarantee Program from \$56.5 million to \$110 million. H.R. 2647-Public Law 95-14, approved March 24, 1977. (VV)

White House Conference on Small Business: States as the sense of the Senate that the President should convene a White House Conference on Small Business to develop recommendations that will increase public awareness of the importance of small business; identify the problems of new, small, and independent business enterprise; and suggest appropriate governmental actions to encourage and maintain the economic interests and potentials of the small business community in order to strengthen the overall economy of the Nation. S. Res. 105-Senate agreed to March 28, 1977. (VV)

EMPLOYMENT

Emergency unemployment compensation: Extends the Emergency Unemployment Compensation Act to October 31, 1977, to provide a maximum of 13 weeks of emergency benefits (which combine with the 26 weeks of regular and 13 weeks of extended benefits for a total of 52 weeks of unemployment benefits) in States where the insured unemployment rate is 5 percent or more, with a phase out under which individuals eligible before October 31, 1977, may continue to receive benefits until January 31, 1978; extends until April 30, 1977, the 65 week program now in effect in order to avoid terminating benefits for certain participants in that program; provides that the cost of emergency unemployment compensation paid after March 31, 1977, be met from nonrepayable general revenues without the present law requirements that the costs ultimately be met from Federal Unemployment Tax;

Provides that, in addition to any eligibility requirements of State law, an individual would be disqualified from receiving emergency benefits for failing to (1) actively seek work, (2) apply for any suitable work which was referred by the State agency, or accept any offer of suitable work; defines suitable work as that which (1) is within the capabilities of the claimant, (2) meets conditions of present Federal law, (3) meets conditions of State law and practices pertaining to suitable or specific disqualifying work, such as unreasonable travel distance or threat to morals, health, or safety, (4) pays wages equal to Federal or State minimum wage, (5) pays gross average weekly remuneration equal to the individual's weekly unemployment benefits plus any Supplemental Unemployment benefits he might be entitled to, and (6) was listed with the State employment service or offered in writing; allows a State to waive these requirements if an individual furnishes satisfactory evidence that prospects for obtaining work within a reasonable period of time in his or her occupation are good;

Establishes new statutory authority and procedures for the treatment of fraud and erroneous payments; disqualifies applicants submitting false or erroneous information; requires States with certain exceptions, to recover any overpayments made to individuals; makes fraud in connection with the program a Federal crime and imposes a fine of up to \$10,000 and imprisonment for up

to 5 years;

for State implementation Provides changes made by this act; requires each State to enter into a modification if its present agreement within 3 weeks after the Secretary of Labor proposes the modification to the State; provides that if modification is not entered into, the Unemployment Compensation Program in that State would expire within the last week which ends on or before March 31, 1977; permits Kentucky, which does not have a scheduled meeting of its legislature during 1977, to defer until 1979 compliance with certain requirements of the act;

Simplifies administration by terminating an individual's entitlement to emergency benefits two years after the date of the benefit year for which regular benefits were payable; extends for 2 years through 1979, moratorium under which the Federal unemployment tax is automatically increased to recapture any loan to a State which is unpaid after 2 years; prohibits benefits to an individual who was illegally working at the time he earned his eligibility; allows States to deny unemployment compensation to teachers during brief mid-year vacation periods if the teacher was employed by the school system immediately before the start of the vacation and has reasonable assurance of the employment continuing at the conclusion of the vacation; makes clear that groups of local governments are to be provided the same options for financing unemployment compensation as those provided to single government units; extends from September 30, 1979, to March 31, 1980, the provision contained in Public Law 94-566 which requires States to reduce the unemployment benefits of an individual by the amount of any public or private pension including social security and railroad retirement annuities in order to conform this enactment date with the final reporting extension granted the National Commission of Unemployment Compensation; extends the time by which the National Commission on Unemployment Compensation must submit its interim report from March 31, 1979, to September 30, 1979, and the time by which it must submit its final report from January 1, 1979, to July 1, 1979; and amends present law to require an affirmative vote of the Senate and the House to make effective the President's quadrennial recommendations regarding the salary increases of Members of Congress, the Federal judiciary, Cabinet officials an other top Federal personnel. H.R. 4800-1977. (82)

Public Law 95- , approved Public works employment: Authorizes an additional \$4 billion to extend the program of grants to State and local governments to provide jobs through construction in places with the most distressing levels of unemployment as originally authorized under Title I of Works Employment Act of 1976; the Public provides that 65 percent of the funds be allotted on total numbers of unemployed and 35 percent on the basis of the relative severity of unemployment, with States participation in the 35 percent allocation only if their unemployment rates exceed 6.5 percent for the most recent 12 month period; provides that no State shall receive less than threefourths of 1 percent nor more than 12.5 percent; requires that within a State 85 percent or more of the funds be spent in areas with rates of unemployment above the national average and 15 percent for areas with rates below the national average but above 6.5 percent; contains a 2½ percent set-aside for Indian and Alaskan Natives projects to insure a substantial fund for such projects while permitting high-unemployment non-Indian communities a competitive chance to be awarded projects in States with Indian communities; continues the authorization of \$900 million, in Title II, through fiscal year 1978 for water pollution control programs and authorizes \$4.54 billion for each of fiscal years 1977 and 1978 for grants for the construction of waste treatment facilities with no State receiving less than one-third of 1 percent of the total allotment; and mandates, in Title III, the obligation of funds for water resource projects for fiscal 1977 (with the exception of the Meramec Dam in Missouri) and states congressional intent not to uphold any prospective budget rescissions or deferrals re garding these projects. H.R. 11—Passed House February 24, 1977; Passed Senate amended March 10, 1977; House concurred in Senate amendment with a substitute amendment

which includes water pollution control provisions; In conference. (48)

ENERGY

ERDA authorization: Authorizes a total of \$1,639,913,000 for the Energy Research and Development Administration (ERDA) most of the nonnuclear programs and nonnuclear scientific research for fiscal year 1977; includes: \$461,801,000 for fossil energy; \$286.2 million for solar energy; \$65.7 million for geothermal energy; \$221 million for conservation research and development; \$10 million for a high Btu pipeline gas demonstration plant; \$5 million for a fuel gas low Btu demonstration plant; and \$10 million for solar energy projects; contains authorizations for capital equipment not related to construction to replace obsolete or worn-out equipment and to purchase certain new equipment to meet the needs of expanding programs and new technology at ERDA installations; provides an additional \$50 million for the clean boiler fuel demonstration plant authorized by Public Law 94-187 and \$15 million for the 5 megawatt solar thermal test facility authorized by Public Law 94-187; provides guidelines under which funds for fossil energy programs may be utilized; deauthorizes authorized fossil energy projects which were not appropriated within 3 full fiscal years; allows the Administrator to assist in the demonstration of the production of synthesis gas, methane, methanol, anhydrous ammonia, and similar energy intensive products from municipal waste by entering into agreements with units of local government or persons proposing to construct facilities for the manufacture of such products; provides authority by which ERDA may reprogram funds between major program areas; directs ERDA to relate the funds authorized and appropriated in annual authorization and appropriation measures to the objectives and goals of the various enabling legislation under which the Agency operates; amends the Federal Nonnuclear Energy Research and Development Act of 1974 to transfer responsibility for preparation of demonstration project water assessments from ERDA to the Water Resources Council; requires the Administration to classify the recipients of ERDA contracts into various categories including: Federal agency, non-Federal governmental entity, profitmaking enterprise, non-profit enterprise, and nonprofit educa-tion institution; authorizes the establishment of a small grants program to promote the research, development, and demonstration of energy related systems and technologies appropriate to the needs of local comrequires the Administrator, in consultation with EPA, to report to the Congress on the environmental monitoring, asassessment and control efforts related to its various energy demonstration projects;

Authorizes \$347,542,000 for work in biomedical and environmental research, operational safety, environmental control technology, the materials sciences, and molecular mathematical and geosciences portion of the basic energy sciences program and program support; provides \$26,700,000 for plant and capital equipment obligations including construction, acquisition, or modification of facilities, land acquisition, and acquisition and fabrication of capital equipment not related to construction; prohibits ERDA from starting projects if the current estimated cost exceeds the original estimated cost by more than 25 percent;

Authorizes ERDA to transfer sums from its "Operating Expenses" to other agencies for work for which the moneys were appropriated; authorizes "Operating Expenses" and "Plant and Capital Equipment" as no year funds; authorizes any Government-owned contractor operated laboratory, energy research center or other laboratory performing functions under contract to ERDA to use a

reasonable portion of its operating budget for funding employee suggested research projects up to the pilot plant state of development; permits ERDA to contract for advanced architect/Administrator services for construction projects essential to meet the needs of national defense or the protection of life, property, health or safety prior to congressional authorization; requires any officer or employee of ERDA in a policy making position to report certain known financial interests in various energy technologies and re-lated resources; directs the Administrator to develop regulations that would avoid conflicts of interest in ERDA contracts with private persons or organizations involved energy research and development; and authorizes the establishment of a National Energy Extension Service. S. 36—Passed Senate April 4, 1977, (VV)

ERDA loan guarantee program: Amends the Federal Nonnuclear Energy Research and Development Act of 1974 to establish a loan guarantee program to be administered by the Energy Research and Development Administration (ERDA) whereby the Administrator may guarantee the payment of interest and principal of bonds, debentures, notes, and other obigations issued for the purpose of financing the construction and initial operation of commercial-sized demonstration facilities for the conversion of biomass into synthetic fuel or other useable forms of energy; authorizes guarantees of up to 75 percent of the total project cost and, during the construction and start up period, up to 90 percent; limits the total outstanding indebtedness that may be guaranteed any one time to \$300 million; requires ERDA before approving an application, to notify the appropriate State and local governmental officials and to give the Governor of the State an opportunity to make his recommendation respecting the facility; prohibits ERDA from guaranteeing a project if the Governor recommends against it; authorizes the Administrator, in the event of default, to complete the project and assume management of the facility including the authority to sell the products or energy produced; provides that any patents and technology resulting from the facility will be treated as assets in cases of default and requires that the guarantee agreement contain a provision assuring their bility to the Government if needed to complete the facility; and requires ERDA to submit a report of the proposed guarantee and facility to the appropriate committees of Congress which shall have 90 days to disapprove by passage of a disapproval resolution, S. 37-Passed Senate March 31, 1977.

Natural gas emergency: Authorizes the President to declare a natural gas emergency if he finds that a severe shortage exists or is imminent in the United States which would endanger the supply of natural gas for high-priority uses and the exercise of his authorities is reasonably necessary to assist in meeting requirements for such uses; provides that these authorities shall terminate when the President finds that shortages no longer exist and are no longer imminent;

Emergency Allocation: Authorizes the President, during a declared natural gas emergency, to require (1) any interstate pipeline to make emergency deliveries or transport interstate natural gas to any other interstate pipeline or a local distribution company served by an interstate pipeline; (2) any intrastate pipeline to transport interstate natural gas from one interstate pipeline to another or to any local distribution company served by an interstate pipeline; or (3) the construction and operation by any pipeline of necessary facilities to effect deliveries or transportation; directs the President, in issuing such orders, to consider the availability of alternative fuel to users

of the interstate pipeline ordered to make deliveries and to determine that they would not have an adverse effect on the natural gas supply or exceed the transportation capacity of the pipeline; provides that these authorities shall terminate by April 30, 1977, or after the President terminates the emergency, whichever is earlier;

Emergency Sales at Deregulated Prices: Authorizes interstate pipelines or local distribution companies to purchase supplies of natural gas for delivery before August 1, 1977, from intrastate pipelines at unregulated prices as reviewed by the President for fairness and equity; provides that these purchases could be delivered from intrastate pipelines and any producer of natural gas not affiliated with an interstate pipeline unless such natural gas was produced from the Outer Continental Shelf, and the sale of transportation of the gas was not, immediately prior to the date of the contract for purchase of the gas, certificated under the Natural Gas Act; authorizes the President to require, by order, any interstate or intrastate pipeline to transport gas and operate facilities necessary to carry out emergency purchase contracts;

Miscellaneous: Authorizes the President to subpoena information to carry out his authority under the Act; contains antitrust protection provisions available as a defense against civil or criminal action brought against any person for violation of the anti-trust laws with respect to actions taken pursuant to a Presidential order; gives the Temporary Emergency Court of Appeals exclusive jurisdiction to review all cases including any order issued or other action taken under this act; imposes civil penalties of up to \$25,000 a day for violations of orders and \$50,000 a day for willful violations: directs the President to require weekly reports which shall be made available to the Congress on prices and volume of natural gas delivered, transported or contracted for, and to report to Congress by October 1, 1977, on all actions taken under this act; and authorizes the President to delegate all or any portion of the authority granted to him to such executive agencies or officers he deems appropriate. S. 474-Public Law 95-2, approved February 2, 1977. (21)

Radiation exposure: Extends the program of the Energy Research and Development Administration (ERDA) to provide financial assistance to limit radiation exposure resulting from the widespread use of sand containing mill tailings in the construction of approximately 500 public and private buildings in the Grand Junction, Colorado area; calls for a cooperative arrangement with the State of Colorado whereby ERDA is authorized to provide 75 percent of the costs of the program; extends the deadline for applying for remedial work under the program from 4 to 7 years; provides that property owners who removed mill tailings at their own expense prior to the date of enactment and without the administrative determination required may apply for such reimbursement within first year of enactment; permits the State of Colorado to waive the requirement that it perform the remedial work; and increases the authorization therefor from \$5 million to \$8 million, S. 266-Passed Senate April 4, 1977. (VV)

FISHERIES

Fishery conservation zone transition: Gives Congressional approval of the fishery agreements between the United States and the People's Republic of Bulgaria, the Socialist Republic of Romania, the Republic of China, the German Democratic Republic, the Union of Soviet Socialist Republics, and the Polish People's Republic; provides that these agreements wil enter into force on the date of enactment of this joint resolution; waives the 60-day Congressional review period;

limits to 7 days the 45 day period for review and comment on application permits required of the Regional Fishery Management Councils created under the Fishery Conservation Zone Act during 1977 for those applications received by the Council on or the date of enactment and those received by the Council from the Secretary of State after the date of enactmnet to provide for an orderely transition from the 12 mile to 200 mile fishing limit; waives, until May 1, 1977, the requirement that foreign fishing vessels have a valid permit on board and permits the Secretary to waive the fee required before fishing permits may be issued if he is satisfied that the foreign nation will pay the fee before May 1, 1977; and repeals, effective March 1, 1977, the Northwest Atlantic Fisheries Act of 1950. H.J. Res. 240—Public Law 95-6, approved February 21, 1977. (VV)

Gives Congressional approval of the fishery agreements between the United States and Spain, Japan, South Korea, and the countries of the European Economic Community (Iceland, France, Italy, Luxembourg, the United Kingdom, Denmark, Belgium, West Germany, and the Netherlands); contains essentially the same provisions as H.J. Res. 240 (Public Law 95-240) to provide for an orderly implementation of foreign fishing within the 200mile fishery zone of the United States after March 1, 1977, including the 7-day period of comment by the Fishery Management Councils and the public with respect to applications for permits, the May 1 extension of time for the payment of fees and permit requirements, and waives the 60-day Congressional review period. H.R. 3753-Public Law 95-8, approved March 3, 1977. (VV)

GENERAL GOVERNMENT

GAO audits of IRS and ATF: Amends the General Accounting and Auditing Act of 1950 to provide that the General Accounting Office may conduct management and financial audits of the Internal Revenue Service and the Bureau of Alcohol, Tobacco, and Firearms; contains provisions to insure the confidentiality of information Congressional oversight and penalties for unauthorized disclosure; and requires the Comptroller General to submit to the Senate Finance and Governmental Affairs Committees, the House Ways and Means and Gov-ernment Operations Committees, and the Joint Committee on Taxation, every six months, the names and titles of GAO employees having access to tax returns and information; to submit as frequently as possible results of the audit; and to submit annually a report of his findings and recommendations which must also include the procedures established for protecting the confidentiality of tax return information and the scope and subject matter of the audit. S. 213-Passed Senate March 11, 1977. (VV)

Kennedy Center authorization: Increases from \$3.1 million to \$7.6 million the fiscal year 1977 authorization for the John F. Kennedy Center for the Performing Arts with the additional \$4.5 million to remain available until expended for the Secretary of the Interior, acting through the National Park Service, to correct leaks in the roof, terraces, kitchen, and, East Plaza Drive and the damage which has resulted from these leaks; and authorizes \$3.7 million for fiscal year 1978. S. 521—Passed Senate February 24, 1977; Passed House amended March 4, 1977; In conference. (VV)

Presidential reorganization authority: Extends for three years from the date of enactment, the authority of the President under chapter 9, title 5, U.S.C., to submit reorganization plans to Congress proposing the reorganization of agencies in the executive branch; expresses Congressional intent that the President provide appropriate means for public involvement in reorganization; requires that the President, on a continuing

basis, examine the organization of all agencies of the executive branch and determine what changes are necessary to accomplish the purpose of the statute;

Provides that reorganization plans may: create new agencies, transfer or consolidate the whole or part of agencies or their functions to other agencies, abolish all or part of the functions of an agency except any enforcement function or statutory program, change the name of an agency, authorize an agency official to delegate any of his functions, and provide that the head of an agency be an individual, commission or board with a fixed term not to exceed 4 years;

a fixed term not to exceed 4 years;
Requires that each plan be based upon a
Presidential finding stated in a message to
Congress that the proposed action is necessary to accomplish one or more of the purposes of the statute; requires that the message specify, with respect to each plan, the
reduction of or increase in expenditures
likely to result from the plan, as well as any
improvements in the effectiveness or efficiency of the government anticipated as a
result of the plan;

Prohibits the use of reorganization authority to: create a new executive department, abolish an executive department or an independent regulatory agency, abolish any function mandated by Congress through statutes, increase the term of an office beyond that provided by law, create new functions not authorized by pre-existing statutes, or continue a function beyond the period authorized by law:

ized by law; Requires the President to submit each plan, which must deal with only one logically consistent subject matter, to both Houses of Congress simultaneously for referral to the Senate Governmental Affairs Committee and the House Government Operations Committee; requires the Chairman of the respective committee to introduce a disapproval resolution whenever a reorganization plan is submitted to assure that there will be a resolution for the Committee to act on and to report either favorably or unfavorably a disapproval resolution for each proposed plan; provides that plans shall become law at the end of 60 calendar days of continuous session of the Congress or if specified, at a later date, unless either House passes a resolution of disapproval or prior to that time if both Houses defeat a approval resolution; requires the committees in both Houses to file recommendations on each plan with the full House within 45 days and provides, if the committee has not done so, the resolution will automatically be discharged from further consideration and placed on the calendar; specifies that no more than three reorganization plans may be pending in the Congress at any one time;

Allows the President to (1) amend a plan within the first 30 days after submission if neither committee has ordered reported a disapproval resolution or made any other recommendations on the plan, or (2) withdraw a plan at any time prior to the conclusion of the 60 day period;

Provides that, any member may move to proceed to consider a disapproval resolution once it has been reported or discharged; limits to 10 hours floor debate on a disapproval resolution and on appeals and motions made in connection therewith, and makes motions to postpone consideration or amend the resolution out of order;

Provides that suits brought against an agency affected by a reorganization plan, or regulations or other actions taken by an agency under a function affected by the plan shall not abate as a result of the plan, except in the case where the function is abolished; specifies that plans may provide for the transfer or other disposition of affected records, property, and personnel, and for the transfer of unexpended appropria-

tions if the funds will be used for their original purpose; and requires that unexpended funds revert to the U.S. Treasury. S. 626—Public Law 95-17, approved April 6, 1977. (40)

GOVERNMENT EMPLOYEES-FEDERAL OFFICIALS

Federal salary increases: Denies the October 1 cost-of-living increase to Members of Congress, the Supreme Court Justices and other members of the Judiciary, Cabinet officials, and top Executive personnel who just received the March 1 quadrennial pay increase under which salaries were increased as follows: Members of Congress from \$44,600 to \$57,500; Cabinet officers from \$63,000 to \$66,000; the Vice President, Speaker, and Chief Justice from \$65,000 to \$75,000; the President Pro Tempore and Majority and Minority Leaders from \$52,000 to \$65,000; circuit court judges from \$44,600 to \$57,500; district judges from \$42,000 to \$54,500; subcabinet assistants from \$44,600 to \$57,500: and other top Federal personnel from \$42,000 to \$52,000. S. 964-Passed Senate March 10,

Secret Service protection of former Federal officials: Authorizes the Secret Service to continue to furnish protection to certain former Federal officials (Secretaries Kissinger and Simon and Vice President Rockefeller) or members of their immediate families who received such protection immediately preceding January 20, 1977, if the President determines that they may be in significant danger, and provides that such protection shall continue for a period determined by the President but not beyond July 20, 1977, unless otherwise permitted by law. S.J. Res. 12—Public Law 95–1, approved January 19, 1977. (VV)

HOUSING

Supplemental housing authorizations: Authorizes additional funds for housing assistance for lower income Americans in fiscal year 1977; extends the riot insurance and crime insurance programs; and establishes a National Commission on Neighborhoods;

Increases, in title I, the authorization for section 8 rental assistance, the major housing program for lower income Americans, by \$378 million for a total of \$1,228,050,000; increases operating subsidy funds for public housing projects by \$19.6 million to pay for this winter's unexpectedly high heating costs; extends the contract period for new, privately developed section 8 housing from 20 to 30 years in order to attract more private financing; authorizes such appropriations as may be necessary for reimbursement of the FHA general insurance fund for losses on the sale of foreclosed properties from the FHA inventory; contains a \$10 million increase for a total of \$15 million for the HUD urban homesteading program as a means of attracting additional rehabilitation funds into neighborhoods and disposing of the HUD inventory of foreclosed properties: provides for a billion ceiling for losses incurred by the Federal Housing Administration; extends HUD's authority to write crime insurance and riot reinsurance policies through April 30, 1978, and authorizes continuation of policies in force before September 30, 1978, through April 30, 1981; and

Authorizes, in title II, \$1 million for the establishment of a National Commission on Neighborhoods to assess existing policies, laws and programs having an impact on neighborhoods and make recommendations regarding investment in city neighborhoods, community government participation, economically and socially diverse neighborhoods, rental housing, and rehabilitation of existing structures, among other issues. H.R. 3843—Passed House March 10, 1977; Passed Senate amended April 5, 1977; In conference. (VV)

INDIANS

American Indian Policy Review Commission: Extends from February 18, 1977, to May 18, 1977, the period of time in which the American Indian Policy Review Commission must submit its final report to the Congress and increases the authorization therefor from \$2.5 million to \$2.6 million. S.J. Res. 10—Public Law 95–5, approved February 17, 1977. (VV)

INTERNATIONAL

Abu Daoud: States as a sense of the Senate that the release by France of Abu Daoud, a known terrorist who is accused of having planned the murder of Olympic athletes in Munich in 1972, is harmful to the effort of the community of nations to stamp out international terrorism; further states that the United States should consult promptly with France and other friendly nations to seek ways to prevent a recurrence of a situation in which a terrorist leader is released from detention without facing criminal charges in a court of law; and directs the Secretary the Senate to provide a copy of this resolution to the Secretary of State for transmission to the Government of France. S. Res. 48-Senate agreed to January 26, 1977. (13)

Harp seal killings: Urges the Canadian Government to reassess its present policy of permitting the killing of newborn harp seals in Canadian waters which is considered by many citizens of the U.S. to be cruel and, if continued at the current high level, may cause the extinction of that species of seal. H. Con. Res. 142—Action complete April 6, 1977 (UV)

1977. (VV)

Portugal military assistance: Modifies the existing statutory limitations on the allocation of military assistance funds for fiscal year 1977 contained in section 504(a) (1) of the Foreign Assistance Act of 1961, as amended, to add Portugal to the list of eligible countries and specify that \$32.25 million be allocated to that country to upgrade its armed forces which were debilitated as a result of prolonged colonial wars in Africa. S. 489—Passed Senate March 15, 1977; passed House amended March 22, 1977; Senate agreed to House amendment with an amendment April 6 1977 (VV)

ment April 6, 1977. (VV)
Rhodesian chrome: Amends the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome by nullifying the effect of Section 203 (the so-called Byrd amendment) of the Armed Forces Appropriations Act of 1972. Public Law 92-156. which permitted the importation into the United States of chromium and other strateminerals from Rhodesia, despite mandatory U.N. sanctions against trade with that country which the United States supported by its vote in the United Nations Security Council and by Executive Order 11419; prohibits the importation into the United States of Rhodesian commodities and products as specified in that Executive Order, of July 29, 1968, as well as steel mill products containing Rhodesian chromium in any form: establishes an enforcement mechanism which requires a certificate of origin for these products confirming that they do not contain chromium from Rhodesia; and authorizes the President to suspend the act if he determines that it would encourage meaningful negotiations and further the peaceful transfer of government from minority to majority rule in Rhodesia., H.R. 1746-Public Law 95-12, approved March 18, 1977. (59)

Romanian earthquake: States as a sense of the Senate that the United States should join with other nations and international, public, and private organizations to assist the people of Romania following the earthquake which has just affected them; and expresses deepest sympathy to the victims and their families on behalf of the people of the United States. S. Con. Res. 12—Action complete March 17, 1977. (VV)

Romanian earthquake authorization: Authorizes \$20 million to the President for fiscal year 1977, to remain available until expended, for the relief and rehabilitation of refugees and other earthquake victims in Romania;

requires the President to transmit a report to the Foreign Relations Committees of the Senate and House 60 days after enactment and quarterly thereafter on the obligation of authorized funds; and states that nothing in this act shall be interpreted as endorsing any measure undertaken by the Government of Romania which would suppress human rights as defined in the Conference on Security and Co-operation in Europe (Helsinki Declaration) Final Act and the United Nations Declaration on Human Rights or as constituting a precedent for or commitment to provide development assistance to Romania and requires that the Romanian Government be so notified. H.R. 5717-Public , approved 1977. (VV)

Soviet expulsion of George A. Krimsky: States as the sense of the Senate that: (1) the Soviet expulsion of Associated Press reporter George A. Krimsky is contrary to the spirit of the Helsinki Declaration respecting the rights of journalists; (2) the decision serves only to obstruct the implementation of the free flow of information provisions contained in the Declaration; (3) the action only invites and justifies steps of a reciprocal nature by the U.S. Government; and (4) the U.S. and Soviet Governments should seek greater communication in this area to prevent similar events of a counterproductive nature from occurring in the future; and directs the Secretary of the Senate to transmit a copy of this resolution to the President for the Department of State to convey directly to General Secretary Leonid Brezhnev of the Central Committee of the Soviet Communist Party. S. Res. 81-Senate agreed to March 4, 1977. (VV)

Soviet freedom of emigration: Conveys to the Soviet Government the sustained interest of the American people regarding Soviet adherence to the Helsinki Declaration, including their pledge to facilitate freer movement of people, expedite the reunification of families, and uphold the general freedom to leave one's country. S. Con. Res. 7—Action complete March 22, 1977. (39)

Vietnam POW's and MIA's: Directs the President, as Commander in Chief of the Armed Forces, to require an accounting of all military personnel presently categorized on personnel rosters of the various branches of the U.S. Armed Forces as prisoner of war, missing in action, or killed in action in Southeast Asia; directs the President, by executive order, to require the Secretary of State to pursue enforcement of the Paris agreement of January 27, 1973; states that the Congress, having passed Public Law 88-408 authorizing the deployment of U.S. Armed Forces for the maintenance of international peace and security in Southeast Asia, recognize a corresponding duty and obligation to determine the fate of missing or unaccounted for Americans; requires that the President, through the Secretary of State, hold the Democratic Republic of Vietnam and the Provisional Revolutionary Government of the Republic of South Vietnam responsible to account for and provide information not otherwise available to satisfactorily dispose of the POW/MIA problem in accordance with the Paris agreement or seek alternatives that might resolve the question; and requires responsible officeholders in the executive and legislative branches to address the authority of their office toward a satisfactory resolution of the problem, make a public accounting, and remove any question as to the integrity of their function. S. Con. Res. 2—Senate agreed

to February 21, 1977. (VV)
States as a sense of the Congress that the honor of those Americans who upheld the dignity of the law and served in the U.S. Armed Forces should be reaffirmed and that the Government should do everything possible to address the problems of those who served during the Vietnam war; and urges that there be established, in view of the re-

cent issuance of a general pardon for U.S. draft evaders of the Vietnam war era, a Presidential Task Force on Missing in Action and Prisoners of War to propose courses of action to achieve the fullest possible accounting for all Americans listed in a missing status in Southeast Asia, including the return of remains, and to make recommendations concerning Federal policies relating to POW's and MIA's. S. Con. Res. 3—Senate agreed to February 21, 1977. (VV)

MEMORIALS, TRIBUTES AND MEDALS

Alex Haley: Honors and pays tribute to Alex Haley for his exceptional achievement in producing *Roots* and extends to him the highest praise of the Senate. S. Res. 112—Senate agreed to March 14, 1977. (VV)

Francis R. Valeo: Commends Francis R. Valeo for his long, faithful and exemplary service as an employee of the Senate and his ten years of service as Secretary of the Senate. S. Res. 133—Senate agreed to April 1, 1977. (VV)

Gerald R. Ford Building: Names the Federal building located at 110 Michigan Avenue, N.W., in Grand Rapids, Mich., the "Gerald R. Ford Building". S. 385—Passed Senate February 11, 1977. (VV)

Jaycees International Conference: Commends the "Old Sourdough Jaycees" of Anchorage, Alaska, the U.S. Jaycees, and the Jaycee International for bringing together Jaycee leaders around the world who have contributed to the betterment of mankind, S. Res. 137—Senate agreed to April 6, 1977. (VV)

Marian Anderson medal: Authorizes the President to award to Marian Anderson, in the name of the Congress, a gold medal with suitable emblems and inscriptions in recognition of her highly distinguished and impressive career; provides that bronze duplicates of the medal shall be coined and sold under regulations prescribed by the Secretary of the Treasury; and authorizes therefor \$2,500. H.J. Res. 132—Public Law 95-9, approved March 9, 1977. (VV)

Philip A. Hart, death of: Expresses the sorrow of the Senate over the death of Senator Philip A. Hart, of Michigan. S. Res. 15—Senate agreed to January 4, 1977. (VV)

President and Mrs. Ford: Congratulates and commends President and Mrs. Ford on their exemplary conduct as President and first lady and for their dedicated public service to the Nation during their entire career of public service. S. Res. 22—Senate agreed to January 10, 1977. (VV)

President Ford: Commends President Ford for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 38—Senate agreed to January 18, 1977.

President-elect Carter: Extends best wishes to President-elect Jimmy Carter and to all those who will serve in his administration. S. Res. 23—Senate agreed to January 10. 1977. (VV)

St. Patrick's Parish anniversary: Commemorates the people of St. Patrick's Parish, in Pottsville, Pennsylvania, who this year are celebrating the 150th anniversary of the founding of the parish. S. Res. 116—Senate agreed to March 17, 1977. (VV)

Vice President Rockefeller: Commends

Vice President Rockefeller: Commends Vice President Rockefeller for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 37—Senate agreed to January 18, 1977. (VV)

William O. Douglas: Dedicates the canal and towpath of the Chesapeake and Ohio Canal National Historical Park to Justice William O. Douglas; directs the Secretary of the Interior to provide the necessary identification to inform the public of the contributions of Justice Douglas and to erect

and maintain within the exterior boundaries of the Park an appropriate memorial; and authorizes such sums as necessary to carry out the act S. 776—Public Law 95-11, approved March 15, 1977. (VV)

NATURAL RESOURCES

Drought emergency authority: Provides temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought conditions affecting irrigated lands in the western States; authorizes the Secretary, acting through the Bureau of Reclamation and the Bureau of Indian Affairs, to; (1) study available means to augment, utilize, or conserve Federal reclamation and Indian irrigation projects water supplies and to undertake construction (which must be completed by November 30, 1977), management, and conservation activities to mitigate drought damage, (2) acquire water supplies by purchase from willing sellers and redistribute the water to users based upon priorities he determines, and (3) undertake evaluations and reconnaissance studies of potential facilities to mitigate the effects of a recurrence of a drought emergency and make recommendations to the President and Congress; provides that payment for water acquired from willing sellers be at negotiated prices; directs the Secretary to determine the priority of need in allocating the acquired or developed water; authorizes the Secretary to defer without penalty, the 1977 installment charge payments, including operation and maintenance costs, owed to the U.S. on Federal reclamation projects, with the costs to be added to the end of the repayment period which may be extended if necessary; requires that this program be coordinated, to the ex-tent practicable, with emergency and disaster relief operations conducted by other Federal agencies under existing provisions of law; requires the Secretary to report to Congress by March 1, 1978, on all expenditures made under this act; authorizes the Secretary to make interest-free five year loans to individual irrigators for construction, management and conservation activities or acquisition of water; authorizes \$100 million to carry out the water purchase and reallocation (water bank) program of which 15 percent shall be available to carry out other programs authorized by this act; and provides that up to 15 percent of fiscal 1977 funds available to Secretary for the Emergency Fund Act may be used for non-Federally financed irrigation projects, 5 percent for State Government drought emergency programs, and \$10 million for the purchase of water. S. 925— Public Law 95-, approved , 1977. (54)

Nominations

(Action by rollcall vote)

Griffin B. Bell, of Georgia, to be Attorney General: Nomination confirmed January 25, 1977. (10)

Joseph A. Califano, Jr., of the District of Columbia, to be Secretary of Health, Education, and Welfare: Nomination confirmed

January 24, 1977. (7)
Peter F. Flaherty, of Pennsylvania, to be Deputy Attorney General: Nomination con-

firmed April 5, 1977. (99)
Ray Marshall, of Texas, to be Secretary of
Labor: Nomination confirmed January 26,
1977. (12)

Andrew J. Young, of Georgia, to be U.S. Representative to the United Nations: Nomination confirmed January 26, 1977. (14)

Paul C. Warnke, of the District of Columbia, for rank of Ambassador for SALT negotiations and to be Director of the Arms Control and Disarmament Agency: Nominations confirmed March 9, 1977. (41 and 42)

SENATE

Commission on the Operation of the Senate: Extends for an additional 30 days, until

April 1, 1977, the Commission on the Operation of the Senate. S. Res. 93—Senate agreed to February 24, 1977. (VV)

Committee Reorganization: Amends the Standing Rules of the Senate to reorder and rationalize the jurisdictions of Senate committees, effective February 11, 1977, among 15 standing committees and 6 other special, select or joint committees: abolishes the Aeronautical and Space Sciences Committee and transfers its jurisdiction to a newly created Committee on Commerce, Science, and Transportation; abolishes the District of Columbia Committee and the Committee on Post Office and Civil Service and transfers their jurisdictions to a newly created Committee on Governmental Affairs; transfers the jurisdiction of the former Interior Committee to an Energy and Natural Resources Committee; transfers the jurisdiction of the former Public Works Committee into a new Environment and Public Works Committee; transfers the jurisdiction of the former Labor and Public Welfare Committee to a new Human Resources Committee; continues the existence of the Special Committee on Aging with membership reduced to 9 in the next Congress; continues the existence of the Select Committee on Nutrition and Human Needs until December 31, 1977, after which its jurisdiction will be transferred to the Committee on Agriculture, Nutrition and Forestry; establishes a temporary Select Committee on Indian Affairs to consider all legislation relating to Indians for the duration of the 95th Congress after which its jurisdiction will be transferred to the Human Resources Committee:

Limits the number of committee and subcommittee memberships a Senator can hold generally to two major or class "A" committees and one class "B" committee and eight subcommittees thereof: prohibits committees from establishing subunits other than subcommittees; permits the Majority and Minority Leaders to temporarily increase the sizes of committees to ensure majority party control: allows Senators to serve on joint committees where such service is required to be from members of a committee on which such Senator serves; prohibits Rules Committee members from serving on any joint committee unless the Senate members of such committees are required by law to be from the Rules Committee; exempts members of the Budget Committee during the 94th Congress from certain assignment limitations during the 95th Congress; continues grandfather rights for Senators who are serving on three standing committees as a result of an exemption in the Legislative Reorganization Act of 1970 to continue to do so during the 95th Congress; allows the chairmen ranking minority members of the Post Office and Civil Service Committee and the District of Columbia Committee to serve on the Governmental Affairs Committee and two other committees of the same class, as long as their service on Governmental Affairs remains continuous; prohibits a Senator from serving as Chairman of more than one standing, select, special, or joint committee unless the jurisdiction is directly related to that of the standing committee he chairs; prohibits Senators from serving as chairman of more than one subcommittee of each standing, select, special or joint committee; limits members to two class A committee or subcommittee chairmanships and one class B committee or subcommittee chairmanship, effective at the beginning of the 96th Congress; requires that not later than July 1, 1977, the appropriate standing committees shall report gislation terminating the statutory authority of the Joint Committees on Atomic Energy, on Congressional Operations and on Defense Production; requires that the appropriate standing committees report recommendations not later than July 1, 1977, with

respect to the Joint Committees on the Library and on Printing; allows Senators to serve on joint committees considered for termination pending final disposition of the issue:

Provides for sequential and joint referral of bills that cross jurisdictional lines based on motions by the Majority and Minority Leaders, instead of by unanimous consent; provides for a computerized schedule of committee meetings by the Rules Committee; permits committees to meet without special leave until the conclusion of the first 2 hours of a meeting of the Senate or 2:00 p.m., except for the Appropriations and Budget Committees which may meet at any time without special consent; requires that morning meetings of committees and subcommittees be scheduled for one or both of two periods, one ending at 11:00 a.m. and a second beginning at 11:00 /a.m. and ending at 2:00 p.m.; provides for continuous review of the committee system by the Rules Committee in consultation with the Majority and Minority Leaders; prohibits consideration of committee amendments to bills when the amendments are not in the jurisdiction of the committee proposing them; requires committee reports to contain an evaluation of the regulatory impact which would be incurred by individuals and businesses in carrying out the provisions of the bill; provides for the transition of staff from abolished or realigned committees to the new committees and provides for salary and tenure of committee staff during a transition period; provides that committee staff reflect the relative numbers of majority and minority members and that one-third of the committee staffing funds be allocated to the minority members for compensation of minority staff; provides that such adjustment be made over a fouryear period beginning July 1, 1977, with not less than one-half being made in 2 years; provides for funding of increases in the expenditures of new committees resulting from this resolution; incorporates provisions of S. Res. 60 of the 94th Congress relating to individuals appointed by Senators to assist them with committee work; provides for the rereferral of measures according to the realigned jurisdictions; and provides that legal references to old committees are to be construed as referring to their successors. S. Res. -Senate agreed to February 4, 1977. (36)

Deputy President pro tempore: Establishes, effective January 5, 1977, the Office of Deputy President Pro Tempore which shall be held by any Senator who is a former President or Vice President of the United States; authorizes the President Pro Tempore and the Deputy President Pro Tempore each to appoint an administrative assistant, a legislative assistant and an executive secretary; authorizes the Sergeant at Arms to provide and maintain an automobile for use by the Deputy President Pro Tempore and to employ a driver-messenger; and authorizes the Secretaries of the Conferences of the Majority and Minority each to appoint two staff assistants in each office. S. Res. 17-Senate agreed to January 10, 1977. (VV)

Names Hubert H. Humphrey of Minnesota Deputy President Pro Tempore of the Senate, effective January 5, 1977. S. Res. 27—Senate agreed to January 11, 1977. (VV)

Senate ethics code: Amends the Standing Rules of the Senate to create a Code of Official Conduct; amends Senate Resolution 338, the original resolution establishing the Select Committee on Ethics, to provide for additional procedures for enforcing the new Code as well as other laws and rules of the Senate; and directs other Senate committees to study certain matters related to this resolution;

Public Financial Discolsure: Requires Sen-

ators, candidates for the Senate, officers and employees of the Senate earning in excess of \$25,000 per year to file a report listing their earned income and the sources and categories of value of their income, other than earned income, and all other interests, assets, and holdings held for the purposes of investment or income production;

Gifts: Prohibits knowingly accepting a gift or gifts having an aggregate value of over \$100 during a year from any individual or organization defined as having a "direct interest in legislation;

Outside Earned Income: Limits outside earned income of a Senator, officer or employee earning over \$35,000 to 15 percent of the person's salary; limits each honorarium to \$1,000 for Senators and to \$300 for officers and employees; allows Senators or staff to accept honoraria up to \$25,000 if immediately donated to a tax-exempt charity;

Conflict of Interest: Bars the use of one's official position to introduce or aid the progress of legislation the principal purpose of which furthers one's own financial interest; allows Members or staff who earn over \$25, 000 from providing professional services for compensation if not affiliated with a firm or association and if their work is not carried out during regular Senate office hours; directs committee employees earning over \$25,-000 to divest themselves of any holdings which may be directly affected by the actions of the Committee for which they work unless permitted by their supervisor and the Ethics Committee; prohibits Senators from lobbying the Senate for one year after leaving the Senate; applies a similar prohibition to employees lobbying the Committee or office for which they work;

Unofficial Office Accounts: Abolishes unofficial office accounts, those accounts defined as not including personal funds of a member, official funds, political funds and reimbursements:

Foreign Travel: Prohibits "lame duck" travel by a defeated or retiring member; prohibits receipt of counterpart funds where there has been reimbursement from another source; restricts per diem allowance to food, lodging and related expenses and places the responsibility on the person receiving the per diem to return any unused funds;

Franking Privilege—Radio-TV Studio—Senate Computer: Prohibits mass mailings and use of the radio-TV studios within 60 days of an election; requires the use of official funds to purchase paper, to print, and prepare mass mailings under the frank; requires a Senator to register mass mailings annually for public inspection; prohibits the use of the Senate computer to store names identified as campaign workers;

Political Activity by Officers and Employees: Restates the present ban on staff soliciting or receiving campaign contributions; allows a Senator to name one assistant each in his Washington and district office to receive and handle campaign funds;

Discriminatory Employment Practices: Prohibits discrimination on the basis of race, color, religion, sex, national origin, or state of physical handicap in employment practices in the Senate;

Enforcement: Sets forth procedures for the Select Committee on Ethics in investigating complaints of violation of the Code and enforcing its provisions;

Further studies: Requires the Appropriations Committee to report within 120 days regarding an adjustment of official allowances; requires the Finance Committee to report within 120 days on the tax status of funds raised and expended to defray ordinary and necessary expenses of Members; directs the Rules Committee (1) to report within 120 days on the desirability of promulgating rules providing for: (a) periodic

audits by GAO of all committee and office accounts; (b) a centralized recordkeeping system of accounts, allowances, expenditures and travel expenses of all committees and offices; (c) suggested accounting procedures for committee and office accounts; and (d) public disclosure and availability of information on the accounts of all committees and offices in a form which segregates the allowances and expenses of each committee and office; (2) to report within 120 days on the desirability of requiring that only official Senate funds may be used to pay for any expenses incurred by a Senator in the use of the radio-TV studios; and (3) to study laws relating to contributions made by officers or employees as well as on proposals to prohibit the misuse of official staff in election campaigns and report thereon within 180 days; requires the Governmental Affairs Committee to report (1) within 180 days regarding employee discrimination complaints and the desirability of establishing rules requiring "blind trusts" by members, officers and employees of Senate and (2) within 120 days regarding the use of simplified form of address for franked mail; and directs the Foreign Relations Committee to report in 90 days on the problem of travel, lodging and other related expenses provided members and staff paid by foreign governments where it is not possible to procure transportation, lodging or other related services or to reimburse the foreign government for those purposes. S. Res. 110-Senate agreed to April 1, 1977 (94).

Special committee on official conduct: Establishes a temporary Special Committee on Official Conduct composed of fifteen members appointed by the President pro tem-pore of the Senate (eight appointed upon the recommendation of the majority leader and seven upon the recommendation of the majority leader and seven upon the recommendation of the minority leader, with the chairman designated by the majority leader and the vice chairman by the minority members) to conduct a complete study of all matters relating to standards of conduct of Members, officers and employees of the Senate in the performance of their official duties including standards for: (1) annual public disclosure of income, assets, debts, gifts, and other financial items; (2) restrictions on, or the elimination of, outside income from honoraria, legal fees, gifts and other sources of financial or in-kind remuneration; (3) conflicts of interest arising out of investments in securities, commodities, real estate, or other sources; (4) office accounts, and excess campaign contributions; (5) Senate travel; and (6) engaging in business, professional activities, employment, or other remunerative activities, so as to avoid any conflict with the conscientious performance of official duties; requires the Committee to submit a report of its findings by March 1, 1977, together with a resolution setting forth, by way of proposed amendments to the Standing Rules of the Senate, a Code of Official Conduct for Members, officers, and commit are out of order;

Provides that on March 1, 1977, after the conclusion of routine morning business, the resolution shall become the pending business of the Senate under a 50 hour time limitation with a 2 hour time limitation on amendments thereto and 1 hour on amendments in the second degree, debatable motions or appeals; provides that amendments not germane to the bill will not be received; states that motions to limit debate are not debatable and that motions to table or recommit are out of order:

Authorizes the Committee to utilize the facilities and services of the staff of any other committee and provides that expenses of the Committee shall be paid from the contingent fund of the Senate. S. Res. 36—Senate agreed to January 18, 1977. NOTE: (On March 3, 1977, the Senate, by unanimous consent, extended until midnight, March 7, 1977, the time for the Committee to file its report and provided that the leadership may call the resolution up on March 8, 1977, or any time thereafter.) (VV)

TAXATION

Sick pay exclusion: Delays for one year, to taxable years beginning after December 31, 1976, the changes made by the Tax Reform Act of 1976 with regard to the exclusion of "sick pay" from income; makes a similar delay of the effective date of the provisions regarding the tax treatment of income

earned abroad by U.S. citizens; modifies the withholding requirement enacted in the 1976 Tax Reform Act on proceeds of wagers placed in parimutuel pools with respect to horse races, dog races, and Jai Alai requiring a 20 percent withholding tax on winnings of \$1000 or more only if the odds are 300 to one or more; extends for one year the provisions of the Internal Revenue Code to allow State legislators to treat their place of residence within their legislative district as their tax home for purposes of computing the deduction for living expenses; and waives the interest and penalties with regard to certain errors regarding underpayments of estimated tax and withholding that might be made in the tax returns for 1976. H.R. 1828—Passed House April 4, 1977; Passed

Senate April 6, 1977. House agreed to Senate amendments with amendment which omitted the provisions regarding tax treatment of income earned abroad by U.S. citizens April 6, 1977. (100)

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a memorandum entitled "Status of Major Messages and Communications of the President, 95th Congress, First Session," which has been prepared by the Senate Democratic Policy Committee, be printed in the Record.

There being no objection, the memorandum was ordered to be printed in the Record, as follows:

Mr. BAKER. Mr. President, I shall not prolong the proceedings today except to say that I, too, feel that the conduct of the Senate so far has produced significant and important legislative results, and once again to reiterate my remarks on yesterday and on previous days that I commend the distinguished majority leader for his diligence to the calendar and to the work of the Senate, and to observe that the business of the Senate is virtually complete, as reflected by the calendar of business and the executive calendar at the desk of every Senator.

I think that is a truly remarkable achievement at this point in the session.

Mr. ROBERT C. BYRD. Mr. President, thank the distinguished minority leader. May I take this moment to express my deep gratitude to him for the fine spirit of cooperation that he has consistently manifested toward the majority leader throughout the days of this session. I look forward to our continuing work together, and wish to express the hope, as we leave for the nonlegislative day period of Easter, that the minority leader and his family will have a very pleasant Easter holiday.

Mr. BAKER. I reciprocate the Senator's feelings, and I am sure that we will return refreshed from that time.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene on Monday, April 18, at 12 meridian. After the two leaders or their designees are recognized under the standing order there will be a period for the transaction of routine morning business of not to exceed 30 minutes with statements limited therein to 10 minutes each and with no resolutions coming over under the rule, after which the Senate will take up the tax rebate bill H.R. 3477. Rollcall votes could occur during the afternoon in relation thereto and in relation to conference reports or other matters which could come up.

RECESS UNTIL MONDAY, APRIL 18, 1977

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the provisions of House Concurrent Resolution 186, that the Senate stand in recess until the hour of 12 o'clock noon, Monday, April 18, in this year of our Lord 1977.

The motion was agreed to; and at 3:41 p.m. the Senate recessed until Monday, April 18, 1977, at 12 meridian.

NOMINATIONS

Executive nominations received by the Senate April 7, 1977:

GENERAL SERVICES ADMINISTRATION

Jay Solomon, of Tennessee, to be Administrator of General Services, vice Jack M. Eckerd, resigned.

> GOVERNMENT NATIONAL MORTGAGE ASSOCIATION

John Howard Dalton, of Texas, to be President, Government National Mortgage Association, vice David M. deWilde, resigning.

NEW COMMUNITY DEVELOPMENT CORPORATION

William J. White, of Massachusetts, to be member of the board of directors of the New Community Development Corporation, vice Otto George Stolz, resigned.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Ruth Prokop, of the District of Columbia, to be General Counsel of the Department of Housing and Urban Development, vice Robert R. Elliott, resigned.

DEPARTMENT OF DEFENSE

Alan J. Gibbs, of New Jersey, to be an Assistant Secretary of the Army, vice Harold L. Brownman, resigned.

FEDERAL ENERGY ADMINISTRATION

Leslie J. Goldman, of Illinois, to be an Assistant Administrator of the Federal Energy Administration, vice William G. Rosenberg, resigned.

DEPARTMENT OF JUSTICE

George J. Mitchell, of Maine, to be U.S. attorney for the district of Maine for the 4 years vice Peter Mills, term expired.

DEPARTMENT OF STATE

W. Tapley Bennett, Jr., of Georgia, to be the U.S. Permanent Representative on the Council of the North Atlantic Treaty Organization, with the rank and status of Ambassador Extraordinary and Plenipotenti-

Philip Henry Alston, Jr., of Georgia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Australia.

Anne Cox Chambers, of Georgia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Belgium.

Kingman Brewster, Jr., of Connecticut, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the United Kingdom of Great Britain and Northern Ireland.

Robert F. Goheen, of New Jersey, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to India.

William H. Sullivan, of Rhode Island, a Foreign Service officer of the class of Career Minister, to be Ambassador Extraordinary and Plenipotentiary of the United States

of America to Iran. Samuel W. Lewis, of Texas, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Israel.

Michael J. Mansfield, of Montana, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Japan.

Wilbert John Le Melle, of New York, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Kenva.

Wilbert John Le Melle, of New York, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Seychelles.

George S. Vest, of Maryland, a Foreign Service officer of the class of Career Minister, to be Ambassador Extraordinary and Pleni-potentiary of the United States of America to Pakistan.

IMMIGRATION AND NATURALIZATION SERVICE

Leonel J. Castillo, of Texas, to be Commissioner of Immigration and Naturalization vice Leonard F. Chapman, Jr., resigning.

PUBLIC HEALTH SERVICE

The following candidates for personnel in the Regular Corps of the Public Health Service subject to qualifications therefor as provided by law and regulations:

1. For permanent promotion:

To be medical director

Maurice B. Burg Lawrence F. Jack Butler Dietlein, Jr. Vivian Chang Eugene J. Gangarosa Herschel C. Gore, Jr. William R. Martin Peter Gouras Robert I. Gregerman Andrew F. Horne David W. Johnson Emery A. Johnson Michael W. Justice

Peter D. Olch Carroll B. Quinlan Jack C. Robertson Gordon S. Siegel Robert W. Weiger John R. Trautman

To be senior assistant health services officer Jon P. Yeagley Kenneth R. Bahm Laurence W. Grossman

CONFIRMATIONS

Executive nomination confirmed by the Senate April 7, 1977:

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Harry K. Schwartz of Pennsylvania, to be an Assistant Secretary of Housing and Urban Development.

Donna Edna Shalala, of New York, to be an Assistant Secretary of Housing and Urban Development.

Geno Charles Baroni, of the District of Columbia, to be an Assistant Secretary of Housing and Urban Development.

SECURITIES AND EXCHANGE COMMISSION

Harold Marvin Williams, of California, to be a Member of the Securities and Exchange Commission for the remainder of the term expiring June 5, 1977.

Harold Marvin Williams, of California, to be a Member of the Securities and Exchange Commission for the term expiring June 5,

The above nominations were approved subject to the nominee's commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

MR. HASTINGS IS NEW SECRETARY-TREASURER OF NATIONAL ASSO-CIATION

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. CHAPPELL. Mr. Speaker, rural electrification has exerted a vital influence in the development of Florida, and now Florida is making an important contribution to the future of rural electrification throughout America.

I refer to the new leadership my district and Florida is providing in the national organization of rural electric utilities. The newly elected secretary-treasurer of the National Rural Electric Cooperative Association is Mr. Angus S. Hastings whose farming-ranching operations are headquarters in the Fourth Congressional District at Fort McCoy in Marion County.

Over the years, Mr. Hastings has devoted a large amount of his time and energy to rural electrification work in our State and Nation. He was elected as a trustee of Clay Electric Co-op, Keystone Heights, in 1965 and became vice president of the co-op in 1973. Also in 1973, he became vice president of the statewide association of rural electric systems, the Florida Electric Co-op Associations, and was elected by the Florida systems to represent them, beginning in 1974, on the board of directors of the national association. He has been serving as chairman of the national board's government relations committee.

This great American is well known in Florida for his Masonic activities. He is Knight Commander of the Court of Honor, Scottish Rite, and last year was senior grand stewart of the Grand Lodge of Florida. He is a member and past master of Marston Lodge No. 49, Fort McCoy. He has served as a district deputy grand master and president of the Ocala Shrine Club.

As an officer of the National Rural Electric Cooperative Association, Mr. Hastings has responsibilities involving more than 1,000 rural electric systems participating in the rural electrification program in 46 States. These systems own and operate more than 4 out of every 10 miles of electricity-distribution line in the Nation.

Florida alone has 18 such systems. While 25 States have more systems, Florida's electric co-ops deliver more electricity to their consumer members than do those of all but 11 other States. Thus, in kilowatt hours of electricity delivered, the Florida systems rank in the top one-fourth of the States.

This is one indicator of the importance to Florida of rural electrification, and reflects the vital role its leadership plays as manifest in Mr. Hastings' contributions.

Florida is happy to be able to look bevond its own borders and provide inspirational national leadership in furtherance of rural electric service throughout the Nation.

It is unselfish and dedicated citizens such as Angus Hastings who have made our Nation the greatest in the world. We congratulate him and wish him well in meeting his new responsibilities as secretary-treasurer of the National Rural Electric Cooperative Association.

VOLUNTEERS OR DRAFTEES

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. STEIGER, Mr. Speaker, on March 15, I placed into the Extensions of Remarks an article from the Denver Post summarizing comments made by Maj. Gen. DeWitt Smith, Jr., commandant of the U.S. Army War College, at the Civilian-Military Institute's First National Symposium, held recently at the Air Force Academy.

General Smith was quoted by the Denver Post as saying today's military "is far better" than the conscripted force of World War II. Since placing that article in the RECORD, I have gotten a transcript of General Smith's remarks, and an editorial he wrote for the Carlisle, Pa., Sentinel on March 19. The editorial and excerpts from his speech bear thoughtful consideration by all Members of Congress.

General Smith acknowledges that his initial private reaction to the volunteer armed force proposal was negative.

By now-

He says in his editorial-

I am persuaded that my early skepticism was unwarranted, and the heavy criticism of some others unjustified.

He notes questions of quality and discipline that have been raised and responds thusly:

The quality, insofar as we can measure it, is better than it was in the great Army I accompanied to Normandy long ago. The motivation is better than any other peacetime force of which I am aware. And the discipline in today's Army is far better than it has been in many years.

The general told those attending the Air Force Academy conference that while he is prepared to support whatever type of forces the people decide on, he has come to the private conclusion that—

The ultimate democratic act is to volunteer. To draft is coercive and, in actual practice, it has also proved to be inequitable. Except in an extremity, when large numbers would clearly be needed, it seems to me that compulsory public service is an alien instrument within a free land.

There is little I can add to General Smith's superbly stated thoughts. His experience and his present position give him an excellent perspective to evaluate today's volunteer force in comparison to its draft-induced counterpart. I commend his comments to the attention of all who read the RECORD:

[From the Carlisle (Pa.) Sentinel, Mar. 19,

VOLUNTEERS OR DRAFTEES

The issues related to volunteer armed forces have suffered more from heat than they have benefited from light in recent times. These are issues related to the very nature of our society. In differing ways, they touch the lives of nearly all citizens. They affect the wallet, and bear directly upon the nature, quality and competence of our armed forces. Issues this fundamental call for factual and dispassionate analysis.

The determination of which course we shall follow is the proper business of American citizens and the responsibility of civilian leaders.

My initial private reaction to the volunteer armed force proposal was negative. I believe we all share a responsibility for both the welfare and the security of America, and I wished to see this responsibility widely shared. I was also concerned that volunteer forces might drift away from the rest of society, be less representative, and be less attuned to its fundamental values. Lastly, I was not certain that we could attract the numbers and quality of people which the more complex forces of today require, and which our country deserves to have representing it.

Others added the concerns of cost, discipline, motivation and competence. Some even equated volunteers with mercenaries, predicted that volunteers would be dangerously responsive to unprincipled civilian leadership, or become an allen force in our midst.

By now, I am persuaded that my early skepticism was unwarranted, and the heavy criticism of some others unjustified. While not flawless, the volunteer forces work—work well, and perhaps better than draftee forces.

They are of good quality, suit their present purpose, and, with certain caveats, are numerically sufficient except for times of extended, major emergency. In light of presentday facts and experience, my necessarily summary conclusions concerning volunteer armed forces are these:

The ultimate democratic act is to volunteer, to draft is coercive. Both civilian and military responsibility are best shouldered voluntarily in a free society—compulsory public service is an alien in a free land.

To equate "volunteers" with "mercenaries" is to insult the decent and patriotic people serving our armed forces voluntarily today. These two words are antonyms, not synonyms!

The volunteer forces are widely representative of America. They come from every state, nearly every school, and from a broad cross cut of the diverse economic, ethnic, social and regional segments of American society. They are not precisely representative. There are somewhat fewer college educated people the enlisted ranks, but then none of those from the lower mental categories, or those having poor behavior records are eligible for entry. They are not precisely reprentative in point-to-point ratio to our population, but then neither is our House of Representatives, nor the press, nor the clergy nor any other group. And who, in a free society, is to establish the quotas to make any institution so?

The active forces have acquired "the numbers" most of the time. So have they acquired the requisite "quality." Such problems as now exist are curable if recruiting and retention efforts are adequately funded. The reserve forces pose a more serious problem and special programs will be necessary to support them. This is perhaps the critical issue.

Armed forces do cost money; so do life insurance programs. But the key point is that they cost money whether volunteer or draftee. Most young people have responsibilities or are married. We should not try to buy them "on the cheap." It is treating those in the military as most other citizens are treated, plus inflation, which have raised costs. We are, in a sense, paying for some 190 years of previous pay inequitire.

years of previous pay inequity.

Finally, the questions of "quality" and discipline. The quality, insofar as we can measure it, is better than it was in the great Army I accompanied to Normandy long ago. The motivation is better than any other peacetime force of which I am aware. And the discipline in today's Army is far better than it has been in many years.

There remain substantial questions. The possible impact of full-employment economy on recruiting. The numbers of reserves. The ability to gear-up rapidly should a major emergency arise. But these are problems which public-spirited people, working together can solve.

I make no plea for any special type of military forces. I do believe they should be the concern of all citizens. And the issues related to them deserve open, factual and informed consideration.

EXCERPTS OF REMARKS BY MAJ. GEN. DEWITT C. SMITH, JR., COMMANDANT, U.S. ARMY WAR COLLEGE, AT THE FIRST NATIONAL SYMPOSIUM OF THE CIVILIAN-MILITARY INSTITUTE, COLORADO SPRINGS, FEBRUARY 12, 1977

Perhaps most of all today, we have old fears intruding into the present, old prejudices ignoring present reality when the volunteer armed forces are discussed. Substantial problems remain in this area: the possible impact of a full-employment economy on recruiting; how to acquire sufficient volunteers for the reserve components; the numerical adequacy of forces to meet major emergencies; and the degree to which support will be provided to assure recruitment

and retention. But, while addressing them, we should not also have to face unfounded criticism and non-facts which have been repeated so often they are assuming a self-sustaining momentum. There also needs to be a clearing of the philosophical air.

For instance, to equate "volunteers" "mercenaries," as some do, is not only insulting to those in service but it begs the English language as well. These words are antonyms, not synonyms, in terms of both spirit and dictionary. Another example is the new found infatuation of some with the illiberal concepts of a draft or universal service. While I am prepared to give affirmative professional support to whatever type of forces the people decide upon, I have come to the private conclusion that the ultimate democratic act is to volunteer. To draft is coercive and, in actual practice, it has also proved to be inequitable. Except in an extremity, when large numbers would clearly be needed, it seems to me that compulsory public service is an alien instrument within a free land.

That, however, is a personal point of view or philosophy. There are some impersonal facts which bear emphasis because the nonfacts on these issues have acquired such fashionable currency.

One concerns the quality of the volunteer Army. While the quality requires constant working at, and constant support, it is better than that of any Army I have known. In speaking of quality, I include such measures as mental levels, education, physical condition, civilian records, trainability and discipline. And I speak as a two-time private of Canadian and American infantry who, like all middle-aged men, might like to think that yesterday was better. It wasn't. Rose-colored glasses just make it seem so.

Another issue concerns the composition of today's volunteer Army. Contrary to the fashionable cliché, it is widely representative of America. The representation is not in precise, point-to-point ratio, but neither is it so in any other institution-the Congress, the Civil Service, the press or the professions, for instance. The people in this Army stem from our society, and come from all economic and social and regional segments in reasonable proportion. They are slightly unbalanced in ethnic composition, but that is because the Army truly offers equal opportunity. Our people are not static, remote, or in any sense unusually susceptible to misleading by arrogant civilian authority. They are with the rest of America; they "go home again." Moreover, who, in a free society, is to establish the quotas to compel any institution to be exactly "representative"? Is anyone prepared to say that black is bad and white is good? Certainly I am not; it's not true!

Another question, that of cost, is an important factor for us all to consider. But the conventional wisdom, repeated ad nauseum, is that it's the voluntary nature of our forces which makes the costs of people so high. That, I think, is largely false or at least misleading. The "personnel costs" are up because, in a sense, we are paying an overdue bill for some 190 years of inequity. For that long, we bought servicemen and women on the cheap. Now, belatedly, we are trying to measure rough comparability with other work in our society, and to pay and support our military people comparably. Additionally, we include in our present "personnel costs many of the debts incurred in the past as well as substantial costs which could be charged to other agencies. Armed forces do cost money; so does life insurance. People especially are costly, but people are our primary resource, our main investment in na-tional security. I believe that there are changes in some of our systems which good conscience, good management, and changed circumstance dictate. But the key fact remains that armed forces are a costly necessity, and they will be costly whether draftee or volunteer.

Lastly, with respect to volunteer forces, one often hears of alleged indiscipline. That is simply untrue. The disciplinary record of the Army today, for instance, is far better than that of the year 1944 when an historic army entered Normandy. A disciplined military is, of course, absolutely essential in a free society. The Army today is better disciplined than any I have known, and that should be a source of national satisfaction rather than a target for misinformation.

Those, then, are some examples of attitudes and issues on which present reality casts brighter light than was anticipated in the fears of yesteryear. My hope is that, whatever the issues we address in the days to we will address them in present perspective and from a platform of established

empirical evidence.

These successes in avoiding or overcoming earlier fears are really latter-day examples of what, in a larger and historical sense, I choose to call a democratic success story. This is a story too little understood, and too seldom told. And it is a success for which all segments of America can take credit. I speak of the success story of the American military, an institution not without warts, but an institution which, for 200 years and more, has remained loyally and effectively within the constitutional framework wisely devised by our forefathers. I know of no full parallel for this in any other land.

We have had no "man on horseback," no "garrison state," no militarization of society. Rather, we have had a military which has protected rather than suppressed the people, and has given equally scrupulous attention to safeguarding individual liberties and col-

lective security.

Americans in the volunteer armed forces stem from the society they serve. They share its values and aspirations. Theirs is the same transcendent vision of a free land of free people. Their purposes are the nation's pur-

Especially significant, the leadership of the American military is also broadly representative and in touch with the country. It stems from no single school, no one region, no single social or economic segment, no one ethnic source-and it holds no single point of view. Moreover, it is schooled in the wise and responsible use of military power, within a constitutional framework, and under proper civilian authority. American military officers have been, and remain, advisors on the use of power but not advocates of its use.

This is a success story of, and for, all Americans; it has been an important element in the progress the American people have made in realizing their initial dream.

INTRODUCTION OF LEGISLATION TO PROVIDE CONGRESSIONAL AUTHORIZATION OF CUSTOMS SERVICE APPROPRIATIONS

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVE 3 Wednesday, April 6, 1977

Mr. VANIK. Mr. Speaker, last Thursday, March 31, Congressman Jim Jones of Oklahoma, and myself introduced legislation to provide for annual authorizations for appropriations to the U.S. Customs Service beginning fiscal year 1980. The bill would allow a 2-year authorization, thus insuring that the Congress reviews, at least every other year, the operations of the Service on an indepth basis.

I am introducing this legislation because I believe it can be a useful step toward zero base budgeting-ZBB-for one of the oldest line agencies in the Federal establishment. Obviously, ZBB and "sunset laws" are impractical for a major revenue collecting and border protecttion agency such as Customs. But, the passage of authorization legislation will bring a new element of review and oversight to an agency whose rules and regulations have all too often escaped congressional review.

As the new chairman of the Ways and Means Trade Subcommittee, I have just begun my study of the Customs Service. It is already clear, however, that some areas of the Service need close examination. Among the questions which a regular authorization could help resolve are such issues as:

How many imports are really examined?

How accurate are customs statistics? What variations occur in classification and valuation among ports?

What variations occur in the imposi-

tion of penalty provisions?

Does the level of service vary from port to port, causing inconvenience to some shippers and travelers while those in other regions receive immediate service?

What is the level of cooperation between Customs and other agencies concerned with international trade in areas such as agriculture, the control of dangerous drugs, firearms, explosives, and so forth?

The introduction and passage of this authorization legislation will serve as a discipline to the Congress to insure that we review on a regular basis for the full operations of this agency which collects over \$5 billion in revenue annually and which receives an appropriation of nearly \$400 million a year for operating ex-

The introduction of this legislation is just part of a major effort being made by the Trade Subcommittee to review Customs administration and improve the basic laws governing the operation of the Customs Service.

NATIONAL COMMISSION ON SOCIAL SECURITY

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. MOAKLEY. Mr. Speaker, I rise to support Congressman Levitas' bill on social security reform, because I see real trouble in the near future with respect to our present system. In 1975, we paid out \$1.5 billion more than we took in on social security payments. According to estimates made this past spring, in 1976 we will have paid out \$4.4 billion more than we received. In 1978, that figure jumps to \$5.1 billion, and in 1979, it is estimated we hit \$6 billion. At this pace, our trust funds will soon be depleted. We cannot continue to support our national disability, survivorship, and retirement programs when our expenditures exceed our revenues by such enormous amounts. Something must be done to supplement those funds.

Yet the solution to this dilemma strikes as a cure worse than the disease, when increasingly high taxes are proposed to fill the monetary gap. Already, 5.85 percent of every paycheck up to the first \$16,500 of income goes to the coffers of the Social Security Administration, with very few exceptions permitted. To raise this percentage, or to increase other taxes, is to violate President-elect Carter's conception of the tax-relief the American people actually require at this time. But what are we to do, then, about the continuing depletion of social security trust funds? This is a question affecting Americans in all walks of life.

The distinguished gentleman from Georgia directly addresses the problem in his bill calling for a National Commission on Social Security. This Commission of nine private citizens, free of past social security entanglements, would explore the plight of trust fund depletion in both its short- and long-range aspects. First, it would be required to make a series of reports and recommendations to solve pressing financial problems after only an interim period. This measure would provide us with more time to avert the pending monetary collapse of the

social security program.

Second, the Commission would gather data and impressions from across the country in order to evaluate the present social security system and to formulate suggestions for appropriate changes. A final report gaging fiscal adequacy of the program, covert inequities or discriminations inherent within the payment or compensation plans, and possible alternatives to the system to allow greater personalization, less mandatory participation and perhaps different means of revenue and collection, would different be due at the end of 1981. We could then begin direct, long-term revision of the national program.

Our social security system is malfunctioning, and we need to overhaul the works before we get in serious trouble. Congressman Levitas proposes to investigate the problem thoroughly, and I, for

one, heartily support his efforts.

WHAT THE HATCH ACT MEANS

HON. JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. ERLENBORN. Mr. Speaker, I wish to share with my colleagues the following constituent letter concerning the proposal to remove from the Hatch Act the

protection of Federal employees from political pressure.

This articulate letter, by Mr. Charles D. Story of Elmhurst, Ill., is worth sharing because it comes not from someone with a self-serving, special interest, but from a grassroots American with a concern for clean government. In addition, the author, a retired civil service employee with 30 years' experience, writes with firsthand knowledge of this subject. The letter follows:

ELMHURST, ILL., April 5, 1977.

Hon. JOHN N. ERLENBORN, U.S. Representative,

Washington, D.C.

DEAR MR. ERLENBORN: The news media is reporting that President Carter is proposing to modify the Hatch Act to permit some political activity on the part of federal employees.

As a retired federal employee, I can say from first-hand experience that the Hatch Act is one of our strongest safeguards for a professional career civil service. In only one instance in over 30 years of service was I asked to obtain political clearance in order to obtain a different federal job, and I rejected that proposal-with impunity. I was never subjected to political intimidation on the part of a superior, although this is the normal situation in jurisdictions where politics is allowed. I was never asked to contribute to a particular political candidate or to work for a party. I feel that I was hired for my abilities, not for my political loyalties, and that I was allowed and expected to devote full time to the duties for which I was

Contrast this with employment in private industry (as I once was), or in other governjurisdictions (such as Chicago or mental Cook County), where one's political power or influence creates obligations, intimidations, unhealthy attitudes or intrigues which are not related to job performance. The taxpayer expects and deserves a federal employee's full concentration on his job duties. He should not be asked to subsidize the building of a political career or influence for an employee who wants to get into politics.

I never felt that I was a second-class citizen because of the restrictions of the Hatch Act. I could always resign or request a leave of absence if I wanted to run for office. In fact, I always felt proud to be a federal employee, free from political requirements or intimidation. Let's face it, there are many shortcomings in working for the federal government, but I have always been glad that political considerations was not one of them.

I beg you to do all in your power to preserve the protections of the Hatch Act, and to resist all efforts to weaken it.

Very truly yours,

CHARLES D. STORY.

TEXAS AND COAL SLURRY PIPELINES

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. TEAGUE of Texas. Mr. Speaker, the State of Texas has long been an energy producer because of its natural gas and oil resources. But we have become all too well aware in recent years of the limited nature of those resources. Texas, like other States, is now beginning to look to other resources, and one attractive alternative is coal. However, transportation of coal out of many regions of the country will be required. One interesting possibility which is aleady being used in Arizona is the coal slurry pipeline. The following editorial from the March 12, 1977, Houston Chronicle lays out the choices involved in the building of a coal slurry pipeline.

AN ENERGY OPPORTUNITY

Bills before the Texas House and Senate would grant coal slurry pipeline companies the power of eminent domain in laying their lines to provide an alternate energy source to Texas.

The power would not be unique: Oil and natural gas pipeline companies, among others, evercise this right, which enables them to pay fair market value for right of way across property, even if the owner ob-

With this power, the coal slurry pipeline companies will be able to secure right of way that otherwise might be denied them and thereby prevent construction of the lines. For instance, the railroads, which generally oppose the lines, could prevent them from crossing railroad right of way if the legislation is not passed.

The Association of American Railroads argues that railroads now carry about twothirds of all coal produced, is now taking steps to expand railroad coal-carrying capability and that the pipelines would siphon off much of the new coal traffic to the detriment of the railroads.

would not want to see the railroads hurt; they are critical to our economy. But Texas cannot afford to let this opportunity

slip by without acting.
As petroleum reserves decline and the demand for alternate energy supplies increase, Texas will need coal in such quantities that there should be plenty of business for both the railroads and the coal slurry pipelines. We agree with Jon Newton of the Texas

Railroad Commission that research into and development of alternate energy sources must be encouraged as a means of assuring adequate energy for the continued economic health of Texas.

As Newton said: "It is time for policymakers to give energy its proper priority."

Texas must have sufficient energy supplies, and our reserves of oil and natural gas, upon which we depend so heavily now, are limited. We must look at energy in all its forms and steer a realistic course that takes into consideration the realities of today and the needs of tomorrow.

EDITORIAL COMMENT ON PAY CABLE DECISION

HON. TIMOTHY E. WIRTH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. WIRTH. Mr. Speaker, the U.S. Court of Appeals recently handed down a decision on the Federal Communication Commission, FCC, ability to regulate pay cable television. In its decision, the court vacated the FCC's rules limiting the movies and sports programing which could be shown on pay cablefinding them to be anitcompetitive and without merit.

Specifically, the court held as follows: First. The FCC's pay cable rules were overbroad and not based on proper evidence showing actual harm to the public:

Second. The FCC can only regulate cable television where the ends or purpose to be achieved are set forth in the Communications Act of 1934 or where the ends are consistently applied to broadcast regulation as well;

Third. A different first amendment standard must be applied to cable than to broadcasting where there is scarcity

of frequencies and potential for conflict among speakers;

Fourth. If restraints are to be placed on cable consistent with the first amendment, they must be clearly justified and as narrowly drawn as possible; and

Fifth. There were improper ex parte contracts between industry representatives and FCC Commissioners and staff which prevented the court from reviewing the "full administrative record."

This decision has sent reverberations through the communications community and has been the subject of many press reports and commentaries. The Street Journal hailed the decision, observing that-

The FCC has all too often infringed on both the antitrust laws and the First Amendment guarantee of free speech.

The New York Times commented:

Free enterprise has been ill served by loading the odds against a major innovation before it could get started.

The Washington Star, Washington Post, and San Diego Tribune have also commented on this decision. So that my colleagues may share in the observations I include the editorials at this point in the RECORD.

[From the Wall Street Journal, Mar. 29, 1977] CHIPPING AT THE FCC

Few federal agencies engage in more dubious activities than the Federal Communications Commission, and that's saying a lot. In the exercise of its congressional mandate it has all too often infringed on both the antitrust laws and the First Amendment guarantees of free speech.

It is thus gratifying to see that a federal appeals court in Washington has declared unconstitutional and improper certain FCC restrictions on the type of program materials cable TV companies can acquire. It is to be hoped that this will be the first step in a thorough rollback of the FCC's authorityand, more importantly, congressional interference—in the program content of electronic forms of communication.

The FCC itself has had some misgivings in recent years about how much power it should have over program content. The FCC com-missioners have been in a better position than anyone to see the constitutional difficulties that arise when Congress tries to set up a mechanism for restricting the exercise of free speech in a limited area of communications. The concept that the airwaves belong to the public is a justification for technical regulation of broadcasting but wears thin as rationale for rules on program content. When it comes to cable TV there is not even the public ownership argument, except to the extent-not at issue in this case that cable companies pull some of their programming from broadcasts on the airwaves.

The FCC restrictions on cable that the appeals court rejected are very remote indeed from the public airwaves doctrine. They are mainly designed to protect on-the-air broadcasters from direct competition from cable companies for programming material. They limit the ability of cable firms to bid for first-run movies and certain major sports programs.

In part, the decision rested upon a failure of on-the-air broadcasters to demonstrate that they would in fact be damaged by greater competition from cable TV for program material. The court held that the FCC had taken no pains to find out what the effect of open competition would be.

But it also held that the FCC rules infringed on the constitutional guarantee of free speech and this finding, to the extent

that it is upheld by the Supreme Court and extended to other specific actions by the federal government has importance well be-

yond the television industry.

The rights of free speech is not a guarantee to broadcasters, newspapers, magazines and the like but to the American people. As electronic communications technology advances, opening up ever more ways of communicating, it becomes increasingly important to avoid government infringement with the free flow of information. Cable TV offers some special opportunities for communication, as do a number of other electronic forms. Congress finds it almost irresistible to try to make its influence felt in this area. It is hoped the courts will continue to erect barriers to that urge.

[From the New York Times, Mar. 30, 1977] ON FREE SPEECH AND PAY TV

After two decades of controversy, neither the promise nor the threat of pay television has been realized. But now, a decision by the Court of Appeals for the District of Columbia

may bring both a bit closer.

Generally speaking, to receive a pay-TV show, a set owner must live in an area serv iced by cable television, which delivers its images through coaxial cable instead of over the airwaves. He pays a monthly fee to hook his set to the cable. If he wants certain special programs, he must pay an additional then he has pay cable-TV. Of this country's 70 million television households, only one million have so far got hooked on pay cable.

One reason for the lack of interest is clear. The Federal Communications Commission, most recently in a 1975 ruling, has discourcable television from offering such popular fare as movies and major sports events. It is this restriction that the Court of Appeals has just knocked down. The court said the commission has exceeded its authority over cable TV and found its rules to be inconsistent with the freedom-of-speech guarantees of the First Amendment.

The commission, reflecting the views of the TV networks and channels, maintains that its 1975 restrictions were designed to protect "free TV." Without the restrictions, the argument runs, pay-TV could "siphon" away the programming cream that viewers now enjoy through the courtesy of advertisers. In New York City at present, about 47,000 households signed up with a pay cable operation called Home Box Office can see, at a charge of about \$20 a month, new movies long before they are shown on the networks. Under the F.C.C. regulations, however, pay cable has not been permitted to bid for the rich market of feature films between 3 and 10 years old. The F.C.C. contends that if pay cable were let loose it would outbid the networks for popular shows, which would then be unavailable to people who can't afford pay TV.

The broadcasting industry made its case to high F.C.C. officials in numerous private meetings. Cable representatives had private meetings, too, as did movie and sports representatives and spokesmen for public interest groups. The Court chided the F.C.C. for

its bad old ex parte habits.

Appeals will be forthcoming-to Congress as well as to the Supreme Court. Up to now, commercial broadcasters have been remarkably successful in sparing themselves competition from other forms of television. There is, of course, no such thing as "free TV"-only alternative ways of paying for it. Public TV, for example, relying on a combination of tax money, foundation and corporation grants and audience contributions, has attracted a loyal audience and had an important impact on commercial program-

The standards of the stations that make their money from the sale of advertising are rarely as high as their profits; they have scarcely earned monopoly status. The Court of Appeals found insufficient evidence that pay cable would, in fact, siphon off popular shows from commercial outlets. And no one suggests that pay cable is likely to woo away from the networks such spectaculars as the World Series, the Super Bowl or the Kentucky Derby. If pay cable should usurp certain programs that millions have come to expect without charge, public annoyance and public policy would surely impel new regulations or legislation. In any case, free enterprise has been ill served by loading the odds against a major innovation before it could get started. The F.C.C.'s protectionism has been, at least, premature.

Pay cable has the potential to provide communities with dozens more channels than are now available. It could bring a variety of specialized programs to specific audiences that want them enough to pay for them. But it cannot be expected to take such chances unless it has a healthy financial base-and for this it will need some popular shows. By preventing pay cable from competing with the now dominant TV broad-casters, the F.C.C. may have been blocking the development of new, useful forms of television. The pay cable interests are not public benefactors; they are businessmen, with profit on their minds. Still, the nation deserves a chance to see what they can do.

[From the Washington Post, Mar. 30, 1977] PAY TELEVISION'S FUTURE

For a long time now, pay television has been lurking just outside the main arena of entertainment and communications. It has never been able to break into serious competition with regular television, partly because of its own early economic problems and more recently because of restrictions placed on it by the Federal Communications Commission. But the United States Court of appeals here set those restrictions aside last Friday and ruled that the FCC cannot regulate cable television to the same extent it regulates stations that use the airwaves. If that decision stands, pay television may be in your house sooner than you think.

What is involved is the kind of home television system that will be available in the country during the next two or three decades. The networks and existing stations want things to remain much as they are now. They would continue to provide most of the programming. Operators of cable systems would be able to try to sell you a product that provides better reception of existing channels and some additional programming, most of it local in origin. The proponents of pay cable systems, however, want to do much more than that. They want to be able to try to sell you a system that offers in addition, and at a higher fee, exclusive feature movies and sporting events without commercial interruption. The networks argue that if cable operators can do that, they will buy up the best movies and sporting events. This would remove those things from the existing 'free' stations and make them available only to those who live in areas where pay cable systems exist and are willing to pay for them.

This argument has been going on since the days when pay television involved a regular broadcast signal and a special device at tached to a home television set to permit viewing of its offerings The FCC limited sharply the kinds of programs such stations could carry and the courts have upheld that limitation. When pay television switched to cable systems, the FCC attempted to apply same kinds of limitations. Last week's decision distinguishes between the two delivery systems, partly on constitutional grounds, and appears to put quite narrow limits on the power of the FCC to regulate what goes out over cables.

This distinction may be a useful one, al-

though it seems sure to cause a considerable stir among lawyers and television people. The court equates cable systems with newspapers in terms of the kind of regulations government can apply. It puts stations originating over-the-air signals in a different category. Such a distinction could provide constitutional base on which to rest radio and television regulations dealing with program content. It would also free the programming of cable operators from FCC scrutiny.

Beyond this legal issue, however, is the policy question about the access of the public television programming on a Whether the court decision "pay" basis. stands or not on appeal, Congress will undoubtedly be asked again to take a serious look at pay cable systems. It ought to do so. If the decision stands, framing any kind of limits on cable programming will be difficult. If it is reversed, deciding what kind of regulations are appropriate will be equally difficult, particularly in view of the amounts of money at stake. Matters of this magnitude need to be resolved by Congress, not the FCC, and this decision moves the whole subject in that direction.

[From the Washington Star, Apr. 3, 1977] FREEING CABLE TELEVISION

If the nation's commercial television establishment suffers any pinch of the pocketbook nerve from last week's U.S. Court of Appeals decision on cable television, the pain will be

largely self-inflicted.

The "over-the-air" television industry has for years battled to obstruct the development of cable television and the Federal Communications Commission ultimately adopted rules for cable TV reflecting its point of view. (For example, cable companies could buy and show first-run movies only within three years, or after 10 years, of their release.)

The Court of Appeals here in Washington found this and other rules defective and directed the FCC to fashion new ones. The new rules will surely be less restrictive, less biased in favor of "over-the-air" television, and more closely attuned to competitive and free-speech principles.

The broadcasters' war against the coaxial cable-which greatly expands the potential number of television channels—was a study in overreaching.

The commercial broadcasters had arguedand the FCC substantially adopted the view—that cable TV (whose subscribers get the service in return for a monthly fee ranging from \$6 to \$10) ought to be "ancillary" 'supplemental" to broadcast programming. They had argued that unrestricted bidding by cable-TV companies for special features (e.g., sports events and first-run movies) would "siphon" away the best programming. Cable TV, they suggested, would then become an elite service for those who could afford it while stripping all the good stuff from "free" commercial televisionall to the hurt of the poor and rural areas where the per capita cost of cable development might be prohibitive.

As the court found, these arguments are less than overpowering; and the FCC rules based on them raise First Amendment and anti-trust problems.

The argument that conventional commercial television is a "free" service (in contrast to the fee-based cable) is unpersuasive. Advertising fees that sustain "free" commercial television are, of course, passed to the consumer. A Florida television critic even submitted the following ingenious calcula-tion: "If we figure our time is worth the minimum wage, then watching what we don't want to see (i.e., the commercials) for a typical 181/2-hour 'free' television day can cost us a phantom total of \$9.09 per day."

Since the FCC rules also deny cable television the right to carry advertising, and thus lower iees for the convenience of those too straitened to afford it, the Court of Appeals concluded: "... If the Commission is serious about helping the poor, its regulations are arbitrary; but if it is serious about its rules, it cannot really be relying on harm to the poor."

The further contention that pay cable television, unthrottled, would "siphon off" the best features the Court of Appeals simply found to be unsupported by the record. The court noted that average profitability at the networks—more than twice that of American industry as a whole-hardly leaves them without resources to bid for the best features against the cable impresarios.

The fundamental miscalculation of the commercial broadcasters, however, was their failure to reckon on the anti-regulatory mood of the country—especially when regulation seems to play favorites. When cable rules of the FCC came under judicial scrutiny, cable had in its corner not only the Justice Department's antitrust division and the House communications subcommittee but a number of independent observers such as the Committee for Economic Development.

In throwing out the present restrictive rules the other day, the court did not say that cable television is a candidate for wholesale deregulation. It did insist that the FCC write rules consistent with the First Amendment and with fair competitive ideals. And it insisted that if any restrictions are to be based on the "siphoning" scare, they must stem from demonstrable need rather than speculation.

We are confident that the FCC, taking the Court of Appeals decision in Home Box Office v. FCC as its guide, can frame rules that free cable television to compete on an equal footing with over-the-air television. We are not, that is, among those who view the court's decision as a pretext for Congress to replace the FCC as the writer of regula-

Indeed, in scolding the FCC for permitting undisclosed "ex-parte" influence in its rule-making procedure, the Court footnoted an interesting revelation by a network senior vice president. In 1974, when the FCC was considering a modification of pay-cable rules, "we (that is, the commercial network) took the leadership in opposing these proposals with the result that key members of Congress made it known in no uncertain terms that they did not expect the Commission to act on such a far-reaching policy matter without guidance. The Commission got the

If that is how "key members of Congress" deal with weighty issues of television regulation, we fail to see why the rule-making process should be shifted from the FCC and the courts into their hands.

[From the San Diego Tribune, Mar. 30, 1977]
LIBERATING PAY TV

Cable television offering subscribers programs for pay has nearly been strangled in the crib by unreasonable regulation.

The courts are moving to the rescue, but it is the responsibility of Congress to rewrite the law to make sure it doesn't happen again.

Commercial television has feared it might lose a significant segment of its audience if viewers had a choice of pay television programs. The broadcasters have the ear of the Federal Communications Commission.

Thus FCC imposed such ridiculous rules on pay television as a prohibition against showing feature films more than three but less than 10 years old.

A U.S. appeals court has nullified the rules, saying the FCC indulged in mere

speculation and innuendo when it bought the industry's scare talk.

But a more basic remedy can come from Congress, which is engaged in rewriting the FCC law. Rep. Lionel Van Deerlin, D-San Diego, one of the leaders in Congress in this legislature area, has championed the cause of cable TV and should continue to do so.

TERRORISM

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for April 6, 1977 into the Congressional Record:

TERRORISM

The experts say that terrorism will increase, and they urge government officials at all levels to prepare plans for dealing with emergencies.

Such predictions are disquieting. In Washington, we recently experienced the sheer power that a few armed people can exert over the life of a city, capturing a President's and even a nation's attention. Most of us just cannot understand why people turn to terrorism. The secrecy in which the terrorist operates, the strange names of terrorist groups, the agony of waiting, the intense media coverage and the sometimes tragic conclusion are all part of these puzzling and frightening events.

Why do terrorist acts occur? How should officials respond to them? To what extent do television and newspapers encourage these events? How do we preserve individual freedom and yet maintain adequate security amid the increasing incidents of terrorism?

There is no sure-fire way of dealing with terrorism, but we know now more than we did even a few years ago. The terrorist apparently wants to instigate fear and command attention. He has certainly accomplished that. Authorities who must deal with the terrorist are caught in a terrible dilemma-it seems that they must choose between preserving the lives of hostages by capitulating to him or risking the lives of hostages by confronting him. Preventing of such harrowing incidents is perhaps impossible, but preparations can be made to deal with them and reduce the dangers of a bloody outcome. The usual technique employs restraint, patience, sensitivity, and negotiating skills. The idea is to outwit the terrorist rather than to outfight him. Force is assiduously avoided. Negotiators seek to learn all they can about the terrorist, play for time with soothing, tireless talk, work to develop rapport between the terrorist and the victim. negotiators try to promise as little as possible to secure the release of the hostages; they also try to deliver as much as possible afterward. They let the terrorist go public with his grievances and they make modest concessions. Hopefully, as time goes on, the desire of the terrorist to kill fades. There is general, but not unanimous, belief that saving lives comes first. There is controversy about the kinds of concession that should be made. Negotiators must remember that the incident which concerns them will not the last act of terrorism; they must always consider precedents and the expectations they are generating.

Acts of terrorism are usually committed to publicize a particular group's cause. Sometimes the goal is public and sometimes it is private. Terrorists come from the political right and left, though their number are

usually small. Some of them claim responsibility for violence; others do not. Some want to avoid injuries; others want to cause death. Some elude the authorities; others are caught quickly. As a general rule, international terrorists often escape without penalty while local terrorists do not.

Government is taking action, domestically and internationally, to deal with terrorists. Groups responsible for terrorism in recent years are being carefully observed. The location of the training areas of such groups, their patterns of activity and their means of support are becoming known to specialists here and abroad.

New anti-hijacking procedures have already proven effective, and security is being tightened in other public facilities, such as nuclear power plants, which might be inviting targets. The FBI is training a group of agents to deal with terrorists and civil authorities are being asked to draw up contingency plans. Protection for foreign diplomats and dignitaries has been increased. Police cooperation among nations is being widened and international agreements are being sought which would permit the prosecution and extradition of terrorists and those who protect them.

Much rethinking of the problem of terrorism is going on within government circles. The old policy was one of confrontation, not negotiation. The new policy tends to emphasize the safe release of hostages without concessions; it also acknowledges the importance of treating each case on its own merits. "A tough policy with flexibility," is the way one official describes it.

It is probable that the publicity surrounding one terrorist act incites others to terrorism. Yet, to restrict the coverage of such events by law raises the question of censorship: Who is to be trusted with the power to censor and when should it be applied? It is usually better to know the facts than the rumors. While the truth may not be good, the rumors are generally worse. Journalists across the country do not want censorship, but they differ in their views as to whether coverage of terrorist activities requires reform.

"SEXPLOITING" KIDS—AN ABUSE OF POWER

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. KILDEE. Mr. Speaker, I should like to bring to the attention of my colleagues an article written by Ellen Goodman, which appeared recently in the Washington Post, discussing the exploitation and abuse of young children who are being used in pornography.

As a chief sponsor, along with our colleague, John Murphy of New York, of the legislation to stop this abuse, I should like to make it clear to my colleagues that we are not dealing with censorship or first amendment rights, as the opponents of this legislation would have us believe. Our bill is aimed at preventing the physical and mental abuse of small children by those who care only about the profits they are reaping at the expense of their innocent victims.

Mr. Speaker, for those who may have missed it, I recommend Ms. Goodman's excellent article as very worthwhile reading:

"SEXPLOITING" KIDS—AN ABUSE OF POWER (By Ellen Goodman)

Boston.—There is almost a sense of relief in talking about it. At last, a simple matter of right and wrong. There is no "redeeming social value" for "Lollitots" with its sex shots of little girls. There is surely no "community standard" left unviolated by "Moppets" with its children posing in adult fantasies.

No. Finally there is an unequivocal villain. Finally a group we can pursue with a clear sense that "This, we know, is wrong."

After being force-fed the "heroics" of a creep like Larry Flynt, after pondering the defense of an obtuse sexual gymnast like Harry Reems, the question of kidporn is refreshingly uncomplicated.

Our reaction is equally direct: Stop it! Already there are two federal bills and half a dozen pieces of state legislation designed to stop the use of children's bodies as sexual capital.

The speed with which child pornography has become a national concern says a great deal about our gut feelings about pornography in general. Kidporn is just a distillation of the worst of the genre: the perversion of the healthy, the rape of the natural, the sale of people.

But it has been dangerous and difficult to ban the trafficking among "consenting adults"—those who pose and those who peer. The Supreme Court's notion—to determine what is pornographic by "community standards"—is so flexible and flaky that 12 jurors in a remote village could sentence Masters and Johnson to jall.

But the children cut through all of the murkiness. This is not a First Amendment issue. It is not a matter of legislating the sexual fantasies of adults. It's a matter of protecting the real lives of the young models.

We can take kidporn out of the realm of

We can take kidporn out of the realm of sex and into the realm of power, where it belongs. The children are victims, and kidporn is the exploitation of the powerless by the more powerful. That exploitation is as common to the history of adult-child relationships as is protection.

Children have always been the dependent subjects of adults. Until recently they were the objects as well. For centuries, parents simply owned them as property, and only gradually has society modified that power.

Now adults are not allowed to abuse their children, at least not badly, and not allowed to send them to work, at least not hard work or long work.

Yet it's estimated that thousands of children are killed every year by their "guardians" and that two million are "abused." In the home, the majority are merely "hit." In the schools, others are administered "corporal punishment." In the fields, thousands are put to work beside desperate migrantworker parents.

Numerically, there are far, far fewer cases of sexploitation than of other forms of misuse. But now the federal legislation against kidporn will appear under two peculiarly appropriate categories. One has been filed under child abuse, the other under child labor statutes. These are the areas that already legislate restraint.

If we take this issue, and look at it as a matter of the abuse of power rather than of sexual deviance, we may begin to look at adult-child relationships more intently and more generally. We can continue to sort out and deal with our own confused notions of what is the appropriate use of power by adults over children. How should we use it

and how should we further limit it?

At least on the kidporn question we are sure. As a Village Voice writer noted: "Even Lolita, a teenage 'seductress,' was finally a powerless child. In the novel, after her

mother dies, Lolita goes to the bed of the obsessed Humbert, who explains: 'You see, she had absolutely nowhere else to go.'"

PHILIP AGEE

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. McDONALD. Mr. Speaker, two U.S. citizens, Philip Burnett Franklin Agee, 41, and Mark Hosenball, 25, are appealing deportation proceedings in Great Britain. Agee and Hosenball have been openly active in providing exposés of Central Intelligence Agency operations and alleged personnel to the Organizing Committee for a Fifth Estate—OC-5—for its magazine Counter-Spy. Former CIA Director Colby charged that Agee's work for Counter-Spy was responsible in part for the assassination of Richard Welch, the CIA Chief of Station in Athens in December 1975.

Last year the British Home Office moved to deport Agee and his associate under the provisions of Britain's Immigration Act of 1971, stating that Agee:

A. Has maintained regular contacts harmful to the security of the United Kingdom with foreign intelligence agents:

with foreign intelligence agents;

B. Has been and continues to be involved in disseminating information harmful to the security of the United Kingdom; and

C. Has aided and counseled others in obtaining information for publication which could be harmful to the security of the United Kingdom.

Agee and Hosenball have appealed their deportation orders which have been upheld in each appeal so far. In February, three U.S. Lawyers traveled to London to make statements to the Appeals Board on Agee's behalf. The three were former U.S. Attorney General Ramsey Clark, now a "cooperating at-torney" with the Center for Constitutional Rights which is an offshoot of the CPUSA's National Lawyers Guild and National Emergency Civil Liberties Committee; Morton Halperin of the Center for National Security Studies, an antiintelligence project staffed by the Institute for Policy Studies and National Lawyers Guild; and Melvin L. Wulf, former legal director of the American Civil Liberties Union also affiliated with the NLG.

In the appeals process, Mark Hosenball has sought strenuously to disassociate himself from Agee. According to reports in the British press, his partial success has been due in part to the efforts of his father, S. Neil Hosenball, a distinguished attorney who serves as general counsel to the U.S. National Aero nautics and Space Administration-NASA. Mark Hosenball has been associated with a new left journal, Time Out, and with leaders of the Trotskyite Fourth International which is involved in terrorism in England and Ireland. The Fourth International has been cooperating with the Cubans in international terrorism since the early 1960's.

Since Agee defected from the CIA in 1969 in Mexico City, he has made a new career of exposing CIA operations. It is interesting that Agee has exposed not only those operations which were known personally to him as a case officer, but also those that were ongoing in Greece, Britain, Portugal, southern Africa and other areas. During the past 2 years he has apparently been able to expose new alleged CIA operations in Portugal, Italy and, after a visit to Moscow perhaps for "research," Jamaica.

Agee has been denouncing the deportation order as "political persecution" and demanding to be presented with all evidence against him. Agee claims now to have no idea why the British Government would consider him a threat to their internal security. However, in a January 28, 1977, interview in the New York Times, Agee stated he believed his deportation order "had something to do with exposing a Western spy ring in Poland." Agee denied having done this.

Nevertheless, there is public evidence to the contrary. In April 1976, Jerzy Pawlowski, a Polish UNESCO official and member of the 1968 Polish Olympic fencing team, was sentenced to 25 years imprisonment for espionage. According to official accounts in Polish newspapers, Pawlowski "had entered into collaboration with the intelligence of one of the NATO states in 1964," and had until his April 1975 arrest provided military information on the Warsaw Pact to the West.

The official Polish version concluded with the claim that:

During the investigations * * * Pawlowski confessed * * * and disclosed numerous details and circumstances. * * * this fact alone * * * induced the court not to pass the supreme sentence.

That comment is false propaganda. The facts indicate that Agee had betrayed Pawlowski years earlier, and that the Communists had allowed Pawlowski to continue his operations so that his entire network of contacts and agents could be rolled up. There have been some press reports that more than 100 people believed to have supplied the West with intelligence have been arrested.

According to Agee's book, "Inside the Company: CIA Diary," at the 1968 Olympic Games in Mexico City, Philip Agee as a CIA officer was working as a U.S. representative on the Olympic Organizing Committee with a special responsibility in the Soviet operations section and "with a chief interest on spotting and assessment of new access agents." The book contains a "shopping list" of intelligence information Agee was seeking at the time. From that list it is difficult to doubt that Agee had become aware of Pawlowski's work for NATO at that time.

David Phillips, a former CIA officer who is president of the Association of Former Intelligence Officers, had more informative comments in the AFIO's newsletter, Periscope:

Whether Philip Agee is a paid agent of the Cuban Intelligence Service—a surrogate of the Soviet KGB—is almost beside the point. By definition, his role has been that of an "agent of influence" responsive to Cuban control. He has made five hugger-mugger expeditions to Havana of which I am aware. His declared mission has been to dismantle the CIA by identification, exposure and neutralization of its people abroad * * *." The degree of his effort in this aspect * * has been the subject of debate. * * * Agee * * * shrugged off the Welch tragedy, and others yet to come, as the breaks of the intelligence game. As late as January 9 [1977] Agee told the London Observer that he was being deported because the British government believed him responsible for the death of two British agents in Poland. * * *

In his book, Agee openly gave credit to representatives of the Cuban Communist Party and to the resources of the Cuban Government for providing him with support and material. While living in France and England, Agee has admitted being in frequent contact with Cuban diplomats. He said in an interview:

Whether they were Cuban intelligence officers or not, I don't really care.

In February, Lord Chief Justice Widgery and two other judges upheld the Home Secretary's deportation ruling against Agee and Hosenball. Following the ruling, three British alleged members of the Agee-Hosenball network were arrested under the Official Secrets Act for disclosure of secret defense related material. Two were New Left "journalists," and the third from the military.

Hosenball's appeal to the British High Court was denied on March 29. The High Court's decision by Lord Denning, Master of the Rolls, supported by two Lord Justices, is a masterful statement of the need for a government formed and supported by reasonable men to protect itself against subversion. Excerpts from the High Court's decision were reported by the London Daily Telegraph on March 30, 1977:

In war-time everyone is aware of possible danger to the State, said Lord Denning. "Times of peace hold their dangers, too. Subverters and saboteurs may be mingling among us, putting on a most innocent exterior.

"If they are British we will tell them that, and will deal with them here.

"If they are foreigners they can be deported. This is in no way contrary to the rules of natural justice.

"This is a case in which national security is involved. Our history shows that when the State itself is in danger, our cherished freedoms may have to take second place.

"Even natural justice itself may suffer a setback. Time after time Parliament has so indicated, and the courts have followed loyally."

CONFLICTING INTERESTS

It was for the Home Secretary to hold the balance between the conflicting interests of national security and the freedom of the individual. He was answerable to Parliament, and not the courts.

"The public interest is so great that the nature of the information must not be disclosed if there is any risk that it would lead to the sources being discovered—not even to the House of Commons."

Lord Denning had no reason to doubt that Mr. Rees, Home Secretary, had carefully considered the case.

Lord Justice Geoffrey Lane and Lord Justice Cumming Bruce agreed with Lord Denning in upholding Lord Widgery's decision.

"Translated into plain English," the Home Secretary's reasons for making the order were that he believed Mr. Hosenball to be a danger to the country and that he was no longer welcome here," said Lord Denning.

"I would like to say at once, if this were a case where the rules of natural justice had to be applied, some criticism could be made of the Home Secretary's reasons."

Mr. Hosenball had not been given sufficient information to enable him to answer the charges against him. "But this is no ordinary case."

The British High Court also determined that the Hosenball appeal was without merit and denied further appeal to the House of Lords. However, Hosenball's solicitors said that deportation may be delayed until May because they intend to petition the House of Lords Judicial Committee to request a hearing.

The Agee/Hosenball appeals have been delaying tactics designed to prevent Agee's deportation to the United States where the Justice Department's Criminal Division, then under Assistant Attorney General Richard Thornburgh, was considering charges against Agee for violation of the Espionage Act.

Agee's supporters have been working behind the scenes to insure that the renegade intelligence officer can return to this country to carry out his stated goal as a revolutionary socialist: destroy-

ing our intelligence agencies. Morton Halperin and the elite legal group carrying out the attack on America's intelligence agencies want Agee back to serve as their star attraction for the campaign against government spying. Agee's appeals will probably be exhausted in May, and a support group of Americans for the British members of his team has already appeared. Two of Hosenball and Agee's comrades from Time-Out, Crispin Aubrey and Duncan Campbell, and John Berry, an Army signal corpsman, are facing charges. Berry's position was analogous to that held by Counter-Spy editor Perry Fellwock, aka Winslow Peck, in the U.S. Army and involved analysis of electronic intelligence.

During the past week the North American S.W.—Socialist Workers—Defense Appeal, 635 Sixth Avenue, second floor, New York, N.Y. 10011 made its appearance. The fundraising letter is signed by Philip Agee; Noam Chomsky; James Weinstein, the Trotsky and Castro-oriented editor of a new socialist newspaper, Common Sense; Stanley Aronowitz; William Kunstler; and Stan Weir.

Agee, as an American citizen, has a right to return whether or not he faces prosecution. However, the woman who calls herself Angela Agee but is not his legal wife does not have a right to a U.S. visa. She has admitted in press interviews to membership in the Revolutionary Communist Party of Brazil—PCBR—which has involved in terrorist activities. She has said:

There will have to be an armed struggle. This has happened in every country where there has been a revolution.

But now the way has been cleared for Agee's return to the United States without the threat of prosecution, thanks to the U.S. Department of Justice. On March 18, 1977, after Agee's lawyers Mel Wulf and Ramsey Clark had met with Benjamin R. Civiletti, newly appointed

head of the Criminal Division, it was announced that Agee will not face prosecution if he returns.

According to Agee's lawyers, they had received a letter from Mr. Civiletti reporting that Agee was no longer under investigation, but that the Justice Department "could not guarantee that it might not reopen the matter if additional evidence came to light that would suggest a violation of Federal law."

I maintain that this is an outstanding example of why Congress needs a Committee on Internal Security which would have the responsibility of investigating areas where our security protections are weak or outdated and of drafting new legislation to meet these new and changing situations. Past excess use of "secret" stamps by Government officials does not excuse the current wholesale leaking of necessary defense and diplomatic secrets both directly to our enemies and to the media.

As a basic first step, let us join together to reestablish the House Internal Security Committee.

CAMPAIGN FINANCING ACT OF 1977

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. ASHLEY. Mr. Speaker, I am pleased to add my name to the growing list of cosponsors of the Campaign Financing Act of 1977, a bill whose time has come. In past years, like so many of my colleagues, I have had serious reservations about the various forms this legislation has taken. I have balked at the exclusivity of the public funding called for, and I have hesitated over the enforceability of several provisions. I am persuaded, however, that the current version combines the best features of public and private campaign financing. It preserves the concept of participatory democracy while sharply reducing both the possibility and the probability of fundraising abuses.

Recent political history has shown us that a modified form of public campaign financing does work, and it is time to extend this experiment to the congressional sphere. In so doing, we must bear in mind that public campaign financing is very much an evolving concept in this country. We must regard this bill as something of a pilot program which will undoubtedly be further shaped with the perspective gained in future elections. Notwithstanding, I am convinced that this bill is a thoughtful effort to inject a tone of rationality into the often irrational business of campaign financing.

The chief provisions of the bill are straightforward. Congressional candidates will be entitled to \$50,000 in public, matching funds—on a dollar-for-dollar basis—for all private contributions up to \$100 per contribution. Thus, for each candidate accepting matching funds, there would be available a potential pool of \$100,000 comprised only of public moneys and contributions from individual supporters.

By accepting public matching funds. each candidate must agree to abide by a \$150,000 spending ceiling, regardless of source. Of this aggregate amount, the individual candidate could contribute up to \$25,000 of his own money-\$35,000 in the case of a senatorial candidate Within the confines of the spending limit, it would be up to the individual candidate to apportion his campaign moneys.

The provisions of the Campaign Financing Act are not all-inclusive. An individual candidate may decide not to accept matching funds and thereby escape the operation of the \$150,000 spending ceiling. Such a decision, however, will automatically free his opponent of the stricture on spending, notwithstanding any matching moneys already received

It is thus conceivable that a candidate might buy an election under this legislation. There must be some sort of upper limit on spending, regardless of the acceptance or nonacceptance of matching funds. And, I would favor consideration being given to making the operation of this act mandatory on all candidates.

The final and crucial provision of this bill is the slashing of the permissible contribution by special interest groups from \$5,000 to \$2,500. Inevitably this change will greatly affect the influencereal and assumed-of these groups. In my opinion, this special interest limitation is the hallmark of the entire bill, and makes it supportable, notwithstanding minor disagreements.

The net effect of the Campaign Financing Act of 1977 is to make the funding of political campaigns more manageable and realistic. It will help free both Congressmen and candidates for more important tasks, and should lead to more meaningful and issue-oriented campaigns. It is by no means a panacea, but

it is a good starting point.

It is also a fair bill. I have heard it criticized as unduly favoring incumbents. Recent political history, however, suggests its basic fairness. A modified public financing system permitted Ronald Reagan to mount a ferocious attack on an incumbent President, and it allowed a national political unknown by the name of Jimmy Carter to sweep into the White House.

By establishing modest qualifications for matching funds, and by circumscribing the role that can be played by special interest groups, any unnatural favoritism toward the incumbent is eliminated in my opinion. This bill has done that. I urge its support.

PETROLEUM MARKETING PRACTICES ACT

HON. CHRISTOPHER J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. DODD. Mr. Speaker, yesterday, April 5, the House passed the Petroleum Marketing Practices Act, H.R. 130, by the overwhelming margin of 322 to 90. I

strongly supported the legislation as I feel it guarantees the franchise rights of the Nation's fuel distributors and service station owners. The bill basically addresses two problems; it establishes Federal standards governing the termination and nonrenewal of franchise relationships in the marketing of motor fuels and it establishes standards requiring the disclosure of octane rating of automobile gasoline to the consumer.

Title I of the bill establishes protection for motor-fuel marketing franchises from arbitrary or discriminatory termination or nonrenewal of their franchise. The title prohibits a franchisor from terminating a franchise during its term and from failing to renew the relationship unless it meets certain requirements as outlined in the legislation. No longer will service station owners who have worked for years at building a business be able to be arbitrarily stripped of their franchises by the franchisor. The burden of proof will be placed on the franchisor if he wishes not to renew a franchise. Service station owners will at last be protected and the independent owner-operator will no longer have to fear that at any time his franchise may be revoked. I feel this measure is a major step forward in insuring an independent energy market-one in which competition is able to flourish.

In addition, the legislation has a very important consumer protection provision. H.R. 130 requires the testing and certification of octane ratings of automobile gasoline and that these ratings be posted at the point of sale. Thus we will have a national standard which will allow the consumer to compare the octane ratings of different brands of gasoline and help to insure that he can get the best buy possible. I view this provision as another step in our efforts to obtain a free and competitive energy mar-

I am pleased that the House has passed this very important energy legislation and am hopeful that it may soon become law. Only through the protection of our energy distributors, like service station owners, and fair consumer practices, such as the posting of octane ratings, can we hope to guarantee a competitive energy industry that will meet America's future energy needs.

RISK-BENEFIT APPROACH NEEDED ON DOUBTFUL FOODS

HON. SHIRLEY N. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mrs. PETTIS. Mr. Speaker, as a co-sponsor of legislation to halt the proposed ban of saccharin by the Food and Drug Administration, I was particularly interested in the following article which appeared in the Los Angeles Times on Sunday, April 3, 1977.

I am sure that the hundred or so other cosponsors will also find this item interesting in light of its conclusion that the FDA and other agencies should be allowed the flexibility of making a judgment on whether products like saccharin pose greater benefit than harm to the population.

The Los Angeles Times article follows: RISK-BENEFIT APPROACH NEEDED ON DOUBTEUL FOODS

(By Barry Commoner)

The controversy over the decision by the Food and Drug Administration to ban saccharin raises the question of whether the risk of a carcinogen to people ought to be evaluated against its benefits.

For example, what is the benefit of a carcinogenic dye that makes hot dogs red? If the social purpose of hot dogs is to nourish people, then-leaving aside the argument about what contribution the hot dog itself makes to human nutrition—the dve has no value at all. If "market research" shows that people are more likely to buy red-dyed hot dogs than a competitive brand which is not dyed, then the only social value of the dye is to enable the first company to sell more hot

In the same way, the social benefit derived from preservatives is that they help make possible the production of foods at large, centralized factories from which they are shipped over large distances. If a food preservative turns out to be carcinogenic, then the risk must be evaluated not against the benefit of buying "fresh" food, but against the relative benefits of preserving food for long shipment, or arranging to produce it

locally and to deliver it fresh.

It can be seen, therefore, that once the attempt is made to weigh the risk against the benefits of a food additive-or of any of the numerous synthetic chemicals introduced into the environment by the petrochemical industry-very far-reaching economic, social and even political questions are raised. In practical terms, then, when a substance has been designated as a "carcinogen" through the only practical method that we have available-animal tests-a decision regarding whether and how human exposure to it is to be controlled is inescapable. Such a decision can be made in two alternative ways.

The first is the absolute approach (the Delaney Amendment). Given the disastrous health effects of cancer, no benefit from a particular substance is worth the risk, no

matter how small it may be.

In effect, then, this approach involves no further evaluation by society, other than the assertion that no risk of cancer to people is ever, under any circumstances, to be deliber-ately induced. No evaluation of benefits is

undertaken in this approach.

The second is the relative approach (riskbenefit evaluation) now being urged in opposition to the Delaney Amendment. This method asserts that action should be based on the socially perceived balance between the carcinogenic risk of exposure to a sub-stance, and the benefits to be derived from using the substance. However, balancing the benefits against the risks belongs not to the domain of science, but to society. The assessment is a value judgment-a social rather than a scientific process.

For example, if saccharin is essential in the diet of a diabetic, it has the considerable benefit of extending human life. In contrast, saccharin used in the massive marketing of "diet soda," which for most people could be replaced by another product, can be assigned a much lower benefit.

Similarly, the social benefit of an antileukemia drug which is itself carcinogenic may be quite high, whereas the social benefit of a carcinogenic food dye is very low.

In the same way, the use of polyvinylchlo-ride—from which the carcinogen vinyl chlo-ride may leach—may have a high social value in an artificial heart valve, because there is no substitute for this essential function. In contrast, the use of the same polyvinylchloride in food packaging has a much lower social value, because safer substitutes, such as

glass or paper, are available.

Thus, if we choose the option of balancing the risks and benefits of carcinogens, we face a rather unusual situation: while it is possible to attach a wide range of values to the various possible benefits of using a carcinogen, about all that can be said about the risk is that it does or does not exist. Given this situation, the practical course of making the social risk-benefit judgment can take one of the following general forms:

If, balanced against the fact that the risk of cancer from a particular substance is greater than zero, it is determined that the associated benefit is essentially zero, then the substance would be banned. For example, carcinogenic food dyes would be banned on the grounds that they contribute nothing to nutrition, which is the social value of

food.

At the other extreme, if the social benefit associated with the use of a carcinogen is judged to be so great—for example, saving a life that would certainly be lost otherwise—that it warrants even a large carcinogenic risk, the substance would be approved—for that social use. For example, saccharin might be approved for use by diabetics who have no alternative way to achieve an acceptable diet, but banned for massive use in diet soda, on the grounds that there are equally or more effective ways to control weight.

In intermediate cases, it would again be necessary to reach some judgment of the benefits associated with the use of the substance, so that its social value can be balanced against the evidence that it creates some risk of cancer. Such a judgment would be more difficult than the first two, but not impossible.

These arguments apply not only to the carcinogenicity of chemicals, but also to most of the toxic effects of chemicals, since these are often as difficult to assess quantitatively.

In effect, then, if the risk-benefit approach is adopted, it means that society must undertake to determine, on the basis of their value to society, what chemical substances are to be produced, and are permitted to come into contact with people. This will require social governance of decisions—about what chemicals to produce and for what purposes—which, in our present economic system, are governed not by social, but by private interests.

INTRODUCTION OF A BILL TO AMEND THE INTERNATIONAL TRAVEL ACT OF 1961 TO PROVIDE FOR THE COOPERATIVE REGULA-TION OF THE TRAVEL AGENCY INDUSTRY

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. ROONEY. Mr. Speaker, by request I am introducing the following proposal to establish a regulatory program for the travel agency industry.

This proposed legislation would require persons engaged in the business of conducting a travel agency to obtain a registration certificate from the Travel Agent Registration Board, a five-person unit to be established in the Department of Transportation.

In order to obtain a travel agent registration certificate, an applicant would

have to make an adequate showing of minimum qualifications, as established by the Board, to engage in the business of operating a travel agency. These qualifications would include ethical business conduct, adequate training and experience, and financial responsibility. The certificates would be issued and renewable for 2-year periods.

The following classes of persons are exempted from the provisions of the bill: common carriers and their employees; the owner or employee of a hotel, motel, inn, et cetera, when making reservations in his own or other such establishment, and when making arrangements for local sightseeing tours; a person making travel arrangements for his employees; and tax-exempt religious, charitable, educational or fraternal organizations when arranging for its members travel that is directly related to the purpose of the organization, provided that the organization receives no fee for the travel arrangements. All other classes of persons who engage in the solicitation or sale of travel reservations or accommodations are covered by the provisions of this bill.

At this time, I am not fully convinced that circumstances warrant further legislation in this area. Existing laws and regulations, if vigorously enforced, may be adequate to deal with any abuses that may exist. On the other hand, they may

At this time my subcommittee is working with the Senate Subcommittee on Merchant Marine and Tourism of the Committee on Commerce, Science, and Transportation to complete a national tourism policy study. At a future unspecified date in this 95th Congress, my subcommittee will hold hearings on this legislation.

In addition, the Federal Trade Commission is currently investigating the travel agency industry to discover whether unfair business practices exist, and, if they do, their extent, and the adequacy of the Commission's authority to deal with any widespread problems. Testimony from the Commission at our hearings would be very important in exploring the issues and possible solutions.

The subcommittee hearings would also explore the extent of current regulation of the travel agency industry, whether additional legislation is necessary, and, if so, what form it should take. Testimony from all affected and interested parties will be requested on the issues at that time. At the conclusion of the hearings the committee will make whatever recommendations it deems appropriate based on the hearing record and its own determinations.

FANNIE LOU HAMER—BEACON FOR HUMAN RIGHTS

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. STOKES. Mr. Speaker, in recent months the term "human rights" has been very much in vogue. Yet there was a time in our history when it was perilous if minorities or others spoke or fought for "human rights". It was at this period in America's human rights struggle that Fannie Lou Hamer was most vocal and active. Thus, it is with great sadness that I must report that Fannie Lou Hamer died of cancer on March 16, 1977, in Mount Bayou Community Hospital in Mississippi. Though but 60 years old when cancer ended her life Fannie Lou Hamer enjoyed a fruitful and productive life.

After leaving her toils as a sharecropper on a cotton plantation at age 45 Mrs. Hamer joined the Student Nonviolent Coordinating Committee in 1961. As a result of her efforts to register Southern blacks she was harassed, beaten, thrown off her land, and jailed. Yet, this did not deter her efforts to secure human rights. In fact it motivated her and renewed her faith in the belief that her struggles were righteous. Mr. Speaker, what many of us remember Fannie Lou Hamer most for was her challenge to Mississippi's all-white delegation to the 1964 Democratic National Convention. Mrs. Hamer pleaded to be seated at the Democratic National Convention in a forceful and eloquent manner. Her tearful utterances electrified the television audience by reminding them that she had been brutally beaten in order to participate in the political process.

Mr. Speaker, though Fannie Lou Hamer's 1964 challenge to Mississippi's all-white delegation was unsuccessful she has been credited with the partial seating of blacks at the 1968 convention, the displacement of white delegates at the 1972 convention, and the merger of the black and white Democratic Parties in 1976.

Mr. Speaker, in a 15-year period, Fannie Lou Hamer accomplished more than most persons accomplish in a lifetime. Mr. Speaker, I think that Mrs. Hamer's accomplishments were in no small measure attributable to the simple fact that she refused to be intimidated, for as Fannie Lou Hamer put it, "People respect me, because I respect myself." Mr. Speaker, Fannie Lou Hamer will be dearly missed.

TRIBUTE TO WAYNE ELLSWORTH, SUPERINTENDENT OF TRIPP HIGH SCHOOL

HON. LARRY PRESSLER

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. PRESSLER. Mr. Speaker, as a young student growing up in Humboldt, S. Dak., I frequently heard of Mr. Wayne Ellsworth, because at that time he was the band director of Montrose, which is 7 miles away from Humboldt, S. Dak. Mr. Ellsworth is now the superintendent of Tripp High School and is retiring after 41 years of service to South Dakota students. While he was at Montrose High School, Mr. Ellsworth had a champion-

ship band for several years. He was known to me because I played in the Humboldt band and also played basketball, and I would frequently come across him either at band contests or at basketball games where his band was performing.

Few educators can claim as varied an education background as Mr. Ellsworth has. Born and educated in South Dakota, Mr. Ellsworth first taught at Montrose, S. Dak. From 1936 to 1961, Mr. Ellsworth served as band director and science instructor, teaching chemistry, physics, and math. During the last 10 years there, he served as high school principal.

In 1961, Mr. Ellsworth became superintendent of Tripp Public Schools. Under his leadership, Tripp High School has won many State honors in athletics, vocal and instrumental music, and high school forensics, to name just a few.

His educational colleagues have recognized Mr. Ellsworth's talents. In 1960, he was elected to the American School Band Directors Association; in 1972, he was chosen Outstanding Educator of the Year by the University of South Dakota/Springfield; and he has received several grants from the National Science Foundation.

In addition to his educational activities, Mr. Ellsworth has been involved in civic and religious organizations.

Mr. Ellsworth is retiring this year. But the impact he has had on education will continue as his students go on to do other things, and leave their marks on the world. For that, he and his family can be very proud. For that, South Dakota can be grateful.

Mr. Speaker, I am happy to insert into the Congressional Record a tribute to this great man on his retirement after service for 41 years.

VICTORY FOR FORT DEVENS

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. DRINAN. Mr. Speaker, I was delighted to be able to announce yesterday to the people of Massachusetts that Fort Devens no longer faces the dismal prospect of closure or severe reductions. At that time, I and other members of the Massachusetts congressional delegation personally met with President Carter and representatives of the Department of Defense at the White House.

To the relief and applause of the Massachusetts delegation, it was disclosed that the Secretary of the Army had decided to terminate the reduction studies which were being conducted for Fort Devens.

As the Speaker well knows, this announcement came after a year of hard work, frustration, and uncertainty for those of us who have sought to insure that the decision on Fort Devens would be fair and equitable. Although the decision was not scheduled to be released for some time, the economic analysis which was done was so overwhelmingly

on the side of continuing Fort Devens that it was released earlier than expected.

I think that it is important to emphasize that Fort Devens is being saved because the installation is economically justified. In our meeting at the White House, the President indicated that this was the first military installation in his administration that had been saved from closing or severe reductions after initially being targeted by the Pentagon. The President said:

But there is no political credit which is due to me. The analysis was done on a strictly business basis. The base stood on its own merits. It is a great credit to the people of Massachusetts that they have built a Fort which has stood on its own merit.

The actual economic analysis on Devens was disclosed to the Massachusetts congressional delegation by the Deputy Secretary of Defense, Charles Duncan, and the Secretary of the Army, Clifford Alexander, who also attended the meeting at the White House, Mr. Duncan stated that it would have cost \$156.4 million to transfer the functions of the fort to other military installations. Balanced against the fact that only \$5.8 million would be saved on an annual basis through moving Devens, it was overwhelmingly clear that there would be no savings to the taxpayer if Devens was closed or reduced. Indeed, it would have taken over 25 years to even recoup the initial cost of the move, a fact which strongly argued against the proposed reduction.

Mr. Speaker, the above figures showed that Fort Devens is fully capable of standing on its own based on military considerations. Yet these very impressive statistics did not even include the local and State economic impacts which would have been experienced had Devens been closed or severely reduced. There are more than 7,600 military and civilian employees who work at Fort Devens. The combined payroll of these individuals total more than \$70 million, while contracts from the fort reach nearly \$40 million. In addition to other local dollar impacts, the Fort Devens presence in Massachusetts and New England as a whole reach nearly \$130 million. Obviously, the loss of such an installation would have entailed a great deal of hardship for our State.

Neither can we underestimate, Mr. Speaker, the individual cases of hardship which a closure at Fort Devens would have entailed. Men and women who have laboriously built up their businesses for many years in the Ayer, Fitchburg, and Leominster areas and who are dependent on the fort would have had their livelihoods rudely interrupted. In many cases, individuals would have lost their businesses and their life savings through the transfer of Devens. This was poignantly brought to my mind again and again as I met with business owners, school teachers, town officials, and homeowners in the central Massachusetts region, who would have been adversely affected by a closure or reduc-

During our briefing yesterday, I was especially pleased to hear the President say that during his campaign for the

Presidency he acquired a "special awareness of the spirit of the people of New England." Mr. Carter also mentioned that he was aware of the special economic problems which we face in our region. Fortunately, Fort Devens did stand on its own merits such that additional economic problems will not be experienced as a result of a major transfer of functions. Nevertheless, I feel that we must face up to the fact that Devens must be made more cost efficient in the future. There are many things which could be done to effect greater efficiency. as suggested by the Arthur D. Little report and other studies. I therefore feel that in the future we must do all that we can to see to it that the fort is made increasingly cost effective.

One of the prime ways of doing this would be to expand the intelligence training and Morse code functions which are presently ongoing at the fort. By increasing the size of these schools we could lower the cost of overall training and increase the efficiency of Devens. This option has been recommended quite a number of times, and I feel that it is time that such recommendations are implemented. The Defense Department does want to review the intelligence functions, and I would strongly urge that this be an option which is given great attention.

Another option which could be pursued involves reducing the substantial energy costs which are experienced at Fort Devens. Due to the fact that many of the buildings at the fort are not properly insulated, significant energy waste does occur. I would therefore suggest that the Army give serious attention to insulating and weatherizing many of their buildings. This activity could perhaps save as much as one-third of the energy which is now used to heat the fort's facilities. I would also raise the possibility of installing solar equipment at the base. With the great amount of space which is available on post, Fort Devens could be used to foster a major solar demonstration program to test the feasibility of solar power equipment and devices. This could be accomplished in cooperation with the regional Federal solar institute which will be located in the New England area.

Mr. Speaker, by insuring that the cost efficiency of Fort Devens is continuously improved we can protect the investment which the taxpayers have in this important military installation. We can also see to it that Fort Devens continues as an important component of the U.S. defense effort. In view of the fact that the fort is the last major Army installation in New England, this is one way in which we can work to strengthen our local and regional economy.

I am delighted by the final decision which has been reached with regard to Fort Devens. The fort has shown that it can stand on its own, and we have avoided the very substantial impacts which would have been experienced by individuals affected by closure or reduction at Devens. However, the fight has not ended. We must now do all in our power to insure the efficiency and capability of the fort. In this way, the victory for Fort Devens will not be a short-

lived one for the residents of Massachusetts.

Mr. Speaker, I would now like to include in the Congressional Record the information sheets which were provided to Members of Congress by the Defense Department in announcing the termination of realinement studies at Fort Devens:

[Information for Members of Congress]
TERMINATION OF REALIGNMENT STUDY FOR
FORT DEVENS

OFFICE OF THE SECRETARY OF THE ARMY, Washington, D.C., April 6, 1977.

The Secretary of the Army has decided to terminate the realignment study of Fort Devens, Massachusetts, announced on 1 April 1976. The objective of the study was to determine the feasibility of reducing Fort Devens to semi-active status and incorporated previously directed studies concerning realignment of all or a part of the U.S. Army's Intelligence and Morse Code Training.

Study of the reduction action has revealed unacceptably high relocation costs coupled with a low annual amortization rate. In keeping with the Army's earlier announced intention to stop realignment studies at any point if continuation is clearly not beneficial, the Secretary of the Army has made this decision.

While reducing Fort Devens to a semi-active installation has been judged infeasible, the Army will be reviewing the Morse Code and Intelligence Training functions, presently at Fort Devens, as part of a Defense-wide initiative to establish a leaner, more economical base structure.

FORT DEVENS BASE REALIGNMENT STUDY

APRIL 4, 1977.

94.1

On 1 April 1976 the Army announced that Fort Devens would be studied for possible reduction to semi-active status, with Reserve Components support retained. The FORSCOM draft study of that alternative has produced data shown below. The data has been validated and the Case Study and Justification Folder is still being refined.

(In millions of dollars) Military Personnel (movement, household goods, dislocation allowances) _______ 2.8 Civilian Personnel (termination, severance, relocation, overtime) _____ 3.0 Transportation (movement of equip-

ment and supplies) 1.0

Other (deinstallation/reinstallation of some equipment; packing and crating; put some buildings in "mothballs") 9.8

MCA (FYDP construction—barracks,

tions and dining facilities—includes EM barracks and academic facility at Ft. Huachuca @ \$51.5 and EM barracks at Ft. Lewis @ 15.5)

* Family housing not included in amortization calculation.

CONSUMER EDUCATION IS A GOOD INVESTMENT

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. REUSS. Mr. Speaker, this summer the House of Representatives will consider appropriations for fiscal 1978 for the Department of Health, Education, and Welfare. The Labor/HEW Subcommittee of the Appropriations Committee has just completed its hearings and will soon begin markup on this legislation.

A small but important part of that budget will be the Carter administration's request for \$3,135,000 to continue funding for HEW's Office of Consumer Education.

Helen Nelson, director of the University of Wisconsin's Center for Consumer Affairs in Milwaukee, has just sent to me the December 5, 1976, article by Sidney Margolius, as published in the St. Paul Sunday Pioneer Press. The article describes the important work being done in some of the 66 projects funded by the Office of Consumers' Education, and presents a forceful argument for continuing these programs. I want to share that article, entitled "Consumer Education Good U.S. Investment," with my colleggies:

CONSUMER EDUCATION GOOD U.S. INVESTMENT
(By Sidney Margolius)

New YORK.—The \$3 million the U.S. Office of Consumers' Education is spending to finance 66 grass roots projects around the country may well be the best money the government ever spent, both in immediate and future returns.

This is the first year of this broad effort at consumer education authorized by Congress in the Education Amendments of 1974.

The diversity of the first 66 projects funded by a combination of federal grants and local resources is especially striking. From lonely Indian reservations to teeming inner city neighborhoods, pilot groups are beginning classes, information clinics and service activities aimed at developing consumer skills needed to cope with their special problems

The groups include senior citizens, handicapped people, minority groups, teen-agers, industrial workers, and low-income families. They all share common consumer problems, of course, but have unique problems.

As immediately useful as the services flowing from these exploratory projects may be to their communities, their real value is what the country as a whole is going to learn about specific consumer information and service needs. The community groups and educators running these projects will learn as much from the people being educated as they will from the teachers.

In fact, and very encouragingly, some of the projects are aimed at training school teachers and community agency representatives in consumer information so they in turn can teach the students and other people

There are few more worthwhile educational efforts in this age of widespread consumer problems with their often harmful effects on individuals and families, and on our national economy and community life.

It is increasingly apparent that a waste of personal and family resources is, on a large scale, a waste of national resources. In almost every type of consumer expenditure noticeable waste of resources is taking place.

The projects themselves have been designed so that the methods and materials they develop can be used in other towns and schools around the country.

The Office of Consumers' Education (OCE), which helped develop these projects is part of the U.S. Office of Education. OCE sees its effort as different from much of the traditional consumer education in schools that was, and often still is, related mainly to homemaking, business education or industrial arts.

In this new concept, school students would get consumer education in a wide variety of subject areas. But as significantly, the OCE program includes consumer education for adults, and especially for those with particular needs or who are trying to manage on relatively small incomes.

Just over half the projects are being run by traditional educational institutions such as local school systems, colleges and state agencies, reports OCE Director Dustin Wilson, Jr. The others are conducted by communitybased public or private nonprofit agencies.

Several of the community-based projects seek to teach consumers their legal rights. One, operated by the Tampa (Fla.) Legal Services helps answer individual legal questions but also tries to educate the public through group discussions of rights and responsibilities. Another project, in Flagstaff, Ariz., is zeroing in on consumer legal education for low-income people.

A number are aimed at helping seniors with their many and often acute consumer problems. Virginia Polytechnic Institute is developing a financial counseling program for the elderly. Catonsville Community College in Baltimore, Md., is concentrating on "Senior Survival in the Marketplace."

In Detroit, the United Auto Workers Union is working on consumer education materials for industrial workers and also is training a number of workers to provide consumer education for other workers.

Several projects are helping native Americans and Spanish-speaking groups solve urgent consumer problems. In the West, the Coalition of Indian Controlled School Boards is developing a consumer education program for reservation schools.

In Massachusetts the Boston Indian Council is developing a program for adult low-income Native Americans recently coming in to the city from reservations and rural communities. A number of projects are aimed at helping handicapped consumers, such as the deaf.

Also noteworthy are projects being developed to help people returning to society. The Southern Illinois University Dept. of Family Economics is planning consumer education for prison residents and parolees.

The University of Alabama is sponsoring a consumer education project for prerelease mental patients.

PROTEST OF PAY RAISE TO MEMBERS OF CONGRESS

HON. BOB GAMMAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. GAMMAGE. Mr. Speaker, I recently received a letter from Mr. Jerry

Jircik, president of the Alvin Chamber of Commerce, informing me of the protest the Alvin, Tex., Chamber of Commerce has lodged in reference to the pay raise recently granted Members of this House as well as officials in the judicial and executive branches of Government.

For the benefit of my colleagues, I would like to insert in the Congressional RECORD, Mr. Jircik's letter regarding the congressional pay increase, and would recommend that my colleagues study what the business community of Alvin, Tex., has to say about the salaries of Members of Congress.

The letter follows:

ALVIN CHAMBER OF COMMERCE, Alvin, Tex., March 10, 1977.

Hon. BOB GAMMAGE, U.S. Congressman, District 22 Washington, D.C.

DEAR CONGRESSMAN GAMMAGE: The Public Affairs Committee of the Alvin Chamber of Commerce have studied and discussed the recent automatic increase in salaries for members of the House and the Senate and others in government. The committee reported their findings to the Board of Directors of this Chamber of Commerce recommending that this body protest to members the House and Senate for allowing this salary increase to become effective without opposition.

The Board of Directors have agreed unanimously to take such action taking into consideration that the administration of the United States has urged that all inflationary trends be curtailed. We do not feel that congressional raises amounting to \$12,000 or \$13,000 a year automatically are in keeping with the movement to curb inflation

It is the feeling of this Board of Directors that certainly, efforts to curtail the infla-tionary spiral should be led by the members of our Congress.

We would appreciate this protest going into the records of both the House and the

Very truly yours,

JERRY JIRCIK. President.

INDIA'S REMARKABLE ELECTION

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. SOLARZ. Mr. Speaker, all of us who are interested in the protection of human rights and the expansion of democracy around the world can only rejoice in the splendid election campaign which has recently been concluded in India. To the surprise of many inside and outside that country, India has once again reclaimed its title as the world's largest democracy, a title which she held since independence from Great Britain after World War Two and until a state of emergency was proclaimed in 1975.

While many held the belief that democracy is the plaything of India's intellectuals and the urban elites, or that democracy can be maintained only in a developed country, the millions upon millions of rural and urban poor who turned out at the polls and dismissed the Indira Gandhi government were clearly reveling in the return to democ-

India has been one of the few developing countries which has maintained a vibrantly free legal system, parliament and perhaps most important, a free press. With the election returns in, it is a cause for great happiness that the state of emergency has been eliminated. The victorious Janata Party has promised to end the remaining restrictions on liberty and to free those political pris-

oners still held.

While the greatest praise has to be heaped upon the people of India who responded so eloquently through their votes to the challenge of the past 2 years, credit is also due Prime Minister Gandhi who true to her word permitted elections after 18 months of emergency-and then resigned to make way for the new leadership. Whatever mistakes and miscalculations that Mrs. Gandhi may have made in restricting India's freedom, her government has always pledged a return to free elections, a pledge which has led to her sudden fall from power.

It is now clear, if it was ever in doubt, that democracy has an appeal to massive numbers of poor and illiterate people around the globe, and that millions prefer the freedom from human restraints that democracy brings to the rigid restrictions and conformity that dictator-

ships demand.

A New York Times editorial of March 22 makes an important point concerning the importance of the election to the United States:

Of particular importance to the United States is the expected shift in foreign policv. The attitude of the Congress Party, which has ruled since independence, has varied from a self-righteous edginess toward the West to a chilliness bordering on hostility. All indications from the victorious alliance, known as Janata, are that a friendly attitude can be expected toward the United States, with a noticeable cooling of feelings for the Soviet Union.

Whatever its foreign policy, India has begun to earn a new claim on American sympathies, and perhaps aid.

I believe that Congress should keep these words in mind as we begin to consider assistance programs for India both through bilateral as well as multilateral aid programs, particularly through the International Development Association. Those who previously expressed a desire to slash aid to India should consider the events of the past few days as a hopeful portent for the future of United States-India relations and of democracy in the world.

Mr. Speaker, I include the editorial in the Record at this point:

INDIA RECLAIMS ITS FREEDOM

The news from India is an inspiration to all democracies. A people repressed by Prime Minister Indira Gandhi through 18 months 'emergency" seized a moment of freedom to turn on her Government and party, even though they were subject to the threat of further suppression. An impoverished people rejected the siren song of authoritarians everywhere that bread must be bought at the price of freedom. This historic election will

reverberate through many lands; even some Americans had begun to despair of the fate of democracy before the seemingly inevitable march of tyranny.

At the height of her power, Mrs. Gandhi must have felt the stigma of illegitimacy that arose from her people's democratic instincts. To her credit, the election she called when she thought she would surely win turned out to be fair and open, as promised. Ironically, nothing less than her defeat could fully demonstrate the return of democracy that had been her proclaimed aim.

India's future course is by no means clear. But the election showed that Mrs. Gandhi was wrong in judging democracy important only to intellectuals and middle-class citizens. Her stunning defeat, along with that of her son, Sanjay, and of her Congress Party, have badly tarnished that widely held theory.

It is apparent now that the Prime Minister was herself taken in by it, as dictators are so often taken in by counselors who tell them what they want to hear. Otherwise she would probably have tried to rig the election just as her fellow-authoritarian in neighboring Pakistan rigged his recent election, using armed power to make the results stick.

There were, of course, other ingredients in Mrs. Gandhi's defeat. There was revulsion against Sanjay Gandhi for his ruthless ambition and disregard for the elders of Indian politics who tried to block his drive to power. In the final weeks of the campaign he was recognized as a burden on the Congress Party and proved it by pulling his mother down to defeat even in her own district.

There was also deep resentment against the Government's handling of its sterilization program, and a fear that it would become compulsory after two children. The policy was actually confined to only one state but rumor had it spreading soon. Moslems could not accept the practice, on religious grounds, and many Hindus rejected it, partly on philosophical grounds and partly because they feared it would give the future to Moslems. Population control remains essential to the salvation of the country, but the use of compulsion outraged the population to the point of rioting. Education, voluntary controls and a higher standard of living, however slow, seem to be the only tolerable means of achieving a reduction of population; such an approach should be congenial to a more democratic regime than Mrs. Gandhi's.

What next for India? The patchwork coalition that so unexpectedly brought Mrs. Gandhi down may well fly apart as the moment of responsibility approaches. No leader has appeared who seems vigorous and respected enough to pull together that politically, racially, religiously and culturally variegated land. But that does not necessarily point to anarchy, as the fearful predict. The newly constituted Parliament may well produce a leader younger than Moraji Desai and more inspiring than Jagjivan Ram. the two chief contenders. And if not, India still has institutions—the army, the civil service, the state governments-stable enough to provide a more or less orderely transition to the country's next stage.

Of particular importance to the United States is the expected shift in foreign policy. The attitude of the Congress Party, which has ruled since independence, has varied from a self-righteous edginess toward the West to a chilliness bordering on hostility. All indications from the victorious alliance, known as Janata, are that a friendly atti-tude can be expected toward the United States, with a noticeable cooling of feelings for the Soviet Union.

Whatever its foreign policy, India has begun to earn a new claim on American sympathies, and perhaps aid. All who love freedom are measurably safer today than before the Indian election and they have an obligation to encourage the spread of the democratic habit.

DROUGHT EMERGENCY RELIEF **ACT OF 1977**

HON. LEON E. PANETTA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. PANETTA. Mr. Speaker, today, I am introducing the Drought Emergency Relief Act of 1977 in the hope that it will provide the Federal Government with new powers to deliver more appropriate emergency assistance to drought areas.

The Drought Emergency Relief Act pays particular attention to the unique needs of our agricultural sector since current predictions of loss in farm production caused by drought can be translated into even more alarming statistics for rising unemployment, increasing consumer prices, and additional government spending. In California, this multiplier effect means that predictions of \$6.3 billion loss in agriculture-related industries add up to the loss of 144,000 jobs outside of agriculture and \$18 billion loss to our State economy.

During a day-long hearing recently held in my district, local officials, farmers, and cattlemen presented a sobering picture of the situation we face in California. To date, we have had from onethird to one-half of our normal rainfall. Many reservoirs are at 10 percent of their capacity. We have serious overdrafting problems and subsidence is extending 3 to 6 feet. Where subsidence occurs, the soil has less capacity to store water and wells dry up. In areas close to the coast, we have salt water intrusion into our wells as a result of pumping overdrafts. These wells are no longer usable for irrigating vegetables.

Every day there is more public outcry for new wells to be dug. Wells that were once dug at 200 to 300 feet are now down to 800 to 900 feet, requiring 150 to 170 horsepower engines to pull the water out of the ground. This leads to additional use of energy at a time when estimates show that inadequate water supplies in streams will cause a substantial loss of

hydroelectric power.

So there is an energy crisis built into today's water crisis in the West. We also have the threat of extreme fire hazards, severe cutbacks in crop production, and the prospect of increasing numbers of farm acres being sold to developers, thus forcing many of our small farmers out of business. The tale goes on and on. And the end is not in sight. Weather forecasters anticipate the drought to continue for 1 and possibly 2 to 3 more years. If this is the case, it is essential that the Disaster Relief Act of 1974 be amended now to provide emergency assistance to drought areas.

Current programs simply do not provide assistance that is flexible, timely, or

relevant. There is too much administrative redtape, with very little effective coordination, sometimes delaying the delivery of relief over 2 to 3 months.

Noting that droughts, unlike other types of natural disasters, occur over extended periods of time, often resulting in severe long-term economic damage, the Drought Emergency Relief Act of 1977 provides for a specialized program for Federal assistance. Along with the provision for the appointment of a Federal coordinator to serve in the affected area, my bill provides for emergency funding for the following types of services: Water conservation programs for farmers, businesses, and Government entities; regional water supply investigations for agricultural and domestic needs; improved irrigation practices; water transportation and expansion of water sources; training for farmers to develop alternative crops that conserve water; employment and manpower training programs; and temporary mortgage or rental payments when individuals have received notice of foreclosure or cancellation of a contract as a result of a drought. Two additional provisions allow for the reduction of interest rates to 1 percent for emergency small business and farmers home loans.

Mr. Speaker, the present crisis is serious. I do not think it is being overestimated in any way. In my area of the country, as well as in others, people are suffering severe economic hardships as a result of the drought. It is the intent of my legislative proposal to enable these people to benefit from the same funds to which victims of floods, hurricanes, and earthquakes are now entitled, and to provide both immediate and long-term as-

sistance to drought areas.

It is my hope that Congress will respond favorably to this urgent appeal for action by approving passage of the Drought Emergency Relief Act of 1977. I include for the RECORD the text of the

H.R. 6156

A bill to amend the Disaster Relief Act of 1974, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Drought Emergency Relief Act of 1977."

TITLE I-AMENDMENTS TO THE DISAST-ER RELIEF ACT OF 1974

SEC. 101. Section 101(a) of the Disaster Relief Act of 1974 (42 U.S.C. 5121(a)) is amended by striking out "and" at the end of paragraph (1), and by adding after paragraph (2) the following:

"(3) droughts and other similar noncataclysmic disasters may cause the same kinds

of loss and disruption: and

"(4) droughts occur over extended periods of time, causing severe long-term economic damage, and, therefore, require special Federal attention and Federal assistance;"

SEC. 102. Section 303 of the Disaster Relief Act of 1974 is amended by redesignating subsections (b) and (c) as (c) and (d), respectively, and adding a new subsection (b) as follows:

"(b) Upon his declaration that an emergency exists, and after a request by the Gov-ernor of the affected State, the President

shall appoint a Federal coordinator to operate in the affected area.".
SEC. 103. Section 306 of the Disaster Re-

lief Act of 1974 is amended by redesignating subsection (b) as subsection (c) and adding

a new subsection (b) as follows:

"(b) In any major disaster or emergency caused by drought, Federal agencies are hereby authorized, on the direction of the President, to provide assistance by performing on public or private lands or waters any emergency work or service essential to avoid the loss of lives and to protect and preserve property, including, but not limited to-

(1) conservation practices, including, but not limited to, emergency tilling, fencing,

and range seeding;

(2) improved irrigation practices, including but not limited to, installation of irrigation pipes;

in-depth regional water supply in-"(3) vestigations for agricultural and domestic needs:

"(4) education, training, and assistance for farmers, businesses, and other affected persons or government entities covering appropriate conservation techniques;

(5) assistance for water and other essential needs, including the movement of water, supplies, and persons, and including the drilling for or expansion of water sources;

training and assistance for farmers in the production of alternative crops which require less water for growth;

"(7) establishing comprehensive employment and manpower training programs; and

"(8) making contributions to State and local governments for the purpose of carrying out the provisions of this paragraph.'

SEC. 104. Section 310 of the Disaster Relief Act of 1974 is amended by adding the words "or drought emergency" after the words "major disaster" in both places in which it

SEC. 105. Section 408 of the Disaster Relief Act of 1974 is amended by redesignating subsections (c), (d), and (e) as subsections (d), (e), and (f), respectively, and inserting after subsection (b) a new subsection (c) as follows:

"(c) The President is authorized to make a grant to a State for the purpose of such State making grants to meet necessary penses or needs of individuals or families adversely affected by either a drought emergency or major disaster caused by drought in those areas where such individuals, or families are unable to meet such expenses or needs through assistance under other provisions of this Act.".

SEC. 106. Section 414(a) of the Disaster Relief Act of 1974 is amended by

(a) striking the comma and adding the ords "or drought emergency." after the words "result of a major disaster"

(b) adding the words "or drought emer-ency" after the words "fiscal year in which

the major disaster"; and
(c) adding the words "or drought emer-'after the words "full fiscal year period following the major disaster"

Sec. 107. The Disaster Relief Act of 1974 is amended by adding at the end of title IV a new section as follows:

"MORTGAGE AND RENTAL ASSISTANCE

'SEC. 420. The President is authorized to provide assistance on a temporary basis in the form of mortgage or rental payments to or on behalf of individuals and families who, as a result of financial hardship caused by drought, have received written notice of foreclosure on any land, equipment, mortgage, or lien, cancellation of any contract of sale, or termination of any lease, entered into prior to such a drought. Such assistance shall be provided for a period of not to exceed one year, or for the duration of the period of financial hardship, whichever is longer.".

TITLE II-AMENDMENTS TO THE PUBLIC WORKS AND ECONOMIC DEVELOPMENT ACT OF 1965

SEC. 201. (a) Section 801(b) of the Public Works and Economic Development Act of 1965 (42 U.S.C. 3231) is amended by adding the words ". or drought emergency" within the quotation marks after the words "major disaster".

(b) Sections 802, 803, 804, and 805 of such Act (42 U.S.C. 3232-3235) are each amended by inserting "or drought emergency" after "major disaster" each place it appears.

SEC 202. Section 804 of the Public Works

and Economic Development Act of 1965 is amended by striking the words "facilities (including machinery and equipment) for industrial and commercial usage" and in-serting in lieu thereof "facilities (including machinery, equipment, or supplies) for industrial, farm, or commercial usage".

TITLE III-MISCELLANEOUS PROVISIONS

SEC. 301. Section 7(a) (1) (A) of the Act of September 30, 1950 (Public Law 874, Eightyfirst Congress, as amended, 20 U.S.C. 241-1 (a) (1) (A)), is further amended by inserting or has suffered drought emergency" after

"other catastrophe".

SEC. 302. Section 7(b)(2) of the Small Business Act (15 U.S.C. 636(b) (2)) is amend-

ed by-

striking the semicolon at the end (1) thereof and inserting in lieu thereof ", or";

(2) adding a new subparagraph (C) as

"(C) an emergency caused by drought, as determined by the President under section 102(1) of the Disaster Relief Act of 1974 (42 U.S.C. 5122(1)), in which case the interest rate on the Administrator's share of any loan made under this subparagraph shall not exceed 1 per centum per annum;"

SEC. 303. Section 324 of the Consolidated Farm and Rural Development Act (7 U.S.C. 1964) is amended by adding at the thereof the following new sentence: "Notwithstanding any other provision of this section, any loan made or insured under this Act as a result of an emergency caused by drought, as determined by the President un-der section 102(1) of the Disaster Relief Act of 1974 (42 U.S.C. 5122(1)), shall be at an interest rate not in excess of 1 per centum per annum.".

BYELORUSSIAN INDEPENDENCE DAY

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Ms. OAKAR. Mr. Speaker, on March 25. I joined with Americans of Byelorussian heritage in Cleveland in celebrating Byelorussian Independence Day. On that historic date in 1918, the Byelorussian people declared their independence and established the Byelorussian Democratic Republic.

The independence of these gallant people was short lived, for before the end of that year the Bolshevik army overran this country. But there is no doubt that the spirit of freedom and independence among the Byelorussian people lives on. In 1944, when an opportunity for independence again presented itself, the Second All-Byelorussian Congress met in Minsk, reapproved the

declaration of independence, and elected a Byelorussian Central Council. While this effort, too, was soon overcome by force, it served notice to all the world that the Byelorussian people want their independence and will stand up for it in spite of all the odds.

Mr. Speaker, I am proud of the stand our country has taken in behalf of human rights in oppressed lands, and I intend to do all I can to see that we continue to stand with the Byelorussian people in their struggle for freedom.

RICE

HON. JIM GUY TUCKER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. TUCKER. Mr. Speaker, Arkansas is the largest rice-producing State in the Nation. Last year, Arkansans grew 31 percent of the U.S. rice crop and led the Nation in producing rice for export. My district, the Second, alone grows approximately 11 percent of the Nation's total rice crop each year. In addition, 60 percent of our total rice crop, 14 percent of which is grown in Arkansas, is exported. Those exports amount to one-third of all world trade in rice. But the United States grows only 1.5 percent of the world rice crop.

I suggest that we take a new look at our Nation's rice program with three goals in mind: First, assuring an equitable and stable price for farmers, second, meeting domestic and international market demands with a fair price for consumers, and, third, replacing the current stop-and-go rice production policies with a coordinated, long-term rice program incorporated into a total farm

Under present conditions, target price legislation coupled with loan and allotment programs is designed to provide a reasonable level of protection for established ricegrowers. However, disagreement has risen in my district, as well as in others, between allotment holders on the one hand and new growers on the other, who, under the 1975 Rice Production Act, are free to cultivate as much rice as they can grow. These new growers sell their crops on the open market without the benefit of Government loan or target price protection. The conflict between new and old growers needs to be resolved through long-range planning to give all rice farmers equal treatment and a better basis for judging what types of allotment programs and price supports, if any, will be available 2, 3, or 5 years from now. To achieve this end, I support extending the existing rice program for 1

The key to stability in our rice program lies in expanding the markets for rice, both internationally and here at home. Rice is a major food product. In addition to relying on its traditional uses, we should develop new outlets for

its consumption. Along these lines. I am asking the Department of Agriculture to review outdated regulations that exclude rice as an approved food in federally subsidized school lunch programs. Interim regulations allowing school lunch credit for rice are scheduled to go into effect by September after which a period for public comment will be set aside before the final regulations are promulgated.

International markets are vital if the rice farmer is to receive a fair price for his rice at home. Foreign markets provide a profitable as well as a humanitarian outlet for surplus rice. In addition to lessening world food needs, rice exports have helped keep our balance of payments in line, particularly with the OPEC nations where rice has played an important role in partially offsetting the tremendous outpouring of U.S. dollars for oil. Agricultural commodities accounted for 5 percent, or \$23,273 billion, of our total \$114,807 billion exports in 1976. Rice valued at \$629 million made up 37 percent of the agricultural goods exported last year and accounted for 1.8 percent of our total exports in 1976.

The populations of underdeveloped and developing areas-where rice is the principal food staple-are growing at rates much greater than the 1.8 percent annual world growth rate. Last year. Southeast Asia's population increased by 2.4 percent. Population in Africa grew at a rate of 2.6 percent, while the Middle East and tropical South America both increased their populations by 2.9 percent in 1976. These countries have made great efforts to expand rice production. but still must struggle, even under the extremely favorable weather conditions of the past 3 years, to meet the nutritional needs of their people. As we know too well, weather is notoriously unreliable and cannot be expected to support bumper world rice crops much longer.

Our friends in other lands look to the United States to meet their growing rice needs. Several formerly major rice exporting countries, such as Iran, Korea, Vietnam, and Cambodia, must now import large quantities of rice. The rice exporting capabilities of others have decreased significantly in recent years. Burma has dropped from exporting 2 million tons of rice to exporting less than 500,000 tons annually. Likewise, Thailand's annual export level has declined from an average 1.7 million tons to about 1 million tons. It is our moral duty to increase our rice exports and assist these developing nations to upgrade their rice growing capabilities to avert a tragic world food shortage.

Public Law 480, the food-for-peace program, provides an excellent opportunity for expanding our rice exports and for assisting in meeting the nutritional needs of others if utilized to its fullest potential. Six hundred and seventyseven million tons of rice have been allocated under title I of Public Law 480 for the current fiscal year, and a 600 million ton projection has been made for fiscal year 1978. The majority of this rice is sold to Bangladesh, Indonesia, and South

CXXIII-691-Part 9

Korea with lesser amounts going to Sri Lanka, Senegal, Syria, Lebanon, and

Our technology and resources are such that we can continue to move ahead as a major rice exporting nation without restricting the domestic availability of rice at a reasonable price. I was told recently by a rice farmer from DeWitt, Ark., that years ago the average rice yield was 45 bushels per acre. Now the average yearly crop is just over 100 bushels per acre. I am convinced there will continue to be an abundant international need for all the rice we can conceivably produce. Within the past 4 years alone, our rice exports have more than doubled, increasing from \$16 million in 1973 to \$38 million in 1976.

The best course of action is to extend our present rice program through crop year 1978. At that time, we can review the situation and legislate a long-term farm program that recognizes rice as an integral part of a national food policy. Such reliable guidelines will aid farmers in planning their crops to meet the market demand for rice both here and abroad.

JUVENILE JUSTICE DELINQUENCY AND PREVENTION AMENDMENTS OF 1977

HON. IKE F. ANDREWS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. ANDREWS of North Carolina. Mr. Speaker, on April 6, I introduced a bill to amend the Juvenile Justice Delinquency and Prevention Act of 1974. The essential section of this bill would extend the authority of the Law Enforcement Assistance Administration to administer the act through fiscal year 1980.

This bill is identical to the proposal recommended by the Attorney General of the United States. While the pressures of time require the placing of this proposal before the Congress for consideration, I do so with reservations regarding certain provisions of the bill. Therefore, my action today should not necessarily be interpreted as foreclosing avenues of change to improve and strengthen the proposal's impact on the problem of delinquency among our youth.

Clearly, juvenile delinquency remains a serious national problem. The fact that over 43 percent of all serious crime in this country is committed by persons under the age of 18 portrays the magnitude of the problem of juvenile delinquency. It is not surprising, therefore, that Attorney General Griffin Bell re-cently observed that, "If we are going to do anything about crime in America, we have to start with the juveniles." This bill would encourage the States, units of general local government, and private nonprofit agencies, organizations, and institutions to continue their efforts to reduce juvenile delinquency and improve the juvenile justice system.

PORPOISES AND TUNA FISH

HON. DANIEL K. AKAKA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. AKAKA. Mr. Speaker, one of the most serious problems facing Congress this session deals with the tuna-porpoise issue. This issue has a great deal of emotional support on both sides, from the fishermen and the environmentalists. I believe, however, that a solution can be worked out that will satisfy both interests. The Honolulu Advertiser in its April 4, 1977, issue, printed an excellent analysis of this complex problem. I believe that all Members of Congress could benefit by this commentary, and I include it in the Record, as follows:

PORPOISES AND TUNA FISH

Last week The Advertiser published a fullpage advertisement from Friends of Animals, calling for stringent public action against the tuna fishing industry, in order to save the porpoises killed by fishermen netting yellowin tuna.

It represents probably the strongest position of the environmentalists in this matter. But, while we are generally sympathetic to the aims of those who would stop all porpoise killing, there is also another side to the question.

A large share of the tuna eaten by Americans is yellowfin, caught "on porpoise" as they put it in the industry. That is because the yellowfin swim with porpoises and it is by spotting porpoises in the proper waters, that the fishermen find their fish, just as in Hawaii waters, fishermen for aku (skipjack) and ahi (yellowfin) find their fish by watching seabirds.

The modern method of catching yellowfin is the purse seine. Last year the 130-boat American tuna fleet brought home 332,000 tons of tuna, most of it yellowfin. Much of this yellowfin is caught off the South American coast, and that is where conditions are

proper for purse-seining.

(No purse-seining is done in Hawaii waters. They are too warm, and too clear. The ahi would swim down deep enough to escape the net. They do not in colder waters because they do not like cold water, and visibility is poor.)

Last year, those purse-seiners also killed about 100,000 porpoises. The fleet has been laid up since November, when the Department of Commerce held that the porpoise kill had been exceeded. That figure was established under the Marine Mammals Protection Act of 1972, to be reviewed and changed by the Department of Commerce.

The Department of Commerce has just set a figure of 59,050 porpoises, which may be sacrified in the fishing for tuna.

The fleet is still laid up because of the manner in which that fishing can be done. Fishing is prohibited "on porpoise" where the varieties of porpoise are mixed—to protect the rare eastern spinner porpoise, which often swims with the common spotted porpoise.

The fishermen have elected to stay in port because they say it is impossible to make a profit with so many restrictions. That issue has yet to be resolved.

Friends of animals and other environmental groups want the porpoise kill put at zero. As things stand that would mean an end to American purse-seining for vellowfin.

American purse-seining for yellowfin.

It would not, however, mean an end to

porpoise slaughter. Several other nations seine for tuna. There is an immense market for canned tuna the world over. The disappearance of the U.S. fleet would simply mean more for the others.

Through industry and Federal financing, remarkable progress has been made in reducing the porpoise kill in recent years.

Last fall several scientists went out with the purse-seiner Elizabeth C.J. Using new techniques, the fishermen brought home a catch of 550 tons of tuna. They threw out their seine 31 times. They caught in it an estimated total of 20,000 porpoises. The scientists counted only four killed in the whole operation.

To be sure, Elizabeth C.J. had the most modern experimental equipment aboard. But the captain and crew proved to the satisfaction of the scientists that they could do the job with almost zero porpoise kill.

job with almost zero porpolse kill.

Now the question is to get this system into general use. The easiest and quickest way to do this is for the Federal government to subsidize changeover to the equipment and system used by Elizabeth C.J.

Such an example by the American fleet would be of far more effect in stopping other nations from killing porpoises than quitting the purse-seine method.

Here in Hawaii it has not seemed to be an issue. Our own Coral brand tuna is skipjack, caught on lines.

Bumblebee brand, also packed by Castle & Cooke, is generally yellowfin, also sometimes caught on lines. But Castle & Cooke has a 12-boat purse-seine fleet, serving its several canneries, and some of the Bumblebee brand is actually caught off South America "on porpoise."

The environmentalists say we must save the porpoise and stop the slaughter. They note some six or seven million porpoises have been killed by purse-seiners since the technique was developed in the late 1950s. The story was virtually unknown until 1971, when environmentalists suddenly became aroused.

The 1977 porpoise kill quota of 59,000 seems far too high to those who would save the porpoise. It seems almost punitive to the tuna industry, but some fishermen say it is within the realm of possibility.

There must be compromise between the environmentalists and the industry on this matter. The public wants to save the porpoise, but it also wants to keep food prices down

There, in essence, is the argument. The combined efforts of science, industry and government can resolve it. That much is now plain.

DEAR AMERICA

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. LAGOMARSINO. Mr. Speaker, the following is a patriotic essay by my constituent, Mrs. Catherine Mervyn of Oxnord, Calif.

Often we Americans are so deeply concerned with the faults of this Nation that we become blind to its greatness. Mrs. Mervyn's essay exemplifies the true spirit of America—a proud nation founded on freedom and opportunity:

MARCH 28, 1977.

DEAR AMERICA: For a very long time now I've wanted to talk to you and tell you that I love you. In a way, this is sort of a love

letter to you because I feel that when a person has good, strong feelings about something, or someone, he should say so, especially when the time to do it in . . . is getting shorter, faster. So . . . here it is . . . America, for everyone to hear . . . I love you!

It seems hardly a breath away since I first stepped upon your mystic, crowded shores! Filled with frightening wonder, I could not see the great, blue sky that burst out, far beyond the eminence of your colossal, concrete piles. The eyes of youth do not penetrate the depths of freedom's grandeur 'til time and life mold us into what we are. I am older now and know your magic power, the power of freedom, whose blade-sharp edge forever scores its imprint upon the human soul.

I love you, America!

I love you for all your many temples where people can stand, kneel, or sit to worship the Maker of us all. We can discuss the pros and cons of evolution and still believe that in one God there lies salvation for us all.

'One nation under God ..." "God Bless America!"

May you be blessed for my life's partner whose constant love, comfort and compan-ionship, inspire me to thought and action on things that bring fulfillment to my otherwise empty life.

I love you, America!

I love you for the opportunities you've given me, and I tremble with joy when teaching young children the intricacies of you whose faults I can lay bare, but balance each

with greatness beyond compare.

I love you for their young sounds when tonelessly they recite, "I pledge allegiance . . .". Their voices are eternally etched iance . . upon my heart, and a tomorrow surely will be here when they, too, will feel the tingle of your sublim nobility. And come it will, as long as I discharge my duty to my God. . . . and you!

I love you, America!

I love you for the vastness of your countryside; the brown, the green and purple mountains whose peaks lift my spirit to lofty, glorious heights, yet dwarf me to nothingness . . . a tiny creature, whose dependence upon God is everlasting. I love you for times upon your sandy shores

and seas whose depth and breadths can move me to dream of goals that I may never reach,

yet can always strive for.

I love you for memories that thoughts of you evoke, for words of heroes who profoundly spoke:

"So a man can stand!"

"Give me liberty, or give me death!"

"With malice toward none. . . ."

The chain is endless with maximus to honor and be proud, and I know in thanking you, I am truly thanking God.

WHY BREIRA? PART II

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. McDONALD, Mr. Speaker, yesterday, I placed in the RECORD part I of "Why Breira?" by Joseph Shattan. We may not all agree with every formulation of Mr. Shattan, but his scholarship and expertise are clearly shown in this article. Mr. Shattan, who recently received his doctorate at the Fletcher School of Law and Diplomacy, has provided us with valuable information on

a support appartus for Middle East terrorism. Part II follows:

WHY BREIRA? PART II

Even before Mrs. Isaac's pamphlet appeared there were signs of friction within Breira over the activities of its full-time staff. At least a few of those whose names were listed on Breira's masthead had begun to feel they were being used, in effect, as window-dres ing. One such person was Rabbi Joachim Prinz, a well-known Zionist and former president of the American Jewish Congress, and one of Breira's "stars," who in June 1975 sent a letter of objection to Loeb about a statement denouncing Israeli foreign policy which Breira was planning to issue at a press conference. Rabbi Prinz complained: "The Advisory Committee, of which I am a member, has never met [!], and so decisions are left to you and Arthur [Waskow], after some superficial consultations with one of us or with none of us." (At the time Waskow was nowhere even listed as a key figure in Breira.) Rabbi Prinz subsequently resigned from the organization, but it was some time before his name, and thus the appearance of his endorsement of Breira, was removed from its stationery.

In recent months, controversy over Breira has intensified both inside and outside the organization. A number of prominent people who had joined or supported the group have resigned—notably Nathan Glazer and Jacob Neusner*—and others who had con-templated joining are reported to have had second thoughts on the matter. (No doubt some have also been drawn to Breira precisely because of the adverse publicity.) One neewspaper, the Jewish Week, has waged a lengthy out-and-out campaign of denunciation against Breira, but has also opened its pages to rebuttals by Loeb and others.

As for the established Jewish organizations, their reaction to Breira and to the controversy surrounding it has ranged all the way from alarm—one or two agencies have enjoined members of their own staff from publicly espousing positions contrary to those officially adopted by the organizations employing them-to diplomatic silence. And as a consequence of all the charges and countercharges, Breira itself, at its national conference held in late February, released a series of platform resolutions which clearly reflect a moderating tendency on a number of key issues and a desire to create as broad a base as possible by clinging to the lowest common

* Neusner, a professor of Jewish studies at Brown University and one of Breira's early members, has written recently that he joined the organization hoping it would provide a forum for the free discussion of the whole spectrum of issues facing American Jewry and contribute some "important and serious thought on the definition of Zionism and the tasks of Zionism in the [Diaspora]." But, he says, it has done nothing of the kind. Instead, "Breira is an organization with a single obsession, which is not Zionism, not peace in the Middle East, not any of the great issues of that world-but the West Bank and the evils of Jewish settlement thereon. Its principal interest is to tell the Israelis what to do in connection with what is (alas) only one of the man aspects of policy they have to work out." Another early member of the organization, who has subsequently disaffiliated himself, Alan Mintz, says in a recent article that he missed in is (alas) only one of the many aspects of "ahavat Yisrael, unconditional love for the Jewish people"; following Israel's setbacks in the Yom Kippur War, Mintz notes, the mood in Breira "can only be described as inhilant.

ideological denominator its members can agree upon.

It remains to be seen whether, in the effort to broaden its appeal—which will mean, and has already meant, issuing strong declarations of support for a secure Israel, endorsing aliyah, and, above all, muting the preoccupa-tion with the PLO—Breira will dilute itself out of fashion. But whatever the future shape of the organization, the significance of Breira as phenomenon transcends the particular issues it finds to concentrate upon, and in the end it is the phenomenon itself which remains to be understood.

Breira came into existence and has gained strength and adherents during a period when the political fortunes of the state of Israel have reached perhaps an all-time low. Before 1973 Israel was, to be sure, isolated in its immediate geographical vicinity and surrounded by enemies sworn to its physical destruction. Since 1973, however, Israel has become increasingly isolated in the world as a whole, shunned even by many of its former friends and treated as a pariah by the community of nations. The reasons for Israel's new and more complete isolation are of course in the first instance political, having to do with the need to insure the supply of oil from Arab countries to the West. But what political considerations demand, moral considerations have come to justify. Hand in hand with the withdrawal of political support for Israel on the part of a dependent and weakened West has gone a withdrawal of sympathy, of moral support. The campaign of vilification against the Jewish state, initiated by the Arabs and the Soviet Union, and participated in enthusiastically by many Third World nations, has met with only token opposition from Israel's friends and allies.

The resolution of the UN General Assembly equating Zionism with racism, the ceaseless accusations that Israel is an outpost of imperialism in the Middle East, a "white" colonial power bent on thwarting the legitimate national aspirations of a people whose land it took away by force—these lies and others like them may or may not be accepted in their entirety in the West, but less and less is anyone inclined to refute them. It has increasingly come to be accepted as true that the fundamental cause of justice in the Middle East is on the side of the Arabs, the fundamental cause of injustice on the side of Israel: indeed, a serious question has been raised as to the very legitimacy of Israel, its right to exist.

Now, this idea—that Israel is the source of the problem in the Middle East—has not only come to inform the political thinking of Western governments intent on wringing concessions from Israel in order to placate Arab oil-producing nations, but it has also come to permeate public opinion as wellprogressive opinion, enlightened opinion, liberal opinion. With the success of the worldwide campaign against Israel's legitimacy, liberal support for Israel can no longer be taken for granted-certainly not in Europe, and not even in the United States. And if liberal support cannot be taken for granted, the once-solid front of American Jewry is also beginning to show serious signs of a split. If the economic and geopolitical interests of the United States in the Middle East and the interests of Israel should diverge further, that split may become more pronounced.

Breira is a symptom of that split, a vivid demonstration of the inroads made into the American Jewish consciousness by the campaign to delegitimize Israel. In its monthly newsletter, in its public pronouncements, even in the newly "even-handed" resolutions passed at its national conference, Breira tacitly and often not so tacitly endorses the idea that the "problem" in the Middle East is not the decades-old Arab refusal to recognize and make peace with Israel, but rather Israel "intransigence."

One might expect to find, in the publications of a group nominally supportive of Israel, the utmost skepticism concerning Arab intentions toward the Jewish state, yet in Breira's publications it is not the Arabs but the Israelis who are always and willfully assumed guilty until proved innocent—guilty of mistreating their Arab minority and brutalizing the Arabs in the occupied territories, guilty of expansionism, guilty of military vainglory and arrogance, guilty of economic exploitation, guilty, in short, of imperialism and racism.

The Arab nations, on the other hand, are assumed in these same writings to be, if not quite innocent, then certainly well-intentioned. Breira spokesman have made a positive habit of attributing to Arab leaders a burning desire for peace that the Arabs themselves would be surprised to learn they possessed-certainly one they have never bothered to express publicly in anything but the vaguest and most hedged-about terms. Yet to judge from Breira literature, some Arab countries have already recognized Israel, while others are just waiting for the chance to be allowed to follow suit. Thus according to a resolution adopted at the national conference for which no documenta-tion was provided, "certain Arab countries and Palestinian leaders are willing to recog-nize Israel's right to exist." Arthur Waskow in his Op-Ed piece in the *Times* stated as fact that the PLO leadership was ready to accept the legitimacy of Israel, and was only restrained from doing so publicly for fear of by hardliners inside the terrorist organization. The PLO itself, of course, has repeatedly taken pains to assure the world that it continues to adhere rigidly to the Palestinian National Covenant calling for Israel's elimination.

The effect of these and other such deconfrontation is to place the moral burden of proof on one side only, and the weaker side to boot. This, to say the least, is a peculiar position for a "Zionist" organization to assume. Is Breira, then, "anti-Israel"? There is no doubt that there are some associated with the organization who can be objectively so described, for it would be impossible otherwise to explain their preoccupation with a terrorist organization whose first principle is the dismantling of the state of Israel. Even if one's main concern in the Middle East were the fate of the Palestinians, and one's main hope the satisfaction of their aspirations to national self-determination, one would hardly need to insist, as Loeb and Waskow and others in Breira have done, that these aspirations can be satisfied through the PLO and the PLO alone—especially when even a number of Arab leaders, including President Sadat of Egypt, have suggested such alternative non-PLO solutions to the Palestinian problem as a co-federation with Jordan (not to mention other solutions proposed by Israel and the friends of Israel). But so fixated on the PLO is this faction within Breira that it continues to insist on the centrality of that organization at a time when the PLO has been decimated in size and influence by the power politics, and the bullets, of its Arab "brothers," and when many observers are coming to believe that, to quote a recent report in the New York Times, the PLO's role in Middle East history may "be at an end."

In addition to its pro-PLO faction, however, Breira is made up of rabbis and liberal Jewish intellectuals and academics who may well form a majority, and who are far from being "anti-Israel" in any simple sense of the term. Yet these people too have lent their support and prestige to a movement that seeks to "solve" the Middle East conflict by placing the burden of proof on Israel. One

might speculate endlessly about the motives of these Jewish men and women. Liberal guilt, a desire to be on the side of "liberation" 'progress," a weariness at having to uphold Israel's cause when that cause has gone out of odor or has come to seem hopeless, even an unconscious and paradoxical wish to be, for once, on the side their own government may be leaning toward-whatever the particular impulse, it is clear that, as they do not in fact wish Israel harm, they must find convincing reason to advocate the course they do, and persuade themselves that following it will lead away from danger and toward peace. It is here that the reassuring notion comes to hand-a notion invented by necessity if ever one was-that the Arabs themselves are ready and willing to make peace with Israel and have already said as much if one only succeeds in interpreting their words properly.

That in addition to mere wishful thinking there is a hint of unconscious racism in this last idea cannot be discounted altogether; Breira's pronouncements are in general characterized by an appallingly patronizing attitude toward the Arabs, a refusal to take them or anything they say seriously. But as Rael Isaac points out, what strikes the observer above all in such mental maneuvers is the unspoken desire, born, perhaps, of the feeling that Israel has become an intolerable burden, to distance oneself as a Jew from Israel's fate. Because this desire cannot be confronted honestly, reality is denied or redefined, one's intentions become cloaked in the language of moral rectitude, and a conviction takes hold that the "solution" to Israel's dilemma is both simple and at hand.

But the motives and intentions of the sundry and various elements in Breira are one thing, the ends the organization serves, whether it wishes to or not, are another. In spite of its recent protestations to the contrary, what Breira has primarily managed to do is to lend a seal of Jewish approval to the idea that the party at "fault" in the Middle East is not the 100 million Arabs who vowed once to throw Israel into the sea and now, after thirty years, actually stand within halling distance of achieving that aim, but the 3 million Israelis, who for thirty years have sued for nothing but the opportunity to live among their neighbors in peace.

Breira furnishes an "address," inside the Jewish community, to which anyone in government or in the world of public opinion may appeal who is seeking to promote a policy of one-sided pressure on Israel and needs to overcome the opposition which American Jewry has heretofore offered to such action. As Mark Bruzonsky, a supporter of Breira, put it candidly and approvingly in a recent article, Breira's "hope is so to weaken American support for current Israeli policies as to force policy changes, by U.S. Imposition if necessary." In other words, by breaking the united front of the Jewish community, Breira may contribute toward making it possible for the United States to impose terms on the Israelis from which everyone will benefit but the Israelis themselves, and they may pay dearly indeed.

Both Mrs. Isaac's pamphlet and the reaction of some established Jewish organizations to Breira have been characterized by the group's defenders as a "witch-hunt" and an attempt to suppress legitimate dissent within the Jewish community. The truth, however, is that far from being suppressed, Breira has attracted many members and financial supporters from the heart of the American Jewish "establishment" itself, including staff members of the major defense agencies and leaders of the rabbinate. Indeed, the whole issue of "dissent" is a bit disingenuous. Neither Breira nor its supporters have been notable in demanding that the Jewish Defense League (which may be thought of as Breira's counterpart on the Right) be given a fair hearing by the "establishment"—de-

spite the fact that this dissenting organization has evoked much greater hostility than Breira has.

The reason for the hostility both to Breira and to the JDL is that the overwhelming majority of American Jews, and the organizations representing them, believe neither in the latent peaceful intentions of the PLO toward Israel nor in the annexationist policies advocated by the JDL. Accordingly, anyone espousing either of these positions must expect to be met with criticism and opposition. Considering that the literal survival of the state of Israel is at stake, it is not to be wondered at that the criticisms should sometimes be harsh and the opposition passionate.

As for the charge of smearing and witch-hunting, which has been leveled by (among others) Alexander Cockburn and James Ridgeway (writing in the Village Voice, March 7, 1977) and by Irving Howe in a letter to the Jewish Week: to describe as a witch-hunt the scrupulous documentation of the political history of individuals and groups undertaken by Rael Isaac is itself to perpetrate a smear. In addition, it might be pointed out that charges of witch-hunting and of conducting a smear campaign come with ill grace from the likes of Cockburn and Ridgeway, who do not hesitate to characterize the Jewish Defense League as "parafascist," and from Irving Howe, who has spoken of a "mixture of Stalinist and McCarthylte methods" [!] being brought to bear by the Jewish Week against Breira.

In a recent article in the Nation, Arthur Waskow likened the role of Breira today to the role of the anti-war movement of the 60's. Just as the anti-war activists of the 60's. he wrote, initiated contracts with Hanoi and the Vietcong and so helped bring "peace" to Vietnam, so Breira has initiated and participated in meetings between representatives of the PLO and American Jews in the hopes of bringing about an end to conflict in the Middle East. Waskow chided American Jewish leaders, many of whom had opposed the American intervention in Vietnam, for not recognizing the parallelism of the two situations and for turning their backs on today's "peacemakers." He concluded:

"We know now that those who criticized the policy of the U.S. government in Vietnam were right... Why is it so hard for the American Jewish leadership to learn this lesson from its own experience...?"

There are several interesting facets to this argument. One is what Wastok should so cavalierly overlook the fact that American Jews do not stand in relation to the government of Israel, which is after all the concerned party here, as they did in relation to their own government when it was a party to the conflict in Vietnam; they do not hold Israeli citizenship, and they have neither the rights nor the obligations thereof, the latter including emphatically the obligation to fight and perhaps to die for the decisions the Israeli government must make. But what is most arresting about the analogy Waskow draws is something else again. The proper term for the "peace" that was finally brought to Vietnam is not peace but, for the one side, victory, and, for the other side, defeat. The "peace" that came to South Vietnam for which Waskow now takes credit in behalf of the antiwar movement of the 60'swas the peace of obliteration, the peace of the grave; the country called South Vietnam no longer exists.

This is, indeed, precisely the sort of "peace" which the Palestine Liberation Organization and, as the weight of all the evidence strongly suggests, every self-respecting Arab government in the Middle East have in mind to bring to Israel as well. To work knowingly for such a "peace," to lend one's support to those who work for it, may be easy to reconcile with an attitude of enmity toward Israel; it is not so easy to reconcile with any more positive

EXTENSIONS OF REMARKS

CENTRE DAILY TIMES MARKS 43d ANNIVERSARY

HON. JOSEPH S. AMMERMAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. AMMERMAN. Mr. Speaker, the Centre Daily Times, published in State College, Pa., and serving Centre County, the largest county in my district, marked its 43d anniversary on Saturday, April 2.

I would like to share with you the CDT's editorial noting its anniversary and recalling its history:

THE CENTRE DAILY TIMES IS 43 YEARS OLD

The Centre Daily Times is 43 years old today.

It was on April 2, 1934, that The State College Times (founded May 12, 1898) made the difficult conversion from weekly to daily publication.

And despite the period—in the midst of the worst depression in the nation's history—the move proved to be a most successful one.

From a tiny four- and six-page edition with some 1,300 subscribers, the newspaper grew steadily to the present when nearly 20,-000 Centre Countians buy the product and the daily page average exceeds 32.

And in step with that progress have been physical and startling technological advance-

ments.

A new building was erected in downtown State College in 1940 and a twice-that-size plant was constructed near Dale Summit in 1973; press size increased from 8 pages in 1934 to 16, then 32 and now to 56.

Personnel multiplied, too, from a handful to nearly 80 fulltime and more than 300

parttime employes.

Statistics, however, can't begin to tell the story.

For The Times' growth is a testimony to the loyalty and devotion and interest and keeness of its readers and the support and

success of its advertisers.

Reader's and advertisers, in reality, determine the success or failure of any publication. And for a newspaper to succeed, it must combine its own offerings with those desired and expected by and delivered to its customers.

More important than mere growth is improvement. And if The Times has attained the latter, it's because its readers and advertisers, through all the years have guided its contents and responded to its efforts.

The primary task of a newspaper is to continue to present news, views and features of interest and importance to its readers, along with advertising messages which will assist readers.

But as the Centre County area and the nation and the world grow more complex and face critical problems such as exist today—and which have occurred repeatedly in the past 43 years—additional efforts are needed.

And that is to go beyond the headlines, to look beneath the surface, to dig out the background, to explain the meanings of all the events which combine to make life what it is today and what it will be tomorrow.

The assignment is a difficult one. But with the knowledge gained in 43 years, with the well-trained and dedicated personnel who blend the steadiness and knowledge of veterans with the enthusiasm and skills and innovations of comparative newcomers. The Times enters its 44th year today confident that it can meet its responsibilities and be more than a match for its obligations.

With the help and guidance and support, of course, of its constantly increasing and impressively devoted readership and advertisers—the people from every section of Centre County.

On this, our own birthday, we wish them health and prosperity and the will to overcome the problems which beset us all. Together, we will work around the clock for the next 365 days and beyond to continue to try to make Centre County an even better place in which to live.

THE IMPORTANCE OF CAPITAL FORMATION

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. LENT. Mr. Speaker, our economy is in a state which can best be described as "stagflation." Most of our efforts to date have been centered on a short term solution, such as the \$50 rebate, and I believe we have so far given too little attention to ways to keep our economy healthy over the long run.

The key to the future economic wellbeing of the United States lies in increased capital formation, that is, the investment of savings in factories, equipment and new technology. These are productive investments, and are the

source of jobs and income.

Recent studies of U.S. capital needs agree that the demand for capital will be increasing dramatically in the next 10 years—we will need \$4.5 trillion or \$21,000 for every man, woman and child in the United States. This capital is needed to modernize and expand our industrial base and to meet the Nation's environmental requirements.

Thus, if the U.S. economy is to grow and prosper, we need new and efficient technology and increased productivity. The resulting efficiency will reduce inflationary pressures by keeping costs down. Lower costs mean that the individual's income will buy more, because he has a higher real income. Individuals with higher real income will increase their personal expenditures for goods and services, and jobs will be created to fill that demand.

Currently, tax laws discourage investment by taxing some income from investment twice—first taxing the corporation and then taxing the stockholder on the same income. Present tax laws often do not allow businessmen to recover their investments since provisions concerning depreciation allowances and capital gains are too restrictive.

In light of the benefits that a high rate of capital formation can produce, it is necessary to ask what can be done to encourage capital investment. One way is to eliminate the bias in our tax laws to insure that our productive capacity is increased enough through savings and investment to create full employment and to reduce inflationary pressures. This bias can be eliminated by:

Ending double taxation of corporate dividends. The present corporate tax is paid by consumers in higher prices. Corporations do not pay taxes, they are merely a form of doing business—people pay taxes.

Making depreciation allowances fair-

er and more realistic. Depreciation allowances for business under the tax code do not reflect the true cost of replacing plant and equipment; that is, capital goods. Because of inflation, the cost of capital goods increases while the depreciation allowance reflects the original cost-a printing press today costs far more than the same press purchased 10 years ago, but depreciation is allowed only on the "old" cost, not replacement cost. Thus, firms often have insufficient reserves to replace worn out or obsolete equipment, or to expand their facilities. A more realistic approach would be to permit business to "catch up" with inflation by permitting depreciation based on the cost of replacement.

Encouraging firms to invest in productive activities through a tax credit given to those firms who invest in capital goods. If the "Investment Tax Credit" is raised to 12 percent, made permanent and made fully refundable—that is, a cash rebate for those firms whose tax credit exceeds their tax liability—it would reduce the cost and increase the supply of capital—and in so doing, provide jobs and promote economic growth.

Finally, more equitable capital gains tax rates would make investment in productive assets more attractive. A smaller portion of the gain should be taxed the longer the asset is held to reflect inflation and to reward the investor for saving instead of consuming. Such an approach would help free locked-in capital, encourage new investment, and treat long-term investors and small businessmen more equitably.

These recommendations are only a few ways by which the health of free enterprise can be encouraged in the United States. Through the increased production of real goods and services resulting from increased capital formation, we can reach full employment without inflation.

For these reasons, I support the recommendation of the Republican Policy Committee for a permanent across-theboard cut in the tax rates, and the Jobs Creation Act authored by my colleague, Congressman Jack Kemp. These are realistic approaches to improving our Nation's economy, and not an exercise, as Milton Friedman described the proposed \$50 plan, in "throwing money out of an airplane."

PUBLIC SERVICE EMPLOYEES

HON. MORGAN F. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. MURPHY of Illinois. Mr. Speaker, the time is long overdue for all of us to pay tribute to those people who give their time and lives to our well-being. I am speaking, of course, of those public servants who day in and day out work to make our lives more livable.

Law enforcement officers, firemen, and teachers are the backbone of our society. These people are dedicated individuals working under trying conditions often with little or no acknowledgment for their untiring efforts.

Law enforcement officers put their lives on the line every working day. When things go wrong, they cannot take the easy way out by not getting involved. They do not turn their backs and ignore the problem. Instead, they work to make life a little safer for all of us. Unfortunately, their reward is too often community abuse, community ostracism, and calls of police brutality.

Firemen, too, place their lives on the line in answering their call to duty. They cannot be spectators. Their jobs require them to be on call any time of the day or night, sacrificing their own lives so

that others may live.

Another segment of our society too often overlooked is the teacher. The education of our young people is an awesome responsibility. The teacher must not only be an educator but also a disciplinarian. Enough cannot be said in praise of the work done by the teachers in this country. They deserve the support of their community and the country.

We can run the gamut of public service jobs and we will find men and women with families trying to cope with everyday living and everyday problems. But on the job they perform necessary services and make sacrifices for our wellbeing. We can be proud of these men and women who work to make our lives more

safe, sane, and secure.

MAYOR THOMAS BRADLEY URGES EMPHASIS ON ALTERNATIVE EN-ERGY SYSTEMS

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

BROWN of California. Mr. Speaker, yesterday my good friend, Tom Bradley, was reelected mayor of Los Angeles. This event is noteworthy primarily because it seems so natural. Yet there was once a time in this country, and even in Los Angeles, when the election of a black in a city that was mostly nonblack was simply not possible. This election was not without subtle racial overtones; busing for purposes of integration was a major campaign issue. But Tom Bradley earned his reelection by sticking to the important issues which face the cities of America.

Among the most important issues is energy. As a sample of the quality of work that Mayor Bradley produced, and because the suggestions are so sensible, I wish to place the text of a recent letter sent to the President's energy adviser, James Schlesinger by Mayor Bradley.

The letter follows:

CITY OF LOS ANGELES. Los Angeles, Calif., March 29, 1977. Dr. JAMES R. SCHLESINGER,

Assistant to the President, The White House, Washington, D.C.

DEAR DR. SCHLESINGER: I applaud your program to obtain citizen input for the Carter

Administration's energy policy. I respond to you as a citizen and as the elected representative of almost three million citizens who were immediately and directly threatened by the insecurity of the nation's energy supplies in 1973.

I endorse the Administration's increased emphasis on energy conservation. The concept of conservation must be defined and pursued as a very broad concept that includes accelerated development and commercialization of a full range of technologies that promote more efficient use of fossil fuels by end-users as well as alternatives which substitute for fossil fuels.

In tune with this theme, following are some of my thoughts on areas of needed change in the national energy policy:

Large scale demonstrations of available technology which have potential to solve real

problems immediately:

Many technologies which have the potential for greater end-use energy efficiency or as substitutes for fossil fuels are commercially available or close to it. Examples are direct applications of solar energy for space and water heating, on-site electricity generation with waste heat recovery; energy recovery from solid waste and sludge; and wind generation.

Typically they are not economic for private individuals, companies, local governments, or public utilities at the present time.

There is currently an extensive program to demonstrate commercially available technologies. The funding for this program is insufficient in the area of both conservation and renewable energy sources. Moreover, the criteria for selecting demonstrations emphasizes esoteric technical considerations. Selection should be redirected toward problem areas that exist at the local level. Demonstrations should be large enough to have an immediate impact on real problems. Example: energy/resource recovery technologies which have potential to use a large proportion of solid waste and sludge generated by Los Angeles are on the market or close to it. Some of these technologies produce gaseous fuels that burn clean enough for use in local power plants. Our power plants can no longer obtain natural gas, although it is critically needed to reduce power plant emissions. However, the energy recovery from waste processes do not appear to be even close to being economically competitive with available and proven alternatives, with the result that they are unlikely to play a role in solving solid waste, energy, or air quality problems in this basin for a very long time.

The situation indicates the appropriate role of the federal government in demonstrating and advancing these new technologies. It is to bridge the gap between what is in the national interest and what is cost/ effective and prudent for individuals, local governments, and other end-users of energy. To the extent that the federal government does not play this role, it will be asking end-users to subsidize everyone else in the nation who will benefit from the acceleration and refinement of energy alternatives. My office has produced a memorandum on the issue of appropriate cost/benefit analysis for energy conservation investments at the local level. Since it is relevant to this point, I am including it as an attachment to this letter.

Financing of new technologies:

The need for federal government assistance in the financing of new energy development has been well recognized in Washington. However, proposed programs have markedly preferred fossil fuels and nuclear power fossil fuels and nuclear power. Technologies which promote end-use efficiency, solar energy, and other renewable

energy sources should get at least equal emphasis. Subsidized loan programs that enable end-users to finance solar or energy conservation at least as easily and cheaply as public utilities can finance power plants is needed and not yet available.

I would suggest that the Administration

consider very carefully the suggestion of Professor Barry Commoner regarding creating of Energy Banks at the local level that would finance both solar energy systems and insulation with low-cost loans.

These funds could possibly be administered through existing public utilities or new "solar utilities" which would be created by local governments for the purpose of not only financing solar systems and insulation but also for installing, maintaining, and guaranteeing such systems in order to increase their acceptances by the public.

Technical information should be inde-

pendent:

In recent years we have repeatedly learned that the making and enforcement of laws which regulate the private sector in the lic interest are hampered by a lack of reliable and complete technical information. Perhaps the most grievous example has been the laws which have attempted to limit both air pollution and fuel waste in motor vehicles.

Current ERDA programs aimed at developing alternative automotive engines that are both low in emissions and high in mileage do not seem to be funded at a level which can quickly make up for the years we have lost in relying on Detroit to do this work for us. Worse, some of these programs are being done in conjunction with automobile or manufacturers.

We should commit ourselves to spending whatever is necessary to resolve our present predicament of dependency upon a transportation technology that is ruining air quality in major cities throughout the country and increasing our reliance on foreign sources of energy. We should realize that it is very likely that the government will never be able to move forcefully into regulating both waste and pollution caused by motor vehicles until it has a research and development program that will give law makers absolute confidence as to what can be done technically and how soon.

Energy independence through better crisis

contingency planning:

The establishment of the Strategic Petroleum Storage Program is an excellent start toward the only kind of energy independence that may make sense in the foreseeable

A great deal more must be done in this The 1973-74 Los Angeles experience with mandatory energy conservation in a crisis situation suggests that public support for carefully planned and equitable reductions in energy use in crisis situations is very great. Equitable distribution of sacrifice can only be achieved through careful, advance planning for this reduced consumption.

It is clear that the petroleum storage program plus a carefully planned emergency conservation program could increase this nation's security from future political embargoes of its energy supplies. Such an approach to energy independence is more realistic and cost/effective than the previous Administration's emphasis on increased domestic production at any cost from the nation's diminishing reserves.

I wish you and your associates greatest success with the difficult and critically impor-tant task which the President has entrusted to you. We in Los Angeles stand ready to help in any way possible.

Very sincerely yours,

TOM BRADLEY, Mayor. YOUNG PLAYED KEY ROLE IN ST. LOUIS AIRPORT FIGHT

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. GEPHARDT. Mr. Speaker, last week, in a momentous decision for the St. Louis region, Secretary of Transportation Brock Adams dropped extensive plans for a new southern Illinois airport and ruled that the St. Louis airport would remain as the area's principal air facility. The decision is a major boost for Missouri residents, insuring economic stability for a large area around the airport and guaranteeing continued easy access for air travelers. Many citizen groups, media representatives, businessmen and government officials had an impact on the decision; they rightfully have been cited for their contributions. It was clearly a team effort. But I believe that special thanks are due to a colleague who, as much as anyone else, laid the groundwork for Secretary Adams' announcement.

For nearly a decade, first in the Missouri Senate, and, since January, in the House of Representatives, Bob Young of Missouri's Second District has worked without fanfare to strengthen Lambert-St. Louis International Airport and head off its replacement by an Illinois airport. While Young has had long involvement in the fight to save Lambert, his efforts intensified in 1970 after the announcement of plans to build an Illinois air port. Young, then a State senator, proposed a committee to study possible alternatives. He also called for a voter referendum. The referendum, conducted in 1972, found an overwhelming majority of Missouri residents—92 percent—in favor of retaining Lambert. That 1972 vote undoubtedly was a highly significant factor in the decision by Secretary Adams, who noted the strong public opposition in Missouri to phasing out of Lambert.

Young led the drive to create the Missouri-St. Louis Metropolitan Airport Authority, shepherding the enabling legislation through the Missouri General Assembly in 1972. He worked to extend the life of the authority in 1974 and 1976, playing an important role in the funding process as chairman of the Senate Ap-

propriations Committee.

Young made a formal presentation to former Secretary of Transportation William Coleman at the Department's hearings on the airport question in January 1976, then drafted a joint resolution of the Missouri Legislature calling for retention of Lambert Field. After Coleman's decision to build an Illinois airport. Young was appointed chairman of the Joint Committee to Study the St. Louis Airport. The committee issued an extensive report that outlined a blueprint for Lambert's survival. Included was a recommendation calling for development of a so-called reliever airport for general aviation traffic currently handled at Lambert.

Young assumed his House seat in January determined to work for a reversal of the Coleman decision. He pressed for an early effort by the Missouri congressional delegation to meet with the new Secretary of Transportation to present the Missouri position. The meeting, held in February, appears in retrospect to have been a turning point in the long struggle to save Lambert. Secretary Adams' de-

new facility in Illinois followed. As Missourians celebrated their victory, many who had been involved in the tireless fight recognized the crucial lead-

cision to reverse the plans to establish a

ership of Bob Young.

NEW ROCHELLE MODEL CONGRESS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. OTTINGER. Mr. Speaker, during the weekend of April 15, 16, and 17, New Rochelle High School will host its annual Model Congress. I am pleased to have been associated with the students and faculty who have given so tirelessly of their time and I look forward to being with participants again this year. It is a pleasure to share with my colleagues at this time the following description of the program:

MODEL CONGRESS

Representing every region in the country, young men and women assemble in New Rochelle High School on April 15, 1977. The delegates take their seats before the podium. The galleries fill with spectators and members of the press from the entire New York Metropolitan area. The Speaker of the House bangs the gavel-Model Congress is now in session. For the next three days, as far as these legislators are concerned, they are the governing body of over 211 million Americans.

These students are carefully selected, being the most politically active in their com-munities, they represent the full scope of American thought. Assuming Senatorial and Representative roles, the students participate in a simulation of the legislative process. Legislation is written, sponsored and debated in many committees such as Foreign Affairs and Ways and Means. This is followed by exciting debate in the House of Representatives and Senate.

At the opening ceremonies Friday morn-CBS News Commentator Dave Marsh will address the students. On Friday evening the distinguished guest will be James Earl Carter, III better known as Chip, President Carter's son.

Perhaps the most beneficial aspect of the weekend will be the exchanging of ideas, attempting to solve major problems confronting Congressmen and to President Carter to convey to them the opinion of the youth they are representing.

Years ago, John F. Kennedy charged that "Political action is the highest responsibility of a citizen." As future voters, American high school students must be exposed to the intricacies innate in the operation of our government. They must build an acute awareness of the give and take inside and outside those notorious smokefilled rooms. They must have understanding, not cynicism

of our political machinery and must be able to repair it when breakdown occurs. Above all, months of Watergate have confirmed that if our government is to function properly, each and every citizen must be informed and active.

As an exercise in democracy Model Congress offers students the opportunity to fami-liarize themselves with the procedures of government. This national student forum, modeled after the United States Congress, allows delegates to express their opinions in a meaningful manner in the hope of solving the problems facing our country today. Assuming the roles of Senators and Representatives, delegates extensively debate their own bills. Upon passage by their committee they may sponsor this legislation on the floor of the House or Senate.

The experience and insight gained from participating in mock sessions and floor fights cannot be duplicated elsewhere. This reenactment of virtually every aspect of the legislative branch introduces the student to the art of debate with all the pomp and parliamentary procedure practiced in Congress itself.

There is great similarity to the U.S. Congress in terms of the literal rainbow of opinions expressed in debate. The ideological spectrum of students from all over the nation is vast. Through personal encounters and informal discussions with students of diversified backgrounds delegates are encouraged to reassess their regional differences and expand their horizons.

In recreating the legislative branch, we also recreate the unavoidable necessity for politics. Whether drawing support for procedural votes that can kill a bill or maneuvering major votes on a particular issue, the art of compromise is essential. Through skillful diplomacy in the legislative process, and personal exchange, the great schism of misunderstanding between radical left and far right

Studying Congress from a civics textbook is not enough! Such perspective is limited and often distorted. Model Congress brings the legislative scene into sharper focus, better enabling young Americans to fashion the future of their country.

INSIDE OUR SMOKE-FILLED ROOMS .

To fully re-create the atmosphere of this country's highest lawmaking body, Model Congress engages a staff of official pages and runners for the convenience of its hardworking Senators and Representatives. A copy of the New York Times is supplied each morning to keep the Congress informed. Delegates are provided with lounges for relaxing, working, snacking and meeting with other students. Also at the delegates' disposal is our own 20,000 volume Congressional Library. Although not in possession of every publication in the United States, our "Library of Congress" serves a vital role when passage of a bill is contingent upon research of perhaps one particular subsection.

Experienced Congressional assistants, and former Washington interns, aid delegates in their work. As each classroom becomes the scene of legislative action, New Rochelle High School is transformed into the Youth Capitol, composed of the capital youth of this country.

THE WEEKEND . . .

Upon registration, Friday morning April 15, each delegate receives a private portfolio containing all necessary stationery and legislative supplies for the weekend.

The delegates then attend a joint session of the House and Senate featuring an address by a prominent national political figure. In the past notable speakers such as Assemblyman Andrew Stein, Congresswoman Bella Abzug, Congressman William L. Hungate and

New York City Mayor John V. Lindsay have

addressed our group.

After this reception and a catered lunch, delegates organize their own political parties and draft platforms. The afternoon is spent in committee sessions. The twenty committees range in scope from Foreign Affairs to Public Health and Welfare. Here students are introduced to parliamentary rule and the legislative process. During these hours of debate problems in delegates' bills are ironed out. Political parties become powerful as they threaten to hold up legislation in committee. In the face of such political realities radical ideas are compromised.

While dinner may satiate the stomach of our delegates, we never seem to satisfy their appetite for debate. The legislators labor in committee session until late in the evening, and deal with as much of their busy agenda as possible. After this long legislative day New Rochelle members of this organization and other concerned residents open their doors and refrigerators to visiting delegates. Breakfast is served at the host's home, while other meals are catered in the high school's dining room. A minimal delegate fee covers all food expenses.

In the frantic rush before committees are called to order Saturday morning new bills marked up Friday are placed at the end of the proper committee's agenda. Delegates realize the urgent need to debate all the important bills on their agenda so that they can be further discussed in the House or Senate sessions later that day. Following a luncheon parties meet. Delegates work on party strategy and caucus for support from other parties for or against the bills to be debated. Saturday afternoon the House and Senate convene. Agreements and friendships made between students now gain importance as party lines are drawn and power struggles commence. As legislation is argued on the floor, delegates see a true test of their ideas and political manipulation. Having mastered public speaking and parliamentary rule in committee, debate takes on a new air of excitement. This first exhilarating session

is finished early that evening.

Under consideration for the Saturday night entertainment programs are a Mock State Dinner, a Broadway show, a feature movie

and a Splash Party.

Sunday morning, the delegates meet again in House and Senate to debate, in full fury, more controversial bills. This affords students the opportunity to share their ideas with over three hundred, by this time, experienced demagogues. In honor of these outstanding speakers, there is a gala banquet, at which time, accolades for excellence in debating are awarded.

But be you an eloquent statesmen, a stumbling spokesman, or just a conscientious listener and tricky questioner, you will have a memorable, educational experience at the Model Congress Weekend—one in which the House will become your home.

OUR FOUNDING FATHERS . .

For over a decade, New Rochelle High School Model Congress has set the pattern for a dramatic concept in America education—political analysis by high school students. As an outgrowth of a one day mock Political Convention in 1964, Model Congress has been faithfully nurtured by Mr. William P. Clarke, faculty advisor for the over 100 students who work year round on this after school activity. Thanks to their tremendous efforts, New Rochelle's Model Congress has earned its reputation as the largest, most diverse activity of its kind. In its reproduction of the legislative branch, Model Congress Weekend provides the intensive debating sessions necessary to perfect parliamentary procedure. The noise produced during three full days of fast debate is the call of reveille for many students in attendance—awakening potential acumen in politics.

DICKEY-LINCOLN HYDROELECTRIC PROJECT

HON. STEWART B. McKINNEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. McKINNEY. Mr. Speaker, yesterday I joined 11 of my colleagues in forwarding a letter to President Carter expressing our disappointment over the removal of the Dickey-Lincoln hydroelectric project from among those to be reviewed. Whether or not the environmental impact study is completed, we feel that an investment of close to \$1 billion in this project would be an unwise expenditure of tax dollars. It would be a travesty environmentally, economically, and overall, it would provide too little of New England's energy needs. For the benefit of my colleagues I would like to include as a part of the RECORD a copy of that letter. The letter follows:

House of Representatives, Washington, D.C., April 5, 1977.

President JIMMY CARTER,

The White House, Washington, D.C.

DEAR MR. PRESIDENT: We are as disappointed by your decision to remove the Dickey-Lincoln project from your list of projects recommended for deletion of funding in FY 1978, as we were supportive of your original action February 21.

The Dickey-Lincoln project has been, is and will continue to be economically and environmentally unacceptable, regardless of what stage it is in. In size, in cost, and in damage to the environment, the project is enormous. We oppose any further funding of Dickey-Lincoln on economic, energy, and environmental grounds.

ECONOMICS

1. The cost of the project has tripled since it was authorized twelve years ago in 1965. The Corps of Engineers now estimates that it would cost \$669 million to construct at 1976 prices; other estimates go higher.

2. An updated analysis of the benefits and costs of Dickey-Lincoln, based on the latest figures available from the Corps of Engineers and the Federal Power Commission, was completed this spring by A. Myrick Freeman, Professor of Economics at Bowdoin College, Maine. (Enclosed) His report states: "One surprising conclusion which emerges from this new data is that despite rising oll prices the economic case for Dickey-Lincoln is getting weaker . . . the benefit-cost ratio is declining because the costs of building Dickey-Lincoln are rising faster than the costs of building and operating alternative sources of power."

At the time the project was authorized, its benefit-cost ratio, as computed by the Corps of Engineers, was 1.81 to 1.00. A recent benefit-cost ratio by the Corps, using the discount rate of 6% % applied by the federal government in evaluating new water resource projects, shows a ratio of 1.2 to 1.0. A Corps economic efficiency analysis shows a comparative ratio of only 1.02 to 1.00.

parative ratio of only 1.02 to 1.00.

3. A major economic resource will be destroyed: 106,000 acres (166 square miles) of prime timber land. Seven Islands Land Company, which manages most of this land for private owners, estimates that approximately 200,000 cords of wood could be produced annually on a sustained yield basis. The estimated value of this resource to the state's economy is \$40 million per year. If this figure were included in the project's cost-benefit ratio, the ratio would

fall below 1 to 1, even if the 31/4 % discount rate were used.

ENERGY

The proponents of the Dickey-Lincoln project justify its enormous cost on the grounds that it will provide needed electricity to New England. This argument is faulty for several reasons:

1. Dickey-Lincoln will generate very little electricity for its size and cost. Since the St. John River has a low flow for most of the year, the Dickey dam will have only a 15% annual capacity factor. This means that it can be operated an average of only 3-4 hours per day; if it ran continuously it would run out of water in 35 days. The total electricity output of Dickey-Lincoln would be only about 1% of the electricity generated in New England in 1986, when the project would be fully operational.

2. The growth rate of peaks in energy demand is slowing, according to NEPOOL (New England Power Pool) because of higher prices and energy conservation programs, including rate structure changes, thus reducing the need for peaking generators such

as Dickey-Lincoln.

3. Most important, Dickey-Lincoln will not be needed even in 1986. A NEPOOL forecast dated December 31, 1976 states that New England has a present reserve margin of 49% above peak demand. (Peak demand in 1976 was 14,000 MGW, capacity was 21,000 MGW). The forecast predicts that in 1986 the Pool will have a reserve margin of 30% over peak demand, vithout Dickey-Lincoln. (The report predicts a 24,000 MGW peak demand and a 31,800 MGW capacity. Furthermore, Dickey-Lincoln would only offer about 800 MGW of peaking power).

4. Other hydropower alternatives which

4. Other hydropower alternatives which are economically feasible and environmentally sound exist in New England. An Army Corps of Engineers survey counts over 3,000 already existing dams in the region, very few of which currently produce elec-

tricity.

Some study and field work have been completed by the Mitre Corporation and the Maine Hydroelectric Corporation which indicate that small site dams could be retrofitted with turbine generators for \$600-\$2000 per kilowatt.

ENVIRONMENTAL CONSEQUENCES

The Dickey dam would be 2 miles long and 335 feet high. In total volume it would be the eleventh largest dam in the world, larger than Egypt's Aswan Dam. In addition to the two dams, five dikes would be constructed to prevent the reservoir from spilling over into adjacent watersheds. Total acreage required is 127,000 acres. Numerous studies have documented the environmental consequences of the Dickey-Lincoln project:

 It would destroy finally and irrevocably the great free-flowing St. John, the longest

wilderness river in the Northeast.

Some of the best white-water canoeing, surpassing the already overused Allagash Waterway in its magnificent rapids, would be lost forever.

3. It would wipe out some 267 miles of streams, including the outstanding brook trout fishery of the upper St. John, the Little Black and the Big Black Rivers.

4. It would inundate 17,600 acres of deeryards, critical winter habitat for over 2,000 deer, with the attendant disruption of as many as 30,000 hunter days each year.

It would flood the habitat of moose, bald eagles, and many rare and endangered

species of plants and animals.

6. The project would create a 57-mile long, 88,000 acre reservoir, whose water level would fluctuate approximately 22 feet in an average year, with a 17,700 acre (27 square mile) "bathtub ring". At minimum lake level, there would be 50 square miles of bathtub ring. Maine already has over 3,000 lakes, many of superlative quality; the rec-

reational value for the reservoir was considered so lowly by the Northeast Regional Office of the Bureau of Outdoor Recreation that it declined to do serious recreational studies for the project.

PUBLIC AND POLITICAL OPPOSITION

1. A survey conducted in 1975 by Congressman Emery of Maine disclosed that two-thirds of his constituents opposed the project. Petitions in opposition circulated by the Maine Natural Resources Council have been signed by over 30,000 persons, including 17,000 Maine residents.

2. The President of the Maine Senate, Joseph Sewall (Mr. Sewall requested he be quoted as follows: "Unless it were proven by competent engineers that Dickey-Lincoln was essential to the development of tidal power"), and the Maine Senate Minority Leader, Gerard Conley, both oppose the

project. 3. The Maine Young Democrats and the Americans for Democratic Action adopted

resolutions against the project. 4. The Boston Globe, the major newspaper of New England, the Bangor Daily News, the Kennebec Journal, and the Maine Times, all have taken editorial positions against Dic-key-Lincoln, the Globe reversing its former position supporting the project.

5. All major American, Canadian, local and regional environmental groups oppose the project, including:

LOCAL AND REGIONAL GROUPS

Appalachian Mountain Club.

Conservation Law Foundation of New England.

Federation of Western Outdoor Clubs. Maine Natural Resources Council—the "umbrella" environmental coalition in Maine, with 28 Statewide and 98 Regional and Local Affiliates.

Massachusetts Council of Sportsmen's Clubs.

Massachusetts Forest and Park Asso-

Northeast Audubon Society. Sierra Club—New England Chapter.

NATIONAL GROUPS

American Canoe Association. American Rivers Conservation Council. Environmental Policy Center. Friends of the Earth. Friends of the St. John (Coalition). National Audubon Society. National Wildlife Federation. Sierra Club. Trout Unlimited. Union of Concerned Scientists. The Wilderness Society.

LOAN GUARANTEE CATALOG

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. MOORHEAD of Pennsylvania, Mr. Speaker, the Subcommittee on Economic Stabilization is examining the subject of loan/loan guarantee commitments of the Federal Government. The total amount of credit provided under these auspices has risen rapidly during the past decade and plays a significant role in allocating and reallocating our Nation's resources. Analysis of their impact and the distribution of benefits from such assistance is almost nonexistent and is a major concern of the subcommittee.

The types and volume of guarantees, as well as measurement of their effectiveness to redirect resources in the fashion sought by the Congress, is a matter of examination through our effort. With the assistance of the Congressional Research Service, we have undertaken the task of preparing a Loan Guarantee Catalog, much in the manner the grantin-aid device was compiled earlier. A compilation and descriptive statement on all such programs is expected to be completed by late May of this year and is intended to be of use and value to the Members.

While only a listing of these programs is currently available. I believe it may be of use and interest at this time. I should stress that the list is tentative inasmuch as new loan guarantee programs are continually being discovered. For the moment, the number of federally insured and federally guaranteed loans totals 147. The listing follows:

LOAN GUARANTEE CATALOG DEPARTMENT OF AGRICULTURE

1. Farm Credit Administration.

2. Farmers Home Administration-Emergency Loans.

Farmers Home Administration-Farm

Labor Housing Loans and Grants.
4. Farmers Home Administration—Farm Operating Loans

5. Farmers Home Administration—Farm Ownership Loans.

6. Farmers Home Administration—Grazing Association Loans.

7. Farmers Home Administration—Irriga-tion, Drainage and Other Soil and Water Conservation Loans.

Farmers Home Administration-Low to Moderate Income Housing Loans.

9. Farmers Home Administration—Rural Housing Site Loans.

10. Farmers Home Administration-Recreation Facility Loans.

Farmers Home Administrationsource Conservation and Development Loans.

12. Farmers Home Administration-Rural Rental Housing Loans.
13. Farmers Home Administration—Soil

and Water Loans.

14. Farmers Home Administration-Water and Waste Disposal Systems for Rural Communities.

15. Farmers Home Administration-Watershed Protection and Flood Prevention Loans

16. Farmers Home Administration-Business and Industrial Loans.

17. Farmers Home Administration-Indian Tribes and Tribal Corporation Loans.

18. Farmers Home Administration-Community Facilities Loans.

19. Farmers Home Administration-Emergency Livestock Loans.

TUNA AND PORPOISE CONTROVERSY

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. McCLOSKEY. Mr. Speaker, I have today introduced a bill to try to resolve the tuna/porpoise controversy. The bill seeks to solve the problems facing the U.S. tuna industry as a result of conflicting court decisions interpreting the Marine Mammal Protection Act of 1972

It has become increasingly clear in remonths that administrative changes in the regulations of the Department of Commerce will not be able, in themselves, to end the prospect of further litigation seeking to interpret the act.

Also, after 4 years of operation, several new problems have arisen in the tuna industry, particularly with respect to foreign fishing operations.

It has also become clear that despite a good faith negotiating effort on the part of representatives of the industry, the environmentalists and the Government, there are still differences amongst the parties which can only be resolved by Congress. I hope the bill introduced today will provide a framework for our early action following the spring recess.

We have passed emergency legislation to assist foreign fishing fleets to operate in accord with our own 200-mile fisheries law. It seems appropriate that we should do the same for our own fishing industry.

Briefly, the bill provides for the fol-

lowing:

First. Confirms the "immediate near-zero mortality goal," but specifies that this goal is to be reached by December 31, 1981 through progressively lower quotas set by the Department of Commerce.

Second. Redefines "take" to exclude

safe settings on porpoise.

Third. Requires an observer on every tuna vessel of 400 tons or larger, the cost to be borne by the permit applicant; provides for penalties against shippers failing to exercise due care; permits withdrawal of the observer when a skipper has demonstrated consistent skill and success in achieving the nearzero mortality requirement of the law.

Fourth. Allows the taking of eastern spinner porpoise to a maximum of 5,000 until December 31, 1981.

Fifth. Bans the importation of all fish and fish products from a country or vessel which does not follow U.S. standards with respect to the act, including

acceptance of an observer. Sixth. Requires approval of the Secretary of Commerce for transfer of a tuna vessel, with a bond to be posted to secure compliance with U.S. law.

The full bill follows:

HR.

A bill to amend the Marine Mammal Protection Act of 1972 to allow the commercial tuna fishing fleet to continue operations while exercising due care to reduce incidental porpoise mortality to insignificant levels approaching near zero

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Emergency Amendments to the Marine Mammal Protection Act of 1972."

SEC. 2. Section 2 of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361), is amended by adding a new finding as follows:

"(7) While the tuna fishing industry has used, and should be able to continue to use, the technique of setting purse-seines on porpoise, a duty of due care should be imposed on the industry in connection with purse-seine tuna fishing in order to reduce porpoise mortality to insignificant levels approaching zero in the near future, allowing, however, for accidental porpoise mortality in cases of unforeseeable failures of gear or weather.

SEC. 3. Section 3(13) of the Marine Mammal Protection Act of 1972 (U.S.C. 1362(13)) is amended by inserting immediately before the period at the end thereof the following:

"but in the case of purse-seines setting on porpoise for the purpose of fishing for tuna when such setting is carried out in accordance with regulations prescribed by the Secretary pursuant to Section 103 of this title and pursuant to a permit issued under Section 104 of this title, the term "take" shall mean to kill or attempt to kill any marine

SEC. 4. Section 101(a)(2) of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1371(a)(2)) is amended-

by striking out "immediate" in the

third sentence thereof:

(2) by inserting immediately before the period at the end of such third sentence the following:

"before December 31, 1981; such goal shall achieved through progressively lower quotas for each species and population to be established by the Secretary pursuant to Section 103 of this title."; and

(3) by amending the last two sentences to

read as follows:

"The Secretary of the Treasury shall ban the importation of commercial fish and products from fish from any foreign country which has under its jurisdiction or control any commercial fishing vessel which causes the incidental killing or incidental serious injury of marine mammals in excess of United States standards prescribed pursuant to section 103 of this title. After December 31, 1977, the Secretary of the Treasury shall ban the importation of fish or fish products from any foreign country which has under its control or jurisdiction such vessel if the fish from such vessel is not accompanied by a certification (in a form satisfactory to the Secretary) stating that such vessel taking such fish or the fish from which the products were manufactured had on board at the time of taking an observer who is required to perform functions substantially equivalent to those specified under section 111(d) of this title. The Secretary may duly waive this certification requirement for those commercial fishing vessels which do not cause the incidental kill or serious injury to marine mammals.

SEC. 5. Section 101(a) (3) (b) of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1363(a)(3)(B)) is amended by inserting immediately before the period at the end

thereof the following:

; except that the Secretary may issue permits for the taking of the eastern stock of spinner dolphin, Stenilla longirostris, incidental to commercial fishing operations for yellowfin tuna until December 31, 1981, Provided, That the number of spinner dolphin from such stock authorized to be killed each vear shall not exceed 5.000 and shall be limited so as to assure, on the basis of virtual certainty, significant annual increases in such stock and the recovery of such stock to its optimum sustainable population as soon as possible and in no event later than December 31, 1981."

Sec. 6. Section 101 of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1363)) is amended by adding a new subsection (d) as

follows:

"No commercial fishing vessel which has been operated pursuant to a permit issued under section 104 of this title authorizing the taking of marine mammals incidental to commercial purse seine fishing for yellowfin tuna or which was designed for or capable of such fishing may be constructed, repaired or transferred to any person for operation under the jurisdiction or control of a foreign

country without the prior approval of the Secretary. Such approval shall not be granted unless the transferee and foreign country both agree to operate said vessel consistent with United States standards for the incidental taking of marine mammals as prescribed under section 103 of this title and to allow observers approved by the Secretary to board and accompany such vessel in a manner consistent with section 111(d) of this title and a bond is filed with the Secretary in an amount and form determined by the Secretary to be necessary and appropriate to insure performance of such agreement.

SEC. 7. Section 104(e)(1) of the Marine Mammal Protection Act of 1972 (16 U.S.C.

1374(e)(1)) is amended-

(1) by adding the following:

"and may deny future permits or certifi-cates of inclusion under general permits to operators or individuals"

(2) by striking out "or" at the end of subparagraph (A);

(3) by redesignating subparagraph (B) as subparagraph (C); and

(4) by inserting immediately after sub-

paragraph (A) the following:

"(B) if the Secretary finds, on the basis of observer reports required under section 111(d) of this title, or other relevant information, that the permittee or any individual acting under such permit has not exercised due care in complying with the regulations or other terms and conditions applied under this Act for the purpose of reducing the incidental killing of marine mammals during commercial fishing operations, or".

SEC. 8. Section 104(g) of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1374 (g)) is amended to read as follows:

"The Secretary shall establish and charge reasonable fee for permits issued under this section. A fee charged for permits issued with respect to the incidental taking of marine mammals may recover all or part of the cost of agents placed aboard commercial fishing vessels under section 111 of this title, and may be set on a basis which will provide an incentive to individual fishing operators to reduce the incidental taking of such mammals. All fees for permits issued under this section shall be deposited in a separate account or accounts which shall be used to pay directly the costs in-curred under section 111(d) of this title and in connection with the issuance of said permits or to refund excess sums when neces-

SEC. 9. Section 104(h) of the Marine Mam-mal Protection Act of 1972 (16 U.S.C. 1374 (h)) is amended by adding at the end there-

of the following:

"In the event that a general permit shall be issued for the incidental taking of marine mammals in connection with fishing for tuna, any certificate of inclusion hereunder shall be issued to the operator of the vessel and shall specify the names of all individuals qualified to operate the vessel setting on porpoise."

SEC. 10. Section 111(d) of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1381 (d)) is amended to read as follows:

"Furthermore, if the Secretary determines that a reasonable probability exists that any commercial fishing vessel of over 400 gross tons will engage in the incidental taking of marine mammals in the course of fishing operations on a regular fishing trip, he shall, after timely notice to the vessel owner, direct individuals acting as agents of the Secretary to board and to accompany any such vessel on such trip for the purpose of conducting research, observing fishing operations, and monitoring for compliance with regulations and permits issued pursuant to this title. Such research, observation, and monitoring shall be carried out in such a manner which will minimize interference with fishing operations. No master, operator,

or owner of any vessel shall impair or in any way interfere with the research, observation, monitoring being carried out by agents of the Secretary pursuant to this section. Each observer shall submit to the Secretary a report of his observations in such form as prescribed by the Secretary. The Secretary may eliminate the requirement of observers and the cost thereof for those operators who have consistently demonstrated due care in meeting the requirements of this Act."

SQUIRREL POWER

HON. STEVEN D. SYMMS

OF TRAHO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. SYMMS. Mr. Speaker, for several years the great energy debate has raged across America. Most frequently, we hear the complaint from all segments of opinion that we lack a national energy policy. But, Mr. Speaker, I submit that we do have a national energy policy-and that our policy amounts to making sure that nothing is done that might encourage energy production, while at the same time paying lipservice to conservation.

However, Government, as we all know, is very ingenious and creative—always has been-and it has been assumed that Government would solve our energy dilemma. Well, the expected breakthrough has finally come. The details are reported in the March 9, 1977, issue of Review of the News by Mr. John Brennan. The article describes a revolutionary new power source that may even attract the blessings of Ralph Nader and Environmental Action, Inc.

The article reads as follows: SQUIRREL POWER

The United States Government has begun a vast national roundup of a previously unused natural resource as the latest answer to the energy crisis. Teams of newly recruited inner-city youths are patrolling the countryside and parks of America's great cities to collect this live asset. Traveling in government-designed vans pulled by energy-saving oxen, they are searching for squirrels-now expected to be harnessed to wheels as means of providing this great country with vast quantities of needed energy.

An enormous squirrel farm, the first of many to be placed in strategic locations

throughout the country, has been erected just outside Plains, Georgia, and over 100,000 of the frisky, furry rodents are even now adjusting to captivity in a hygienic atmosphere there. The squirrels are being fed a vitaminenriched diet to prepare them for the task ahead, and a recording of Jimmy Carter telling the American people not to worry is frequently played to the captive energy source as both a complement to their diet of nuts and encouragement to do their best.

Secretary of the Interior Cecil Andrus kicked off the squirrel campaign several weeks ago by symbolically capturing a squirrel atop a 90-percent finished T.V.A. dam outside Knoxville, Tennessee. The squirrel, alleged by some to have been sedated for the event, was picked up gently by Secretary Andrus and placed in a brown paper bag for a flight on Air Force One to the government squirrel farm

A local official was interviewed after the ceremony and indicated that he would have preferred to have the dam completed, as it had already cost a hunderd million dollars and would have provided energy equal to that produced by 15 million barrels of oil a Ralph Nader, who was present at the rite, reminded the official that a completed dam would have further endangered the three-inch snail darter, a fish on the Endan-

gered Species List.

'Wait till you see what government squirrels can do!" cried Mr. Nader, who then called for the halting of construction of all nuclear power plants, all electrical energy production stations, all oil refineries, and an immediate return to the oar, the pedal, and the windmill. In this he was a bit late, for the federal government is already sponsoring construction of giant windmills in the Rockies.

In the billion-dollar squirrel scheme the Federal Energy Administration has relied on a report, prepared by Mr. Nader, showing how a healthy squirrel running on a wire wheel attached to a smaller generator might produce enough electricity to heat a six-room house while powering all the electrical appliances in the average household. Some skeptics complained that a tiny squirrel whirling in a cage could not possibly produce suf-ficient energy to do this, but experts from the Internal Revenue Service said that a properly motivated squirrel could do the job. They assured the nation they had the methods and the personnel to guarantee compliance.

The first squirrel-cage factory is due to open in Cambridge, Massachusetts, on April 1, 1977, and will be dedicated by House Speaker Thomas P. "Tip" O'Neill. Speaker O'Neill replied at a recent press conference that he saw no conflict of interest on the part of the Administration in the fact that the government squirrels will live on a diet of peanuts. Later in the week the White House announced that a squirrel farm will be constructed on the former site of the now defunct Harvard University, from which some 1,200 professors had fled in terror upon

learning of the squirrel roundup.

Bert Lance, President Carter's director of the Office of Management and the Budget, is overseeing the massive squirrel project in its initial stages. Lance stated that he is certain the squirrels will see America through her time of need, adding that the "same uncanny equilibrium that helps the squirrel maintain his balance high in the treetops might well be harnessed to help me achieve

a balanced Budget by 1980."

Mr. Lance estimates that approximately 276,989,436 squirrels will be needed to supply America's energy needs. Since the young people employed under the federally funded program known as Youth And Squirrels Save America's Heat (YASSAH) appear to be catching the furry little animals at the rate of 2.4 squirrels per youth per day, it appears that the goal of capturing 276,989,436 squirrels before next winter will not be met. The youth of YASSAH blame their relative lack of productivity on the slowness of the federally developed ox carts, originally designed by the L.E.A.A. as police patrol cars.

The government is meanwhile banking on the well-known ability of squirrels to reproduce in large numbers as a means of saving the program. A high Welfare official recalled just the other day that when his mother began handing out bread to two little squirrels in his backyard it was impossible to enter the yard after only two months without being beseiged by a pack of the persistent ravenous creatures. The problem was solved when his father purchased a large dog which he kept tied to a tree in the yard and fed sparingly. The Welfare official thus far has been disinclined to apply a similar solution to the problems of his agency, but he has presented abundant data to prove that subsidies for squirrels should produce abundant offspring.

The Congress of Racial Equality and the

American Indian Movement have meanwhile been watching the squirrel project with much interest. Indeed, both organizations threatened legal action when the squirrel search was orginally confined to gray squirrels because of their alleged superior energies. Red and black squirrels are now as welcome on the government squirrel farms as

the gray.

Ambassador Andrew Young, whose pronouncements have been getting him in difficulty, ran into more trouble this week when his limousine struck and killed a squirrel in Central Park. Ambassador Young was photographed tearfully holding the carcass of the dead squirrel by the tip of its tail. The picture was captioned "America's Friend Makes Ultimate Sacrifice," but was withheld from most newspapers as not being in the national interest. It was widely reproduced in foreign countries, however, and became the cause of unseemly merriment in the O.P.E.C. nations and South Africa. General' Idi Amin Dada telephoned Ambassador Young to say that Acts of Heaven will happen. Idi offered to replace the defunct squirrel with an anxiously running missionary.

Paul Warnke, whose nomination to head the arms control agency had such a stormy time in the United States Senate, is among those who are very interested in the squirrel energy program. He feels it is somewhat similar to his well publicized but little understood plan to replace the B-1 bomber with horse cavalry. Mr. Warnke also has an answer for those who say the squirrel might fail to run and turn his little wheel. He says the same motivational technique should be used when dealing with squirrels as he would use when dealing with the Russians. "Build a man-sized cage and I will get in it," says Warnke. "Once the squirrels see me running they will know I am sincere and I am sure they will then want to run in their own little cages."

A late development in the squirrel energy story has broken just as we go to press. According to Jimmy Carter's chief economic advisor, Lawrence Klein, a slight error has been found in Ralph Nader's initial calculations that had indicated the energy of one squirrel could provide enough electricity for the average household. The new government figures, says Klein, confirm that the original plan was correct in all respects . . . except that the squirrel would have to weigh 200 pounds. A crash federal program with cost overrides is now under way to develop a 200 pound squirrel, and President Carter believes that with the sacrifices and forbear-ance of the American people his dream of energy independence will soon be a reality.

ATTEMPTS TO FURTHER DIMINISH OUR INTERNAL SECURITY CAPA-BILITY

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. McDONALD. Mr. Speaker, some of our colleagues have introduced a bill promoted by the American Civil Liberties Union and others to further diminish our Government's ability to prevent terrorism and other violent crimes by revolutionary groups. The March 19, 1977, Human Events has provided a valuable analysis of the bill which shows just how dangerous the present trend can be. Pressures on the legislative, executive, and judicial front have done

severe harm to our Nation at a time when terrorism and other subversive activities are on the increase. I commend the Human Events article to the attention of my colleagues. The article follows:

HOW FAR WILL CARTER GO IN CURBING FBI?

On the very day that the fanatical Hanafi Muslim sect began marauding through the Nation's Capital—shooting, killing and tak-ing hostages—it was learned that the Carter Administration was sympathetically looking at a proposed measure that would virtually eliminate FBI surveillance of militant domestic groups, many of whose members are advocates of terror and have close ties to terrorist groups abroad.

The 35-page explanation of the proposed bill, touted by former Atty. Gen. Ramsey Clark when he was in the Capital in mid-February, bluntly says: "First and foremost this proposed legislation seeks to end po-

litical surveillance."

The explanatory material makes plain that the measure looks toward putting a permanent ban on the use of undercover agents and informants for any purpose, even when employed to penetrate the Mafia or terrorist groups. "Informants and undercover agents are so prone to violating civil liberties," say the proponents, "that this Act requires Congress to examine their alternatives" within a year of passage.

The proposal would repeal such laws as the Riot Act, which permits the federal government to prosecute persons who cross state lines to promote violence, and would flatly prohibit all forms of electronic surveillance, no matter what the suspected crime, even in

kidnapping cases.

While the proponents contend they are opposed to "political" surveillance, it is obvious that they include in such a definition groups who support violence and even

swear allegiance to Moscow.

The proposed measure, for instance, flatly rejects an investigation of such groups as the Trotskyite Socialist Workers party, despite its official ties to the Fourth International which actively support terrorism on a worldwide scale. The Trotskyites in the U.S., moreover, not only look upon the Soviet Union as their guiding spirit, but harbor a faction which openly endorses terror. Yet the Clark proposal says any investigation of the SWP would be clearly outside the law.

"Nor," says the proposal, "could the FBI open a preliminary investigation, as it can under existing guidelines, solely on the basis of allegations or other information that an individual or group may be engaged in activities which involve the use of force.'

Other provisions would ban all record keeping aimed at "political" groups, eliminate FBI checks of government nominees (transferring this role to the Civil Service Commission), and establish an Inspector General post that would have unrestricted

access to all FBI files.

Called tentatively "A Law to Control the FBI," the proposal is sponsored by the American Civil Liberties Union, the Committee for Public Justice and the Center for National Security Studies. John Shattuck, the director of the ACLU's Washington office, told HUMAN EVENTS that Atty. Gen. Griffin Bell, and members of Carter's Domestic Council have looked with favor upon the proposal, though he does not insist they support it in all its details.

Shattuck says he has had several meetings with Bell, and believes he is quite sympathetic. Bell, himself, indicated in his confirmation hearings that he was interested in new measures to curb the FBI. Shattuck says the bill will be introduced in Congress in the next three or four weeks.

All three group sponsors of the measure have been in the forefront of those who want

to deal a knockout blow to the Bureau. In its 1970-71 annual report, the ACLU boldly announced: "The ASLU has made the dissolution of the nation's vast surveillance network a top priority. . . . The ACLU's attack on the political surveillance is being pressed simultaneously through a research project, litigation and legislation action."

The Committee of Public Justice is no less an opponent of Bureau activities. Founded in 1970 by Lillian Hellman, who has acknowledged she joined the Communist party in 1937, but has taken the Fifth Amendment when asked to discuss her CPUSA associates and activities, the CPJ burst into the media in 1971 when it launched an attack on the FBI's monitoring of violence-prone and subversive organizations. The Center for National Security Studies is the chief organizer of the freshly minted Campaign to Stop Government Spying. Yet the Bureau-crippling measure that this trinity of groups is sponsoring is reportedly being given serious attention by the Carter people.

What makes this even more disturbing is that the nine-member White House panel to select a new FBI chief is loaded with people whose views on internal security and domestic surveillance parallel those pressing for this ominous measure to emasculate the Bureau. At least five of the nine are believed to favor far greater curbs than now exist on FBI investigations. At least one, Charles Morgan Jr., who is well regarded in even conservative circles despite many of his leftish views, is a member of the Committee for Public Justice and acknowledged to Human Events that he endorses that part of the proposal to end FBI surevillance of domestic

Equally distressing is the fact that Mary Lawton of the Justice Department's Office of Legal Counsel is the executive director of the nine-member panel to secure a new FBI director. Ms. Lawton also chaired the group appointed by former Atty. Gen. Edward Levi to draw up the existing guidelines for FBI domestic security investigations.

The Levi-Lawton guidelines are themselves considered alarming, and, in many ways, form the basis for the proposed bill now being pushed on the Carter Administration. The proposed bill would, in fact, codify the guidelines, though it would add even further harmful restrictions as well.

Francis McNamara, a long-time expert in the security field, told Human Events that "her domestic security guidelines reversed directives of six Presidents-FDR, Truman, Eisenhower, Kennedy, Johnson and Nixon— by taking the FBI out of the 'poiltical' surveillance field, stripping it of authority to collect domestic intelligence, except in criminal cases.

"Running counter to the controlling Supreme Court decision on electronic surveillance, they deny the FBI the right to use warrantless wiretaps in certain security cases. Also, they flatly forbid the FBI, with or without a warrant, to listen to subversion and crime plotting by revolutionaries and radicals if one happens to be an attorney representing another in some case

"They are so completely unrealistic they force the FBI to cease surveilling the Socialist Workers party, the Trotsky Commu-nist group which has ties with foreign terrorists and some of whose members advocate that it undertake a program of terrorist

action in this country

"The informant guidelines prepared under Lawton's direction threaten the ability of the FBI to crack conspiracies, whether they are subversive or terrorist in nature, or of the organized crime type. They also endanger the lives of those willing to serve the government as informants in criminal and subversive groups."

And the Carter Administration may go

even further. Hence, there is a growing con-

cern within the police and internal security community about just what Jimmy Carter's plans are for the FBI.

GREATER HARTFORD RESOLUTION

HON. WILLIAM R. COTTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. COTTER. Mr. Speaker, in Februthe Lithuanian-American community celebrated the 59th anniversary of the modern Lithuanian Republic, and the 726th anniversary of the founding of the Lithuanian nation.

Today, however, the Lithuanian people are deprived of their right to national self-determination. Lithuanian culture and religion are suppressed by the Soviet Union's official policy of "Russification."

Mr. Speaker, I think it is important to mention the hardship and oppression of the Lithuanian people because our Government has recently embarked on a campaign to encourage the development of human rights around the world. The basis of this campaign has been the international agreements which bind signatory nations to basic human rights. agreements like the Universal Declaration on Human Rights.

Lithuania certainly is an example of the Soviet Government's cavalier attitude toward these agreements. While the Soviets are undertaking a campaign to suppress the Lithuanian people's ethnic identity, political freedom is non-existent and religious freedom is only minimally observed.

At this point, Mr. Speaker, I would like to insert a letter and resolution from the Hartford branch of the Lithuanian American Community of the U.S.A., Inc.:

LITHUANIAN AMERICAN COMMUNITY OF THE USA., INC., HARTFORD BRANCH.

East Hartford, Conn., January 20, 1977. Hon. WILLIAM R. COTTER, House of Representatives, Washington, D C.

DEAR MR. COTTER: The Lithuanian nation succeeded in reestablishing an independent state, having been oppressed by the old Russian Empire, at the end of WWI, on February 16th, 1918. Regretfully, the Republic of Lithuania enjoyed her independence for only twenty-two years when, in 1940, the Soviet Union invaded, occupied, and forcibly

annexed Lithuania into the Soviet Union. It is ironical that on July 12, 1920, a peace treaty was concluded between the Lithuanian Republic and the Soviet Union. The treaty included the following statement:

"Russia recognizes without reservation the sovereign rights and independence of the Lithuanian State, with all the juridical con-sequences arising from such recognition and voluntarily and for all time abandons all the sovereign rights of Russia over the Lithuanian people and their territory.

On September 21, 1921 Lithuania was admitted into the League of Nations and was thereby recognized by the world community of nations as rightfully enjoying national

independence and sovereignty.

Thus, it seems, that by virtue of the July
12, 1920 peace treaty, the people of Lithuania have the right to freely determine their political status and pursue their economic, social and cultural development-now!

From a moral point of view, the fate of Lithuania remains one gross act of international appeasement of the Soviet Union's imperialism by the Western powers after WWII, and continued today.

On February 16th, 1977, Americans of

Lithuanian origin and descent will commemorate the 9th anniversary of its independence, as well as the 726th anniversary of the founding of the Lithuanian State. It is in this spirit, that I invite you to join us and demonstrate your own just concern for the oppressed people of Lithuania by taking an active part in the commemoration of Lithuanian Independence Day in the US House of Representatives, and to insert your remarks in the Congressional Record.

Sincerely,

STEPONAS, ZABULIS, Chairman.

LITHUANIAN AMERICAN COMMUNITY OF THE USA, Inc., HARTFORD BRANCH, RESOLUTION

We, Lithuanian-Americans of the Greater Hartford, at a meeting held on February 13, 1977 commemorating the 59th anniversary of the reestablishment of the independent state of Lithuania on February 16, 1918, and the 726th anniversary of the formation of the Lithuanian Kingdom in 1251, send our warmest greetings to the people of the Sovietoccupied Lithuania and pledge our unwavering support for the restoration of Lithuania's sovereignty and unanimously adopt the following resolution:

Whereas in 1918 the independent state of Lithuania was reestablished by the free exercise of the right of self-determination by

the Lithuanian people; and

Whereas by the Peace Treaty of July 12, 1920 Soviet Russia officially recognized the sovereignty and independence of Lithuania and voluntarily renounced forever all rights and claims by Russia over Lithuanian soil and her people; and

Whereas until 1940 Lithuania was a sovereign nation, member of the League of Nations and a signatore of numerous international treaties with the Soviet Union: and

Whereas the Soviet Union during June 15-17, 1940 invaded and occupied Lithuania, and subsequently, forcibly annexed the Lithuanian Nation into the Soviet Union;

Whereas the Soviet Union continues to conduct a policy of colonization, Russification, ethnic dilution and religious and political persecution; and

Whereas the people of Lithuania to this day are risking and sacrificing their lives in deflance of the Soviet regime as most recently an untold number of Lithuanian and Russian dissidents have been arrested and imprisoned for the publication or dissemination of "The Chronicle of the Lithuanian Catho-

lic Church"; and Whereas the United States Government maintains diplomatic relations with the government of the Free Republic of Lithuania and consistently has refused to recognize the unlawful occupation and forced incorporation of this freedom-loving country into the Soviet Union: and

Whereas the 89th U.S. Congress unanimously passed House Concurring Resolution 416 urging the President to raise the question of the Baltic Nations status at the United Nations and other international forums; now therefore be it

Resolved, that we, Lithuanian-Americans will urge the President to vigorously implement the House Concurrent Resolution 416 to the fullest extent; and further

Resolved, that we urge the Secretary of tate, during the Belgrade Conference, in State, during the Belgrade Conference, in compliance with the humanitarian provisions of the Final Act of the European Conference on Security and Cooperation, to protest the

persecution and request the release of Nijole Sadunaite, Tomas Venslovas, Marija and Daina Jurgutis, Kestutis Jokubynas, and Antanas Terleckis, just to name a few, who have been illegally persecuted by the Soviets in defiance of the Final Act; and further Resolved, that copies of this resolution be

Resolved, that copies of this resolution be forwarded to the President of the United States, the United States Secretary of State, the United States Ambassador to the United Nations, the United States Senators, members of the House of Representatives, the Lithuanian Minister in Washington, D.C., the Lithuanian Consuls in New York City and Chicago, and the press.

DEFENSE DEPARTMENT SHUNS
NORTHEAST, MIDWEST ON PROCUREMENT EARMARKED FOR
AREAS WITH HIGH JOBLESSNESS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. EILBERG. Mr. Speaker, because of the involvement of the Vice President and the White House, most Americans have become aware of the severe economic problems inflicted on the Philadelphia metropolitan area as a result of the Defense Department's decision to close Frankford Arsenal.

For years, the arsenal was a favorite target of the "economizers" in the Nixon and Ford administrations. Their answer to achieving "savings" in Government was to take the meat-ax to this essential military installation. On the eve of the 1976 Presidential election, the Vice President gave the people of Philadelphia his solemn promise that, if the Carter-Mondale ticket were elected, the decision to close the arsenal would be reversed.

Since then, of course, the American people have have learned that, although the decision was reviewed by the Secretary of the Army, the decision to shut down this installation and throw thousands of people out of their jobs was not reversed. Therefore, we in Philadelphia are faced with the task of finding new job opportunities for these skilled employees. This would be a problem under any circumstances; it is aggravated by the fact that unemployment in Philadelphia already is perilously high—nearly 9 percent of the work force currently cannot find jobs.

Mr. Speaker, this is the fifth Government closing in the Philadelphia area in recent years. These closings have resulted in the loss of some 10,000 jobs. Some of the people disemployed have moved away, taking with them their contribution to the stable tax base of the city; many of the others have had to take jobs at lower skills and lower pay, eroding the taxable base still further:

Because of the high unemployment levels, Philadelphia has been looking to the Department of Defense for assistance in solving this crisis. DOD has responsibility for administering the economic adjustment program, which is designed to lessen the impact of base closure.

sures. And DOD has the responsibility for carrying out a program, instituted a quarter century ago, to funnel Government contracts into areas of serious unemployment.

Unfortunately, Mr. Speaker, this latter program has been a bitter disappointment to the industrialized areas of this country. The Northeast-Midwest economic coalition, with which I am proud to be affiliated, has just completed a study detailing the failures of this program to serve the needs of the major urban areas of America. I am indebted to my friend and colleague, the gentleman from Massachusetts (Mr. Harrington), who chairs the coalition, for making this study public.

In the interests of acquainting my colleagues with the gravity of this situation, I am placing in the Congressional Record two articles which appeared in newspapers in my area—the Philadelphia Bulletin and the Philadelphia Inquirer. These articles help to explain the enormity of the problem which we face in trying to provide jobs and economic support for economically hard-hit areas like Philadelphia. The text of these two articles follows:

[From the Philadelphia Bulletin, Apr. 4, 1977]

DEFENSE DEPARTMENT CRITICIZED ON APPROACH TO JOBLESS

(By Robert E. Taylor)

Washington.—The Defense Department has "undermined, ignored and forgotten" a 25-year-old policy to target procurement contracts to areas with high unemployment, a coalition of northeastern congressmen has charged.

Rep. Michael J. Harrington (D-Mass), chairman of the Northeast-Midwest Economic Coalition, made the point in a letter to Defense Secretary Harold Brown.

The report was the first major research effort by the coalition to document its charge that the Northeast and Midwest, despite high unemployment, receive a disproportionately small amount of federal spending.

The report traced implementation of a Defense Department policy, established in 1952, to channel contracts and purchases to areas with high unemployment.

The policy was reinforced by another order in 1968, but at no time over the past 15 years has even one percent of Defense contracts been awarded to companies certified as operating in high unemployment areas.

In 1975, the most recent year for which statistics are available, less than one fifth of one percent of the department's contracts were awarded on the basis of such preference, the report stated.

Harrington claimed the statistics showed that, "despite a series of Federal policy statements, the procurement practices of the Department of Defense contribute far too little to solving the chronic economic problems of the older urban regions of the nation, and may even make those problems worse."

Harrington said the policy had been ignored because economic factors "tend to favor regions outside of the Northeast and Midwest, and in part because of political alliances cemented between the Pentagon and influential politicians during the past

In 1976, Philadelphia had the third largest number of businesses certified to bid for contracts under the preference to high unemployment areas. New York and San

Francisco ranked first and second, respectively, according to the report.

Harrington urged the Carter Administration to make a greater commitment to awarding contracts to high-unemployment areas.

[From the Philadelphia Inquirer, Apr. 5, 1977]

DEPRESSED AREAS SLIGHTED BY PENTAGON (By Aaron Epstein)

Washington.—In 1952, the Defense Department issued a policy intended to stimulate economically depressed areas of the nation by trying to make more purchases in the areas of highest unemployment.

But in the 25 years since that policy went into effect, only a tiny portion (less than one-fifth of 1 percent) of the hundreds of billions of dollars in military purchases has been spent to relieve acute unemployment, according to a congressional study.

The study also shows that much of the money that was to be spent in economically troubled areas went to the wrong places.

As a result, the Northeast and Midwest especially in cities with high unemployment, such as Philadelphia—have been drastically short-changed.

The analysis was sponsored by a coalition of Northeastern and Midwestern congressmen headed by Michael J. Harrington (D., Mass.).

Harrington, in a letter to Defense Secretary Harold Brown, charged that the Defense Department, which is responsible for 73 percent of the federal government's annual procurement expenditures of \$60 billion, has "ignored and forgotten" this "targeting" policy.

geting" policy.

A large part of the reason, the study suggests, is the fact that since 1953 the Maybank amendment has been added routinely to defense appropriation bills.

That amendment prohibits paying higher prices on contracts to relieve economic stress "except where the Secretary of Defense has specifically determined that sufficient price competition exists to ensure a reasonable price to the government."

The amendment originated when former Sen. Burnet Maybank (D., S.C.) sought to prevent the Defense Department from paying more for New England textiles than it would pay for textiles produced in southern mills.

Behind the failure to implement the targeting policy, Harrington suggested, lie the "political alliances cemented between the Pentagon and influential politicians during the last 30 years."

This is an apparent reference to the members of the Congress from the South and Southwest who frequently head armed services committees and subcommittees and who sponsor Pentagon legislation. Sen. John C. Stennis (D., Miss.), Rep. George Mahon (D., Tex.) and Rep. Robert L. Sikes (D., Fla.) are three current examples

The study indicates that the South has benefited from the small amounts of money that have been spent under the Defense Department program of relieving economic hardship.

In 1974, for example, the Philadelphia area received \$5 million, or 7 percent, of all Defense Department targeted funds.

Although unemployment in the Philadelphia area rose the next year, the area's share dwindled to \$2.2 million, or 4.7 percent.

In contrast, the Atlanta region, where unemployment was far less severe, was getting \$15 million, or 21 percent, of all the targeted purchases in 1974 and even more—\$19 million or 39 percent—in 1975.

"The minimal use of (the targeting policy) can be attributed to some extent to the limitations imposed by the Maybank amendment," the study declares.

"No explanation can be found, however, for the existing regional disparity in the allocation of federal dollars under (the policy)."

Harrington and the coalition are asking the Carter Administration to enforce the 1952 policy rigorously by changing Defense Department practices, by training federal procurement officers and by minimizing the effect of the Maybank amendment.

THE URGENT NEED TO CURB GASOLINE WASTE

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. WAXMAN. Mr. Speaker, I would like to call to the attention of my colleagues, an article, by former Environmental Protection Agency Administrator Russell Train, that appeared recently in the Washington Post. Entitled "The Urgent Need To Curb Gasoline Waste," Mr. Train has skillfully crafted an exacting analysis of the automobile's role in national energy demand.

Fully 30 percent of U.S. refinery capacity is devoted to the manufacture of gasoline used in automobiles. With experts predicting petroleum imports to exceed domestic production in 1977, the time to put a stop to profligate energy waste is now. Trimming energy consumption by the automobile is a good place to start.

There is little doubt that the country's inordinately high demand for gasoline is due in large measure to the continued production of and continuing consumer preference for gas-guzzling cars. Mr. Train points out that in comparison with West Germany, the U.S. transportation sector uses approximately 3.7 times more energy. While allowing for varying lifestyles and differing government monetary policies, the figures do point to a significant conservation potential in U.S. transportation.

The 1973 oil embargo caused perceptible, if temporary, shifts in consumer preferences toward smaller, more fuel-efficient cars. Long lines at the pumps were significant incentives to consumers to alter their habitual attraction to bigger, faster, and more powerful cars.

When the embargo ended, and gasoline supplies loosened, demand for gasoline and bigger cars shifted back toward historical trends. The Congress, however. recognizing that although the embargo had faded, the totality of the energy crisis remained, enacted provisions in the Energy Policy and Conservation Act-EPCA-to mandate strict automobile efficiency standards. Under the provisions of the law, automobile manufacturers are required to achieve increasingly stringent fleet line mileage efficiencies beginning with the 1978 model year. By 1985, manufacturers will be required to achieve an average fleet line efficiency of 27.5 miles per gallon. Mr. Train estimates that the 1985 standards would result in fuel savings equivalent to 750,000 barrels per day. This deadline, however, is 8 years away and the efficiency standards are only fleet averages, and are not applicable to individual models. It is clear that the immediacy of the energy crisis requires additional action.

In his conclusion, Mr. Train raises an important issue concerning the necessity of a shared responsibility between industry and consumers toward increasing automobile efficiency. Train comments:

I recognize that it is much more palatable politically to design a conservation program that emphasizes requirements on auto manufacturers or charges on large car purchasers. These are important in themselves, but if we stop there, the program will tend to obscure the fact that any really effective energy conservation program is going to require personal effort and sacrifice on the part of all Americans. So long as we perpetuate the idea that national energy conservation can be achieved by someone else's sacrifice, we will be deluding ourselves and we will not solve the problem. We need to provide a signal that life-style changes are required.

While Congress must remain firm in maintaining strict automobile efficiency standards, serious attention must be given to Government-sponsored incentives for consumers to alter automobile buying habits. Mr. Train believes the most effective solution is a gradual increase in the gasoline tax combined with rebate provisions to equalize the disproportionate effect upon the poor. Any such tax proposal must provide for earmarking resulting revenues for non-energyintensive investments such as mass transit and the development of renewable energy resources. The energy savings from such an allocation would multiply and expand upon initial savings in reduced gasoline demand.

Whatever the final policy adopted, it is essential to get national energy policy off dead center and take action on unnecessary energy consumption.

Mr. Speaker, I include Mr. Train's article in the RECORD at this point:

THE URGENT NEED TO CURB GASOLINE WASTE (By Russell E. Train)

On the first Earth Day in April, 1970, on campuses across the nation, automobiles were buried to the accompaniment of appropriate funeral rites and oratory. While these tongue-in-cheek ceremonies obviously represented a simplistic solution to the problem of auto pollution—to say the least—the students were right on target in highlighting the contribution of the automobile to the environmental problems of the nation. While we have made substantial progress since 1970 in reducing auto emissions, the plain fact is that the automobile was then and remains today the single largest source of air pollution in most urban areas of the United States.

While environmental problems are still very much with us, we are now confronted as well by an energy crisis which continues to worsen and which threatens the security and economic stability of the country. And once again the automobile is front and center as the single largest source of energy waste in our society.

By our failure to act decisively, we have

By our failure to act decisively, we have squandered three years, and we can no longer afford to read and then forget the warnings. For we face a clear and present danger. If we move boldly to conserve gasoline by wise use of tax policy, by insisting upon fuel savings in new models and by changing our habits, we can take a giant step toward ending energy waste—or, by failing once more to do so, we can continue on our present gasguzzling way down the road to disaster.

Oil imports are now running at a mind-boggling rate projected at 8 million barrels a day in 1977, as compared to 7.1 million barrels per day in 1976 and only 3.4 million as recently as 1970. In 1975, 45 per cent of all domestic demand for oil in the United States was for autos and trucks. Of that amount, two-thirds went to fill the tanks of passenger cars and the balance to trucks. (These proportions remain relatively the same today.) Any national energy policy must give first priority to energy conservation, and no energy conservation program will succeed unless it deals comprehensively and effectively with the problem of the automobile.

How much of the gasoline consumption in autos represents waste is, of course, speculative and a matter of judgment. There is little doubt that a substantial proportion of that consumption is unnecessary. Comparison with European experience makes the point beyond dispute. Average fuel economy of the entire U.S. auto fleet in 1973 was 13.1 miles per gallon (15.6 mpg in 1975). In the same 1973 year, the average fuel economy of the Italian auto fleet was 25.8 and the average of other European countries ranged from 20 to 26—at a minimum, about 50 per cent better fuel economy performance than in the United States.

A broader-based comparison gives an even more startling picture. The United States uses approximately 3.7 times more energy per capita in the transportation sector than does West Germany—certainly an intensively developed nation with a high standard of living.

However one views these various figures, there is obviously a tremendous potential for improved automobile fuel economy in the United States.

TAKING CHARGE OF OUR CARS

What is the answer? Is it finally to make a reality of the 1970 Earth Day script and bury the automobile? Clearly not. Whatever penalties we pay in terms of air pollution, energy loss and otherwise for the use of our automobiles, the benefits in terms of individual mobility and freedom are so great that, we can assume, the individual transportation mode represented by the private auto is here to stay.

The need is to do a far better job of managing automobile transportation than we have in the past, to learn to enjoy its benefits without over-indulgence. We need to take charge of our cars and not permit them to mindlessly shape and structure our society for us. Of necessity, the time has come for us to ride our cars—not the other way around.

Clearly, there is no single or simple solution at hand. Any attack on the problem should probably involve a mix of approaches. And it does seem plain to me that jawboning the American public is not going to achieve significant results. The recent trend back to larger cars—contrary even to industry projections and in the face of repeated warnings—strongly suggests that we are going to indulge our taste for gas-guzzlers as long as we can get away with it.

An obvious place to start is with mandatory fuel economy standards for new cars, both domestic and imported. Congress has already made a beginning in this direction. The 1979 models must meet a fuel economy standard of 19 miles per gallon, and 20 mpg for 1980. The legislation likewise sets a "target" of 27.5 mpg for 1985.

The area where I feel the greatest concern is the period between 1980 and 1985 during which Congress has specified no standards and has left it up to the Department of Transportation (DOT) to set "interim" standards. Indeed, DOT has authority under certain circumstances to relax the 1985 "target" itself. My own experience at the Environmental Protection Agency with auto emission standards is that Detroit will work

hard to secure the most lenient fuel economy standards it can get. The industry has historically used fuel economy as an argument against higher emission standards, and it can now be safely predicted that stricter auto emission standards (which Congress must address in the near future) will be used as an argument for less strict fuel economy standards.

This is not to belittle the interrelationship between emissions and fuel economy. The link between the two objectives is very real and the challenge is to achieve an optimum mix. (In this connection, I think it clearly not in the public interest to shift the emissions responsibility designed to protect public health from EPA to DOT as some have proposed.) DOT is presently engaged in developing a proposal for fuel economy standards for the post-1980 years, and it is vitally important that these be as strict as possible.

AN INCENTIVE' FOR FUEL ECONOMY

One of the problems in this area is the inherent difficulty of making an accurate, advance judgment of what level of fuel economy can in fact be achieved in subsequent years. If such a judgment is based solely on technology known and available at the time the judgment is made, we are probably selling short the industry's real capacity for technological innovation under pressure.

Consideration, it seems to me, could well be given to a statutory system for the post-1980 years which sets 27.5 mpg as the standard for 1981 and succeeding years and imposes a set of progressively greater charges based on the gap in any given year between a manufacturer's actual average fuel economy performance and the statutory standard. Such a system would have a dual advantage: it would avoid the need for highly controversial and difficult administrative standard setting, and, at the same time, it would create a strong incentive for manufacturers to achieve substantially improved fuel economy as rapidly as possible.

A charge system applying only to fuel economy could create an imbalance with the emissions control program by weighing Detroit's priorities in favor of fuel economy at the expense of the fight against pollution. Depending upon the outcome of the current congressional consideration of auto emission standards for model years after 1977, thought might be given to introducing a system of charges for non-attainment of statutory emission goals.

These suggestions for a system of charges grow out of my own conviction in the environmental area that economic charges of various types can serve to reduce much of the rigidity inherent in a purely regulatory program while, at the same time, providing a strong market incentive for attainment of standards.

A related possibility which has been actively considered in earlier years and deserves fresh attention now is a system of excise taxes which would place a heavy charge on the purchase of a car with poor fuel economy (usually a larger car) and even provide a rebate to the buyer of a more fuel-efficient (usually smaller) car.

A major problem with all of these approaches directed to the design and purchase of new cars is that they can only be effective over a fairly extended period of time. Thus, the present mandatory fuel economy program will only be fully effective in 1985 (assuming no administrative relaxation of the standard), as which time it should produce a saving of about 750,000 barrels of oil per day.

HOW TO BEGIN

Such long-term approaches are absolutely essential but they do leave unanswered the question of what can we do right now to reduce significantly the current consumption of gasoline.

The most drastic step would conceivably be a system of gas rationing. Given the inequities and administrative nightmare inherent in gas rationing, it seems an unlikely option in the absence of a real threat to our foreign supplies. An alternative approach would involve a substantial increase in the present federal excise tax on gasoline, ranging from 25 cents to a dollar per gallon. This is the approach that brings cries of anguish from politicians.

I strongly suspect that fears of a voter revolt against higher gasoline taxes (properly distributed) are exaggerated and that public readiness to make reasonable sacrifices to improve the nation's energy situation are greatly underestimated. A recent Harris Survey showed overwhelming public support for a strong energy conservation program. Indeed, the poll reported that a 74-to-21 majority would support raising the price of gasoline by 50 cents.

The problems presented by a gas tax rise of this or comparable magnitude should not be overlooked. Necessarily, the burden would fall disproportionately on low income groups, and there would be much to be said for a system of rebates to help improve the equity of the tax.

Moreover, each cent of federal gas tax is estimated to produce about \$1 billion in revenue, meaning that a 50 cent tax increase would take \$50 billion out of the economy (using a simple linear projection which may not be entirely accurate.) A substantial portion of funds of this magnitude would have to be returned to the economy on a reasonably current basis if major disruptions, including a severe deflation, were to be avoided. Rebates not only to the poor but to states and local governments would seem in order. A major stepup in federal funding for mass transit programs would also seem an attractive option.

The impact of a gasoline tax increase on gas consumption is somewhat problematical. The indications seem to be that demand is relatively inelastic and that consumption would not be particularly sensitive to a small tax increase. When fully effective, a 50 cent tax increase would, it is estimated, reduce oil consumption by something on the order of 600,000 barrels per day (compared with the 8 million barrels per day we expect to import this year).

In any event, it seems clear that, before any decision is made to go forward with a major increase in federal gas taxes, careful consideration should be given to structuring such a tax in ways that mitigate the burden on the poor and avoid economic disruption. Further, I would assume that for political reasons, if no other, any very substantial gas tax increase should be phased in over a period of years, thus significantly reducing the immediate impact on consumption.

Whatever the decision on a major increase in gas taxes, I would urge a relatively small increase (5 to 10 cents) now. Such an immediate step would retain the option of further increases in later years.

Admittedly, such an increase would not have a significant effect on consumption. Nevertheless, it would provide a clear, tangible signal to our society at a time when such a signal—beyond mere rhetoric—is badly needed.

I recognize that it is much more palatable politically to design a conservation program that emphasizes requirements on auto manufacturers or charges on large car purchasers. These are important in themselves, but if we stop there, the program will tend to obscure the fact that any really effective energy conservation program is going to require personal effort and sacrifice on the part of all Americans. So long as we perpetuate the idea that national energy conservation can be achieved by someone else's sacrifice, we will

be deluding ourselves and we will not solve the problem. We need to provide a signal that life-style changes are required. Some immediate increase in gas taxes could help provide this signal.

There is, of course, much that the individual citizen can and should do: more carpooling, slower driving, grouping trips, avoiding unnecessary trips, using mass transit where available, among other steps. In the latter connection, it is important that the federal government help provide the funding that can make effective mass transit options more broadly available.

Regular engine maintenance is not only important to emission control performance but also to saving energy. A properly tuned engine should provide improved gas mileage. I would hope that thought be given to a federal program designed to assist states and local governments in setting up inspection and maintenance programs.

It can be taken for granted that any mandatory requirements that impact on individual consumers are going to be highly controversial. However, the American people are far readier to undertake personal sacrifices in this regard than is general assumed. It is clear that strong leadership is going to be required.

The time has come when energy conservation must become the keystone, the first priority of national energy policy. The statements by President Carter along these lines have been highly gratifying. I am confident that the American people are prepared to meet the challenge, and a good place to start is with our automobiles.

STEEL-JAW TRAPS

HON. PETER H. KOSTMAYER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. KOSTMAYER. Mr. Speaker, I rise today to inform my colleagues of the interest of a number of my constituents concerning the inhumane trapping of mammals and birds.

Two young citizens from my district, John and Beth Margaret Barton, were upset enough by the mistreatment of wildlife because of the use of the steel-jaw trap, that they circulated a petition in their Hilltown, Pa., community. The response they received was enthusiastic, for they gathered 200 signatures from people who were equally upset by the lack of regulatory controls over the trapping industry and more specifically, the steel-jaw trap.

I am inserting a copy of the letter which John and Beth Barton sent to me, as well as a list of the 200 names which they enclosed in their letter.

DEAR CONGRESSMAN KOSTMAYER: We are writing to you in regards to one thing, the outlawing of the steel-jaw trap. Here are some points that we are trying to get through: A, the outlawing of the trap so that all animals have a fair chance of surviving, B, that we think of the animals humanity as well as ours, and C, the adoption of more humane traps. We realize that there is a law saying that the trapper must check his traps every 36 hours, but how often does this really happen? We demand that something is done now please, not 10 or 15 years from now.

Respectfully,

BETH MARGARET BARTON.

JOHN BARTON.

John Barton, Beth Barton, Laurie Clemmer, Jeff Kuhn, Diana Ambolino, Chris Perry, Linda Oakey, Diana O'Neg, Julia Higgins, Kim Strohm, Tracy Longstreet, Sue Magau, Kris Marko, Donna Marsee, Maria Lysak, Barb Meyers, and Tracy Reese.

Jody Pritchard, Kelly Rantz, June Renner, Eric Overholt, Kevin O'Toole, Jo Ann Roth, Kelly Robison, Denise Munsell, Roger Green, Pat Robbins, Ruth Shirey, Diane Scholl, Roslyn Shaak, Jim Robison, Patty Scott, Tina Snyder, and David Viveras.

Glenda Whitman, Keith Godshall, Daniel Steich, Jim Detwoler, Keith Eitelgeorge, Rich Caraballo, Sandy Besch, Robin Croissette, Tim Cahill, Dean Dimming, Laurie Clemmer, Dawn Robbins, Mark Staw, Dave Korr, and Joel Andrews.

Bernie App, Karen Allen, Carl Hesehl, Missy Althouse, Joe Anderson, Kristen Ayers, Angela Arnavdo, Lisa Baum, Carl Akers, Dick Berger, Wendy Gross, Charlotte Hendirckson, Sandy Beyer, Keith Bishop, Stacey Ben-

ner, and Judy Benner.

Brenda Moore, Jolene Heacock, Barry Grebb, Andrea McMurtrie, Margeret Barton, Wendy Haberle, Sandy Boyle, Dawn Haldeman, Beulah Brewington, Laura Pinckney, Janet Becker, Louise M. Butcher, Janice O'Donnell, Wendy Hange, Julie Geyer, and Diane Malishauki.

Dan Corzier, Marh Crawford, John Montes Diane Engle, Lisa Moyer, Kelly Townsand, Lisa Schram, Nancy Gottshall, Barbara Rentschler, Chris Moore, Brian Conrad, Mike West, Kirsten Hughes, Laurie Gaylor, Andrea Pea-

cock, and Wendy Garrett.

Alicia Campbell, Chris Wertman, Barrie Detweiler, Tommy Moore, Theresa Ensle, Darlene Brewington, Donna Geib, Kristin Lindsey, Andrew Grin, Shawn Mathing, Sharon Anender, Donna Buehrle, Gary Anderson, Anthony Maudo, Lise Eisenlohr, Michele Nunevilla, and Pattie Doan.

Pam Derstine, Melanie Rennevig, Deirdre Beck, Mike Alkinson, Jeff Bleungh, Stacey Metzler, Chris Stiles, Roy Briton, Richard Duperry, Ms. B. Nostetler, Kathy Dansereau, Kevin Buzdygan, Tony Ciarco, Lucy Pelletier, Donald Roberts, Maureen Peucell, and Brant

Art Lockett, Chuck Holten, Lori Rice, Reggie Felt, Jane Hannes, Katherine Penley, Wendi Oreim, Linda Terri, Rita Klein, Tara Moore, Kelly Jones, Ellen Drees, Jamie Bleigh, Matthew Budd, Mike Franon, Rita Lesh, John Bunton, and Roger Beer.

Mr. Speaker, because of the magnitude of concern shown by these young citizens, 1 am cosponsoring Representative Glenn Anderson's bill, H.R. 5292, which calls for the strict regulation of the trapping of mammals and birds on al. Federal lands.

I urge, Mr. Speaker, that we heed the words and ways of our young constituents who know that the way we treat animals is a reflection of the way we treat each other.

GENERATION GAP—NONEXISTENT PROBLEM

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. STEIGER. Mr. Speaker, this morning's New York Times carried a very interesting story on the family of our colleague "Ham" Fish.

The long history of commitment to public service by the Fish family is re-

markable.

As one Member who has worked closely with and respects "HAM" FISH, JR., who has met but regrettably only briefly Mr. Fish, Sr., and who remembers well young "HAM" FISH during his student days. The saga of this family is well worth reading: [From the New York Times, Apr. 6, 1977]

GENERATION GAP-NONEXISTENT PROBLEM

(By Anna Quindlen)

In the clutter of his Park Avenue study, among the artifacts peculiar to distinguished men—worn oriental rugs, cracked leather-bound books, dusty busts, framed seplatoned photographs, treasured correspondence and old letter-openers—sits Hamilton Fish Sr., a happy man.

His new bride—his Thurdi—wants to build him a library-museum in his birthplace of Garrison, N.Y., with some of her substantial money. He recently appeared in Congress for the first time in 32 years to testify on his current preoccupation, what he views as the nuclear superiority of the Russians, before the House Armed Services Committee. Now the Library of Congress has requested his papers and those of his father so that it can begin to assemble the Hamilton Fish Family Papers division of the manuscripts collection.

He is 88 years old, but his voice—the voice of an orator—and his impeccable posture are years younger. "There are other families," he says, "outstanding families. There was the Adams family, for example, although they seem to have died out somewhat." And under his breath he added: "But not in direct line, and perhaps one would say not as well known. With a bit more money, perhaps. But we are indeed unique."

It is not a debatable conclusion.

Mr. Fish, who was a member of the House of Representatives for a quarter-century, and whose son, Hamilton Fish Jr., is now in his ninth year in the House, is a master of the nondebatable conclusion.

In this case, he is as right as he sounds, for the Ham Fishes of New York—who wearily say they have heard every joke about that name—have served in the House with a consistency unmatched by any other American family.

This is also a source of great satisfaction for Mr. Fish. Beginning with the 28th Congress in 1843, a Hamilton Fish always goes to Congress from the State of New York.

"Always has gone," said the sandy-haired

"Always has gone," said the sandy-haired young man in blue jeans, his form draped over a chair in an East Side apartment not far from his grandfather's study. "Always has," he repeated, with a smile and a nod. "Good."

This last word, coming as it does from Hamilton Fish, who is 25 years old, is meant to signal not approval but a kind of laissezfaire. It is accompanied by the avowal, "I have no political ambitions," and the admission that if he ever has a son, he would probably never name the child Hamilton. He insists he does not feel the accumulated weight of the four who have preceded him in direct line of descent: Hamilton Fish, Secretary of State under President Ulysses S. Grant as

well as Senator from 1851–1857, Governor of New York from 1848–1851 and, of course, member of the House of Representatives; Hamilton Fish, Speaker of the New York State assembly, elected to Congress in 1909; Hamilton Fish, ranking minority member of both the Foreign Affairs and Rules Committees, nationally known isolationist conservative who dogged Franklin D. Roosevelt's defense and social welfare policies with a snarl, member of the House from 1920 to 1945, author of five books, and grandfather of the youngest Mr. Fish.

And, of course, Hamilton Fish the current Congressman, 49 years old, Representative from a district that includes parts of West-chester, Dutchess and Putnam Counties, one of the seven Republican members of the Judiciary Committee who supported articles of impeachment against President Richard M. Nixon, and latest in the line begun when Col. Nicholas Fish named his first son after his close friend, Alexander Hamilton.

Hamilton Fish the youngest—he avoids a number after his name—has so far chosen a more entrepreneurial public role.

He has been director of finances for the Democrat Ramsey Clark's 1974 Senate race, head of a group of American backers who saved Marcel Ophul's documentary film "The Memory of Justice," from cutting-room mutilation and distributed it in its entirety worldwide, and is now organizer of a group of investors that will soon sign a binding purchase-option agreement to buy The Nation, which may be the country's oldest journal of opinion but goes nowhere near as far back as the Fish family does.

For all this, the youngest is still a Hamilton Fish. Like his father and his grandfather, he is tall, dignified, a trifie distant with strangers, and handsome in a way most often associated with the profile on the side of a

coin.

If a movie were ever to be made about the family—which the eldest would adore, the youngest might buy the rights to, and the middle one would probably have to sandwich between committee meetings—all three men could play the 88-year-old at different times in his life.

"I would like to see this young fellow run for Congress," said Mr. Fish Sr. of his grandson. "He's supposed to be a little too liberal, and he's a Democrat, but that doesn't bother me a bit. After all, I left the Republican Party for the Bull Moose party because I was a great admirer of Theodore Roosevelt. You do these things when you're young. I hope he'll come around, because this has always been so in our family."

The family, interviewed separately at different places, admits to the usual generation gaps. All three agree that the eldest is the most conservative, the youngest the most liberal. Mr. Fish Sr., who keeps up his correspondence with former President Nixon, publicly criticized his only son for voting to "impeach and destroy" the Republican leader, while the Congressman's son says his father's work on the Judiciary Committee in 1974 is "a source of great pride" to him.

Still, the eldest Mr. Fish says there will be

Still, the eldest Mr. Fish says there will be no problem finding his grandson a Congressional district: even the one now held by Ham Fish Jr. might be suitable, if that incumbent runs for the Senate in 1978 and becomes the second of the name to be elected to that chamber.

The present Representative himself is more circumspect about the future. Sitting on the stone wall that rings the Capitol, Mr. Fish expressed guarded interest in higher office and complete confidence in his son's own career decisions.

WOULDN'T "TELL HAMMIE" WHAT TO DO

"I would never tell Ham I wanted him to be a Congressman and my father never said he wanted me to be a Congressman," said Mr. Fish, smoking in the sunlight as tourists stopped to snap his picture, sure that he must be someone.

"I am doing exactly what I want to do," he said. "It's probably no different than if family of ministers or docyou were in a tors and wanted to follow in your father's footsteps. I was a great partisan at an early age; I can remember being 10 and booing Roosevelt in those Pathe newsreels."

Mr Fish appears to have sidestepped his father's shadow. At Harvard, where he was Class of '49, his father '07, and his son '74, he became a member of the crew. The eldest Mr. Fish was captain of the football team, and is the last surviving member of Walter Camp's All-Time All-America football team.

He is a different sort of personality than his somewhat flamboyant father, recently married to Alice Curtis Desmond, 79-year-old widow of another prominent Republican, State Senator Thomas Desmond, who made a fortune in the construction of ships and

skyscrapers.

At his wedding reception the eldest Fish praised Mrs. Desmond, a writer, for bringing money back into the family. He says: "It's a common misconception that we have a lot of money. I don't, my wife does. We marry

well—Chapins, Stuyvesants, Schuylers."

The current Congressman is amused by his father's candor, and says: "He's more sure of him than anyone I've ever known.'

Mr. Fish Jr. is steady, thoughtful, uncontroversial, and extremely popular in the 28th District, where in his last re-election effort he won 70 percent of the vote. His father while in office was outspoken, unswervingagainst what he called intervention in World War II, against the New Deal, against com-munism, he headed the first Congressional committee to investigate communism in the United States.

He was anathema to President Franklin D. Roosevelt, whose home district he represented, and who made him part of an oftquoted political slogan when he denounced him, along with Bruce Barton of Manhattan and Joseph Martin of Massachusetts, as the reactionary team of Congressmen "Martin, Barton and Fish."

'I remember," said Mr. Fish Sr., with a considerable sparkle in the blue eyes that are faithfully reproduced in both son and grandson, "when I once amended a draft bill Roosevelt wanted. And after they took it over to him, some of the men in Congress came to me and said, 'Ham, you almost killed the President last night. Because when he heard that his own Congressman put in that amendment, he almost had apoplexy.

The voungest Hamilton Fish, who has also sat between the Houdin busts of Benjamin Franklin and George Washington and heard these stories, said, "Yes, he is the most rethese stories, said, "Yes, he is the most remarkable man of 88. He is the most remarkable man of 50. I feel almost more like a student of his life than his grandson."

THE SUPPLEMENTAL SECURITY IN-COME AMENDMENTS OF 1977

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. CORMAN. Mr. Speaker, I am introducing today H.R. 6124 that provides for the administrative simplification and makes other improvements in the supplemental security income-SSI-program. The provisions in H.R. 6124 were approved by the House as part of H.R. 8911 during the 94th Congress, but were not acted on by the Senate. The following is an explanation of the provisions of the bill.

Section 2 is related to blind or disabled children ages 18 to 21. As the law stands a child aged 18 to 21 who is in school or taking a course or training is deemed to be a child up to age 21. However, if he does nothing he is treated as an adult at age 18. This has been criticized as a deterrent to further training for blind and disabled children. Obvious inequities arise from the provision which was tailored for the family assistance plan that never became law. This provision corrects this by placing all persons over 18 on the same basis and treating them as adults. At the same time we have carefully preserved existing exemptions for persons who are taking training beyond the age of 18. Through this provision we eliminate the attribution of family income to children who desire to take training after age 18.

Section 3 of the bill deals with outreach. There has been a great deal of complaint that the SSI program has left many persons who were eligible for its benefits without knowledge of the avail-

ability of the program.

Section 4 of the bill deals with the modification of existing requirements for payments to be made to a third party, when anyone is disabled as a result of alcoholism or drug addiction. This has been a very difficult requirement for the administrative agency to meet. In highly populated metropolitan areas there has simply been no one who would undertake to serve as a third party payee for large numbers of the persons involved. The bill would accordingly amend the law to provide that if the chief medical officer of the institution or facility where the individual is undergoing treatment certifies that payments of benefits directly would be of significant therapeutic value, and that there is substantial reason to believe that he would not misuse or improperly spend the funds, the payments can be made directly. It is believed that with these safeguards, direct payments can be made in some cases and that they may promote successful rehabilitation.

Section 5 deals with persons living on the border of the United States in areas where hospitalization is normally obtained across the Canadian or Mexican border. The section allows eligibility for SSI while the individual is hospitalized in the same way that provisions were made for such circumstances in the medicare program some years ago and which apparently are satisfactory.

Section 6 deals with the exclusion of certain gifts and inheritances from income. Normally receipt of gifts, inheritances, prizes, and similar items are counted as income in the month that they are received, whether or not they are in cash and to the extent that they are not expended in the calendar quarter in which they are received, they become resources in the next quarter. This has produced problems when an inheritance or gift is not in the form of cash. Inheritance of antique furniture from a relative might well disqualify the person from benefits, if the value were considered as income in the month the furniture is received and yet a reasonable cash value might not be available. In such an instance the individual or spouse might be deprived of food, because of his acquisition. The law makes provision for the orderly disposition of resources. The provision accordingly proposes to treat gifts or inheritances which are not readily convertible into cash only as resources and not as income. This is consistent with the treatment of other items under the program.

Section 7 would increase payments to presumptively eligible individuals. Existing law makes provision for an emergency payment of \$100 where an individual appears to be eligible. However, experience has demonstrated that it is frequently several months before an initial payment is made. This provision would increase the \$100 amount to the amount for which the applicant is presumptively eligible, and increase the time limitation to a period of 90 days.

Section 8 deals with emergency replacement of benefit payments. One of the most widespread complaints about the SSI program has been the number of persons who have been placed in desperate need by the failure of checks to arrive, due to their having been lost, stolen, or undelivered. I understand that the Treasury Department will soon have improved procedures and is in a position issue duplicate checks relatively quickly. However, even this lapse of time can cause serious hardships for a needy individual. This provision would change the law to provide that the duplicate check could be sent to a State agency which had an agreement with the Secretary and which had issued an emergency payment to replace the lost, stolen, or undelivered check. The same provisions would apply to checks for less than the correct amount. If the check itself is for a larger amount than the amount of emergency assistance which the State supplied, the balance would have to be transmitted promptly to the SSI beneficiary. The procedure is similar to the provisions enacted for reimbursement of a State for interim assistance provided to an individual who has applied for SSI benefits but has not yet been approved as eligible to receive ben-

Section 9 deals with termination of mandatory minimum State supplementation in certain cases. Public Law 93-66, enacted in 1973, provides that an individual is guaranteed the same amount of income which he received in December 1973, if his own needs and situation are unchanged. This has resulted in higher payments than would have otherwise been received for a substantial number of beneficiaries. This provision would eliminate the requirement that the December 1973 level of income be guaranteed for the indefinite future, would permit the Social Security Administration to stop maintaining such records when they are no longer beneficial to the individual. This might in a few instances prove detrimental because of future individual situations but it is believed that the administrative savings

and simplification of the program well warrant a very small risk.

Section 10 provides for the monthly computation for determination of SSI benefits. Under existing law benefits are determined for a calendar quarter-except the quarter in which an initial application is made-thus averaging income and expenses over a 3-month period. In some instances this represents a hardship to the individual beneficiary as a substantial change in situation may occur in the last month of the calendar quarter and not receive more than partial recognition. The longer the time period involved, the less sensitive the program is to the fluctuation in individual need. The Department of Health, Education, and Welfare, advises that it is entirely feasible to make the determination of benefits for each month rather than for a 3-month period. This does not imply that the actual determination would be made each month but rather that the computation will be made for a monthly rather than a quarterly period. This section provides for a monthly computation.

Section 10 deals with the eligibility of individuals in certain medical institutions. Under existing law, when an individual enters a hospital or other medical institution in which a major part of the bill is paid by the medicaid program, the benefit under SSI is reduced from its usual level to an amount not in excess of \$25 per month. This is intended to take care of personal expenses since the costs of maintenance and medical care are provided through other programs. In the case of individuals having other income such as social security benefits no SSI is payable when the total of such other income exceeds \$45 per month. It has been pointed out that an individual entering a hospital frequently has a household to be maintained if he is going to return to the community, expenses of shelter and other items do not stop, because an individual is institutionalized for a relatively short period of time. The existing provision which makes only a small benefit available for any full month that the beneficiary is in a medical institution can defeat its purpose and make more difficult the subsequent return to community living. It has also caused problems in the care of the mentally ill disabled who may need to enter a hospital for intensive treatment for a short period of time. The bill, accordingly, extends the period to "the period ending with the third consecutive month throughout which he is in such hospital or facility" except in cases where an individual is already in a medical institution at the time of initial eligibility for SSI benefits. During that 3-year period his eligibility and benefit amount would be determined as though he continued to live outside the institution under the same conditions that existed prior to his entry. Since the purpose of this provision is to make provision for needs which are ongoing during a short period of institutionalization. it is not the intent that the larger payment for the 3-month period be considered income for purposes of the medicaid program. Likewise, neither will the

larger payment level determined as a result of the amendment adopted last year to protect the benefits of an eligible spouse when the other member of the couple is institutionalized be considered income for purposes of the medicaid program.

Section 12 deals with the exclusion of certain assistance based on need. The original SSI law excluded from income assistance based on need, provided by the State or local public assistance agencies. A 1974 amendment extended this exclusion to support or maintenance provided by a nonprofit institution or by a charitable or philantrophic agency to an individual who is a resident of a nonprofit retirement home or similar institution. This section would extend the exclusion of income for charitable organizations which was provided on the basis of need to individuals whether or not they live in institutions. It would exclude such assistance furnished by any private entity described in section 501 (c) (3) of the Internal Revenue Code of 1954 which is exempt from taxation under section 501(A) of such code. The provision would not be applicable to situations in which the institution or agency has an obligation to provide such assistance. Such situations would be primarily those where for a monetary or other consideration the agency has undertaken to provide for full or partial lifetime care.

Section 13 of the bill would prevent the Social Security Administration from recovering any overpayment that was made to an SSI recipient prior to October 1, 1976, because they had benefited from Federal rent subsidies. This provision is complementary to a provision in the Housing Amendments of 1976. That provision prevents reduction in SSI benefits after October 1, 1976, if the recipient benefits from Federal rent subsidies

Section 14 provides for the effective dates for the provisions of the bill.

A provision of H.R. 8911 also approved by the House extended SSI to the residents of Puerto Rico, Guam, and the Virgin Islands. Legislation has already been introduced that deals with this issue and the Ways and Means Committee has recommended in their March 15 budget report that such a provision as contained in H.R. 8911 be enacted.

COMMODITY AGREEMENTS ARE AGAINST CONSUMER INTEREST

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. FINDLEY. Mr. Speaker, a policy objective clearly emerging in the Carter administration is the negotiation of a series of international commodity agreements aimed at setting prices advantageous to the more inefficient producers—particularly in the third world. When President Carter addressed the U.N. General Assembly 2 weeks ago, he said:

The United States is willing to consider, with a positive and open attitude, the negotiation of agreements to stabilize commodity prices, including the establishment of a common funding arrangement for financing buffer stocks where they are a part of individual negotiated agreements.

Allied with President Carter will surely be certain powerful financial interests and a number of U.S. banks. They have invested heavily in third world countries which lack petroleum resources and which, consequently, are heavily pressed by a combination of rising energy costs and the disadvantages which already existed as the result of their need for economic development and consequent inefficiency in competition with more advanced societies.

At the end of 1976, the nonoil less developed countries were in debt to U.S. banks and their foreign branches to the tune of \$45.2 billion. Among these nations are Brazil, Mexico, Korea, Taiwan, the Philippines, Argentina, Peru, Colombia, Israel, Chile, Thailand, Malaysia, Egypt, India, Zaire, and Zambia. The loans to Brazil and Mexico alone amount to \$23.3 billion.

What will be the effect of commodity agreements? The most obvious and immediate effect will be to raise the price of agricultural and other basic raw materials. In a word, higher consumer prices. It is possible—but far from certain—that U.S. producers will share in the higher prices. One thing is certain—all consumers, U.S. and foreign, of all economic status will pay the price.

It will be tantamount to a sales tax on food, which, of course, is the most regressive tax of all, hitting low-income people hardest. U.S. banks holding the \$45 billion in nonoil third-world debt will benefit, of course, because higher commodity prices will help their customers meet their payment schedules.

The beneficiaries in the third world are hard to identify precisely. As most of these countries function under dictatorships of one form or another, the benefits initially will go to the ruling clique. In such societies, benefits will reach the struggling poor only if it suits the rulers.

What is difficult to comprehend is why liberals in the United States would ever fall for international commodity agreements. In addition to aggravating our balance-of-payments problem, they will raise consumer prices on food, which is a massive step backward, hurting the poor of this country. International commodity agreements, by their very nature, are antipoor.

STAR-SPANGLED BLUEPRINT

HON. ROBERT S. WALKER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. WALKER. Mr. Speaker, it is an honor for me to call to the attention of my colleagues an outstanding speech by one of my constituents, Robert L. Madeira, executive director of the American

Association of the Meat Processors. The speech, entitled "Star-Spangled Blue-print," was selected by the Brook was selected by the Freedoms Foundation to win the Valley Forge Honor Certificate Award.

Mr. Madeira's remarks reveal a deep appreciation and understanding of our economic system and our American way of life. The remarks follow:

"STAR-SPANGLED BLUEPRINT"

(Speech delivered by Robert L. Madeira)

As we are met here in San Jose, California, on this first full day of Spring in 1976, we have a lot to be thankful for. Mary and I are thankful for the opportunity of getting away from the lingering cold weather on the eastern Seaboard. I'm sure that most of you are thankful for the chance to get away from the usual routine at home and to share ideas and good fellowship with your friends.

But, these are only superficial matters. I'd like to call your attention to some of the more basic things we too often take for

granted.

As a Christian, I believe in prayer. I know that many of you do also. I believe that giving thanks is an important part of prayer. I'm wondering . . . when is the last time you gave thanks for the great blessings of life you enjoy? When is the last time you really thanked the Lord for your health, your family, your home, your business, your freedom?

We take most of these things for granted though they just happened. But they didn't just happen. By God's grace and be-cause of the courage of our forebears, we here in America have inherited the most fantastic blessings ever showered on a people.

As we look back at the birth of our nation, our attention focuses on one of the most remarkable documents ever conceived by the minds and hearts of men . . . the Declara-tion of Independence. Written by Thomas Jefferson and adopted by the Continental Congress in 1776, this unique document ignited the torch of political freedom that has

lighted our pathway ever since. Another document published in 1776 is also of great importance to us. Although it is not nearly as well known as the Declaration of Independence, it has played a vital role in the development of our nation. I am referring to the "Wealth of Nations" written by Adam Smith. The doctrine presented in this great document promoted the concept of individual freedom of choice and action. It opposed government interference in economic affairs beyond the minimum necessary for the maintenance of peace and property rights. This philosophy became the basis for our economic system which we know as the free market or the free enterprise system.

Both the Declaration of Independence and the Wealth of Nations were great landmarks in human history. Both documents were similar in that they proclaimed freedom-one in the political sphere and the other in the economic sphere. It seems to me that these two documents, both born in 1776, have been the twin keystones upon which our great nation has been built. I like to think of them as a "Star Spangled Blueprint," a blueprint for building the greatest nation on earth.

I have had the great privilege, during my lifetime, of traveling to Europe, Africa, Asia and South America as well as to every in our nation. I've seen over 40 countries in the course of my travels and have established friendships with individuals in many different parts of the world. By no stretch of the imagination am I an international expert. But I've seen enough of the world and I'm in touch with enough people around the world to be convinced that we here in America have the greatest thing going that the world has ever seen.

It is no accident of history that Americans enjoy the highest level of affluence for the

greatest number of people. Ours has been a system of incentives. It has been a system that rewarded innovation, experimentation, new ventures and new investments. Our "Star Spangled Blueprint" has made it possible for any individual with an idea and the energy and gumption to make it and market it to go into business and succeed. Some failed, but many succeeded. Accordingly, ours has become the most viable and flexible economic system in the history of

Admittedly, this system isn't perfect, and sometimes its judgments and actions are harsh. But maybe in reality they are less harsh and more merciful than they might at first seem to be.

If we want to hear about a "perfect" sys tem, we can ask for a description from the theoretical analyst as he speculates on the efficiency of the all-powerful socialist state with central planning and central direction. Or, we might recall the "perfect" systems of Hitler's Germany and Mussolini's Italy where boasts were made that the trains "ran on time." The trouble with the state planner's Utopia is that something always goes wrong. The system never achieves perfection. The Achilles heel of the Soviets' highly touted "Five Year Plans" is their continuing inability to produce enough food or to provide enough consumer goods to meet the most modest standards of human comfort and satisfaction.

The trouble with having the trains "run on time" in Germany and Italy and the Communist nations is the price in terms of enormous loss of freedom. As Alexander Solzhenitsyn has told us, the imprisoned, the executed, or the malnourished don't really care whether or not the trains run on time.

Even as we celebrate the 200th anniversary of our independence. American political leaders are pursuing an age-old prescription for trouble. Let me cite an example. Democratic Senator Hubert Humphrey and Republican Senator Jacob Javits have introduced in Congress "The Balanced Growth & Economic Planning Act." Supported by prominent academics, intellectuals, labor leaders and businessmen, their proposal to plan the economic of the American people would lead us back to the mercantilism and economic stag-

nation of the 18th century
